Fishing Tackle.

MANN'S

Trolling Spoons.

Sixty varieties manufactured, suitable for Trolling for all kinds of fish that will take an artificial bait, and adapted for any lake or river in the United States.

Our Perfect Revolving Spoon is undoubtedly the best general spoon for taking fish ever offered to the public.

Three sizes made—No. 20 for bass, pike, pickerel, or any fish under five pounds weight; No. 21 for large fish, and the best spoon ever made for salmon trout; No. 22 excellent for deep water fishing. Beware of imitations. None genuine except JOHN H. MANN'S name stamped on every spoon.

Send wholesale and retail by the principal dealers in Fishing Tackle.

17 Warren St., N. Y.

Hornbeam Rods A SPECIALTY.

W. HUNTINGTON,
WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for what preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

THREAD-WOUND, LONG-RANGE SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 50, 70 and 90 yards, giving close pattern and great penetration. 70 and 125 gauge. Send for circular.

GUNPOWDER!
DuPont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
DuPont's Gunpowder Mills, established in 1802,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:

DuPont's Diamond Grain.—Nos. 1 (coarse)
to 4 (fine) unequalled in strength, quickness and
cleanliness; adapted for glass-ball and pigeon
shooting. Packed in 1 lb. canisters.

DuPont's Eagle Ducking.—Nos. 1 (coarse)
to 2 (fine); burns slowly, strong and very clean;
great penetration, with a close pattern; adapted
for glass-ball, pigeon, duck and other shooting,
with either muzzle or breech loaders. Packed in 1
lb. and 5 lb. canisters and 6½ and 12½ lb. kegs.

DuPont's Choke Bore.—Specially adapted
for "choke bore" guns, and particularly for prairie
and upland shooting. Burns slowly, strong and
moist; does not cake or burn on the barrels, gives
both a good penetration and a close pattern; will
be found well adapted for glass-ball and pigeon
shooting. Made of two sizes, only No. 7 and No. 8,
No. 7 being the coarsest. Packed in 6½ lb. kegs and
1 lb. canisters.

DuPont's Eagle Rifle.—A quick, strong and
clean powder, of very fine grain, for pistol shooting.
Packed in 1 lb. canisters and 6½ lb. kegs.

DuPont's Rifle Fg.—"Sea-Shooting."—
Fg. and FFG. The Fg. for long-range full shooting,
the FFG. for general use, burning strong and moist.
Packed in ½ lb., 1 lb. and 5 lb. canisters, 6½, 12½ and 25 lb. kegs. Fg. coarse, FFG. fine.

DuPont's Sporting, Mining, Surplus and Blasting
Powders of all sizes and descriptions. Special
Grades for Export. Also Rifle, Cartridge, Musket,
Cannon, Mortar, Mammoth, Hexagonal, Cubical
and Pellet Powder, U. S. Government Standard.
Powder manufactured to order of any required
grain or proof.

Agencies in all the cities and principal towns
throughout the United States. Represented by
F. L. KNEELAND, 87 Beaver St., N. Y.
N. B.—Use none but DuPont's Fg. or FFG. for
long-range rifle shooting.

Oriental Powder Mills,
BOSTON, MASS.

Western Sporting,
Wild Fowl Shooting,
Falcon Ducking,
SPORTING POWDER.

ALSO ALL GRADES OF

Blasting Powder.

Agencies at all Principal Points in
the West.

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point
of strength and cleanliness. Packed in square can-
isters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and
6½ lb. kegs. A fine grain, quick and clean, for up-
land prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters
and 6½ and 12½ lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest or water shooting it
ranks any other brand and it is equally serviceable
for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" FG in kegs of
25, 12½ and 6½ lbs. and cans of 5 lbs. FFG is also
packed in 1 and ½ lb. canisters. Burns strong and
moist. The FFG and FFG are favorite brands for
ordinary sporting and the "Sea Shooting" FG is the
standard rifle powder of the country.

Superior Mining and Blasting Powder.

ANSWERS TO CORRESPONDENTS.	17

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Assurance, 49 Strand, W. C., London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.
Thursday, August 4.

Specimen copies of this paper will be sent free upon application. We will esteem it a favor if our readers will call the attention of their friends to the merits of the FOREST AND STREAM.

JORDAN'S MANUAL OF THE VERTEBRATES.

A THIRD edition of this valuable work has been issued, and those who wish to identify beasts, birds, reptiles or fishes which may be found in the district east of the Mississippi River and north of North Carolina and Tennessee, exclusive of marine species, cannot afford to be without it. It has been enlarged and improved, and all species which have been added to the fauna since the former additions appear here.

The fishes include forms found beyond the lines mentioned and include the Salmonidae of the Pacific coast and many Southern forms. Professor Jordan is too well known to our readers to need any introduction and his work needs no praise. Former editions have been thoroughly reviewed in our columns, and we have said that we use it constantly as a book of reference, especially in the department of fishes. Each edition improves upon the former ones and is therefore welcome. The author is a constant worker and embodies the results of his recent labors in a new edition of his "Manual." It is published by Jansen, McClurg & Co., Chicago. Price, \$2.50.

THE NOVA SCOTIA LICENSE FEE for non-residents has been reduced from \$50 to \$30.

HOW FISH EGGS DIFFER.

THE communication from Mr. John A. Ryder, Embryologist of the United States Fish Commission, which we publish to-day, will be found to be of interest to the general reader as well as to fishculturists and zoologists. It will give the general reader who has no knowledge of fish-culture an idea of the troubles that may beset the fish-culturist when he attempts to hatch a fish whose embryology is new to him.

That fishes differ in their modes of reproduction as widely as birds and mammals do is not generally known outside of those who have given special attention to it. The facts are that the treatment which will hatch a trout egg will not do at all for the egg of the shad, and each family of fishes, and sometimes each species in a family, require to be studied and special devices discovered whereby they may be hatched. To bring this forcibly to the mind of those who may have supposed that the eggs of fishes were as nearly alike as those of birds, and might therefore receive the same general attention, we will say that young shad placed in a trough where trout are reared would probably not live an hour, or longer than a young cod would if it were placed under ground where the fox is reared.

Mr. Ryder's investigations are very valuable to the student of embryology and to naturalists in general, and his notes on viviparity of the cyprinodonts (the common "killy-fishes" of brackish water) are of a nature to stimulate our anxiety to learn more of these curious fishes.

BOOK OF THE BLACK BASS.

DOCTOR HENSHALL has given the angler a book which, as the oystermen say, is "a full measure and solid meat."

It is a large 12 mo. of 460 pages, all of which are filled with both scientific and practical information, and none are given to fancy writing or the poetry of the art. Part I. includes the terminology, morphology and physiology of the species; part II., tools, tackle and implements, and part III., angling and fly-fishing. In the first part a change is made in the nomenclature. The small-mouthed bass is called *Micropterus dolomieu*, instead of *M. salmoides*, and the latter name is transferred to the big mouth, which has been recently called *pallidus*. This raises questions of priority which we had hoped were definitely settled, but it need not affect the angler in the least. The names of "big mouth" and "small mouth," which are so descriptive, will stand for ages, while the learned men wrangle about which fish Lacepede, Cuvier and Valenciennes intended the name for half a century and more ago. The reasons for these changes are too long to give here, and we will carefully watch to see what naturalists say on this subject and who are inclined to follow the Doctor.

This book will have a large sale in all parts of the country and will help to kill off those abominable local misnomers which obtain in some parts for these fishes, as "trout," "chub," "Oswego bass," etc., as well as that other notion that one is a "true" black bass and the other a false or fraudulent one. These things are dying out among the better informed anglers, but still feebly live in isolated sections. Two original figures are given by which any observant angler can distinguish which species he has caught, if he will notice the relative extension of the mouth to or beyond a line dropped from the posterior portion of the eye. As an angler Dr. Henshall is enthusiastic on the subject of his favorite fishes, and regards them as the great fresh water game fishes of the future, after the trout streams are depopulated, which he thinks will be before long. He gives as a reason for the black bass having been ignored so long the fact that we have derived our notions of game fish and fishing from British writers who, not having the subject of our story in their land, naturally class the salmon and the trout as the best of game. Dr. Henshall boldly proclaims the bass to be the peer of any fish for game qualities, and whether one agree with him or not he cannot help admiring the manner of his entering the lists as a champion of the one on whom he pins his faith.

Book of the Black Bass [comprising its complete Scientific and Life History] together with a practical treatise on Angling and Fly Fishing; and a full description of Tools, Tackle and Implements [by] James A. Henshall, M. D. 1—141 am. 81r, a brother of the angle.—Isaac Walton [et al.] Fully Illustrated [Chicoutin] Robert Clarke & Co. [1881]

The angling portion of the book is without doubt the best thing ever written upon these fishes, for there are two distinct fishes, although the Doctor usually speaks of them as "black bass" without distinguishing them. It is clear and covers the whole ground of the different modes of fishing, and is accompanied by cuts of the manner of holding the rod, casting, and diagrams of the mode of throwing the fly, that it seems to us as if the merest tyro could soon become an expert by carefully reading this book and following its instructions. Not only is it a book for the beginner, but it is one that no angler can afford to do without. It fills a place too long vacant and one that we would not allow to remain vacant long on our own shelves.

The Book of the Black Bass will be found to contain much that is new and original on these fishes, and we have long believed with Dr. Henshall that the big mouth, when under three pounds weight, is just as gamey and as hard a fighter as his brother, although popular prejudice declares that this is not so. A great charm in the book is the author's freedom from conventionality and from the echoing of sentiments which have become in sort orthodox opinions of angling writers. Taking it as a whole we cannot speak too highly of it.

THE SALMONIDÆ OF THE UPPER COLUMBIA.

FROM advance sheets of "Proceedings of the United States National Museum" we learn that our correspondent, Capt. Chas. Bendire, U. S. A., has published notes on the salmon family of the Upper Columbia.

Our readers will remember that Capt. Bendire was foremost in working up the so-called "red fish" of Idaho, figures of which we published. He has recently sent the National Museum a fine series of fish from the neighborhood of Fort Walla Walla, which is pronounced by Prof. Jordan to be by far the most valuable collection of fishes ever made in the waters of the Upper Columbia. The series shows that the blue-backed salmon or "red fish," which was supposed to be a land-locked species and described as *Oncorhynchus kennerlyi*, is merely the young breeding male or grilse of the *Oncorhynchus nerka*, a fact not before suspected, according to Jordan.

Capt. Bendire says that every one out there now concedes that the red fish is not a resident of the lakes wherein it is found, and he is perfectly satisfied that they are anadromous and not land-locked. How they get rid of the hump and hooked nose, after going back to salt water, troubles him, as he thinks they can't all die after spawning, for many of them are of ten pounds weight and must have made more than one trip to sea. A cut of the male fish accompanies the report and shows a moderate hump and an enormous looking of the jaws.

THE WARWICK CLUB.

A LARGE party of gentlemen left Jersey City on Saturday morning last to attend the flag raising at the new club house of the Warwick Club, in the Warwick Woodlands, Greenwood Lake. The officers of the club are: C. Olcott, M. D., Brooklyn, President; Mr. A. S. Roe, of Chamberlin, Roe & Co., New York, Vice-President; Mr. H. C. Cooke, of Cooke Bros., New York, Treasurer; Mr. Wm. O. McDowell, of McDowell Bros. & Co., bankers, New York, Secretary. Prominent among the numerous members are Hon. Abram S. Hewitt, Hon. Frederick A. Potts, of New Jersey; Hon. Gennett A. Hobart, of New Jersey; Rev. Dr. Chas. F. Deems, of New York; Hon. John W. Taylor, Newark, N. J.; Mr. P. W. Millsap, New York; Mr. Bird W. Spencer, Treasurer Erie Railway, N. Y.; Mr. C. N. Jordan, Treasurer New York, Ontario and Western Railroad; Mr. B. V. W. Taylor, the well known architect, Newark, N. J., and Dr. J. A. Osborn, of Newark, N. J.

The club house is a very handsome Gothic structure, situated on a rocky bluff about fifty feet above the lake, and about one-eighth of a mile north of the landing. The dimensions of the two-story building are 64x42 feet, with handsome piazzas and projections, which give it a frontage of 80 feet on the lake with a depth of 48 feet.

The party upon their arrival scattered through the rough imbered grounds of the famous Warwick Woodland to ad-

mire the scenery and the model structures in process of erection. Dinner was served in the large tent of the hotel which has a seating capacity for 300, the President at the head of the centre table with the Secretary opposite. It certainly was a rare sight to see such a number of talented gentlemen of mature years, many of them gray-haired veterans, but all bearing a healthy and substantial look. The bill of fare was carried out to the letter.

DINNER.
Saturday, July 30, 1881.

SOUP.		Cousonne.	
Mock Turtle.	FISH.	Greenwood Lake Bass.	
	BOILED.

	Pecan Nuts.	Cheese.	Milk.
		Tea.	Coffee.
Chocolate.	ICE CREAM.	Strawberry.	Vanilla.

The after-dinner speeches in response to the following toasts were as happy, witty and brilliant as might have been expected from the gentlemen present. The following toasts were responded to as called for by the President: "Wm. Henry Herbert, better known as 'Frank Forester.'" Dr. J. D. Osborn, in response to this, recalled his acquaintance with "Forester," and gave many incidents of his worth as well as of his amusing escapades. Judge D. L. Titzworth was next called with the toast "Greenwood Lake." He gave the history and many interesting reminiscences of that locality. Next, "Gentlemen sportsmen," T. C. Banks, followed with "Warwick Woodlands," by Mr. McDowell; "Literature and sport, twin sisters," by Mr. J. A. Beecher; "Long life and success to the club," by Mr. E. L. Joy; "New York and New Jersey linked together by Greenwood Lake and the membership of the Greenwood Lake Association," by the Hon. Wm. A. Righter.

This closed the pleasing ceremonies, which consumed about three hours, after which the party repaired to the boat and sailed for the Brandon House, where they were well entertained for half an hour in the dining-room. The first toast was to the "Brandon House," which was responded to by Mr. Brandon and afterward by the present proprietors. "The Press" received a hearty response from Col. Edwards, of Orange County. The boat whistled for a return, and nearly the whole party took the train for home in the best of spirits.

THE ENCAMPMENT HOTEL.

The hotel of canvas at the Warwick Woodlands, Greenwood Lake, is a new and novel feature of camp life. Upon nearing the landing, on a recent visit, we noticed a large number of pure white tents and supposed that a camp meeting was in progress. The office of the hotel is a tent, with all the paraphernalia of an ordinary hotel office. Upon inquiry as to where the hotel was the answer was that those tents were the rooms of the house and could accommodate two hundred guests. The idea was new and novel. We were assigned to room 10, a cosy tent on the margin of the lake, which was so very comfortable that our stay was prolonged an extra day. The hotel has upward of fifty tents 14x14, with a fly over each one to keep out the rain and the heat of the sun. They are all furnished with clean beds, and are neatly kept. The dining pavilion is a large striped tent near the office, with a seating capacity for three hundred persons. The kitchen is over 40 feet long, and a marvel of neatness; it has a very large hotel range, with an abundant corps of cooks, who understand their business, as the meals served bore ample evidence.

The proprietor and manager of the hotel, Mr. L. Y. Jenness, is a veteran in that line and has done a large business in Florida during the winter for the past four years. We urged him to take all his tents to Florida and start a hotel there on the same principle, which he may do, as this is an assured success. Families get the full benefit of camp life, with the table d'hôte attendance of a first-class hotel at less expense than in the usual hotel.

The Warwick Woodlands are owned by the Greenwood Lake Improvement Company and consist of 1,000 acres of rough timber land. They were first brought into notice by Frank Forester's book, the "Warwick Woodlands," published in 1846, in which he says:

"This is the Greenwood Lake, called by the monsters here Long Pond; in my mind prettier than Lake George by far, though, known to few except chance sportsmen like myself. Full of fish, perch of a pound in weight, and yellow bass in the deep waters and a good sprinkling of trout toward one end! Ellis Ketchum killed a five-pounder there this spring! and heaps of summer-duck, the loveliest in plumage of the genus, and the best, too, me ju-

dico, excepting only the inimitable canvas-back. There are a few deer, too, in the hills, though they are getting scarce of late years. There, from that headland, I killed one three summers since: I was placed at a stand by the lake's edge, and the dogs drove him right down to me: but I got too eager, and he heard or saw me and so fetched a turn; but they were close upon him, and the day was hot, and he was forced to soil. I never saw him till he was in the act of leaping from a bluff of ten or twelve feet into the deep lake, but I pitched up my rifle at him, a snap shot! as I would my gun at a cock in a summer brake, and by good luck sent my ball through his heart."

Mr. James R. Boyd, the Manager, gave us much more information about present and future accommodations. Suffice it to say that the tract is in the hands of capitalists who intend making it one of the finest resorts in the State, regardless of cost. The elevation is 1,000 feet above the level of the sea, and it is only forty-two miles from Jersey City. They have already constructed an auditorium which will comfortably seat five hundred people. The building is about sixty-five feet square and forty feet high, built in the Queen Anne style. The timbers are of yellow pine, stained, and the windows in either end are of fine stained glass, and the sides will be covered by elegant lattice work so as to give plenty of air. The finish will be polychrome style, and the large roof supported by four trusses, leaving the main floor entirely clear. The first concert given there this season brought nearly five hundred persons from New York and New Jersey combined, and some two hundred who remained over night were carefully provided for at the Encampment Hotel. With the lavish expenditures now being made it certainly must become a favorite resort.

BYE-WAYS OF THE NORTHWEST.

SECOND PAPER.

NO one can pass through Echo and Webber Canions, on the Union Pacific Railroad without being greatly impressed by their grand beauty, but I think that to fully appreciate their magnificence one must have seen them a number of times. Like most scenes of great natural beauty the first view gives one only a general impression, and subsequent study is needed for any just appreciation of the grandeur of these canions. To satisfactorily take in all the details of these natural wonders it would be necessary to travel through them on horseback or by wagon, and examine them at leisure as one passes slowly along under the overhanging cliffs. As one flies through them by train many of the most fascinating bits of scenery escape the eye, and others are passed so quickly that the mind fails to receive more than a blurred and indistinct impression of something beautiful, missed now and to be looked for more carefully on a succeeding journey.

I shall not attempt to give any description of the beauties of the ride, which have been so often detailed in the exuberant language of guide-books. I may, however, say a few words about the very great attractions of the Salt Lake Valley, for in this spot we are shown very clearly what our Western country—no matter how barren it now appears—may become whenever it shall have been supplied with water. I do not mean to say that the Salt Lake Basin furnishes the only instance of this kind, for there are certainly many others, but nowhere else in the sage "deserts"—so far as I know—has the raising of large crops been so extensively carried on as here.

The Basin of the Great Salt Lake was, when first settled, nothing more than a sage plain. In some places it is flat, in others gently rolling, and its level is approximately the same up to the benches of the mountains by which it is surrounded. In many respects it reminds one of the "parks" of the Rocky Mountains, these being in fact nothing more than extensive plains surrounded by a wall of mountains.

The Salt Lake Basin, of which the Great Salt Lake now occupies but a comparatively small portion, is simply the bed of that older and grander sheet of water, called by geologists Lake Bonneville; and the terraces, which show the level at different periods of the waters of that ancient inland sea, can still be seen, by whoever cares to look for them, running along the mountain sides, hundreds of feet above the level of the plain. Lake Bonneville was far larger than any body of water now existing on this continent. Its outlet was in Idaho, toward Snake River, and it extended southward for several hundred miles.

The plain of the Salt Lake Basin, as I have said, was formerly, and is still, in some places, a mere sage desert. At some points, where the land is but slightly higher than the lake, the low flats are covered with saline and alkaline incrustations, which whiten the ground, and of course render it wholly infertile. But a large portion of the soil which is not subject to overflow by the lake has been so thoroughly irrigated by water brought down from the surrounding hills, that it produces crops which the most highly cultivated farms of the East might be proud to acknowledge. Far-extending fields of wheat, rye, barley and oats, bright green stretches of graceful corn, and long rows of potatoes, now just commencing to blossom, carry one back, in imagination at least, to the well-tilled prairies of Iowa or Illinois. Every farm has its orchard of thrifty fruit trees, and its hay and pasture fields, where the clover and the timothy grow thick and high. The air is filled with the fragrance of the new-mown hay and the scent of the clover. One hears the familiar song of many of the birds of the timber, and sees their graceful forms and bright colors as they move among the trees. The clear, fresh

water which hurries down from the snow-clad peaks to make a garden of the parched prairies, shines and glistens, and its murmur and rush as it dashes onward make music delightful to the ear. Sights and sounds such as these are inexpensively grateful to the weary traveler, and he cannot fail to wonder at and admire the indomitable industry and perseverance which have built up in the desert an oasis. The most careless observer can gain—by comparing this region with the country through which he has just passed—some slight conception of the change which has been brought about in the Salt Lake Basin. To fully appreciate it, however, one must be an old mountain man; must have spent days, weeks and months in riding over prairies such as this one was, have been parched by the hot winds and scorched by the blazing sun of summer, have looked longingly at the eternal snows of the loftier peaks of the mountains, which, visible but unattainable, told him their story of cool airs and icy waters. To one who has been through these experiences Salt Lake City and its environs tell their own story, and for such a one they have an unspeakable charm.

Every one who stops here goes to the Tabernacle, the Temple and the Museum. The two former are both very wonderful in their way, but of the Museum perhaps the less said the better. It is by no means so interesting now as it was some years ago, though it contains some very interesting specimens of ores from various Utah mines. A visit to the Warm Springs ought by all means to be made, and then, after a dip in the lake, one feels ready to resume his journey. A little narrow-gauge railway—the Utah Western—runs bathing trains daily to Black Rock and Lane Point, which wait for a couple of hours, affording ample time for a bath and the lounge one feels like indulging in after his immersion in these extremely buoyant waters, which are so dense that it is almost impossible to sink in them. One can float without any effort with the whole head out of water, and diving to any considerable depth is almost an impossibility. Most bathers avoid submerging the head, as, if the water reaches the mucous membrane, the effects are extremely unpleasant for the time being. It is necessary after leaving the lake to take a *douche* of fresh water, otherwise one finds one's self coated with a crust of salt. During our excursion to the lake a number of interesting birds were observed, some of which were new to the Eastern eyes of our party. High in the air and rosy in the light of the setting sun a number of great white pelicans were slowly fanning their way southward, directing their course, no doubt, to some distant breeding place. In the marshes which border the lake we saw long-billed curlews, willets and great blue herons, while on the mountain, at whose base the track runs, were various magpies and a number of hawks.

I made some inquiries while in this place with regard to the California quail, liberated here some years ago, but was unable to obtain any very definite information as to how they are doing. I was told, however, that they were numerous to the south of the city, and they seemed to be well known to the inhabitants, some of whom did not seem to be aware that the birds had been introduced, but regarded them as indigenous.

If one desires, during the overland journey from New York to San Francisco, to stop off and visit the famous Comstock mines of Nevada, he should stop at Reno. From there the Virginia and Truckee Railroad will take him to Carson City, Gold Hill and Virginia, all of which places are worth a visit. We chose the last-mentioned town, and, through the kindness of Mr. W. H. Patton and Mr. Lannan, of the Consolidated Virginia, were enabled to make a most interesting tour through the mills and mine. The process of reducing the ore is so well known that I will not go into it, but the descent into the mine afforded me a novel experience.

It is not every day that one has an opportunity to spend an hour in a temperature not far from 120 deg. Fahrenheit, and knowing that the mines in question are unquestionably the hottest places "on or about" the surface of the earth, we were all anxious to go through them. The lowest level yet worked in the C. and C. V. mine is 2,550 feet below the surface of the earth. The temperature varies greatly in different parts of the same level, but it may be safely asserted that everywhere it is hot. At these great depths the men can only work for a few minutes at a time, and are then obliged to retire to the cooling rooms. They drink great quantities of ice water, and pour it over their bodies continually. Of course they perspire enormously. The water which trickles from the roofs and walls of the tunnels is hot, so hot that one cannot bear the hand in it; the air is full of steam given off by this almost boiling water, and every object that one touches feels warm or hot. We were told that the hottest place through which we passed had a temperature of 120 deg., but there is said to be a place in the 2,200 feet level where it is 155 deg. No one who has not been through something of this kind can quite appreciate what such a temperature means, and what it means to be surrounded by air so hot as this. It is one thing to stand for a moment at the door of a blast furnace and feel the glow of the molten metal on your unprotected face and hands, and quite another to be enveloped in and to breathe air at 120 deg. The heat is intense and all pervading; at first it is difficult to breathe, and one feels suffocated; the perspiration pours down like rain. I heard one of my companions, as we passed along, express his sincere commiseration for Shadrach, Meshach and Abednego. Now that he was going through what they had experienced he could understand what their feelings must have

been and sympathize with them. The cold bath which immediately followed our return to the regions of day was delightful and refreshing, but the debilitating effects of the great heat did not pass away until the following day.

Returning to Carson City we took the stage for Glenbrook, a little settlement on the shores of Lake Tahoe, from which a steamer crosses the lake to Tahoe City, eleven miles from Truckee. The stage ride from Carson to the lake was hot and dusty, and the sight of the mountains, absolutely stripped of timber, was to me a very sad one. From miles and miles of mountain the timber has all been cut off, until now there is nothing left standing but a few dead and rotting tree-trunks. Springs have dried up and brooks gone dry, still the work goes on, and unless some steps are at once taken to check this wholesale destruction of our forests, the day will surely come when the water supply of the region, now none too large, will be materially decreased. It is not as if the timber were cut with judgment, the older sticks being taken and the younger left to increase in size, and in the meantime to shade the earth and diminish evaporation: everything is cut down and in the most wasteful manner. Let us hope that this will not continue.

Lake Tahoe has been well called the "Gem of the Sierras." It is indeed a beautiful lake with beautiful surroundings, but already they have commenced to strip the mountains of their timber and to defile these pure mountain waters with sawdust and the refuse of the lumber mills. Nevertheless, as a whole, the spot is still most lovely. The waters, long famous for their wonderful purity, reflect the blue of the clear sky above or mirror the dark-green hills and snow-clad mountains which on all sides surround them. Near the shore, where the water is forty, fifty, or sixty feet deep, one can distinguish very minute objects on the bottom, and can see the trout swimming or resting quietly near the bottom. These fish are caught for the most part either by trolling or by hand lines, using minnows for bait. They are said to run up to twenty-nine pounds in size, and captures of fish of over seventeen pounds seem to be well authenticated. I was unable, owing to engagements in San Francisco, to try the fish with a fly.

The ride from Tahoe to Truckee is a delightful one and, being taken in the evening when the sun is low and the shadows long, we enjoyed to the full the lovely scenery through which we passed. The road follows the Truckee River and runs for the whole distance through a beautiful pine forest. The destruction of timber, so noticeable on the other side of the lake, has begun here also, and before long the magnificent forests through which we now pass will give place to an arid waste, on which no green thing larger than a manzanita bush will have been left standing.

From Truckee to San Francisco is only about twelve hours and, unfortunately, the most beautiful scenery on the ride is passed during the night. We thus lose many of the most interesting features of the Sierra Nevada Mountains and find ourselves, when daylight breaks, on the level plains of the Sacramento Valley, in a country which, though fertile and in many respects interesting, presents to the eye no striking beauties.

Our stay in San Francisco is short. There are certain things, of course, that one feels bound to do. A visit to the Cliff House, taking by the way the beautiful Golden Gate Park, should be made at once, and there are, near the city, a number of places which should be seen. But San Francisco in summer is not nearly so attractive as at some other seasons, and besides, we have seen all this before, so taking steamer we sail swiftly out of the Golden Gate and are fairly on our way to the North.

Victoria, B. C.

THE DOG ON THE ISLAND in the rapids at Niagara has been joined by three other unfortunate curs, which, it is claimed, have been purposely put there as an advertising dodge by enterprising hotel proprietors. It is reported that a recent attempt to rescue the unhappy dogs, which would have been entirely successful, was frustrated by the interference of a gang of roughs, who openly blustered that the dogs should not be released, as they were a good lure for the curiosity-seekers. An indignant visitor to the Falls writes to the *Buffalo Courier*: "As a member of a society for the prevention of cruelty to animals, I have to ask you, sir, whether it is allowable that these helpless animals should be imprisoned on a barren heap, bereft of all the liberty and domesticity to which they have been accustomed and brought to the verge of madness in order that a set of showmen, guides and hack-drivers may reap benefit from the credulity of a defrauded public?" If this is the truth in the case the sooner the yelping canine castaways are released the better it will be for all concerned in the cruel fraud.

PERSONAL.—Mr. T. B. Mills, of the firm of Wm. Mills & Son, sailed last Saturday in the Baltic for Europe. He will remain abroad several weeks and proposes to try some of the famous salmon streams on the other side.

Among those who called at the office of the *FOREST AND STREAM* during the past week were Messrs. J. B. Graham, Secretary of the Toronto Gun Club; A. McGregor, R. Morrison, G. A. Burns, John Dill and S. Stangeland, all of the Toronto Gun Club and enthusiastic devotees of the sports of field and flood. We are always glad to welcome our old friends and the latchstring of this office is always out; in fact, the door is wide open for visitors from out of town. Give us a call.

THE SAVAGE BLOODHOUNDS of the playbills, in the "only original Uncle Tom's Cabin" are inoffensive beasts on the stage. Just now we are reading of a hunt for human prey in the northwestern forests of Wisconsin, where the genuine article of bloodhound is employed to track the game. This is savage business, although the exigencies of the case appear to call for rough measures. But imagine the predicament of an unsuspecting sportsman in those forests, mistaken by the dogs for the outlaws. We shall take our turn for game in some other section of the country if Wisconsin woods are to be overrun with bloodhounds. Let us hope that the outlawed wretches may be cleared out, and the dogs with them, before the deer season opens.

THAT 'POSSUM promises to be perennial. The interest is still alive, and when it shall have decreased we shall for a long time be in uncertainty as to whether it is really dead or only pretending to be. We had no thought when we broached this culinary query that the topic would prove so fruitful of racy and entertaining writing. The lawyers especially appear to have taken kindly to the argument of 'possum hot and 'possum cold. Two-thirds of the letters on the subject have come to us from the legal fraternity. It speaks well for the disciples of Blackstone that a large part of our general correspondence is with them. We will trust our case every time with a lawyer who has an intelligent appreciation of the dignity and value of field sports.

Dr. J. H. HENSHALL and our correspondent, Mr. C. L. Jordan, of Texas, are contemplating a Florida angling campaign next winter, when the latter, we understand, will take lessons in the art of fly-fishing for the black bass. He is the enthusiast referred to, if we mistake not, by Dr. Henshall in his "Book of the Black Bass," who dubbed a bass-fly "a fish-hook poetized," and thought the fish "should take it through a love of the beautiful, if nothing else."

THE LEONBERG DOG has gained much esteem among the residents of St. John, Newfoundland. In our issue of July 21 we published a warm commendation of the breed, written by our correspondent at that place; and the high opinion expressed by the writer of that article is shared by other owners of the huge animals.

PRAIRIE CHICKEN SHOOTING is the sport toward which many scores of shooters are now turning their eyes. The season opens shortly in the West and the reports of the game supply are very encouraging. Elsewhere will be found notes of some good centres for the sport. We shall be pleased to receive regarding other resorts any information which will be of practical benefit to our readers.

THE CAR "CITY OF WORCESTER" starts West on a shooting trip the sixth of next month. Mr. Jerome Marble, of Worcester, accompanying the party. There is room, we understand, for four more in the company, and those desiring to join the car should make early application to Mr. Marble, at Worcester, Mass.

ILLUSTRATIONS of many of the localities mentioned by Mr. Fay, in his itinerary of a trip from Moosehead Lake to the Main St. John, are to be found in Mr. Steele's book, "Canoe and Camera." A map of the country is also contained in that volume.

PRAIRIE CHICKEN SHOOTING.—A correspondent wishes to secure, about the first of next September, board in farmhouse or hotel in Iowa, where prairie chickens are numerous and of easy access from the house. Address A. P. V., this office.

THE ILLINOIS STATE SPORTSMEN'S ASSOCIATION is holding its tournament at Kilmannan Park this week. A report of the proceedings will be given in a succeeding issue.

PROFESSOR HUXLEY'S lecture on "The Herring," which we print to-day, is worthy of careful study.

THE WOODCOCK SEASON in this State opened last Monday.

WE are obliged to defer the sparrow poem until next week.

AN ENDORSEMENT WE VALUE.

THAT we have the approval and good will of the seafaring and nautical portion of the community in our efforts to have the sailing machine displaced by a healthier style of craft and yachting elevated from baby's play on a mill-pond to the same manly standard of amateur seamanship which the sport occupies in British waters, we have been convinced from the start. It is with pleasure, therefore, that we give space to the following endorsement, coming from one of the most experienced captains who ever sailed a fisherman out of the port of Gloucester, Massachusetts. To draw from a practical seaman such lines of fellow-feeling is enough to counterbalance a hundred adverse opinions from sources far less qualified. Men who "have been there" in earnest we have never known to hesitate in the choice between a ship and a sham:

Editor *Forest and Stream*: I have a great desire to write something for your fishing columns. I would like to "shake the teller's hand" who writes those articles in favor of deep boats, whoever he may be, and assure him that his efforts to have coxswains substituted for skiffs are appreciated by one who has had the unpleasant experience of seeing his vessel sprawled out on her beam ends more than once in a gale and who feels that there is as much need for a change of model in our fishing vessels as there is in our yachts. A GLOUCESTER CAPTAIN.

The Sportsman Tourist.

THE PROSPECTOR'S DINNER.

IN CAMP ON JAMES' PEAK.

BY JEROME BURNETT.

WAIT, pard, until I load my pipe again
And stir the fire. The cook's a mile the winner
It's the tenth of June; I'll tell you, then,
What old Bill Jow and I had once for dinner.

The lay-out wasn't big, but all the same
We had a meal, and more'n we intended—
A dozen eggs withouten toast, and game
And trout, the grub that makes a man feel splendid.

And we was hungry for it, Bill and me;
'Prospectin' keeps the appetite a-riisin',
And when we find such truck as that, you see,
The way it kind of 'fades is just surprisin'.

Here's how it was: We'd come across the range
And took the trail that leads you down to Boulder,
For we was off to tackle, just for change,
The carbonates before we'd got much older.

'Bout twelve o'clock Bill dashed a mountain quail,
And found a nest with eggs, as I'm a sloner;
And then we caught some trout, and near the trail
Corralled a grouse! You bet we had a dinner.

You oughter seen Bill play his fork and drisk,
A-flirtin' up his engine like a sucker,
Until, to keep along, I had to work,
And draw to him, as players do at poker.

We worked the lead as long as color showed;
Cashed every egg, and all the best and fitters;
Then ambled on to strike the Boulder road,
And stopped at Jake McCallin's to get some bitters.

For on the search we never drink a drop;
It doesn't help in this yer kind of 'tracin';
But back among the ranches, then we stop
And smile a little, 'cause it's kinda of bracin'.

Jake took our measures, then he hustled round,
To get up what we wanted, strong and pleasant,
The while we told about the eggs we found
And had for dinner, 'long with his fish and pheasant.

A tenderfoot was snoozing in a chair,
And when he heard us talk of eggs it raised him;
He seemed to think we had 'em then and there,
'Tween me and you the racket kind o' dazed him.

"Beg pardon, men," he said, and stopped a spell;
'It 'pears to me, sirs, if I unders-and you,
You have some mountain quails' eggs here to sell;
If so, I've got the ready cash to hand you.

"These quails, the parmagins, ar' scarce, you know,
And scintille men down East, they want to rate 'em
As very curious birds, they want to show
That by some carce they may domesticate em.

"And now, if you've the eggs, here's what I say:
I'll give you—well, ten dollars each to set 'em,
For that's the price I'm authorized to pay."
Then put in Bill: "Way, darn it men, we've 'em!"

"Taint any use to tell you how we swore,
Nor how we laughed, altho' it wasn't funny,
Then Bill declared he'd go and get some more,
Bur, sir, he's never called to get the money.

In fact, we haven't seen him since that day,
And though at dinner he was no beginner,
It's my opinion, pard, he's gone to stay,
And all because we had them eggs for dinner.

A JOPLY FISHING PARTY ON KEUKA LAKE.

THE true time to go to a "summer resort" is when nobody else is summer resorting, and therefore it is the knowing ones junket "all in the merry month of May" or saunter in September. Curled calmly up in home hammocks during the fiercely beating heat of July and August, they can placidly smile at the antics of the "maddening crowd" who wildly tear from pillar to post, sweating in steam-boats, baking in Pullman cars or luddled in hotels, making half-burnt offerings of themselves on the red-hot altar of the insatiable "fun." There is a monorch-of-all-I-survey feeling, too, in being the first or last guest at a country hotel, a certain distinction in being the only one. You have a desolately grand sensation as you kick your heels through marble corridors haunted by the rustling ghosts of last season's Worth gowns and the phantoms of dead flirtations. The exquisite flavor of this feeling is intensified if you arrive a few days ahead of your own small and select party who are coming to fish with you, and you get well acquainted with the clever captain of the smart little steamer which runs upon the lake, and you find out just where the best fishing is, and you learn the first names of all the boys on the dock, and get all the local fish stories pat on the end of your tongue, and "know the ropes" generally, and have a heapstore store of shiny bait in an old starch box with lumps of ice to keep it dead and dainty for that twenty-pound salmon-trout you're going to haul in sure as fate to-morrow, when the best and jolliest fish commissioner in the world arrives, with his spectacles and his tackle and his jovial comrades.

The first guest is like the first swallow, the first baby, the first flower. He is a conquering hero. He doesn't know exactly whether he feels more like Christopher Columbus stepping ashore on Adam I. in the garden. Unconsciously he takes the pose he has seen Christy adopt in the drop curtain of the Grand Opera House where he is "shooting" the Indians into the precession boxes and planting the flag in the sand. The first guest is as the long-lost brother of the cheery landlord, and the pretty hostess smiles kindly and even graciously pauses at his table to be that he is well served. On him the waiter beams and widely grins; on his honor the shiner polych comes upon the burnished glass; in his honor the shy chambermaid crimpeth her long locks by candle-light in the silent watches of the night; and as with lordly tread he leads the way to the dining-room through the echoing halls, his now newly arrived friends patterning meekly after him, why, for the moment he is "a bigger man than old Grant."

The first week of fragrant May last saw Seth Green the

pioneer guest at the Fairchild House—a most homelike hostelry, by the way—in Hammond's Point, N. Y., a little hamlet which dabbles its feet in the lovely waters of Keuka Lake, and is just as delightful a place for your money as you could find, only it is, alas! four hundred miles from Broadway. Seth of the rods does not fit my fancy sketch of the specimen first guest at all, for he has known every one around here for thirty years or more, and he never saw the drop-curtain of the Grand Opera-House, and is too simply genuine to know how to feel theatrical under any provocation. While to the inhabitants of this quiet, far-away section he is "a bigger man than old Grant" all the year round. Everything was ready for the fray in fine style. Two enormous spotted beauties, weighing 12 pounds apiece, flanked the hotel register on the office counter to greet the coming guests. Indeed, one of the guests, Miss Pansy, vowed they were made of rubber, and stuck surreptitious hairpins in both, but was confounded and convinced when she perceived the identical pin-holes in a choice morsel on her plate at supper.

Next morning very early we set out to try our luck. Imagine this glass-clear lake, stretching away and curving in and out for twenty-two miles—a nice skin beauty of a lake, only one mile butt measure. It is glided by many-breasted, modestly, softly sloping hills, mantled with six thousand acres of lovely vineyards smiling at the sky. Imagine the soft sweet air and the misty haze, not hiding but enhancing the beauty of the country, and leading to the most mystic loveliness becoming its splendor, as a veil becomes a bride. Imagine a great quiet and hush as if all the roaring cities were dead or not yet born—no sound save the lip-lip, lap-lapping of the water flirting gently with the flower-spangled shore. Imagine the jaunty little scumers Lulu cuddling close to the dock, and painted so smartly in divers colors that she looks like a bright shoulder-knot on the gray silk garment of the lake. She is now coyly waiting to take us away to the happy fishing grounds far from the fertile loam of old Keuka. Imagine, I imagine, seventeen hard-boiled eggs, twelve sandwiches and a luscious rube pie in the hunch-basket—and please don't forget the salt nor the tackle nor the waterproofs, pillows, shawls and other impedimenta. We are all ready. Suddenly the shrillest and most unexpected shriek you ever heard leaps from the tiny turret of the Lulu, wounding the holy silence grievously and reverberating along the shore in piteous echoes, as if every bill held captive a baby Lulu and all the water birds of old Keuka. Imagine, I imagine, the fertile loam of old Keuka. All the water bubbled on the dock to wash us luck, lady fingers waving blue veils from the piazza and their gudemmen smiling in the doorway, while the white apron of the waiters shines spotless in the dining-room window.

We landed at Urbana dock and look at the famous wine-machinery or fermentory which sends us the famous "Gold Seal and lovely, sweet, insidious still wines that taste like nectar, and are soft as dew and seductive as a siren's breath. We are offered the freedom of the cellar in a tumbler, and there is given a lively discussion as to whether, after all, there would not be more solid enjoyment to the square minute to be got out of the day by going over to the factory and seeing the bottling process, etc., than could be extracted from dawdling in a rowboat, waiting for surly fish to bite. The superintendent is very handsome and gallant, and the ladies strenuously wish to stay, but Seth says, doggedly: "We came to fish, and we're going to fish." That settles it. Good-bye, "Gold Seal," thou many-medalled nectar; there isn't a headache in a dozen bottles of thee. Conversation gallops away as the little glide by us, unrolling their beauty as they pass, all garlanded with delicate pale vines, like an elegant roll of rich-ribbed stuff embroidered in every hue and shade of green, from the faintest yellowish tinge to the darkest melancholy myrtle; the pattern broken at intervals by stripes of dun-colored cultivation and seamed by little clefts or gullies worn by rushing mountain streams which in the spring hasten to hide their sorrows in the lake. One tiny stream, whose trouble was deeper than the rest, was heavily laden with myrtle, beautiful to see the silver tear-drops trickling faintly and monotonously from rock to rock.

Alice's note-book bristles with facts and figures. Pansy is gloating on the pretty bait. We can hear her earnestly discussing the vexed question of sawbills versus whitebait. "You know, Mr. Green, as I was saying, Greenwich is in England, you know; a place where they make latitudes and longitudes and things, and every one goes there in the season to eat whitebait, and it is counted as a delicacy, and is awfully swell; and you know, Mr. Green, they are exactly like these, so please don't call the dear little things 'sawbills' any more. It is a perfectly horrid name anyhow. Why, don't you know even prime ministers go to Greenwich to eat whitebait?" This last clincher ought to have settled the matter, but Seth stuck to his point and wouldn't say whitebait, though in deference to his antagonist he called them alewives for the rest of the day. All of thirty years before he had caught white—no, say—no, alewives, and it is beautiful to see the silver tear-drops trickling faintly and monotonously from rock to rock.

The captain's fish stories have been growing out of all proportions. He has now arrived at the point where the "photographer" fell over there in Pen Yan" made a picture of the boy who caught an eight-pound fish on the end of his nose! Sure enough, there was the photograph, and sure enough, the boy had a nose! Evidence can go no further. This boy is supposed to be in a boat with his mother—mark that well, gentlemen of the jury—with his mother near the shore. She is fishing. Her back is turned to her boy, who is leaning over the edge of the boat paddling his little arms in the blue water. A large fish is jumping, a yell, and the mother turns round to find a large fat eight-pound trout squirming in the bottom of the boat and her son standing up, bellowing, with a bloody nose! "The name of the boy and the boat, and the age of the infant, please; the date of the occurrence, the color of the mother's hair, and was her dress cut with a basque or a polonaise?" hurriedly demands Alice, with pencil poised and note-book gaping, while Pansy sardonically hums a line or two of a once popular song, and Seth is the only one who looks at the cat. With unctious the captain dwells on the gory details: "The hull front of his shirt was all blood. Oh, you should have seen that boy's shirt!"

We disembarked and Lulu steams away. Now for three sultry, silent hours in the rowboat. Jock's coat off now and the glory of his yellow gloves forever gone to limps; Mr. Fish Commissioner quiet and watchful; Pansy furtively

cranking out of Black's "White Wings," so as to know the correct thing to ask when anybody gets a bite. She has seen "above her butt" repeated scores of times in this delicious yachting idyl, but any direction on Mrs. Cleopatra's needle would be equally intelligible to her, and she is ashamed to ask for information. The others nurse their fishing-rods. Alice's face is clouded, for she has forgotten the name of the game constable who was shot at from the shore by a fish poacher last autumn, though she took down the dimensions of the bullet hole in the deck of the Lulu, and even stuck her little finger in it with awe. The constable's name shall never go down to posterity, not even when somebody finds her note-book some day in a Sixth avenue car, with its wild muddle of memoranda of table-linen, lists of things to buy at Macy's, things to be put in the chamber trunk, notes of travel, receipts for puff-paste, bits of song, the ice-man's new address, when Mary's mouth is up, in fallible smugness wash, etc. One of our gentlemen secures the first bite, and every one in the boat is instantly on his feet to land the fish, the ladies standing up and endangering their lives in their eagerness. Jock rows rapidly. "Kee! in! reel in!" cries Seth; "steady, steady!" "Give him plenty of line!" "Don't jerk!" "That's it, keep it stiff!" "Don't be too rough!" "She's a fighter!" "Faster, faster!" "Slow, slow!"—were a few of the directions showered volubly on this genial novice, who has only been catching fish for about forty odd years or so. Deliberately and scientifically our fishermen, however, were all ready to reel in their catch. Seth has the scarp-net ready in his hand for the final capture. "Acts kind of queer," quietly comments the observant Jock. "Hurrah! haul him in, haul him in!" He, she or it is hauled in, and proves to be a fine, healthy, inoffensive-looking stick about five feet long, the hook embedded in its soft bark. Amid the general laughter poor Pansy's face wears a comical look of woe. In the intense excitement of the moment she had never once thought of saying, "Shove her butt!" This was a good thing to say to a young woman who talks of deep near blue for weeks after she has been out on the bay for a day, and who is apt to call her bosom friends "land-lubbers" when she returns from a visit to the schoolship. However, she landed a five-pound trout herself almost immediately, which was a slight consolation. A native, trolling along patiently, passes near our boat. "What luck?" "Didn't have a bite!" "Don't say—nuther did I, not a sign of a bite," and we rowed along in parallel paths. Seth and the passing fisher smile at each other, and talk of the end of their lines. "Guess you've got a bite." "Hullo, so have I," Seth reels in. The casual person reels in. Everybody directs, encourages, scolds and "bosses the job," as before. Again does Jock mutter, "Acts kind of queer." Dead-lead. Each with lifted rod poised stiffly, and the lines reeled taught to the verge of snapping. "You've touched bottom, perhaps." "No, it's more'n 200 feet deep here, and I've only paid out 50 feet of line." Awful pause, after which the lynx-eyed Pansy shines at the face of her brother. "Oh, you've tangled my line in your line, you bet," which was strictly true. Next day Seth caught nineteen beauties, weighing from three and a half to twelve pounds, but one of our party beat him by five fish and four pounds. Seth says now he doesn't believe in going out fishing with ladies anyhow.

The tag-end of an unofficial note received from Mr. Green yesterday reads thus: "Caught seventeen salmon-trout in Keuka Lake yesterday. There were no ladies in the boat!"

POST-PRANDIAL 'POSSUM.

Owl's Cove, Ark., July 28, 1881.

Editor Forest and Stream:

I find I am indebted to you in the extent of a letter in the nature of a personal explanation, or apology. You must bear in mind that I am away up here in the Ozark Mountains—"Bosting Mountings," as they are sometimes termed by the natives—in search of health. One day late in June I received a letter from you, asking "How they do it in Arkansas." I did not understand the question, and of course could not answer it. It occasioned a good deal of perplexity. At first I had a suspicion that it might relate to a discussion concerning certain disputable fishes of Northern lakes and streams, which day the fly into the mouth with the tail. But reflection satisfied me it could not be that. Our fishes are more sedate, will hardly take a fly at all, and when they do, they do it in a straightforward way. They do not use their tails to fill their mouths. Then possibly it might mean, how we protect our game; but we don't do that at all. As to any other question whatever, it can only be said that we are not agreed among ourselves, and do it in various ways, each according to the best light he has.

A later mail brought me a bundle of back numbers of the Forest and Stream, remailed from home; and now, when it is too late, I find that I have missed the opportunity to sit down to a dish of 'possum with such distinguished company as Senator Garland, "Guyon," and the inimitable Col. "Bob" Crockett—too late even to sit down to the second table with the "children and niggers." Too bad!

For your own private information, however, I will give you the result of years of experience boiled down: for if there is one thing above another which an editor ought to possess, it is accurate information. Now, in catching a "possum" you need a dog. But that is too long, and life is too short. You should, if in Arkansas, go to a persimmon orchard, for in the production of this fruit this State ranks second in the Union—the supremacy of North Carolina in that industry being, of course, beyond dispute. Moreover, when the persimmon is in season the 'possum is ripe, and *vice versa*; the hard frost which softens the fruit also "pulls" the 'possum from the persimmon, and best reason of all, you are sure to find your game there than elsewhere. The best way, I think, is to hunt him with a gun. The dog trees the game, you shine his eyes with a torch or jack-lantern, and aim at the two little fireballs that reflect your light. If you fail to "hear something drap," as you shoot, you may know that it was "nothing but a coon," or "wasn't fat."

Will he sham, make as if he pretend he's dead, play 'possum? He will. Find one alive, strike at him, but don't hit him. He will counterfeit a dead 'possum "to a fault." Go off a little ways and watch. First one eye will open just a little; then if he fails to see you the other opens; his head moves, slowly at first; he looks all about him; then gets up slowly, and looks all around. If he fails to see you, he makes off. If he sees you, he's dead again. There's nothing involuntary about it. It is willful, deliberate and premeditated. If in doubt whether the animal is dead or shamming, pick him up; straighten the tail; then pretend to let him

drop. If alive he will coil the tail around the arm or hand, and save himself a fall. If he fails to do this, he is dead or mortally hurt.

There is a great deal of poetry on the subject of the 'possum. One solitary verse endures in the recollection, which I quote as illustrating the "shamming" trait in his character. It is as follows:

"I met a peewissim in the road,
And hauled he dead seem to be—y—y—
He curled his tail and squirmed a tail,
And swore the road was free—y—y—"

There would seem to be some difference in opinion as to the manner in which this Southern dainty ought to be dressed. I don't quite like that conceit of Col. Bob Crockett—the resemblance to a young baby. To my mind he should be dressed to resemble a well-dressed pig. It is more appetizing somehow that way.

And that is easy. Ashes and hot water; hold him in by the tail—which is ready dressed—till the hair slips, then slip it all off; rub with a corn-cob; scrape with a knife then draw, then put on a little salt, and throw him on some low floor to freeze for one or two nights.

To cook him you don't need a stove. Every well-regulated Arkansas family has an open fire-place, and an oven-and-lid, and a skillet-and-lid. The oven is a deep baking kettle, the skillet a shallow one. This is not unfrequently the entire cooking outfit. To fry the 'possum you need have a luscious fry oil gne to cook. The 'possum should parboil for half an hour; if a few spoonfuls of sharp vinegar, a little soda, or a red pepper be boiled with it all the better. When parboiled throw all the water away; prepare the oven by putting one layer of sweet potatoes, medium sized, sliced lengthwise on the bottom, then put in the 'possum; season only with salt and black pepper; use no other dressing or device whatever, then fill the oven with sweet potatoes sliced as above; put on the lid, set it on the coals, cover over with glowing coals, and let it cook until both the potatoes and 'possum are tender. Have the skillet filled with corn dodgers made up with corn meal, water and salt only. Serve all hot. This is the correct thing. No sauce of any kind is admissible. For the matter of a drink your correspondent recommends water first, last and all the time.

Is it good food? It is. Never tried it, but know it must be. I have never seen any that was properly cooked left to get cold, and have never seen any who had never tried it. *Dides pygmaea* is of a modest and retiring disposition, and must be sought to be found. It is perhaps but natural that the great public should entertain many misconceptions concerning one whose front name is based upon an erroneous notion. At another time I may ask a further hearing in his behalf.

FROM MOOSEHEAD LAKE TO THE MAIN ST. JOHN.

IN THREE PARTS—PART II.

WHEN I was awakened on the morning of May 30 it was by the beating of the rain upon our tent. The fire which we left burning just outside when we retired the night before went out, and it was cold and cheerless. I got up and looked out into the forest.

The wind was hushed; the tall trees moved not a branch; but all was still, save the almost noiseless current, and the patter of the rain drops upon the leaves. The rain came down easily and still, and a sense of desolation stole over one in the great wilderness.

I awoke the guides; and soon a cheerful fire was blazing, notwithstanding the rain; and as long as the forest trout were spluttering in the pan. After breakfast the crews broke a little; and we decided to strike our tent and move forward on our journey. Two of the guides took a birch and paddled down to 'Suncook to engage a team to take our boats and luggage across Mud Pond Carry, while the rest packed up and paddled down to the "Meadows," at the head of 'Suncook, now completely flowed over. Later in the season the water falls off and nothing but a narrow, shallow, very crooked rapids, where the lake sets up four or five miles, with a width varying from one-half to three-quarters of a mile. This tributary is called the

UMBAGOZOOKUS RIVER

and is the outlet of the lake of that name. Having got again upon our course (for we had gone out of it to camp) we rested on our oars to await the return of our guides.

After half an hour's delay we resumed our paddles, our guides having found the men who were to be had across Mud Pond Carry, but it must be made on foot. Now the occupants of 'Suncook Farm pretend to furnish teams for that service; so while we were pitching our tent, Sam and John went back about four miles to assist the teams across a small creek, which empties into 'Suncook on the east bank, to enable them to reach us at our camp at the foot of Little Carry, near which is the west terminus of the carry when made by teams.

Until within ten or twelve miles we have no teams to be had across Mud Pond Carry, but it must be made on foot. Now the occupants of 'Suncook Farm pretend to furnish teams for that service; so while we were pitching our tent, Sam and John went back about four miles to assist the teams across a small creek, which empties into 'Suncook on the east bank, to enable them to reach us at our camp at the foot of Little Carry, near which is the west terminus of the carry when made by teams.

While awaiting their return we found some very good fishing on the river near our camp. About 6 p. m. our guides returned with the intelligence that they could not get the horses across the creek, as the owner would not swim them unless we would stand security, fearing they might drown—hence they abandoned the team, put it back and hired three men, paying them \$5 each to assist in getting us across the carry.

The next morning—May 31—we made an early start, for we had the hardest battle of the route before us for this day's work. Our guides paddled up the pitch (some forty rods), where we walked "Short Carry." Resuming our boats, an hour's paddle against a stiff current took us a matter of two miles into

UMBAGOZOOKUS LAKE,

half a mile across the lake to the east shore and you land at the west end of the famous or infamous

MUD POND CARRY.

It is two miles long and from one of the worst out of doors. To the westward the water empties into 'Suncook and pays tribute to the East Branch of the Penobscot; to the eastward into Mud Pond and thence into Chamberlain, till it finally reaches the St. John—hence

it is of the head waters of the St. John, there being many tributaries to that river. A well-defined road crosses to Mud Pond, but the soil is light and springy, with a frequent admixture of solid mud, so that you often sink from two to three feet into the mire. Having made the carry before, however, we were provided with long-legged rubber boots and were able to get over it without great discomfort. Our birches and other luggage were transported with little difficulty or delay. A matter of two or three hours suffices to make it with light luggage and canoes, but taking across a bateau weighing from 600 to 800 pounds is quite another matter; it was accomplished, however, in about six hours. Our guides now numbered eight men and, by means of yokes roughly improvised for the occasion, they raised the bateau to their shoulders, carrying it from ten to fifteen rods at a pull. Although it was not yet June the black flies swarmed about us in great numbers and annoyed us exceedingly.

At four o'clock, however, we were safely across, our three extra men were dismissed, and we resumed our journey.

MUD POND.

is a small sheet of water, very shallow, but deep in mud, nearly round, with a circumference of about two and a half or three miles. Fifteen minutes took us across to the outlet; this the guides ran, while we walked to the foot of shoal water, a distance of about eighty rods, where the outlet is sufficiently deep to admit of safe passage. Three-quarters of a mile further took us to

CHAMBERLAIN LAKE.

into which the outlet empties. As is usually the case, the mouth of the outlet was choked up for a distance of some forty rods with "dry kic," a mass of broken trees, old stumps and branches, and all sorts of drift wood closely interwoven and packed together. By the aid of setting poles we worked our way through it in twenty minutes, and were upon the broad bosom of Chamberlain, a charming stretch of water, some twenty miles long by two to three wide. Nearly opposite on the east shore is

CHAMBERLAIN FARM.

where sportsmen always find a hearty welcome, a good bed, and a satisfactory fare. Quite a sale of wild game was effected here; we were welcomed upon the lake, and our little birches bobbed merrily up and down upon the heaving billows, but they rode the white caps beautifully, and at about six o'clock we made a safe landing at the farm.

June the 1st was a most delightful morning, the air was fresh and bracing, with a stiff breeze from the north. About 8:30 we got under way, our larder restocked, and everything provided for a three or four days' sojourn in the wilderness. Our course lay northward along the east shore. A stiff head wind rendered our progress slow, and it took us a matter of an hour and a half to reach

THE LOCKS.

Three miles distant. The locks were built several years ago, at a considerable expense, to form a communication of Eagle with Chamberlain Lake, and thus take the logs from the surrounding territory into Chamberlain, thence into East Branch, and finally into Maine, instead of in the other direction down the St. John. To carry out this project three dams were built, two at Chamberlain and one at the foot of Chamberlain, just at the head of Chase's Carry. Parties interested in aiding them down the St. John, however, would not tolerate this new thoroughfare, and shortly after a fire mysteriously destroyed every dam.

The dams at the locks are about eighty rods apart. The first is at the beginning of the outlet, and the second just below on the same outlet. The remains of the dams are sufficient to bar the progress of passing through in boats, so we had to carry by the first into the water below, and also do this at the second dam. Our bateau was the only thing that promised trouble, but by means of the "painter" we dragged it upon the top of the first dam and let it down below. At the second dam we cleared a passage to the sluiceway through a mass of "dry kic," and our guides ran it through expert, jumping the apron into the water below. An hour's delay did the business, and we found ourselves floating calmly upon the bosom of

EAGLE LAKE.

At the upper end of Eagle Lake, on the west shore, we visited a beaver house, which we found to have been recently built, and noted fresh tracks of beaver thereon. A "beaver house" is built of earth in the form of a mound, resembling a small cock of hay. Over the top and about the sides are placed small round sticks or poles from three to six feet in length. Communication with it is made by means of a narrow passage or channel from the bed of the river, and as you gaze down you will distinctly note the pathway. They feed principally upon the bark of trees, such as birch and poplar, and when they are in luck they will cut wood out in short sections for fuel. All around in the forest adjoining they had left traces of their handiwork in the shape of "beaver cuttings," i. e., stumps of trees from two to ten inches in diameter, standing out from the ground as though shorn of their trunks by an axe. These trees they cut down with their teeth, and so intelligent are they that they know instinctively which way a tree will fall, and never cut one unless it will fall where they wish it. They cut entirely around the tree, and when it falls the top of the stump breaks off in the centre and leaves a cone-shaped point, while the work, to the uninitiated, has the appearance of having been done with an axe.

They also build extensive dams reaching entirely across a river, and thus dam the current at pleasure. For this purpose they also fell trees, fill in the interstices with small stones, which they carry by forming a loop of their broad, flat tails, taking the end in their mouths, and in this way drag the stones where they want them, then a masonry of mud completes the dam.

At the beaver house we saw tracks of moose and caribou. We were now in a wild and seldom visited region, where moose, caribou, deer and beaver abound in great numbers, and where, if the reader will spend a week with a good guide, he will find game to his heart's content. Last winter Capt. Cole trapped eighty-four beaver in this region.

LEAVING THE BEAVER HOUSE, we found our way to

PILSBURY'S ISLAND,

three miles from the head of the lake, where we pitched our tent on the old camping ground of Capt. Cole. It is located on the east side of the island, near the north end. Nearly opposite, and on the east shore of the lake,

SMITH'S BROOK

comes in. This is a favorite haunt of moose, caribou, etc. As our trip was not planned for hunting, we were not fully provided with shooting arms, having only one rifle, a repeater and a shot gun for small game.

Onward night we took a birch, with Sam for a guide, armed with my Winchester, and paddled up Smith Brook or game. As the law was on, I will tell no tales out of

school. Let it suffice the reader's curiosity, however, that he saw both a moose and caribou within shooting distance, and, if called into court to testify, I shall truthfully depose that I distinctly heard the crack of said rifle four times during his absence. The next morning he tried his luck again, but saw only a black bear. He had patiently waited for half an hour for game and saw nothing; then it occurred to both him and his guide, Ned, that a smoke would not come amiss, so, laying down his rifle, first removing the cartridge, he commenced filling his pipe; ere it was half filled, however, a black bear got up within two rods of him (probably had been taking a nap), and before he could get his rifle in readiness said bear took the alarm and galloped off. F— set three or four bullets after him, but Bruin did not tarry, and that was the last seen of him. This was all the hunting for large game done on our trip. Further up the river is a beaver dam, where the fishing is usually excellent. We, however, caught only a few there.

June the 3d we resumed our journey. About three miles from Pilsbury's Island our journey comes to Peet's Island, neither of which are named upon any map I have seen, although both are located properly in Eagle Lake.

It was near this latter island that "Dirty Donald," the hermit, resided for several years, and finally starved to death a few years ago in mid-winter. Having got ten out of provisions, a companion (who had lately joined him) went away after some, but was gone several days, and upon his return found him dead. His hut was located on the west side of Eagle Lake, upon a point of land that makes out into the lake about two miles north from Peet's Island. This point in the lake is known as

THE NARROWS,

and is scarcely half a mile wide.

Before entering the Narrows the lake makes off westerly into a deep bay, at the extreme point of which is

ROSELL BROOK,

which we did not visit, but which affords good fishing in the summer and fall, especially at the mouth.

At the lower end of the Narrows

SMITH'S BROOK

empties in from the east, and affords fine fishing later in the season.

After leaving the Narrows the lake widens up to about two miles, when a fall of about two miles takes you to the head of

"THOROUGHFARE."

a narrow neck of water which unites Eagle with Churchill Lake. A mile and a half to the westward is the foot of Eagle Lake, into the extreme point of which empties

CHASE'S BROOK,

which is classed with the other streams for good fishing. Pursuing our journey we passed through the "Thoroughfare," a distance of five miles, at the foot of which empties in

THOROUGHFARE BROOK,

from the west, which not only affords the best of fishing, but is to be classed with Smith's Brook for large game. As time was an important consideration with some members of our party, we did not tarry at any of the places above-mentioned after leaving Pilsbury's Island. Leaving Thoroughfare Brook you immediately enter

CHURCHILL LAKE,

through which we passed, covering a distance of about six miles, without delay. This brings us to

CHASE'S DAM,

heretofore spoken of as having been burned, and forming one of the most interesting features of the trip. The dam, although so far destroyed as to be rendered useless as a dam, still maintains the appearance of one. The timbers mostly remain, although partly burned and weakened. It is situated at the head of a long sharp pitch of water, which increases in velocity and terror for a mile and a half. For the first half-mile it is rapid, running like a mill-race down a sharp declivity, broken here and there by sharp rocks and boulders. Now it changes its course westerly and tumbles fearfully for the next half mile down a steeper grade, and among sharper and more frequent rocks and ledges, exalting itself into milky foam and dashing spray, as it frots and plunges along its rocky course. Now again its bed regains more nearly its level, and sharp rocks disappear, but it is answered to the cue, and it still tumbles with decreasing velocity for the next half mile, when, like a spent projectile, it settles quietly again into its bed.

Around this rush of waters there was formerly a well-defined road, known as

CHASE'S CARRY,

which was cut out years ago by loggers, but after they had finished decimating the forest, and retired their shadows after them, the road was suffered to grow up again, and we were only able to find it after a most convenient passage. Sam and John had determined to "run" the rapids with the bateau, and Ned and Alf the birches, while Joe was detailed to guide us over the carry. I shall not detail the trials of six men, who tore their way through a tangled mass of bushes and grapevines, headed by Joe, who told Sam he knew the road perfectly. If he did, and we went by the "road," God pity that poor sportsman who has no guide and has to go across lots. The distance by road is supposed to be about half a mile, and we were about three quarters of an hour making it. W— and M— did most of the exploring for the party, while Newt, laughed; S. compromised between the two; and I— well, I had a rifle on my arm, a heavy rod case on my shoulder, and— and big words in my mouth. However, when we reached the foot of the carry it was not many minutes ere we saw a birch rounding the bend of the river above us, some sixty rods away, but, such was the velocity of its coming, that scarcely did it appear in sight ere it was abreast of us, and in a few moments its conical came to harbor upon a safe, although the presence of water in their bottoms told of rough seas they had encountered. The grand spectacle of our whole voyage was now to be witnessed, and one that will ever linger in our memories so long as woods and waters preserve their charms. Our bateau has now rounded the bend and is bearing down upon us with the velocity of an eagle darting for its prey. Capt. Cole stands firmly in the stern, occasionally shifting his paddle from side to side and boxing out the element that would trifle with the course of the bateau, while John, bare-headed, his hair blowing in the wind, stands firmly like a statue in the bow, his paddle poised in mid-air and his settling-pole at hand, watching with an eagle's eye every motion of the current, piercing sharply and quickly here and there for treacherous rocks, lest in a twinkling the gliding craft become a mass of broken fragments; but he is master of the situation, a hero in our own cherished microcosm, as he battles the waters, and with a dexterous sweep of his paddle wards off an approaching danger. Round about dashes the spray as the white water gracefully curves and

divides beneath her bow. Now riding gallantly upon a heaving and throbbing swell, now falling coyly off into the trough of the current, she attains a point opposite us, when, with a few well-timed strokes from both paddles, she obeys their dictate like a thing of life, and gracefully comes to rest upon the bank at our feet.

Running Chase Rapids is no boy's play, and none but the most experienced guides can thoroughly familiar with the quick water ever attempt it, and never, so far as I can learn, with a passenger. Many times, said our guides, while making the transit with the bateau, they could not see each other through the mist and spray which enveloped them, and frequently they could not see the course before them and could only judge of the safety of the passage from their general knowledge of the set of the water. Of course the run is more or less dangerous to be made at different seasons of the year, dependent upon the quantity of water, which increases or diminishes its velocity. In very low water it is more safely made, though less easily perhaps, as part of the bed is nearly dry, and one can pick his way along with a setting pole.

In water like the present, a canoe can run it with less danger than a bateau, as it can keep more out of the swiftest current, being smaller, lighter and having less draft.

At the foot of the carry we all resumed our places, and made rapid progress down the quickened current.

About half a mile below, the river suddenly narrows up and turns to the west again for a short distance, and we have another short pitch called

"THE DEVIL'S ELBOW"

which parties usually carry around as being somewhat hazardous to run, but as there was plenty of water between the rocks we ran it.

It is a nasty spot, however, and must be run with great care, although safe enough in good water to an experienced guide. It is choked with sharp rocks and massive boulders, and the water rushes like a mile-race through its narrow channels. We passed through it without adventure—"killing."

Although you are in the same stretch of water from the time you leave Chamberlain Lake, yet different sections take different names. The bulges are dignified as "lakes" and the smaller sections as a river. From Chase's Carry to Umsaskis Lake, this water is called

ALLEGASH RIVER

and is nine miles in extent. There is nothing worthy of note along the river, which is only some forty rods in width, varying of course in places, save that there is much quick water and the running of it is exciting and exhilarating. Perhaps I ought to add, however, that fishing in it is good at times, and game is abundant along its shores. Ducks were quite plenty when we ran it, although we seldom got near enough to get a good shot. We, however, had one good square meal off white-winged teal. The species of ducks we saw were mostly black, wood, teal and old squaw. About 5 P. M., we entered the waters of

UMSASKIS LAKE

a small lake some four miles long by two wide which forms the head of

LONG LAKE

which, including Umsaskis, is about nine miles long, by some it is called Long Lake. We were advised by Sam there was a good log camp on the east shore of Umsaskis near its head, and we searched it out. It is about one and a half miles down at the foot of or rather midway in a long curve or bend just east of a round point of land which one will readily perceive. Here we tied up for the night, highly pleased with our day's adventure, in which we had accomplished about thirty miles. Should any reader have occasion to propel a sled, or to find an excellent spring of water about forty rods north of the camp or northwest near the old logging road.

GEORGE A. FAY.

Natural History.

(From Appleton's Journal.)

WHY DOES THE CRAB GO SIDEWAYS?

BY ROBERT B. ROOSEVELT.

THE language of the heading to this article seems trivial and beneath the dignity and importance of the question, and the learning which will be displayed in answering it. The word "go" sounds particularly weak and feeble, but it is used in the broadest and fullest amplitude of significance, and covers the ground of "walk, run, swim, crawl, creep, climb, advance, retreat, progress, travel, propel, slide, glide, ramose" and every other method of motion, implied, intimated, or suggested by that small but really strong and expressive word. It is, therefore, no trifling inquiry. Crabs are curious creatures; their ways are not like the ways of other living things, whether of the earth, air, fire or water, and their whole characters possess a side-long quality, like their mode of progression. Most animals move directly forward; others, like the lobster, "advance backward;" a few, like the scallop, are irregular and lightly, unable to control their direction; some fly, some run, some crawl, some hop, some bound, but to the crab and the chess-bishop alone is it permitted to advance or retire at an angle to themselves, as if a cross-eyed man were to attempt to follow his eyes. Pursue a crab with a view to dinner; thrust the net in front of him, and how like a flash of lightning he will dart away to one side or the other, as he thinks escape the easier; place it before his line of flight, and with what incredible speed will he withdraw in the contrary direction, his rear claw "lagging," by no means "superfluous," but with steel-like pincers ready to receive the foe! Endeavor to intercept his retreat, and instantly he changes his course to the opposite one, and again leaves the net far behind. Now, the problem which we propose to solve is why he thus indirectly slides off "on his ear," as it were, and why he does not move as other animals, why, in other words, he is to be an exception to all animated nature.

To obtain a satisfactory answer we must investigate both the moral and physical conformation of our subject. The moral nature can be understood with but casual study, and may be summed up in the two words "stupid" and "perverseness," as the jocose writers puts it, "pure casualness." There is so much positive, active and aggressive ill-temper in a crab that there does not seem to be room for much else, even of negative traits. He has more cruelty and wickedness to the square inch than a Comanche brave with his war-paint on. He is a crustaceous concentration of rage, and would quarrel with himself should the world fail to furnish him sufficient other objects for a perpetual war. He surpasses in appetite for fights the Arkansas "roarer" of ancient celebrity, who

grew low-spirited and fed of heart if a week had gone by without his gouging out somebody's eye or biting off somebody's ear. He will accommodate any one who happens to be looking for a disturbance with the utmost willingness and on the shortest notice and generally without regard to difference of sex. In fact when he gets "mad," which he does on the slightest provocation, he is the maddest thing on earth. His method of carrying on warfare, also, is peculiar, and trying both to his adversary's eyes and feelings. Most times, he allows the latter to approach within a certain distance, when, suddenly and without warning, he springs up and lashes at him with his claws, which, if they miss their mark, clash together like the old-time clank of sword on helmet. The length of these attacks is prodigious; a little baby, as big as a cent piece, can draw blood like a leech, and a full-grown crab can cut through the latter of a boot with ease. When the claws have once fastened on their prey, no power that does not break them can force them apart. It is supposed the word *crustacean*, which the scientific gentry apply to these animals, is only a learned reference to their crusty disposition, so active is their original sin. Another idiosyncrasy maintains their evil reputation. So long as one of them is held by any part of its person, it will lash out at anything else it can reach, and will let go only when itself is released. So, if the enterprising reader should catch a crab by the hind-flipper, he may make a quaint and amusing experiment. There is a little danger attending the attempt in the outset, for these independent crustaceans act on the *non ne laqueo motto*, and do not allow strangers "fooling round" their hind-flippers any more than that other animal of an allied spirit, the turtle, and are apt to reach down for you as you reach out for them. But it is a dangerous duty, they are expected to fate, and fold their arms resignedly against their breasts, like a good man when his hour has come. This subversive state of mind is no deep-seated, however, and if, after getting one at such a disadvantage, you hold it where it can reach the flipper of a brother of the same race, it will feel for him with instant dispatch, and, having once clinched its claw, will cling fast with noble resolution. Then the second crab can be approached to a third, and will seize it in the same manner, and so on till a string of ards long, or as high as the experimenter can reach, will be formed, each crab fastened to the one below, with a death-grip that never relaxes until some limb breaks, or you let go of the first in line—a chain of obstinate ferocity that the student of morals could have much pleasure in investigating provided he did not approach it so closely as to come within reach of a disengaged claw. The purely unscientific person would probably only wonder why a crab should apparently be entirely satisfied to be pinched itself, provided it could pinch some one else, passing along an injury as the great are expected to transmit a favor. Crabs have, however, a means of escape which is peculiarly crustacean. The good book says, "If a limb offend thee, cut it off and cast it from thee, for it is better to lose a limb than that the entire body should fall into hell-fire." Men rarely act on this excellent motto, although it was addressed to them, but the crab community has taken it up with enthusiasm. When a crab is restrained by one claw until the position grows irksome, or its "dander gets rized" beyond restraint, he subdues the offending member, and, leaving it to his more powerful adversary, slips away and escapes the rest of his carcass. If humanity could kick off its legs whenever there was a twinge of gout in a big toe, or could fling away its arms when it had no further use for them, and arms and legs would grow a pain, as quickly as crustacean claws, the practice suggested by the Bible might be more generally followed, and certainly the police force would have much difficulty in manacled its prisoners. Who could properly deride the feelings of one of our guardians of the peace if a criminal whose arms are expected to be cut off, "losing his limbs," as the veracious bath it, should suddenly "leave his hands behind" and arms as a parting gift, and dash down the street with feet made more active by the lessened weight they had to carry? But to man is not given such a precious privilege; he cannot even imagine how he should go about to shake himself clear of his bones; but the crab makes no bones about it; he does not strain after an effect, does not dash around nor strike the offending member—he simply drops it as a fashionist drops a button, with unostentatious quietude. It seems to be an act of mental rather than of physical effort. Having no further use for that limb he drops it off, or, finding himself overcome by his enemy, like a brave but vanquished foe he surrenders his arms, and thus saves life and honor. And then, having got rid of a member in this easy fashion, he recovers it with equal facility. The e are no on-armed pensioners on the crustacean pay-roll, no empty sleeves going about the sanguine streets playing on aqueducts and organs, or appealing to the sympathy of the crabdons; one-ended heroes are left to stump it through life in a feeble search for daily provender. No sooner has the claw been cast aside than another proceeds to grow, hardly off with the old before he is on with the new, and a few months sees the cripple as sound and whole and stout and hearty as ever. All ye who have toothaches, caraches or headaches, all ye who have felons on your fingers or gout in your toes—who have had arm or legs on the altar of your country—all, in fact, who have a limb too few by consequence of its loss, or a limb too heavy by virtue of its bad behavior, go to the crab, observe his ways, and be sad that you cannot do so likewise; that you cannot shut your miseries or recover from your misfortune as easily as he.

Nature has done much for this lively and energetic crustacean; among other favors, it has conferred on him a complete suit of armor. He not merely carries his house but his castle on his back; he is invariably armed *cap-a-pie*, so that enemies cannot break in and steal his *prop-riety*, and he may engage his naturally feeble power without the least apprehension. He is the knight-errant of the watery world, and backs down from no danger; his nearest initiation of a retreat being to slip off sideways. But this comfort of a coat of mail has its disadvantages; the crab grows, but his castle does not. There comes a time in the life of every crab, and it comes very often, at least once a year, and perhaps much oftener, when he has not only grown too big for his boots, but too large for his iron skin, when he must swell or burst when the very weight of his best and his chest-protector, crushes him, and he is cabined, cribbed, confined, within a limit all too small for his swelling proportions. In plain words, he fluids himself in a very tight place and many a less enterprising animal would give up the struggle, and perish like the old-time State criminal who stood mute at his trial under the *peine due et forte*. But not so the crab, who is always equal to the occasion, whatever the occasion may be. He does not cut his coat to his cloth, he does not shrink within himself, nor give up hope of ex-

pansion, nor surrender the confidence of a grander and broader future—he simply sheds that skin. He moves from that house, he leaves his armor for a smaller man; he casts off all that he has worn, and he enters a new and more comfortable one when he enters Fifth Avenue as a leader of society. To an ordinary mortal, endowed with no more capacity than an ordinary mortal possesses, the withdrawal of a crab from its shell would seem an impossibility, but the crustacean certainly performs the feat. The claws and legs and flippers are much larger at the extremities than they are at the joints, the claws especially being often a half-dozen times as large as the body. The crab, however, passes the narrowest of the yielding tube of compression or forcing an enlargement of the smaller portion. The eyes are under protuberances, like knobs placed at the end of delicate filaments one quarter as thick as themselves, yet they are pulled through the unyielding tube which incloses the filament between them and the body. Every portion, even the finest and most delicate, not thicker in places than a hair, is safely and successfully withdrawn, and the case is left with all its parts and armor in perfect, as complete and unincumbered as if the animal had been a deacon, and its flesh had been washed away. The act completed, and to one side lies the shell, to the other lies the crab, alive, but feeble, helpless and unresisting, a prey to any foe, even the miserable little minnow, who can bite a piece out of his exposed sides or run off with the end of one of his claws. The armor is gone and the warrior knows it, his courage and pluck have gone with it; he can now only "suffer and be still." There is danger every ripple of the wave, in every motion of the water, in the approach of every living thing, bird, beast or fish. Death hangs over him like a pall, and he cannot even make an effort to escape. His limbs are too feeble to support him, he cannot run, walk, crawl nor swim; he is aware of this, and makes no attempt to move, either to fly, or to fight, but allows himself to be picked up, or crushed, or eaten, without the semblance of a protest—and just then how good he is to eat; how other fishes love him, what bait he makes, what a delectable manna he provides for the birds, how the birds look for him, and the little fishes "go for him!" His days of power have for the moment passed, and it is no wonder his nature is perverted, for in those hours of helplessness he suffers wrongs and cruelties enough to curb the temper of a race of angels. Every creature's fangs are turned against him, and it is only natural that when he recovers his strength he turns his pincers against every creature.

At this point another serious question presents itself, as serious in many respects as that at the head of the article, and that question is: Which is the best to eat, a soft or a hard crab? So important and far-reaching a matter, a matter that affects the happiness of every man, woman and child who eats crabs (and what man, woman or child fails to eat crabs if he, she or it can get crabs to eat?)—on so tremendous a question it will not do to make any mistake. And yet who can tell? When cooks disagree, who shall decide? And so hard a problem it will be if after we have all eaten soft crabs as the "notion" further of gustatory bliss, have sighed for soft crabs, have sung of soft crabs, have sorrowed after soft-crabs plots, if after all this pride of stomach a future Soyr, or Blot, or Savarin shall arise and tell us we were mistaken, that a soft crab does not compare in flavor, in delicacy, in excellence, with a hard crab; that we have all erred and lived our lives and ruined our digestions in vain! When such undeniable authority shall prove to us that our entire treatment of the crab was a miserable error, that we should have continued our industries to convert the hard shell into the soft, that our distinctions between a "shedder" and a "burster" and a "buckram" were but wasted learning. What shall we say and do then; how turn the hands of time back and make up for our lost crabbed opportunities? Yet there are those among us who believe that such will be the final fate of all who prefer soft crabs to hard.

But let us return to our crab, leaving his comparative excellence aside for his comparative position. The moment he is out of his old house he swells himself; he assumes all the rotundity that the utmost possible consumption of water will attain. This is not out of pride at the extraordinary feat he has just accomplished, but as a precautionary measure for the future. Upon his size now depends the size of his new coat which Nature is making and fitting for him, and he must leave room for all the good dinners he intends to eat for the next many months. As he incased again in his fresh garments, he has no further chance to expand except by another revolution like the one he has just gone through. Having swollen, he lies still till his coat hardens into mail, which it does in a few days. At this time occurs another strange event which no man has successfully explained. A hard crab is very frequently seen swimming with a soft one in his arms; now, the reason for this is something that "no fellow has found out." It may be love or it may be hunger, it may be that the hard shell means to make the soft shell a part of his armor, or it may be that the soft one holds the crab strained to his ear or breast, so that when one is captured the other is taken also, and it has been observed that the two are generally, if not invariably, of different sex. So this strange romance may be founded, like so many human ones, on "the old story," or it may be but a repetition of a still older story reaching way back to the days of Adam immediately on his expulsion from paradise, the struggle for life. As our great poet Joaquin Miller so beautifully sings:

"O master dear, I greatly fear
Our crab will come to harm,
For I saw last night the 'hard crab'
With the 'soft crab' on its arm!"

This eccentricity may therefore signify the end of that soft crab, or it may signify the beginning of a new one, but soft and hard crabs extend far down through all the generations. For, after all, crabs are but mortal, and are dominated by the power of love and hunger like human beings; they may have wonderful gifts, but they are subject to a common fate, and food and folly fill as much of their lives as they do of man's.

We all know the famous definition of a crab, that it was a "red fish that went backward"—and the criticism to the effect that there were only two errors in the explanation, as a crab was neither red nor a fish nor did it go backward! But this is over-true. The best part of a crab's existence, if not of his life, is when he is red—for only after he is cooked do most of our race know him. By heat he turns from a yellow-green to radiant red; he is purified and improved by fire. The most skeptical will admit that, if he is not absolutely a fish, a scale-fish, with the flesh outside and the bones inside, he is a sort of fish, a "variation," as science terms it, a shell-fish, which, in its eccentric and perhaps

as noble nature, prefers to wear the bones outside and keep the flesh safely housed within. Moreover, if the ichthyologically learned were required to define accurately and positively what a fish is, and to determine if a crab would include whales equally with stick-backs and the voracious plaice of the California coast with the flying-fish and the dolphins, and if they would accept the curious double-eyed species of the West Indies, which have one-half of the optic lens adapted to looking through the atmosphere and the other half for use under water, they would certainly experience trouble in keeping out of so large and liberal a class our persevering and interesting subject, the crab. And, as to his mode of progression, did not so great and fishy an authority as the "mely choly Dine" in *Simpson* say, "If it be a crab, you could go backward?" Taking all this together, therefore, it is not surprising that a crab should carry some of his obliquities with him, even into a dictionary. He often gets into strange places, and does strange things when there. For the length of the muddy salt-water creeks of our coast he digs holes and makes narrow but comfortable houses, where he lies and gazes out all day long upon the interest of the placid scenery of his watery realm, waiting, possibly, for a careless minnow to come within reach of his claws, and with apparently as little on his mind as a fashionable New York loafer, hanging around the doors of a city hotel, or staring vacantly, with feet higher than head, from its sitting-room window, on the passing Broadway pedestrians. In the bays where the mud of the creek is replaced by sand, he digs similar holes on the shallow flats, and, backing down into them, passes the days peering into the sky and waiting till the clouds shall fall into the sun, or raise the temperature of the water to boiling heat, so that he can be ready cooked for the salamander who is to take the place of man when that interesting event shall have occurred. At least this is all that we know that he does, except when we walk about barefooted in his neighborhood, when we discover that, in taking to housekeeping, he has not surrendered his predatory propensities. It may be that he retires in doors, like a mode-t animal, to change his shirt—anything may be, or may not be, in the matter, but it is certain that he does not, if he does, the difficulties of the operation must be greatly increased by the closeness of his quarters. There is scarcely room for himself, and certainly not for himself and his shell, when he has cast off the latter, and his struggles to get out of his covering, which at the best are severe and exhausting, would be rendered twice as hard in so limited a space. Still, he has an odd way of getting into odd places for odd purposes. What could have induced the subjects of Pharaoh when, three thousand five hundred years ago, they were erecting a monument to the glories of their pharaoh, to dig under the monument four crabs? They were doubtless an intelligent and civilized people; but what connection could the highest intelligence and most perfect civilization discover between a crab and an obelisk? There are few points of similarity between these objects, and the most casual observer will note many differences. An obelisk does not seem, by any natural process, to suggest a crab, nor a crab an obelisk. Our American predecessors, the wise Indians of our coast, must have captured, killed and eaten crabs for the time during which "the memory of man runneth not to the contrary," and yet there is no evidence that they were in the habit of erecting obelisks. Possibly the engineers of the ancient Egyptians were a jocular and sarcastic race, and thus covertly conveyed to future times an all-gorical intimation of the cruel and crabbed character of the Pharaonic government. Or the great kings themselves may have said, in their plenitude of pride, that the world is changed on the back of a tortoise—as all the world knows—their kingdom should be torse on the back of that far nobler and higher animal, the crab.

But these speculations are carrying us away from the main purpose of this paper, and leaving us almost to forget the question that was to be answered. For our better enlightenment we have taken a casual and cursory look into the moral and physical conformation of the creature. We have curd the reader's mind, and we grow, but it is necessary to draw a line somewhere, and we cannot enter the vast field of the idealistic, symbolical, and imaginative. What we want is a simple answer to a plain inquiry, and can scarcely be expected to look back three thousand years and search through all the realms of fancy to find it. We desire to keep the reader to the point, and not allow him or her to stray off into byways and roundabout lanes, enticing and attractive as they may appear. The question is, Why does the crab go sideways? And we are prepared to give it up by this time, and will furnish the only and correct reply, that is, the only reply which the present state of science accepts as correct—for, as to the future, science reserves to itself the right to change its views as freely as it has changed them about every other problem on every other conceivable question concerning the "heavens and the earth and the wars under the earth," and every living, moving, breathing or inanimate thing therein or thereabout. But at present science and experience unite in saying that a crab goes sideways for no reason, and no other, and for a good reason it seems to be that a crab can go in no other way. For, judging by what we know of a crab's disposition, if there was any other way in which it could go, it would go that way. That's all. And if any one has a better reason let him present it, or "forever after hold his peace."

THE HOOP SNAKE.

NEW HAVEN, Conn., July 23.

Editor Forest and Stream:

Suppose that you now open a discussion on the natural and mythical history of the hoop snake. It has been my custom when traveling through any part of the country to talk with the people on all natural history subjects, and the snakes have no sooner been brought forward than the hoop snake invariably comes rolling in.

No one has ever seen one of the animals in question, but few men are so far behind in the knowledge of the ways of serpents as not to have "heard of" some wonderful fables connected with this cousin of the sea serpent.

I do not believe there is a town in the United States that does not contain innumerable believers in the hoop snake, and where the various legends have originated is as much a mystery as the creature itself.

The naturalists all know that this snake is an utter impossibility, but the people in general are equally certain that their great uncles and brother-in-laws have had experiences with the species.

Let all persons who are familiar with any points relating to the hoop snake contribute their knowledge to *FOREST AND STREAM*, and we shall have some interesting matter.

MARK WEST.

Game Bag and Gun.

FOREST AND STREAM GAME TABLE.

OPEN SEASONS.

The seasons, in which it is lawful to shoot game in the several States and Territories, open as designated in the following table.

States.	Deer.	Woodcock.	Quail.	Ruffed Grouse.	Pinn. Groose (Prairie Chickens).	Wild. Goose.	Wild Turkey.
Ala.	Oct. 29.	Sept. 15.	Sept. 15.	Oct. 1.	Oct. 1.	Oct. 1.	Oct. 29.
Ariz.	Sept. 1.	Sept. 15.	Sept. 15.	Oct. 1.	Oct. 1.	Sept. 15.	Sept. 15.
Cal.	Sept. 1.	Sept. 1.	Sept. 1.	Oct. 1.	Oct. 1.	Sept. 1.	Sept. 1.
Conn.	Oct. 1.	Oct. 1.	Oct. 1.	Oct. 1.	Oct. 1.	Sept. 1.	Prohibited.
Del.	July 1.	Nov. 1.	Nov. 1.	Nov. 1.	Nov. 1.	Nov. 1.	Nov. 1.
D. C.	Aug. 15.	Nov. 1.	Aug. 15.	Sept. 1.	Sept. 1.	Oct. 1.	Sept. 1.
Idaho.	Aug. 15.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Ill.	Sept. 1.	July 4.	Oct. 1.	Oct. 1.	Aug. 15.	Aug. 15.	Sept. 1.
Ind.	Sept. 1.	July 10.	Oct. 1.	Oct. 1.	Aug. 15.	Aug. 15.	Oct. 1.
Iowa.	Sept. 1.	July 10.	Oct. 1.	Oct. 1.	Aug. 15.	Aug. 15.	Oct. 1.
Kan.	Sept. 1.	Aug. 15.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Ky.	Sept. 1.	Aug. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Me.	Oct. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Mass.	Nov. 1.	Aug. 15.	Oct. 15.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Mich.	Sept. 1.	Aug. 15.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Minn.	Sept. 1.	July 4.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Miss.	Oct. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 15.	Sept. 15.
Mont.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 15.	Sept. 15.
N. H.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
N. J.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
N. Mex.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
N. Y.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Ohio.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Ore.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Pa.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
R. I.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.

Texas.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Va.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Wash.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Wis.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Wyo.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.

Antelope.—Col., Sept. 1; Idaho, Aug. 1; Neb., Oct. 1; Nev., Aug. 1; N. Mex., Sept. 1; Utah, Aug. 1; Wyo., Aug. 15.
Goatsuckers.—Cal., Sept. 1; Del., Sept. 1; N. Mex., Sept. 1.
Partridge.—Me., Oct. 1; N. H., Sept. 1.
Doves.—Ala., Aug. 1; Cal., July 1; Ga., Oct. 1; Kan., Aug. 1; Miss., Sept. 15; Mo., Aug. 1; N. H., Sept. 1; N. J., Sept. 1; N. Mex., Sept. 1; Nev., Aug. 1; N. Mex., Sept. 1; Or., July 1; Utah, Aug. 1; Wyo., Aug. 15.
Geese.—Me., Oct. 1; N. H., Sept. 1; Ore., July 1.
Mountain Sheep.—Cal., Sept. 1; Nev., Oct. 1; Nev., Aug. 1; N. Mex., Sept. 1; Utah, Aug. 1; Wyo., Aug. 15.
Pronghorn.—Cal., Sept. 1; N. Mex., Aug. 1; Mo., Aug. 1; Nev., Sept. 1; N. H., Aug. 1; Pa., July 15; R. I., Aug. 1.
Rabbit.—Del., Sept. 1; N. J., Sept. 1; N. S. J., Aug. 25; Pa., Sept. 1.
Squirrels.—Del., Sept. 1; D. C., Sept. 1; N. J., Sept. 1; N. C., Oct. 15.
Squirrels.—Dakota, Aug. 15; D. C., Sept. 1; Nev., Sept. 1; N. C., Oct. 15.

In the States there are special county laws. A deer law applies to sale or possession. A wildcat not protected on the coast. A Upper Peninsula deer season opens Aug. 15. A California quail protected to the 1st of Sept. in the season of 1891 on the prairie. A wild goose, Sept. 1. First open woodcock season began July 1. A wild turkey, Sept. 1. Quail shooting prohibited to Nov. 1, 1891, in counties of Washington, Schuylkill, Saratoga, Albany, Wildford. A wild turkey in Long Island waters opens Oct. 1. Woodcock shooting in Dutchess County prohibited during August. A deer law relates to female deer only.

THE MINNESOTA PRAIRIE CHICKEN SEASON does not open until Sept. 1.

PRAIRIE CHICKEN SHOOTING.

THE reports which have come to us of the pinnated grouse, or prairie chicken, shooting in the West this season are very promising. Our correspondents are uniformly of the opinion that the season of 1891 on the prairie will be all that the sportsman could ask. The law is in Dakota, Illinois, Iowa, Missouri, Nebraska and Wisconsin August 15, and in Indiana, Kansas and Minnesota Sept. 1. Reports have come to us during the past week as follows, and we hope that our friends at the West may supplement these letters with news of the game supply in other localities:

POINTS ON THE CHICAGO AND NORTHWESTERN RAILWAY.
 THE CHICAGO AND NORTHWESTERN RAILWAY CO.,
 CHICAGO, Ill., July 25.

Editor Forest and Stream:

I am advised that chickens are plentiful on our Winona and St. Peter line, west of Rochester, and on our Iowa Division, west of Des Moines. I give the names of some of the towns where sportsmen will find hotel accommodations, and in some cases I have the names of the principal hotels. Where the names of the hotels are not given sportsmen will find good accommodations without any trouble. I do not know the exact rate in any case, but most of the best Western hotels charge transients from \$1.50 to \$2 per day.

Our rule is to make a rate of one and a half for the round trip for hunters. No charge is made for carrying guns and traps and hunting tackle in baggage-cars, nor are baggage men allowed to make any charge for the same.

Iowa.—Des Moines, Cedar Rapids (hotels: Grand Hotel, Northwestern Hotel, Coleman Hotel), Tama, Nevada, Ames, Boone, Ogden, Marshalltown, New Jefferson, Denison, Dunlap, Wall Lake, Sac City, Battle Creek, Mapleton.

Minnesota.—Rochester (hotels: Cook House, Pierce House), Owatonna (hotels: Arnold House, Park Hotel), Waseca, Mankato, Kasson (hotels: Raymond Hotel), St. Peter (hotels: Nicollet House, Chamberlain House), Northwestern, Redwood Falls (hotels: Commercial Hotel, Exchange Hotel), Tracy, Marshall, Lake Benton.

Dakota.—Watertown, Brookings, Volga, Desmet, Huron.

Truly yours, W. H. STERNETT, G. P. A.

GAMER IN KANSAS.

MANHATTAN, Kan., July 26.

Editor Forest and Stream:

The chicken season in Kansas does not open until Sept. 1, the last Legislature having given this bird one more month holiday than it formerly enjoyed. The season closes December 1. Quail cannot be shot until October 1, and the season extends until the first of January. One good act the Legislature did, however, was to remove their protection from the destructive crow. This was done in spite of the protests

of one granger member, that if the crow was driven away the country would be visited by a small white worm that would reduce the State to a howling desert. The crow had to go, however, and our sportsmen are awaiting him in migration to the best of their ability. Some think they must have heard of the law, as they are more careful to keep out of gunshot than before their exemption from him.

This season promises to be a good one for the sportsman in this vicinity. Quail are very numerous, comparatively few being killed last year. Even on the outskirts of this city the voice of the Bob White may be heard in the evening, and in the course of an evening's ride numerous broods will be flushed.

The chicken makes its home on the high prairie during the summer months, and parties in from those sections report them very numerous.

The blue and Kansas rivers unite at this point, and large sloughs are numerous, so it may well be imagined that there is high sport during the fall and winter. Geese and ducks are very numerous, the former on the rivers, and the latter both on the rivers and sloughs.

When the season fairly opens I shall give you some further notes. Just now there is nothing to hunt except squirrels, and they are not very numerous. AMATEUR SPORTSMAN.

THE PROSPECTS IN IOWA.

MORNING SUN, Iowa, July 27.

Editor Forest and Stream:

The chickens are here in fair numbers, and as the law is off the 15th of August, we expect some sport in that line soon. Plover are beginning to come in, and there are said to be some snipe in the Iowa bottom.—M. S. I.

LINCOLN, Neb., July 27.

Editor Forest and Stream:

There is good plover shooting in the vicinity of the city. Two of us went out the other afternoon and bagged between thirty and forty. One can hear quail in every direction when outside the city limits, and twice I have heard them near the State house within the last two weeks. Reports from the country are to the effect that prairie chickens are plentiful. The shooting season opens Aug. 15. I fear the game laws here are not very strictly observed. The city club offers a premium of \$50 for the conviction of a member of any club for violating the law, and \$10 for the conviction of any other person. Still I apprehend chickens are being shot all the same. Thermometer 51 this A. M.—BRIE H. POLK.

THE MINNESOTA SEASON.

MINNEAPOLIS, Minn., July 28, 1891.

Editor Forest and Stream:

The open season on prairie chicken in Minnesota commences Sept. 1. The Legislature changed the date to Sept. 1 at its last session, 1880-81. Let me quote from the Revised Statutes approved Feb. 20, 1891: "No person shall kill or pursue with intent to kill any prairie chicken, nor any white-breasted or sharp-tailed grouse or prairie chickens, saving only during the months of September, October and November; nor any quail or partridge, nor any ruffed grouse or pheasant save only during the months of September, October and November."

Prairie chicken are reported quite plenty in this vicinity, and we anticipate good sport, if the coveys are not broken by farmers' boys and unprincipled gunners who style themselves sportsmen.

I saw a party from the Rice Lakes (about fifteen miles or less) here, and famous for its grand "pass" shooting) who says there is more rice in the lakes this year than there has been for fifteen years. This argues well for some excellent sport among the rice ducks this fall. If any of your correspondents want any wild rice, I think I could make arrangements for getting some this year. F. V. H.

MORRIS, Minn., July 28, 1891.

Editor Forest and Stream:

Chickens are more plentiful than before for years. Ducks also in large numbers. SUBSCRIBER.

OUR DETROIT LETTER.

THERE is consternation in the camp of the pigeon shooters. The place where the Michigan State Medical Association does its shooting is a part of the Hamtramck race track inclosure called deer-shooting Park. Of this G. O. Voorhees is lessee and he rents to the Medical Association. The law of this State, under which the Society for the Prevention of Cruelty to Animals operates, contains this clause: "Any person who shall rent any building, shed, room, yard, ground or premises for the purpose of * * * shooting any animal, fowl or bird, or shall knowingly suffer or permit the use of any * * * ground or premises belonging to him or under his control for any of these purposes shall, on conviction thereof be adjudged guilty of a misdemeanor."

The penalty is imprisonment in jail not exceeding three months, a fine not exceeding \$100, or both such fine and imprisonment as the Court shall determine.

Mr. Voorhees yesterday received from James Forsyth, Secretary of the Society for the Prevention of Cruelty to Animals, a letter notifying him that the Society had finally resolved to enforce the law with respect to pigeon shooting. In consultation with some of the leading men of the Medical Association, Voorhees has said that he will make a test case in the courts if the Association will stand by him. In my opinion it is extremely doubtful if the men who shoot will undertake anything of the kind. They think the easiest way is the best way. They are not anxious to go into a wrangle with the law, and some of them are more than half inclined to think that after all they deserve the appellation of "pigeon murderers," which has frequently been applied to them heretofore. That is to say, there is in the minds of some of them a half-defined notion that it is not the manifest thing in the world to trap and kill half-played-out birds after the fashion of bushwhackers, and I think I begin to observe signs of disintegration in the pigeon shooting clubs in the West. In respect to the present controversy, the Society for the Prevention of Cruelty occupies the van, and ground, having put the shooters on the defensive and being right in the strength of law and the undoubted drift of public sentiment. I do not quite know how this will strike the readers of FOREST AND STREAM, but if facts are what they want, they may possibly thank me for writing and this journal for publishing the naked truth. I express no opinion of my own on the merits of the case. What I have written here is to-day history.

The law in relation to woodcock shooting takes effect in this State August 1, but in the meantime the sportsmen are bawling away, and woodcock are selling at \$4 to \$4.50 a dozen. Even at these figures they are very scarce, and the market is not especially eager for them. I have detected some signs of conscience among sportsmen here, and it is a genuine pleasure to record the fact that most of them have steadily refused to pull a trigger, though July is, in theatrical parlance, an "open date" in Michigan.

At Point Mouillee Marsh, President Colburn informs me, and the promise for September 1 is uncommonly gorgeous. At the St. Clair Flats ducks are plentiful already, but rascals are killing them at an outrageous rate. They do not bring them to town, nor let it be known who they are, else the genuine sportsmen would invoke the law upon them in a half minute.

That bear, which two hunters of Rogers' Lake presented to E. H. Gillman a few months ago, and which was sent over to Belle Isle by the latter, escaped soon after its arrival. Yesterday a policeman, going through a woods on the island, found the poor bear dead. It had fouled its chain in a log, and unquestionably starved to death.

The fourth annual tournament of the Howell Gun Club will be held at Howell, Mich., on the Detroit, Lansing and Northern Railroad, August 9, 10 and 11. It is to be a tournament with glass balls, open to the world and one or two counties of New Jersey. There will be a no pro rata purse each day, and in addition to the regular purses, the management announce a citizen's purse of \$150 in gold, after purse No. 8, on August 11. EYE-OPENER.

HINTS IN THE ART OF DUCK SHOOTING.

BEING A FAMILIAR LETTER TO ONE WHO HAS BEEN A GREENHORN.

My Dear Fellow:

Of course not; you will not own up that you were ever what you now style a "greenhorn." Oh, no; you never hired a punter and paid him two dollars per day to locate you on some old root or point over deep water where he could position all day, with an ocean of high or wide-winged duck to stare him out if he happened to fly in front of you, where you could "swing" on him without losing your balance, while the said punter went off "to scare him up," which scaring up consisted in locating himself on some good feeding ground in shallow water, where he did scare them up—without shooting—well knowing that the ducks were "wounded," and would straggle along back all day to the crack of his old muzzle loader, and the loading of his old dug-out to its utmost, with "green heads," "hen mallards," "grants," etc. Toward which he pushed a long back, asks, "How many you got?" and picks up your "ge," which consists of one that fell behind the point of deer-tongue, one or two in the high grass and one or two that can be retrieved. A few days later you are surprised to learn that Old Smith—with this same punter—"killed ninety-seven ducks and was in at three o'clock."

How many seasons did it take you to learn that the best places were saved by these punters for just such good fellows as Old Smith, and that Old Smith gave the said punter that che-p single-barreled breech-loader, with which he kills crabs and Old Smith and ducks for the market when he engaged in finding the best places for Smith or guarding the same against encroachments of "greenhorns" and others that are not up to the dodge of fees and perquisites?

How many seasons did it take you to learn to depend on your own judgment, to watch the flights and go where the ducks were, and where they would come back, and to get a good blind if it took till noon? You must well remember how you were prone to stop at the first point where you saw a few ducks flying over, and how after getting partly blinded you would think you saw greater numbers over some other point where you would pull up stake and move. Of course you don't remember in your early days "racking a cap" at a duck at least three gun shots high, and then saying "Gosh! if that gun had gone off I'd a-killed him sure!"—and you wondered why I laughed.

And you don't remember getting vexed at a man because he called you "Mark" when your name is George. Oh! no. You were never a "greenhorn." You never jumped up when a duck was 200 yards from you, and coming straight on? Why, I've seen you do it, to wit, after time, soon after season, and you remember how you would occasionally throw up your gun when the duck was within thirty or forty yards, take it down again, and then regret that you did not shoot, as you imagined he was too far away? Also, how much time was wasted while pulling or pulling across the flat or other open water by stopping and crouching every time a duck could be seen within half a mile.

Again, how long did it take you "to learn the marsh?" And not to be lost by the time you had pulled 500 yards from the open channel? You had it the slightest idea of making your surroundings? It took years to learn to note things in the distance; to mark the risings and depressions of wood-tops, hills, curious y-shaped trees, house tops, etc., against the sky—things that can be seen long after twilight. You were always obliged to leave the shooting grounds by four o'clock for fear of being caught out after dark.

It is I, you were all "greenhorns." It takes years upon years of active ducking to get half an education in that line; to learn the effects of winds of varying force and direction, stages of water at which to visit after time, the color of the clothing you should wear and of the boat you use. How many times I've seen your old black hat or coat blowing up and down when you were a mile from me across the marsh, while I would scarcely catch a glimpse of either hunters at one-quarter the distance, who had had and out of "dead grass" color late in the fall, or the proper shade of green in September, or of brown if blended in the deer-tongue.

How smart we feel and how we pity the green one in his great yawn, with perhaps a half-standing keel that prevents his going into shallow water—his splashing, noisy ways, back splashes, etc. And yet, let us strike one of those old "natives"—"marsh rats"—that have been market shooting and "putting" all their lives; then how green we feel and how fully we appreciate the impossibility of our ever learning half his craft—a knowledge that seems to be a second nature, although acquired during a life-time in the "marsh."

We go out with our parent decoys, our patriguns, our improved boats, our fancy blinds, and get thoroughly hid in the high grass on the point. After awhile along comes your old "marsh rat." His old eyes peer under the bottom of his old skin. He pulls ashore, never noticing the occasional duck that may fly past; cuts a small armful of canes; locates

in the shallow water between two points; sticks the few canes in the mud around his boat and binds down the tops. This makes a "blind" that does not seem to hide him or his boat, any more than the traditional ladder did the girl who undressed behind it; still the ducks do not seem to see him. The course shot, that he always uses, go out of his old gun with a kind of "swish," caused by his two drams of powder and one cut wad, but the duck comes down, be it anywhere under sixty yards, and he seldom shoots further unless he "chances" a long shoot at a canvas back or goose.

Perhaps you never noticed the difference between the "swish" of his gun and the bang, roar and reverberation of the ten-pound, ten-gauge, five-dram breech-loader, with two pink-edge wads over the powder. And speaking of targets, his gun won't make one. Why, a thirty-inch circle, at forty yards, wouldn't have a dozen pellets in it—but then there would be four or five near the centre.

Our native is not out this time for profit. Fowl are not plenty enough. He gets half a dozen in a half hour just enough for a "mess"—pulls up and goes home, with his old gun again in the bottom of the boat. He makes no false motions, but if a duck comes within range of that skiff it falls down, perhaps only winged, and of course dives. Does our "marsh rat" shoot at his flattened head on the surface of the water? Not much. He picks up his paddle, and there is a lively race for the grass, with strokes at the duck every time his head pops out of the water, not giving him time to "get his wind." Long before the grass is reached the head collides with the paddle, and a dead duck is added to the pile in the skiff.

Now, we will go over to Blue Hill Point, where this same "native" shot all last week, and the week before. See here, now! If you want to get out of the boat, get out over the bow. Don't you see the grass is not disturbed at all, except just where his boat was shoved in, and one or two little trails where he has gone in after ducks dropped in the grass. Now, supposing this same point had been shot off from by some of the members of the "Winnettsville Gun Club," it would look as if it had been run over by a herd of cattle, and you could not get any well-appointed wild fowl within fourteen gun shots of the place. Oh, my boy, there's many a point to be learned, many a wrinkle not dreamed of in your philosophy—not in mine, for that matter—not in any man's who can only hunt two or three weeks in the course of a year.

MR. HUNT-ABLE.

Cleveland, Ohio.

RABBIT TAKING TO WATER.

Editor Forest and Stream:

If any readers of this paper have ever seen a rabbit take to the water when pursued by dogs I should like to hear from them.

I witnessed one instance of it one day in February, 1863, while stationed as ordnance sergeant at Fort Banks, ten miles above New Orleans on the Algiers side of the river.

The planters use a half-breed hound and setter for rabbit-hunting; they run faster, but don't follow as true as the beagle, and, consequently, run over and take up time in picking up the trail. We were running a pack of six or eight of these dogs. They had started a rabbit, and were coming toward me at a good pace, every dog giving tongue that made the woods fairly ring with the exciting music. I saw the cotton-tail just flying over the ground, some of the pack were running, I think, by sight. He suddenly stopped in an old ditch or drain. There was about ten or twelve inches of water in the ditch into which my long-eared friend settled himself, leaving above the surface his eyes and nose only.

The pack came up, jumped the ditch pell-mell and, as the last dog cleared the bank, the rabbit crept out and took his back trail. Talk about tail-sailing! Why he went like a streak of lubricated lightning, and by the time the pack got through fighting over their hinder and straightened out on the new direction the cotton-tail had ten minutes' start and the whole State of Louisiana for a race-course. H. L. M. Lynn, July 22.

SHRIMP SHOOTING OFF COBB'S ISLAND.—Parties direct from the Virginia coast report huge bags of bay birds at Cobb's Island, though at Cape Charles Light and vicinity fine sport has been had. Dr. George Williams, P. Savage, Capt. Sturgis of Northampton County, left on Monday for an extended hunt off the broadwater. As each man carried one hundred pounds of shot, a keg of powder, and a sack of salt to preserve the game, the hunt must be immense. If they get back alive I will send you an account of their trip. The Doctor has just bought a new gun from New York. It's a choke bore, and made by —. Well, as this ad. isn't paid for I won't mention makers.—CHASER.

THE CLUBS OF WESTMINSTER, Md.—We have a Forest and Stream Club of Carroll County at this place in addition to the Carroll County Rifle Association. The Forest and Stream Club is now in camp on the banks of the Menocacy, some nineteen miles west of this place, on the Western M. R. R. The camp consists of a frame structure 12 by 20 feet, containing twelve bunks, each 40 inches wide; a tent 14 by 22, and a bunk for the cook. Some very nice struts of bass have been taken already, particularly with crawfish and tadpoles, but the fishing promises to be better later in the season. W. H. R.

GILROY ROD AND GUN CLUB.—The officers of the Gilroy, Cal., Rod and Gun Club for the present year are: E. H. Farmer, president; Geo. Holloway, vice-president; H. M. Briggs, treasurer; E. Levesley, secretary. The club is in a flourishing condition, and a field trial of dogs in the fall is proposed.

GOOD GROUND, SHIMMEECK BAY.—Bay snipe shooting continues to be good. Parties bringing in good bags every day. The best bag of the season, so far, was brought in by Horace Waldo and son, July 26, sixty-four in a half-day's shoot. We are looking for a flight of willet every day.—WILLIAM N. LARK.

WILKINSON'S CHARLIER for filling rifles and shot shells is a simple, accurate and perfectly satisfactory tool. We have carefully tested its merits, and find that its manufacturer's claims for it are well founded.

BEAVERS IN GEORGIA must be in goodly numbers if the report is true that a Greene (Ga.) County trapper made \$700 trapping them last season.

A good excuse for sickness of yourself and family is that you don't use Hop Bitters.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

FRESH WATER.		SALT WATER.	
Salmon, <i>Salmo salar</i> .		Starletfish, <i>Ammodytes americanus</i> , &	
Brown Trout, <i>Salvelinus fontinalis</i> .		gracilis, etc.	
Rainbow Trout, <i>Salmo trutta</i> .		Yellow Perch, <i>Perca flavescens</i> .	
Dolly Varden Trout, <i>Salmo malinche</i> .		Striped Bass, <i>Morone chrysops</i> .	
Grayling, <i>Thymallus tricolor</i> and <i>T. montanus</i> .		White Bass, <i>Ambloplites</i> . (Two species).	
Bass, <i>Micropterus salmoides</i> and <i>M. paludis</i> .		War-worm, <i>Chonobryttus gulosus</i> .	
Muscalonge, <i>Esox nubilus</i> .		Crappie, <i>Pomoxis nigromaculatus</i> .	
Pickereel, <i>Esox reticulatus</i> .		Bachelor, <i>Pomoxis annularis</i> .	
Pike or Pickerel, <i>Esox lucius</i> .		Shad, <i>Alosa sapidissima</i> .	
Pike-perch (walleye) pike)			

SALT WATER.	
Sea Bass, <i>Centropristis atrarvis</i> .	
Striped Bass or Rockfish, <i>Roccus</i>	
White Perch, <i>Morone americana</i> .	
Burgfish or Taylor, <i>Pomatomus saltatrix</i> .	
Scup or Sheepshead, <i>Stenotomus argenteus</i> .	
Pollack, <i>Pollockus carolinensis</i> .	
Tautog or Blackfish, <i>Tautoga onitis</i> .	
Maskerel, <i>Cybinus macrochirus</i> .	
Weakfish or Squeteague, <i>Cynoscion regalis</i> .	
Spot or Spot, <i>Leiostomus xanthurus</i> .	
Channel Bass, Spot, or Redfish, <i>Sciaenops ocellatus</i> .	
Sheepshead, <i>Archosargus probatocephalus</i> .	
Kingfish or Barb, <i>Menticirrhus undulatus</i> .	

BOTTOM FISHING, ground-baiting with the float and sinker, and the like, are doubtless all very well in their way; and will, perhaps, in many instances, even with sporting fishes, be found the most killing, as they are clearly the easiest methods; while, with other varieties they are the only modes that can be adopted; still they are to fly-fishing, or spinning the minnow, what shooting sitting is to shooting the quail; and the fisher who is proud of lugging out of their element a trout by main force, aided by a job-worm or roe-bait, stands in the same relation to him who baits his three or four baits with the artificial fly and single gut artistically cast, as the gunner who pot-hunts his bagful of birds—treating his ruffed grouse, and butchering his quail in their luddies on the ground—does to the crack shot, who stops his cock in a blind brake, with the eye of faith and the finger of instinct, or cuts down his wild-fowl, skating before the wind at the rate of a mile a minute, deliberately, rapid and unerring.

—FRANK FORESTER.

NEW FISIES IN NEW PLACES.

I HAVE read with much interest several articles on food fishes, their true names and classifications; also a desire expressed that any new development in new localities might be promptly forwarded to the FOREST AND STREAM.

Primarily, I would that you might be assured I am no antiquary in my hobby, although I claim from a former residence of years on that noblest of rivers of our continent, the St. Lawrence, to know the muscalonge, pike, pickerel, black and rock bass, perch, sturgeon, eels, catfish and bull-heads (the last in particular, when I see a Frenchman deftly separating the head and hide from the toothsome flesh). I, too, have seen and relished those "shiners," so called, which did so abound in years gone by in the lumbering regions of Canada; and here in our beautiful Lake Madison, just a pleasant ride from our city, we have, besides our excellent fishes, the black bass lifting the steelyard bars at 5 lbs., a very striking resemblance to those Rideau "shiners" (not them—"fellahs," who, years ago, played such adroit tricks on Her Majesty's customs officials, giving to smugglers from the American side that aid and comfort which is so refreshing to the fraternity in a tight place, and when hotly pressed), but that excellent fish which your correspondent has so filly portrayed. Here the people call him bass, and thus are so aptly and so grandly deceived, I believe them to be of the veritable family of shiners whereof your correspondent speaks.

Here I will end my rambling introduction, and give to you and your readers something new to us here in the Minnesota river. Three years ago, while passing along the streets of our city with a friend, who is regarded as a good fisherman and a mighty hunter within, we met a lad with a string of fish, three of which were so singular in looks and so unlike anything known to inhabit our waters that he asked the lad where he caught them. "Just below the slaughter-house" was the reply. I was nonplussed, although I spoke of their strong resemblance to the shad. They were a little like the whitefish of Lake Ontario, with some resemblance to what we call the sheepshead. After a careful examination, participated in by others who came along, it was agreed by all to be an entirely new comer to our river.

No more of the kind were reported until one year ago last fall when a resident of this city going to his stone quarry on the opposite side of the river in his boat, noticed large numbers of fishes going down stream, several of which he struck with his paddle and secured. Just below where this occurred the river widened out into a kind of amphitheatre of sand with very shallow water, the main channel being quite narrow. Ice had begun to form on the shoal water the thickness of window glass, and, casting his eye down stream, he saw numerous fish turned on their sides, the white of which was distinctly reflected through the ice. Running his boat as far as the draft of water would permit he jumped overboard, paddle in hand, and here commenced the "slaughter of the innocents," who, having mistaken the channel, kept on till they had to turn on their sides, and so on till they grounded, being fairly wedged between the sand below and the ice above. His catch, with nothing but his paddle to break the ice and shove them was large, and characterized by the Norwegian grit that defied the ice-striking out with his paddle as often as he saw the dead re-enforced by the living. That evening he filled a large wheelbarrow full from his morning's catch, and on his way to his home he stopped to show me his lad and for counsel as to the kind of fish, whether good, bad or indifferent. They varied in size from one pound to two pounds. I saw at a glance they were of the same family as those caught by the lad the year before, though somewhat larger. In the absence of Goldsmith's Animated Nature, Agassiz being dead, as a dernier resort, I took Webster's Unabridged Dictionary, and there, on page 1,143 I found the "roach" almost a facsimile of the barrow load before me in size and description. But Webster says they are "inhabitants of fresh water, silver white color with greenish back, of the carp family." Why were they in such vast numbers making toward the Mississippi if they were not also visitors to the salted seas? The drift of these fishes continued with little abatement for three

days, and our Norwegian friend needed no pork barrel to resort to that winter.

Almost simultaneously with this incident which I have but imperfectly described there appeared in the Ogdensburg, N. Y., *Republican*, an account of the appearance and take in the large bays of the River St. Lawrence above that city of a similarly described fish much smaller in size than those taken here, and the statement was made that the name and classification of this new species of fish which so nonplused the Ogdensburghers was referred to a man who pretends to know much about fish, who pronounced it a cross between the shad and white-fish. I will only add that my Norwegian friend gave me my pick out of several consecutive barrow loads, and that I found the flavor much like that of the shad, as fat as they, while the small bones (their principal objection), like those of the shad, were innumerable in multitude and infinite in places, but with plenty of time and true patience, duplicated with baked snowflake potatoes, there never recurred a "dead lock" in satisfying the demands of a healthy empty stomach.

F. B. H.

BLACK BASS FISHING NEAR NEW YORK.

THE guests of Stockbridge's Hotel, Central Valley, N. Y., have enjoyed unusual fine black bass fishing this season. Messrs. Geo. Andreae and Walter Hendricks took yesterday in all eighteen bass, nine of them with the artificial fly. Mr. Andreae took one weighing 8 1/2 oz., with a 9 oz. Conroy split bamboo fly rod—a very handsome brace of fish and hard to match anywhere.

Mr. Fred Malleson, of the firm of Conroy, Bisset & Malleson, 65 Fulton street, took, two days before, fourteen bass weighing 28 lbs. Mr. Malleson will be happy to furnish directions to any anglers wishing a good day's sport. H.

IS IT TARPON OR TARPUM?

WE refer to the common name of the *Megalops thersoides*. We notice that Dr. Gill, in his list of east coast fishes, gives its common names as "jew fish" and "tarpum," as used in Bermuda. Prof. Goode, in his catalogue of the fishes of the Bermudas, gives its name as "tarpum." We have noticed that our Floridian correspondents spell it "tarpum." Who knows what the name is derived from and what its orthography should be?

We have written to our correspondent "Al. Fresco" on this subject, and he writes as follows:

JACKSONVILLE, Fla., July 29. I cannot post you regarding the word "Tarpum." It is used on the S. W. coast. I never heard any one say "tarpum." Until I corrected the error they were called jewfish by the fishermen at the Bar. They are being hooked daily, but not landed. They can only be described as "greed lightning," acrobats *par excellence*. AL. FRESCO.

FISHING IN WESTERN NEW YORK.

OSWEGO, N. Y., July 20. BLACK BASS are in full season here. Within the past three days more than 200 fish have been taken with fly and minnow from our river within the city limits. Two days since a two by ten man with two friends in a sloop rigged yacht from this river made Stony Island, thirty miles north-east from here, and in three hours fishing with the fly upon Cat Island bar took forty bass, five of which weighed over three pounds each.

In Lake Neautawau, distant twelve miles from this city, on Friday last, five bass were taken with the minnow, weighing, respectively, five, four and one-half, three and two of two pounds.

The above record is authentic. The Governor has signed the law authorizing the expenditure of funds necessary to erect fishways upon various rivers of the State, and the Superintendent of Public Works has promised to put the ways into the Oswego immediately upon receipt of plans. Next season, we shall, I believe, be able to offer salmon fishing to the sporting public, even as now we claim to offer the finest bass fishing in the State. F. E. H.

BLUEFISH IN GREAT SOUTH BAY.

IN the early part of the season the bluefish did not enter the bay freely, and no large catches are reported. Now the fish are more plenty and enter the bay, but are immediately captured by the pound net's which are set in the channel.

We are also informed that drift nets are used at night to capture these fish. The use of pound nets is distinctly prohibited by law in these waters, and also the use of the drift nets. Notwithstanding this the law has been publicly violated for years past by the fishermen, and the people who live on the bay hesitate, for some reasons best known to themselves, to complain of them. This netting destroys all other fishing, and renders the bay a place to be avoided by anglers, who would spend more money among the towns located on it than the worth of the fish taken, ten times over.

It is surprising that the hotel keepers and others interested allow this violation of the law to go on. We now call on the Game Protectors of the State to take action on this evil and abate it at once.

SALMON IN CANADA.—Metropedia, July 28.—We have had continued rains of late. The river is in flood, and nothing being done at present. Mr. Wm. N. Habersham, who is fishing the upper waters of the river has had fine sport, killing twenty-two fish, all very large, in five days.—G. F. H.

SCARCITY OF SALMON IN NEW BRUNSWICK.—ST. JOHN, New Brunswick, July 29.—Samuel Whitson, of the Fisheries Department, has gone to Grand Falls to look after the fish-hatching there. He finds the greatest difficulty in procuring eggs for the hatching, and speaks very despondingly of the prospects of salmon-fishing in the river. The catch of salmon has been so enormous during the last few years that the supply of parent fishes is almost exhausted.—B.

SALMON IN FRASER RIVER.—Advices from New Westminster, B. C., July 20, say: The run of salmon on the Fraser River surpasses all precedent or calculation. Steamers and towboats laden to the gunwales with fish are arriving at the canneries faster than they can be packed, hands being scarce and labor high, causing many fish to be thrown away. One steamer has just arrived with over nine thousand fine salmon. The "catch" will be enormous, as eight canneries, representing \$500,000 are in full blast.

A LARGE ADIRONDACK TROUT.—Mr. Edward Everett Eames, of the firm of H. B. Claffin & Co., caught in Lake Mechem, in the Adirondacks, on June 26, a trout weighing two and one-half pounds, and safely landed him. His guide was Al. Burr. This is the largest trout caught there this season.—A.L.

TROUT KILLED BY A CLOUD BURST.—On July 24 a cloud burst in the head of Mill Creek Cañon, San Bernardino County, Cal. It tore trees up by the roots and moved huge boulders from their beds, sending them crashing down the cañon. An innumerable quantity of trout was killed.—*Virginian City Enterprise*.

THE HERRING.

BY PROFESSOR T. H. HUXLEY.

(Abridged from "Nature.")

LIKE most fishes, the herring is propelled mainly by the sculling action of the tail-fin, the rest serving chiefly to preserve the balance of the body, and to keep it from turning over, as it would do if left to itself, the back being the heaviest part of the fish.

The mouth of the herring is not very large, the gape extending back only to beneath the middle of the eye, and the teeth of the upper and lower jaws are so small as to be hardly visible. Moreover, when a live herring opens its mouth, or when the lower jaw of a dead herring is depressed artificially, the upper jaw, instead of remaining fixed and stationary, travels downward and forward in such a manner as to guard the sides of the gape. This movement is the result of a curious mechanical arrangement by which the lower jaw pulls upon the upper, and I suspect that it is useful in guarding the sides of the gape, when the fish gulps the small living prey upon which it feeds.

The only conspicuous teeth, and they are very small, are disposed in an elongated patch upon the tongue, and in another such patch, opposite to these, on the forepart of the roof of the mouth. But, if the mouth of a herring is opened widely, there will be seen, on each side, a great number of fine, long, bristle-like processes, the pointed ends of which project forward. These are what are termed the gill-rakers, inasmuch as they are fixed, like the teeth of a rake, to the inner sides of those arches of bone on the outside of which the gills are fixed. The sides of the throat of a herring, in fact, are, as it were, cut by four deep and wide clefts, which are separated by these gill arches, and the water which the fish constantly gulps in by the mouth flows through these clefts, over the gills and out beneath the gill-covers, aerating the blood, and thus effecting respiration, as it goes. But, since it would be highly inconvenient, and indeed injurious, were the food to slip out in the same way, these gill-rakers play the part of a fine sieve, which lets the water strain off, while it keeps the food back. The gill-rakers of the front arches are much longer than those of the hinder arches, and, as each is stiffened by a thread of bone developed in its interior, while, at the same time, its sides are beset with fine, sharp teeth, like those on a brier, I suspect that they play some part in crushing the life out of the small animals on which the herrings prey.

Between these arches there is, in the middle line, an opening which leads into the gullet. This passes back into a curious conical sac which is termed the stomach, but which has more the character of a crop. Coming out from the under side of the sac and communicating with it by a narrow opening, there is an elongated tubular organ, the walls of which are so thick and muscular that it might almost be compared to a gizzard. It is directed forward, and opens by a narrow prominent aperture into the intestine, which runs straight back to the vent.

The chief food of the herring consists of minute crustacea, some of them allied to the shrimps and prawns, but the majority belonging to the same division as the common *Cyclops* of our fresh waters.

Everybody must have noticed the silvery air-bladder of the herring, which lies immediately under the backbone, and stretches from close to the head to very near the vent, being wide in the middle and tapering off to each end. In its natural state it is distended with air; and, if it is pricked, the elastic wall shrinks and drives the air out, as if it were an india-rubber ball. When the connections of this air-bladder are fully explored, it turns out to be one of the most curious parts of the organization of the whole animal.

In the first place, the inflated end of the sac or crop into which the gullet is continued runs back into a very slender duct which turns upward and eventually opens into the middle of the air-bladder. The canal of this duct is so very small and irregularly twisted, that, even if the air-bladder is squeezed, the air does not escape into the sac. But, if air is forced into the sac by means of a blowpipe, the air passes without much difficulty the other way, and the air-bladder becomes fully distended. When the pressure is removed, however, the air-bladder diminishes in size to a certain extent, showing that the air escapes somewhere. And, if the blowing up of the air-bladder is performed while the fish is under water, a fine stream of air-bubbles may be seen to escape close to the vent. Careful anatomical investigation, in fact, shows that the air-bladder does not really end at the point where its silvery coat finishes, but that a delicate tube is continued thence to the left side of the vent, and there ends by an opening of its own.

Now, if the air-bladder of all fishes is, to begin with, an outgrowth from the front part of the alimentary canal, and there are a great many fishes in which, as in the herring, it remains throughout life in permanent communication with the gullet. But it is rare to find the duct so far back as in the herring; and, at present, I am not aware that the air-bladder opens externally in any fishes except the herring and a few of its allies.

There is a general agreement among fishermen that herrings sometimes make a squeaking noise when they are first taken out of the water. I have never heard this sound myself, but there is so much concurrent testimony to the fact that I do not doubt it; and it occurs to me that it may be produced, when the herrings are quickly brought up from some depth, by means of this arrangement. For under these circumstances the air which the air-bladder contains expands to such a degree, on being relieved from the pressure of the water, that deep-sea fishes with a closed air-bladder which are brought to the surface rapidly are sometimes fairly turned inside out by the immense distance or even bursting of the air-bladder. If the same thing should happen to the herring the like misfortune would not befall it, for the air would be forced out of the opening in question, and

might readily enough produce the squeak which is reported.

At the opposite end of the air-bladder there is an even more curious arrangement. The silvery coat of the air-bladder ends in front just behind the head. But the air-bladder itself does not terminate here. Two very small canals, each of which is not more than a two-hundredth of an inch in diameter, though it is surrounded by a relatively thick wall of cartilage, pass forward, one on each side, from the air-bladder to the back of the skull. The canals enter the walls of the skull, and then each divides into two branches. Finally, each of these two dilates into a bag which lies in a spheroidal chamber of corresponding size and form; and, in consequence of the air which they contain, these bags may be seen readily enough shining through the side-walls of the skull, the bone of which has a peculiar structure which surrounds them. Now, these two bags, which constitute the termination of the air-bladder on each side, are in close relation with the organ of hearing. Indeed, a process of that organ projects into the front chamber on each side, and is separated by only a very delicate partition from the terminal sac of the air-bladder. Any vibrations of the air in these sacs, or any change in the pressure of the air in them, must thus tell upon the hearing apparatus.

There is no doubt about the existence of these structures, which, together with the posterior opening of the air-bladder, were first described by two very able and sixty years ago, by the eminent anatomist Weber; but I am afraid we are not much wiser regarding their meaning than we were when they were first made known. In fishes in general there can be little doubt that the chief use of the air-bladder is to diminish the specific gravity of the fish, and, by rendering its body of nearly the same weight as so much water, to render the business of swimming easier. In those fishes in which the passage of communication between the air-bladder and the alimentary canal is closed, the air is no doubt secreted into the air-bladder by its vessels, which are often very abundant. In the herring the vessels of the air-bladder are very scanty; and it seems probable that the air is swallowed and forced into the air-bladder just as the loach swallows air and drives it into its intestine. And, as I have already suggested, it may be that the narrow posterior canal which leads from the air-bladder to the exterior is a sort of safety-valve allowing the air to escape, when the fish, rapidly ascending or descending, alters the pressure of the water upon the contained air.

The hypothesis may be put forward with some show of plausibility, but I really find it difficult to suggest anything with respect to the physiological meaning of the connection between the air-bladder and the ear. Nevertheless such an elaborate apparatus must have some physiological importance; and this conclusion is strengthened by the well-known fact that there are a great many fishes in which the air-bladder and the ear become connected in one way or another. In the carp tribe, for example, the front end of the air-bladder is connected by a series of little bones with the organ of hearing, which, in the fish, is very sensitive to such vibrations. In the case of the fish, it is probable that these bones in the hinder end of the skull. But here the air-bladder, which is very large, may act as a resonator; while in the herring the extreme narrowness of the passages which connect the air-bladder with the ear renders it difficult to suppose that the organ can have any such function.

In addition to the singular connection of the ear with the exterior by the roundabout way of the air-bladder, there are membranous spaces in the walls of the skull by which vibrations can more directly reach the hearing ear. And there is no doubt that the fish is very sensitive to such vibrations. In a dark night, when the water is phosphorescent, or, as the fishermen say, there is plenty of "merfire," it is a curious spectacle to watch the effect of sharply tapping the side of the boat as it passes over a shoal. The herrings scatter in all directions, leaving streaks of light behind them, like shooting-stars.

Probably 10,000 is an under-estimate of the number of ripe eggs shed in spawning by a moderate-sized female herring. But I think it is safer than 30,000, some estimators, which appears to me to be made in forgetfulness of the very simple anatomical considerations that the roe consists of an extensive vascular framework as well as of eggs; and, moreover, that a vast number of the eggs which it contains remain immature, and are not shed at the time of spawning.

Herrings which have attained maturity, and are distended by the greatly enlarged milt or roe, are ready to shed the contents of these organs, or, as it is said, to spawn. In 1862 we found a great diversity of opinion prevailed as to the time at which the operation takes place, and we took a great deal of trouble to solve the question, with the result which is thus stated in our report:

"We have obtained a very large body of valuable evidence on this subject, derived partly from the examination of fish-men and of others conversant with the herring-fishery; partly from the inspection of the accurate records kept by the fishery officers at different stations, and partly from other sources; and our clear conclusion from all this evidence is, that the herring spawns at two seasons of the year, in the spring and in the autumn. We have hitherto met with no case of full or spawning herrings being found in any locality, during what may be termed the solstitial months—namely, June and December; and it would appear that such herrings are never (or very rarely) taken in May, or the early part of July, in the latter part of November or the early part of January. But a spring spawning certainly occurs in the latter part of January, in February, in March and in April; and an autumn spawning in the latter part of July, in August, September, October, and even as late as November. During all parts of the British coast, therefore, February and March are the great months for the spring spawning, and August and September for the autumn spawning. It is not at all likely that the same fish spawn twice in the year; on the contrary, the spring and the autumn shoals are probably perfectly distinct; and if the herring, according to the hypothesis advanced above, come to maturity in a year, the shoals of each spawning season would be the fry of the twelve-month before. However, no direct evidence can be adduced in favor of this supposition, and it would be extremely difficult to obtain such evidence."

I believe that these conclusions, confirmatory of those of previous careful observers, are fully supported by all the evidence which has been collected, and the fact that this species of fish has two spawning-seasons, one in the hottest and one in the coldest months of the year, is very curious.

Another singular circumstance connected with the spawning of the herring is the great variety of the conditions, apart from temperature, to which the fish adapts itself in performing the function of spawning. It is found that the herrings spawn at depths of from ten to twenty fathoms, and even at greater depths, and in a sea of full oceanic saltness. Nevertheless, herrings spawn just as freely not only in the narrows of the

Baltic, such as the Great Belt, in which the water is not half as salt as it is in the North Sea and in the Atlantic, but even in such long inlets as the Södel in Schleswig, the water of which is quite drinkable and is inhabited by fresh-water fish. Here the herrings deposit their eggs in two or three feet of water, and they are found, along with the eggs of fresh-water fish, sticking in abundance to such fresh-water plants as *Polypogon*.

Nature seems thus to offer us a hint as to the way in which a fish like the shad, which is so closely allied to the herring, has acquired the habit of ascending rivers to deposit its eggs in purely fresh water.

If a full female herring is gently squeezed over a vessel of sea-water, the eggs will rapidly pour out and sink to the bottom, which they immediately adhere with so much tenacity that, in half an hour, the vessel may be inverted without their dropping out. When spawning takes place naturally, the eggs fall to the bottom and attach themselves in a similar fashion, but at this time the assembled fish dart wildly about, and the water becomes cloudy with the shed fluid of the milt. The eggs thus become fecundated as they fall, and the development of the young within the ova sticking to the bottom commences at once.

The first definite and conclusive evidence as to the manner in which herring-spawn is attached and becomes developed that I know of was obtained by Professor Allman and Dr. MacBain in 1862, in the Firth of Forth. By dredging in localities in which spent herring were observed on the 1st of March, Professor Allman brought up spawn in abundance at a depth of fourteen to twenty-one fathoms. It was deposited on the surface of the stone, shingle and gravel, and on old shells and coarse shell-sand, and even on the shells of small living crabs and other crustacea, adhering tenaciously to whatever it had fallen on. No spawn was found in any other part of the Forth; but it continued to be abundant on both the east and the west sides of the Isle of May up to the 13th of March, at which time the incubation of the ovum was found to be completed in a great portion of the spawn, and the embryos had become free. On the 25th scarcely a trace of spawn could be detected, and nearly the whole of the adult fish had left the Forth.

Within the last few years a clear light has been thrown upon this question by the labors of the West Baltic Fishery Committee, to which I have so often had occasion to refer. It has been found that artificial fecundation is easily practiced, and that the young fish may be kept in aquaria for as long as five months. Thus a great body of accurate information, some of it of a very unexpected character, has been obtained respecting the development of the eggs and the early condition of the young herring.

It turns out that, as is the case with other fishes, the period of incubation is closely dependent upon warmth. When the water has a temperature of 53 deg. Fahr., the eggs of the herring hatch in from six to eight days, the average being seven days. And this is a very interesting fact when we bear in mind the conclusion to which the inquiries of the Dutch meteorologists, and, more lately, those of the Scottish Meteorological Society appear to tend—namely, that the shoals prefer water of about 55 deg. At 50 deg. Fahr., the period of incubation is lengthened to eleven days, at 46 deg. to fifteen days, and at 38 deg. it lasts forty days. As the Forth is usually tolerably cool in the month of March, it is probable that Professor Allman's estimate came very near the truth for the particular case which he investigated.

The well-known "whitebait" of the Thames consists, so far as I have seen, almost exclusively of herrings under six months old, and as the average size of whitebait increases, from March and April onward, until they become suspiciously like sprats in the late summer, it may be concluded that they are the progeny of herrings which spawned early in the year in the neighborhood of the estuary of the Thames, up which these daily little fish have wandered. Whether it is the general habit of young herrings, even of those which are spawned in deep water, to migrate into the shallow parts of the sea, or even into completely fresh waters, when such are accessible, is unknown.

Fishermen distinguish four states of the herring. Fry or sile, when not larger than sprats; maties, when larger than this, with undeveloped roe or milt; full fish, with largely developed roe or milt; and spent or shotten fish which have recently spawned.

Herring-fry of the size of sprats are distinguished from full fish not merely by their size, but, in addition, by the very slight development of the milt or roe, and by the accumulation of fat in the abdominal cavity. Bands of fat are found in the mesentery alongside the intestine, and filling up the interspaces between the pyloric ceca.

Maties (the name of which is a corruption of the Dutch word for a maiden) resemble the fry in these particulars; but, if they are well fed, the deposit of fatty and other nutritive matter takes place, not only about the abdominal viscera, but also beneath the skin and in the interspaces of the flesh.

As the fish passes from the matie to the full condition, the milt and roe begin to grow at the expense of the nutriment thus stored up, and as these organs become larger and occupy more and more space in the abdominal cavity the excess of nutritious substance is transferred to them. The fatty deposit about the intestine and pyloric ceca gradually disappears and the flesh becomes poorer. It would appear that by degrees the fish ceases to feed at all. At any rate there is usually no food in the stomach of a herring which approaches maturity. In all these respects, therefore, the development and balance between the history of the herring and that of other fishes, such as the salmon—the parr corresponding to the herring-fry or sile, the grilse and the "clean fish" of larger size to the maties.

At length spawning takes place, the accumulated nutriment, transformed into eggs or spermatid fluid, is expelled, and the fish is left in that lean and depauperated state which makes a "shotten herring" proverbial. In this condition it survives for a short time, and the milt and roe are now exhausted and the fish can be blown up with air like empty bags. If the spent fish escapes its myriad enemies, it doubtless begins to feed again and once more passes into the matie state in preparation for the next breeding season. But the nature of this process of recuperation has yet to be investigated.

When they have reached the matie stage, the herrings, which are at all times gregarious, associate together in conspicuous assemblages, which are called shoals. There are sometimes of prodigious extent—indeed, eight or nine miles in length, two or three miles in breadth, with an unknown depth, are dimensions which are credibly asserted to be sometimes attained. In these shoals the fish are closely packed, like a flock of sheep straying slowly along a pasture, and it is probably quite safe to assume that there is at least one fish for every cubic foot of water occupied by the shoal. If this be

so, every square mile of such a shoal, supposing it to be three fathoms deep, must contain more than 500,000,000 herrings. And when it is considered that many shoals approach the coasts, not only of our own islands, but of Scandinavia and the Baltic and of Eastern North America, every spring and autumn, the sum total of herrings which people our seas surpasses imagination.

You read any day and some new books on the natural history of the herring, you will find a wonderful story about the movements of these shoals: how they start from their home in the polar seas and march south as a great armada which splits into minor divisions—one destined to spawn on the Scandinavian and one on our own shores—and how, having achieved this spawning raid, the spent fish make their way as fast as they can back to their Arctic refuge, there to repair their exhausted frames in domestic security. This story was started in the last century, and was unfortunately adopted and disseminated by our countrymen, Pennant. But there is not the least proof that anything of the kind takes place, and the probabilities are wholly against it. It is, for example, quite irreconcilable with the fact that herring are found in cods' stomachs all the year round.

In the matter of its migration, as in other respects, the herring comes abreast with the salmon. The ordinary habitation of both fishes is no doubt the moderately deep portion of the sea. It is only as the breeding-time draws near that the herring (and the salmon) leaves the deep and approaches the shore toward the surface and approach the land in great shoals for the purpose spawning in relatively or absolutely shallow water. In the case of the herring of Schlei we have almost the connecting link between the exclusively marine ordinary herring and the river-asalming salmon.

In 1864 we had to listen to dolorous prophecies of the coming exhaustion of the Scotch herring-fisheries. The fact that the returns showed no falling off was ascribed to the improvement of the gear and methods of fishing, and to the much greater distance to which the fishermen extended their operations. Yet what has really happened? The returns of subsequent years prove, not only that the average catch of the decade 1869-78 was considerably greater than that of the previous decade, but that the years 1874 and 1880 are absolutely without parallel in the annals of the Scotch herring-fishery, 1,000,000 harrs. having been cured in the first of those years, and 1,600,000 in 1880. In the decade 1859-68 the average was 670,000 barrels, and the highest 859,000.

In dealing with questions of biology, *a priori* reasoning is somewhat risky, and, if any tells us "it stands to reason" that such and such things must happen, I generally find reason to doubt the safety of his standing.

It is said that "it stands to reason" that destruction on such a prodigious scale as that effected by herring-fisheries must tell on the supply. But again let us look at the facts. It is said that 3,500,000,000, or thereabout, of herrings are every year taken out of the North Sea, and that the Atlantic. Suppose we assume the number to be 3,000,000,000, so as to be quite safe. It is a large number undoubtedly, but what does it come to? Not more than that of the herrings which may be contained in one shoal, if it covers half a dozen square miles—and shoals of much larger size are on record. It is safe to say that, scattered through the North Sea and the Atlantic, at one and the same time, there must be scores of shoals, any of which would go a long way toward supplying the whole of the great Scotch herring-fishery. I do not believe that all the herring-fish taken together destroy more than one per cent. of the total number of herrings in the sea in any year, and I see no reason to swerve from the conviction my colleagues and I expressed in our report, that their destructive operations are totally insignificant when compared with those which, as a simple calculation shows, must regularly and normally go on.

Suppose that every mature female herring lays 10,000 eggs, the fish are not increased by by man, and that their numbers remain approximately the same year after year. It follows that 9,998 of the progeny of every female must be destroyed before they reach maturity. For, if more than two out of the 10,000 escape destruction, the number of herrings will be proportionately increased. Or, in other words, if the average strength of the shoals which visit a given locality is to remain the same year by year, many thousands times the number contained in those shoals must be annually destroyed. And how this enormous amount of destruction is effected will be explained by the consideration that the shoals of the fish-wales, the porpoises, the gannets, the gulls, the codfish and the dog fish, which accompany the shoals and perennially feast upon them: to say nothing of the flat-fish, which prey upon the newly-deposited spawn; or of the mackerel, and the innumerable smaller enemies which devour the fry in all stages of their development. It is no uncommon thing to find five or six—nay, even ten or twelve—herrings in the stomach of a cod fish, and in 1863 we calculated that the average of the great Scotch herring-fishery is lost the number of herrings which would in all probability have been consumed by the cod fish captured in the same waters if they had been left in the sea.

Man, in fact, is but one of a vast co-operative society of herring-catchers, and the larger the share he takes, the less there is for the rest of the company. If man took none, the other shareholders would have a larger dividend, and would thrive and multiply in proportion, but it would come to pretty much the same thing.

As long as the records of history give us information, herrings appear to have abounded on the east coast of the British Islands, and there is nothing to show, so far as I am aware, that, taking an average of years, they were ever either more or less numerous than they are at present. But, in remarkable contrast with this constancy, the shoals of herrings have elsewhere exhibited a strange capriciousness—visiting a given locality for many years in great numbers, and then suddenly disappearing. Several well-known shoals of the herring have been attributed to an imaginary cause, from fishing on a Sunday to the offence caused to the fish by the decomposing carcases of their brethren dropped upon the bottom out of the nets. The truth is that absolutely nothing is known on the subject, and that little is likely to be known until careful and long-continued meteorological and zoological observations have furnished definite information respecting the changes which take place in the temperature of the sea, and

the distribution of the pelagic crustacea which constitute the chief food of the herring-shoals. The institution of systematic observations of this kind is an object of international importance toward the attainment of which the British, Scandinavian, Dutch and French Governments might wisely make a combined effort.

A great fuss has been made about trawlers working over the spawning-grounds of the herring. "It stands to reason," we were told, "that they must destroy an immense quantity of the spawn." Indeed this looked so reasonable that we inquired very particularly into a case of the alleged malpractice which was complained of on the east coast of Scotland, near Pittenweem. Off this place there is a famous spawning-ground known as the Traith hole, and we were told that the trawlers worked vigorously over the spot immediately after the herring had deposited their spawn. Of course our first proceeding was to ask the trawlers why they took the trouble of doing what would be of little or no benefit to them. Their answer was reasonable enough. It was that the previous abundance of flat fish which were to be found on the Traith at that time. Well, then, why did the flat-fish congregate there? Simply to feed on herring-eggs, which seem to be a sort of flat-fish's caviare. The stomachs of the flat-fish brought up by the trawl were, in fact, crammed with masses of herring-eggs.

Thus every flat-fish caught by the trawl was an energetic destroyer of herring arrested in his career. And the trawling, instead of injuring the herring, captured and removed hosts of their worst enemies. This is how "it stood to reason" when one got to the bottom of the matter.

I do not think that any one who looks carefully into the subject will arrive at any other conclusion than that reached by my colleagues and myself—namely, that the best thing for governments to do in relation to the herring-fisheries is to let them alone, except in so far as the police of the sea is concerned. With this proviso, let people fish who like, and they will prosper. At present I am sure I repeat the conviction we expressed so many years ago that there is not a particle of evidence that anything man does has an appreciable influence on the stock of herrings. It will be time to meddle when any satisfactory evidence that mischief is being done is produced.

Fish Culture.

THE FILAMENTOUS APPENDAGES OF THE OVA OF BONY FISHES AS A CONTRIVANCE FOR THEIR SUSPENSION AND PROTECTION DURING INCUBATION—VIVIPARITY OF CYPRINODONTES.

By JOHN A. RYDER.

It has been known for a long time that the eggs of certain cartilaginous fishes were encased in a tough, horny envelope of a somewhat quadrangular form, which has four long processes or tendril-like filaments produced from each angle of the ovarian covering, the whole thus appearing as a sort of four-pronged fork-like object in the sea, to support the egg while it incubates, so that it is prevented from being buried in the mud or sand of the sea bottom and smothered. While this appears to be the undoubted function of the filamentous appendages of the eggs of cartilaginous fishes, there is no longer any doubt about the existence of eggs of bony fishes provided with filamentous appendages which have a similar function.

In July of last year, while on an experimental trip down the Chesapeake on behalf of the U. S. Fish Commission, and while the steamer *Albatross* was lying at anchor in the Bay, near the Virginia shore, Messrs. Satterthoff and Hamlin, two of the most experienced spawners employed by the Commission, noticed great numbers of a small fish playing about the vessel, attracted by the lights and the noise. On examination these proved to be a species of the *Atherinidae*, commonly known as silversides or friar-fish, or *Chirostoma nola* of the systematists. Many of them were found to be sexually mature females, from which an abundance of ova were obtained for study, but unfortunately no more than a few of the eggs were secured, and in impregnating any eggs so as to watch what must be a very interesting type of development. The eggs, however, after lying for a short time, showed the germinal disk developed independently of impregnation.

The singular feature about them, which is of considerable interest in this connection, is the presence of four long filaments which are attached to one pole of the egg and coiled around the egg-membrane in a spiral manner, completely enveloping the ovum, which is held in the center of the spiral. These filaments, when in the sea water these filaments twined from the surface of the ovum and become entangled with those of their neighbors, so that a number of ova would soon be found hanging together by the filaments. The use of these appendages seems clearly to be that of a support in the water while the egg is undergoing incubation, for it was found that not only would the filaments of adjacent eggs become entangled, but also that of bits of grass or stout seaweed was drawn through the water among the filaments of the eggs, and that to avoid this it was necessary to restrain the eggs with a fine net to free the ova from their newly acquired support. The ease with which such filaments might become supporting organs may be supposed from the fact that they are nearly half an inch in length and are attached to an egg about one-sixteenth of an inch in diameter.

During the present season of 1881, in conducting some investigations for the U. S. Fish Commission at Olney, Northampton County, Va., in company with Col. McIlwain, Commissioner of Fisheries for the aforementioned State, we obtained an abundance of impregnated ova of the silverside or *Atherinidae* (*Chirostoma nola*).

These eggs were provided with a vast number of filamentous appendages scattered over the whole surface of the egg, which measures one-seventh of an inch in diameter. They are at first coiled close around the surface of the egg-membrane, but when after oviposition they free themselves from contact with the membrane and become twisted and entangled among the filaments of the adjacent eggs so that large clumps held together in this way are soon formed. The filaments differ from those of *Chirostoma* in having an enlarged base, or attachment, to the egg-membrane, which becomes abruptly smaller as it is prolonged into the filament. Professor Haeckel, of Jena, first described the eggs of *Bellone* in 1855, but stated that the filaments were internal. Prof. Kolliker in 1858 described the eggs of *Aplocheilichthys*, and he, too, regarded them as internal. But he still regarded them as one of the layers of the membrane, which our observations show is not the fact, and that their function is essentially as described by us, i. e., to attach the egg to foreign objects while incubating in the water. A similar evidence of this is found upon the pond snail, *Lymnaea*, in the vicinity of Cherrystone, to which Col. McDonald tells me great numbers of gar eggs are found attached by the filaments with which they are covered. Haeckel states that strong acids will not dissolve the filaments, but that they eventually undergo solution when immersed in strong alkalies.

An investigation of the ovaries of *Chirostoma* and *Bellone* shows that these filaments are already far developed when the eggs are less than half grown or mature. *Scomberops* has also been shown to be provided with these filaments, and we are here furnished with a tolerable degree of probability to finding them present on the eggs of the flying fish, *Ereopneustes*, *Hemirhamphus* and allies, and not improbably in *Labridæ* of Cope, a fresh-water fish allied to *Chirostoma*. In fact the whole of the *Peregrines* should be ex-

amined with regard to this point, comparing the *Myglidae* and *Tetragonuridae*. Among the *Hemirhamphidae* (*Chirostoma* and *Aplocheilichthys*), the eggs are found to be provided with minute button-shaped appendages at one pole attached to the egg-membrane. May it not be that the thread-tails have similar ova? This is certainly the case in the case of the thread-tails, where they float like the eggs of the Spanish mackerel, the moonfish, cod, haddock, pollock, bonito and certain clupeids; where they are carried about by the male in some special receptacle in the pipelashes and secured and guarded by the male, and in the case of the thread-tails, or carried in the mouth, where incubation is known to occur in a few days.

Even these are not the only ways in which the ova of bony fishes are developed, for the *Embiotocidae* of the west coast, *Zoarces* and the cyprinodonts are more or less completely viviparous. The latter have been recently studied by the writer in association with Colonel McDonald, and it has been found that they develop in a manner similar to that of *Zoarces* as described by Little, but it is still a matter of doubt with the writer whether the young do or do not leave the egg before the latter is extruded by the parent through the tubular prolongation of the oviduct at the anterior border of the anal fin.

CHERRYSTONE, Va., July 23, 1881.

SHAD EGGS WILL NOT HATCH IN SEA WATER.

THERE is a theory among the fishermen at the mouth of the Connecticut River that many of the shad spawn in cold water of Long Island Sound, and do not go into fresh water. This theory is based on the fact that they catch fish which they call "roozers," and which they claim are spent fish before the run in the river begins.

Acting on this theory Mr. James Rankin, a former fish commissioner of Connecticut, and Mr. Robert D. Chalker, a pound owner, attempted to confine the fish in salt water last year until they were ripe, and then tried to hatch the eggs. This would not prove or disprove the theory. Unfortunately the shad were not netted and released the fish. We were glad to see that they did not abandon their attempt for, although we had no faith in the hatching of either shad or salmon eggs in salt water, we were open to conviction if it could be done. Over 200 shad were placed in the young ponds, and when ripe the eggs and milt—both in good condition—were placed in the salt water. Death was observed in from four to seven hours. It was then decided to try fish which had not been panned up. A net was put in, and from ten to a dozen were taken. These were placed in the ponds, and the shad were taken from them. Several ripe females were found, and a variety of experiments made. The eggs were taken from a female into a pan, were impregnated with milt from the male, and Mr. Rankin observed the result with a microscope. In only one case were any signs of life noticed, and these were in the eggs of a female but recently captured. Twelve hours or more after impregnation the eye spots of the little fish were visible under the microscope, and later the hatching. There was life, but it never advanced beyond this first stage.

Four hours after these good eggs were immersed in salt water. They showed under the microscope to be covered with minute punctures. These increased in size and number until the eggs burst. Supposing that this result was due to the severe agitation of the surface water, another portion were placed in a box which was covered tightly, and which was sunk to the bottom, but with no better result. These eggs were visible under the microscope to the shore, supposing that the motion of the boat might have caused the difficulty, but another failure was recorded.

The brackish water experiment has not been fully tried, but Dr. Hudson said, "I am satisfied that shad will not hatch in brackish water, and I have no reason to doubt that the same experiment made in that direction would be no more successful than those made in salt water."

Stuffer on, Groan on, Sicken on, Die on, if you will not use Hop Ditters and be cured.

FIXTURES.

BENCH SHOWS.

September 21, 22 and 23, at Fran'lin, Pa., Franklin Sportsmen's Club and Game Protective Society Bench Show. Entries close September 15. Thos. D. Adams, Superintendent; P. O. Box 61, Franklin, Pa.

September 27, 28, 29 and 30, at London, Ont., London Dog Show. Entries close September 12. Charles Lincoln, Superintendent; Teanach, Ont., Canada.

October 5, 6, 7 and 8, at St. Louis, Mo., St. Louis Kennel Club Third Annual Bench Show. Charles Lincoln, Superintendent.

FIELD TRIALS.

August 30 and 31, and September 1 and 2, at Norfolk, Neb., Nebraska Field Trials second annual meeting. J. P. McCartney, Secretary, Norfolk, Neb.

September 14 and 15, at Pittsburgh, Pa., Close of entries Pennsylvania Field Trials. First Annual Derby. I. H. Staiton, Secretary, Pittsburgh, Pa.

September 13 and 14, at Pittsburgh, Pa., Collie Trials, held under the auspices of the Pennsylvania State Agricultural Society. Entries close September 9. E. Bridge McConkey, Secretary, Harrisburg, Pa.

October 1, 2, 3, 4, 5, 6 and 7, at New York City, New York City Dog Trials commencing on Thanksgiving Day. Jacob Peatz, Secretary, P. O. Box 274, New York City.

November 25, Louisiana State Field Trials. Entries close November 15. Edward Odell, Secretary, New Orleans, La.

November—at Grand Junction, Tenn., National American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

OUR LONDON LETTER.

Editor Forest and Stream:—Since sending you my last letter doggy matters have been at a standstill on this side of the water; only a few unimportant shows have taken place and no new dogs have appeared at any of them. I will, therefore, without further delay, revert to the subject which I alluded to at the end of my last letter, and let you know what has been taken by our authorities against the tricks of unprincipled exhibitors when showing their dogs. Unfortunately I am not in a position to inform you at present of the result of the inquiry which has been requested to investigate the conduct of our Kennel Club, although I am positively assured that the sub-committee in connection with dog shows, and for the simple reason that no decision has yet been arrived at by that body. I can, however, state that the sub-committee some time ago issued a circular to all our leading *philosophes* and requested them to answer the questions which it was requested they would answer in writing. These interrogatories had reference to most of the principal breeds, and in certain instances, the gentleman to whom they were addressed was requested to give his opinion on every variety of dog which he held up to sale as closely identified. This certainly appears to be a sensible way of conducting the inquiry, and I believe it is the first occasion upon which the Kennel Club has appealed to the intelligence of those outside its own immediate circle. Still, I understand that this

SPRINGFIELD, Mass., July 25.—The new rifle range of the Rod and Gun Club just back of the Belden House in West Springfield was auspiciously dedicated to-day by the match between the River-

crades, of Pittsfield, and the local team. The Pittsfield team came out for victory, having collected the best shots in Berkshire, but the way in which the Rod and Gun Club and "ground their

selves" makes the latter feel that they are almost invincible. It is not unlikely that the match may lead to another. The totals were 702 for the Rod and Gun Club team and 721 for the Pittsfield team, out of the regular Mass. target 222 yds. off-hand, W. F. Mosley being scorer, and the individual scores are as follows:

Rod and Gun.

Mayott. 11 7 11 9 11 8 10 9 11-96
Buck. 8 12 11 12 10 11 10 11 10-107

BAYSHOOTERS CORPS, Mass.—The weekly meet of the Schuetzen corps at the靶場 on the 24th inst. was a very successful one. The number of riflemen, who succeeded in placing excellent figures to their credit. The scores:

Massachusetts Target (1st) J. H. Max 106, J. W. Strider 102, S. Feltton 101, J. C. Barrett 99, H. Schormsch 97, G. W. Copeland 93, F. L. Smith 91, C. A. Bels 91, A. Bels 91, H. Smith 89, W. H. Harrington 88, C. Smith.

Massachusetts Target (off-hand)—C. M. Gueh 101, C. Orth 99, J. H. Max 87.

MEDFORD, Mass., July 25.—This afternoon was a fine one for the riflemen, the weather conditions being all that could be desired, yet, owing to the fact of some being at the seashore, the attendance was not so large as usual. The following were the scores below the 200 yards standard:

C. H. Russell. 5 5 5 4 4 4 4 5 4 5 5 6-67
Whipple. 5 5 5 4 4 4 4 5 4 5 5 6-67
C. Hartwell. 5 5 5 4 4 4 4 5 4 5 5 6-67
H. W. Huntington. 4 4 5 5 4 4 4 5 4 4 4 5-64
W. W. Wood. 4 4 5 5 4 4 4 5 4 4 4 5-64
W. Arthur. 5 5 4 5 4 4 4 5 4 4 4 5-64
H. C. Russell. 4 4 5 4 4 4 4 4 4 4 4 5-63
W. Henry. 4 4 5 4 4 4 4 4 4 4 4 5-62

ALBANY, N. Y., July 28.—This being a re-entry match, and a liberal allowance being given to military rifles, both classes of rifle-men took part on the 28th inst. The day was a bright light was the only impediments, and the scores will show that the veterans were overcome by good holding. The match occupied nearly the entire afternoon, and the competition was won by Mr. Oliver Dexter, of Troy, with the best possible 34 out of the 35, the score in detail being as follows:

Oliver Dexter, N. Y. 4555555-34
Theodore Mosher, B. S. 3454545-32
H. W. Huntington. 3454545-32
J. C. Charles, S. M. 3454545-32
W. F. Pitch, B. S. 3454545-32
C. E. Wendell, S. M. 3454545-32
James I. Miles, S. M. 3454545-32

"Allowance to military rifles."

The eighth competition in the Winchester match was also on the 28th inst. The match was a purely military match, all military rifles, at the usual military distances. For some reason the military men do not care to shoot, or to be able to use their arms as they were intended to be used. As a consequence the competitors in nearly all the competitions have been small bore men, who occasionally shoot on profit on the 28th inst. The day was a bright light was the only impediments, and the scores will show that the veterans were overcome by good holding. The match occupied nearly the entire afternoon, and the competition was won by Mr. Oliver Dexter, of Troy, with the best possible 34 out of the 35, the score in detail being as follows:

Oliver Dexter, N. Y. 4555555-34
Theodore Mosher, B. S. 3454545-32
H. W. Huntington. 3454545-32
J. C. Charles, S. M. 3454545-32
W. F. Pitch, B. S. 3454545-32

As a consequence the competitors in nearly all the competitions have been small bore men, who occasionally shoot on profit on the 28th inst. The day was a bright light was the only impediments, and the scores will show that the veterans were overcome by good holding. The match occupied nearly the entire afternoon, and the competition was won by Mr. Oliver Dexter, of Troy, with the best possible 34 out of the 35, the score in detail being as follows:

Oliver Dexter, N. Y. 4555555-34
Theodore Mosher, B. S. 3454545-32
H. W. Huntington. 3454545-32
J. C. Charles, S. M. 3454545-32
W. F. Pitch, B. S. 3454545-32
C. E. Wendell, S. M. 3454545-32
James I. Miles, S. M. 3454545-32

"Allowance to military rifles."

The eighth competition in the Winchester match was also on the 28th inst. The match was a purely military match, all military rifles, at the usual military distances. For some reason the military men do not care to shoot, or to be able to use their arms as they were intended to be used. As a consequence the competitors in nearly all the competitions have been small bore men, who occasionally shoot on profit on the 28th inst. The day was a bright light was the only impediments, and the scores will show that the veterans were overcome by good holding. The match occupied nearly the entire afternoon, and the competition was won by Mr. Oliver Dexter, of Troy, with the best possible 34 out of the 35, the score in detail being as follows:

Oliver Dexter, N. Y. 4555555-34
Theodore Mosher, B. S. 3454545-32

Total	292	Total	39

A 36-rod speake was next shot, in which members of both clubs participated. The shooting was close in this match, the honors being about equally divided between the two clubs.

ROCHESTER, July 28.—The weather rather favored the Genesee Sportsmen's Club this afternoon, and the several hours of sport on the lower river flats comprised one of the most pleasant trap and trigger contests that has taken place in and about Rochester this season. There was a slight breeze blowing, the air was cool and invigorating, the trap worked finely and everything passed off in a most pleasant manner. The sport with the mips opened with

First Match.—Dittmer 5, Miller 5, Griswold 5, Fieischer 3, Orange 4.
Hazard 5, Evershed 6.
Ties on 5.—Griswold 5, Miller 1, Hazard 4, Dittmer 0.

prizes, much to the discomfure of our boys, who seemed to have "lost their grip," notably our two crack shots—Messrs. Ritter and Wertner, who last season were invincible. Want of practice this season is presumably the cause of their poor scores in this match. Messrs. Willard and Wroten made very creditable scores and will, with practice, make fine shots. Mr. Mills contemplates attending the Howell, Mich., glass-ball tournament, Aug. 9, 10, 11, and if he can get a good number of spectators he will probably have one of the prizes.

Special prices to follow others according to their value.

SIMPSON'S NEW FISHING-TACKLE CASE.

A want long felt for by Sportsmen. All Anglers will
acknowledge that the most vexatious thing that can hap-
pen him is to have his spoons, hooks and lines all tangled
up. This case will prevent any such disaster, as it is
so arranged that the most careless fisherman can keep
his tackle in shape. They are made of the best material
and handsomely ornamented and furnished with a lock
and key. This case is approved of by the practical pisci-
cultural professors who have investigated its perfections.
Size—box: Length 12, width 1½, depth 4½ inches; trays
(6): Length 1½, width 4, depth 1 to 1½ inches; top tray:
Length 12, width 1½, depth 1½ inches. Three parts long in
each small tray, eight in large tray, two compartments in
box, making twenty-four places for lines, hooks, sinkers,
spoons, reels, fly-book, and each case packed in a neat box
and sent on receipt of \$4.00. To Clubs taking
a at one time, \$24.00. Send for Catalogue of FISHING-TACKLE AND SPORTSMAN'S GOODS.

Imported black field spaniel at the stud. Fee, \$25. Mr. Jacobs' strain. Brother to Squaw and Lass of Devon; brother in blood to Kafir and Zulu.

Negro, litter brother to Benedict, was second in Kafir at the West of England show last month.

Black, and liver-colored puppies by Benedict, for sale. L. A. SLOTT, J.R.P., Whitehouse, L. I. June1,4

FOR SALE.

By Warwick, ex-Ollie, five very handsome whelps. Also two red Irish setters. For price, etc., address H. W. GAUSE, Wilmington, Delaware. June2,4

PINE LODGE KENNELS.—I am prepared to take a limited number of dogs, either setters or pointers, and train them thoroughly. I give my puppies seven months' work out of the twelve, and guarantee satisfaction. If the dog has all the natural instincts. References on application. Prices, \$50 and \$75, according to length of time I keep the dog, with discount to parties at long distances. A. WINTER, Cairo, Thomas County, Georgia. Oct 2,4

BARONET IN THE STUD.—The lemon-and-white pointer Baronet, whelped Nov. 24, 1879 by Orgill's champion, Rush, and Livingston's Rose, by imported champion (Snapshot), winner of third prize, puppy stakes, Eastern Field Trials, Robbins' Island, Nov. 30, 1880. Y. H. C. in open trials, and special prize for best pointer dog with a field trial record, W. K. C. Show, 1881, to a limited number of bitches. Breeders furnished with full printed pedigree. Address HENRY W. LIVINGSTON, 133 West 42d st., New York. May12,4

HARE BEAGLE KENNELS.—For sale, the produce of imported and home bred animals that have been hunted since able to follow the dam on the trail, and are believed to be second to none in nose, tongue and endurance. COLIN CAMERON, Brickerville, Pa. May12,4

CAMP LIFE IN THE WILDERNESS.—Second edition now ready. This story describes the trip of a party of Boston gentlemen to the Adirondack-Hangley lakes. It treats of "camp life," "indoors and out," is amusing, instructive and interesting. 224 pages, 12 illustrations. Price 35 cents. By mail, postpaid, 50 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

PORTRAITS of Eastern Field Trial Winners, printed on the finest paper, will be sent postpaid for 25 cents each, or the five for \$1. FOREST AND STREAM PUB. CO., 59 and 61 Park Row, N. Y. Dec2,4

NEBASKETT KENNEL, Richmond & Vaughan, Proprietors, Middleboro, Mass.—Sporting dogs boarded, broken and handled by men of experience. Setters, Pointers, Fox Hounds and Beagles trained for their respective work. Satisfaction guaranteed. Also, a number of well-trained setters and pointers for sale. Address BOX 335, Middleboro, Mass. H. B. RICHMOND, N. H. VAUGHAN. June2,4

GORDON SETTERS.—A few young bitches from the "Tilly" Kennel to dispose of on the most reasonable terms. For the field qualities of this strain of dogs refer to Mr. H. Malcolm, Baltimore, Md.; Col. Albert H. Vane, Jr., Ind.; Col. Jas. Gordon, Pontotoc, Miss. Address THE GORDON SETTER KENNEL, Locust Valley, Long Island. 3,917,4

FOR SALE CHEAP, a litter of five Irish setter pups, 10 weeks old, having one cross of Elcho and two of Punkett. Address E. J. WETHERSFIELD, Wethersfield, Conn. July 21-4

LEONARD'S
Split Bamboo Rods,
WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.

No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 26, 1876). This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.

No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 3, 1878). This split thoroughly strengthens where the ferrule is joined to the rod, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been made. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made.

No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

EVERY ROD WARRANTED.

THE GREAT SINGLE BREECH-LOADER.

FOREHAND & WADSWORTH'S NEW BREECH-LOADER has so completely distanced all the others that it stands alone. There is no second. It is the only single gun worth having. As described in the above cut it is now complete, with rebounding lock, pistol grip, lever fore-end, nickel-plated frame, and is beautifully finished throughout. The barrels are either steel or twist. When steel they are bored out of a solid bar of steel, differing in this respect from all others, which are merely old musket barrels refinished. When twist they are the best imported barrels and of very fine grain. The cost of these guns is a mere trifle. We are sole agents at New York for Colt's Club Guns, and also for Enos James & Co., Birmingham. We offer a small lot of the celebrated Wobley Guns of all sorts at about half price.

P. O. BOX 4,309.

H. & D. FOLSOM, 30 Warren St., New York.

The Kennel.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine) burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6½ and 12½ lb. kegs.

Dupont's Choice Bore.—Specially adapted for "Choice Bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 2, No. 1 being the coarsest. Packed in 6½ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6½ lb. kegs.

Dupont's Rifle P. P.—"Sea-Shooting."—FFg. and FFg. The FFg. for long-range rifle shooting, the FFg. and FFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6½, 12½ and 25 lb. kegs. FFg. coarse, FFg. fine.

Dupont's Sporting, Mining, Surprize and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. N. Y. Use none but DUPONT'S FFg. or FFg. for long-range rifle shooting.

CRUTTENDEN FLY ROD.

This Cut is an exact representation of this Rod, which CANNOT BE EQUALLED FOR THE MONEY.

It has Solid Reel Plate, Nickel Plated, Patented Ferrules, allowing the wood to be used the full size, thus preventing rod breaking where wood and ferrules join. But wound with cane and silk, giving it that desirable Appearance and the Feeling of the high-priced rods. The first two joints are made from Best Selected Second Growth Ash, Stained and Polished. The tips from the Lincewood, polished. The Rod is Well Ringed throughout. Length, ten and one-half feet; weight, from nine to ten ounces. This is the best-made, best-finished Rod for the money in the United States and will guarantee it every way. If by accident any part should get broken, we can send a duplicate, thus saving expense and trouble of returning Rod to be repaired. With short tip it makes an excellent Brass Rod.

PRICES.—With one Trout Tip, in Case, \$4.00. With one Trout Tip and one Bass Tip, \$4.75. With two Trout Tips and one Bass Tip, \$5.75.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns almost as fast as "Electric Powder," with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6½ lb. kegs, and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale sale at our office.

ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

Entered According to Act of Congress, in the year 1881, by the Forest and Stream Publishing Company, in the Office of the Librarian of Congress, at Washington.

Terms, \$4 a Year, 10 Cts. a Copy.
Six Mo's, \$2. Three Mo's, \$1.

NEW YORK, THURSDAY, AUGUST 11, 1881.

Vol. 17—No. 2.
{ Nos. 39 and 40 Park Row, New York.

CONTENTS.

EDITORIAL:— The Snake Climbing Question; A Matter of Morals; A Pot Luck Dinner; Fish Culture for Long Island; Transportation of Shad Eggs; A Lobster Law Needed; Otago Acclimatization Society; Notes.....	23
THE SPORTSMAN TOURIST:— A Southwest Virginia Deer Drive; To My Setter, "Scout;" A Week of Prudent Memories; The Magalloway Country; From Moosehead Lake to the Main St. John—Part III.; Lake Poygan; Green Pond; Thanks for the "Possum".....	25
NATURAL HISTORY:— The Way of a Serpent Upon a Rock; How Did the Fish Get There?.....	28
GAME BAG AND GUN:— The Illinois Sportsmen; Nebraska Game Grounds; A Good Way for Adirondack Guides; Pot-Hunting Blackbirds; Shooting at Port Jefferson; A Brace of Woodcock; Wild Geese; Prairie Chicken Shooting; Philadelphia Notes; Oskosh, Minn.; Ducking Resorts.....	29
SEA AND RIVER FISHING:— International Fishery Exhibition; Bluefish at Cape May; The Blue Gills—1881; Camping at Springfield; Nova Scotia Fishing; Canadian Salmon Rivers; Fishery Statistics.....	30
FISHCULTURE:— Do Gills Eat Trout? The Paradise Fish; A German Book on Pisciculture.....	32
THE KENNEL:— The Dog Castaways; Preventives of Hydrophobia; Heroes of Fire and Water.....	33
RIFLE AND TRAP SHOOTING.....	35
YACHTING AND CANOEING:— New York Yacht Club; Beverly Yacht Club; Racine Canoes; Sophia; Cutter Coming; Atlanta.....	36
ANSWERS TO CORRESPONDENTS.....	37

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$3 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C., London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.
Thursday, August 11.

THE SNAKE CLIMBING QUESTION.

THE original question broached in FOREST AND STREAM was whether our venomous serpents could climb perpendicular trees. It is well known that all constrictors do so. None of our correspondents in relating their experiences say whether the black snake circled around the tree, went up it with the same serpentine motion which it uses on land, or whether it adopted a vermicular movement and pushed itself straight up by contraction and expansion, its abdominal plates holding into the roughness of the tree.

We have seen the water snake nearly helpless on a platform of hemlock boards used to cover the raceway of a trout pond. It wriggled with an eel-like motion, but the slivers of the boards pointed the wrong way for it to get hold. On turning it around it went off rapidly, the plates of the abdomen holding in the wood enough to give it a point to push against.

We have seen the black snake ascend a sapling by twining about the trunk and going up with a spiral motion, but we have never seen them climb large tree trunks, although we have seen them in the trees. Will our Washington correspondent describe the motion of the snake he saw climb up a perpendicular wall? and will our Eldred correspondent tell us how the snake descended from the tree?

A MATTER OF MORALS.

MESSRS. WM. B. MERSHON, the Secretary of the Michigan Sportsmen's Association, and A. H. Mershon, the President of the East Saginaw Game Protection Club, recently attempted, by due process of law, to punish three men, Amos Coon, Charles Cary and John Hatfield, of Harrison, Mich., for having killed and had in possession venison out of season. It was positively proved in the trial that the deer had been killed out of season, and the case was a clear one, but the jury, after a short deliberation, brought in a verdict of "not guilty," and afterward explained that "it might have been a tame deer; didn't prove it was wild."

The game clubs are naturally disgusted with such a farcical administration of justice, and are taking pains to report abroad the laxity of local morals in the county where men can kill tame deer all the year round in the woods. It seems that for one of the most brutal and outrageous of indecent crimes in the calendar the Clare County penalty is, as fixed by a jury recently, a fine of twenty-five dollars. This is clearly a matter of morals. Before the sportsmen of Michigan can hope to secure any respect for the game laws among these people they must mend the morals of the community, and instill into it some more healthy regard for the ordinary decencies of life than the verdicts of their juries indicate that they now possess.

A POT-LUCK DINNER.

THE "POT-LUCK CLUB" dined in honor of the birthday of its President. Its President is Hon. R. Barnwell Roosevelt. The name is familiar to our readers. He is suspected of being a Fish Commissioner of New York. He is accused of belonging to the fish-eating club with the jaw-breaking name. It is whispered that he presides at the Fish-cultural Association. And he is guilty of writing on the lateral motion of crabs. See our last issue.

Therefore we are not going to tell you who he is. The Pot-Luckers are literary. They boil over with wit. Its Secretary is a gifted *literatessa*. She gave the spread. She is called the Queen of the Pot-Luckers. The pot was in luck on August 6. It was a full pot. All had full hands. No one was high.

The President was a year older than he was ever known to be before. His age was announced. We won't tell it. We don't think him as old as he claims. He wants to overawe us by a claim of priority. Appearances are deceitful and we judge by acts. By this standard he is twenty-one.

Journalists, poets, and artists comprise the Pot-Luckers. Essays and claims. Poems and lobster salads. Pictures and chowders. Speeches and chicken fixings. Songs and green seal. This is the impression left by a pot-luck dinner. A President who don't preside too much. A hostess who entertains royally. These are the after-thoughts.

FISHCULTURE FOR LONG ISLAND.

AT a meeting of the New York Fish Commission, on the 4th inst., at the office of Mr. R. B. Roosevelt, it was decided to establish the long-talked-of station on Long Island. Our readers may remember that Mr. Blackford was added to the Commission because he favored the placing of a station for both fresh and salt water work on the island.

It is much to be regretted that the Legislature did not make a special appropriation for this purpose, but, as it did not do so, the Commissioners set apart \$3,000 to begin the work. This is a small amount to establish new works with, but it shows a disposition to begin. There is much that might be done on the island in the way of breeding and of observation of the habits of our sea fishes. It is the best place in the State of New York to establish a carp pond, from whence young could be distributed to those fishless portions of the State where only little turtles and pollywogs grow. It is the home of the trout, which can be bred in most of its streams, and its bays formerly swarmed with valuable food fishes.

We hope that the Commission will take up the oyster, the scallop, the clam, lobster and crab and do for them what it has been done for the fishes—increase them and study their habits. In fact Long Island offers many facilities for fish-

culture and for investigations, which have been neglected. A site for operations will soon be selected, and we invite those having knowledge of suitable locations to send them to this office. The Commissioners want a stream of good trout water, which never fails, near where it comes into clean salt water. They cannot buy such a place and must depend upon leasing it; or, better still, upon the offer of it by some public-spirited citizen, or of some village which would like such an institution near it. They would like to begin work next month, if possible.

TRANSPORTATION OF SHAD EGGS.

MANY of our readers will recollect that there have been several attempts to transport the eggs of shad, and to keep them at a low temperature in order to retard their hatching for a period long enough to get the fry across the Atlantic before they starved to death. The first attempt was made in 1874, by Mr. Mather, who lost his fish from starvation on the tenth day, just as the steamer reached Southampton. The impossibility of feeding shad fry and the lack of natural food in water which has been stored in the dark tanks of ships, renders a sea voyage much more difficult than one on land, where fresh supplies of river water containing infusoria can be obtained daily.

There has been great difficulty in handling shad eggs with a view to their transportation and the can designed for carrying them in water and securing aeration by motion of the car, planned by Mr. Mather and tried by Prof. Milner the above mentioned year, did not work. Since then but little has been done in this direction except to experiment to determine how long the fry could live without food. This year, however, one of the most important results of the shad work has been an improved method of transporting the delicate shad egg, which cannot bear the rough treatment to which the ova of salmon and trout can be subjected, and which will certainly lead to great economy in the production of this valuable fish.

Heretofore the usual method has been to keep them in pans or buckets of water, which is frequently changed, after they are impregnated and have passed through the stage which fishculturists technically call "coming up"—i. e., a hardening from an absorption of milt and water. The quantity of water required to be changed necessitated not only much labor but constant watchfulness, especially if, as often happened in the work of the U. S. Fish Commission, they had to be so kept from eight to twelve hours in this way before reaching the hatching station.

Col. McDonald, who has had charge of this work on the Virginia rivers, often found that there was a serious loss of eggs during this time, and set about to remedy it. He took one of the ordinary salmon egg trays, with a wire cloth bottom, such as is in general use, and on this placed a sheet of wet muslin. On the latter he put from one to two layers of shad eggs after they had remained long enough in the pans to "come up." A dozen of these trays were then placed in a stack and crated up, after which they were transported at convenience by the Launch to the Washington Navy Yard, a distance of twenty-one miles, during which time they received no attention whatever, only being kept out of the sunshine. They uniformly reached the hatching house in first-rate condition and sometimes were not placed in the hatching cones until twelve hours, and in one case seventeen hours, after impregnation. This would allow plenty of time to place them on ship board just before sailing, thereby making a gain of several days over those which started across the ocean in 1874 which were hatched at Holyoke, Mass., on Friday, and were delivered at Hoboken on the ship next morning. Eggs so treated could be hatched on the ship the fourth or fifth day out and might reach England before they suffered for want of food.

Under this plan the work under Col. McDonald was conducted upon a new principle. Instead of taking the stations to the eggs, as has been done, he now, and in future will, bring the eggs to the stations. These stations may now be placed at points convenient for the distribution of the fry instead of in inaccessible locations. For example; all the eggs taken on the Potomac River can be brought to Washington and hatched in the old Armory building, at no extra cost for engineers or machinery, and the young fish can then

be loaded on the cars almost at the door, which are to carry them to their destination.

Now that it is known that shad eggs can be so simply and cheaply transported it will greatly simplify the work of hatching, which can be done at a central point convenient to railroad, or other transportation.

A LOBSTER LAW NEEDED.

NEW JERSEY and Rhode Island need a law prohibiting the sale of lobsters under a certain size. The lobsters are getting smaller year by year, and the catching of them when young cannot be stopped as long as there are markets open to the violators of the laws whose catch is not seen until thrown upon the market.

In former years, lobsters of five and six pounds weight were plenty, but now are rare. Maine, Massachusetts and New York have laws forbidding the sale of them when less than ten and one-half inches in length. This is very well in its way, but the catchers sort out the smaller ones and send them to other States. The Newark, N. J., *Advertiser* sent a reporter to the market for information, and he learned from a large dealer there "that the great demand for this fish has induced fishermen to take, within the last two years, too many young ones from their pots, and as a consequence this has produced a depopulation of the lobster fishing grounds." The fact is that New Jersey gets those that dare not be offered in New York.

The Rhode Island Fish Commissioners say in their report:

The capture of small lobsters has gone on in Rhode Island since the first lobster pot was put in Rhode Island waters, the larger ones sent to market, and the smaller ones used for bait for black-fish. Now, our lobster fishery is a very valuable one. Very many men make out a living with their lobster pots, and all know the luxury of an abundance of fresh and cheap lobsters in our cities. For a number of years past the catch of lobsters has been steadily decreasing, not as to numbers but as to size. "All is fish that comes to the net" is the rule with lobster catchers. Those that are of a fit size to send to market, from half a pound upward, are sent, the balance, from five to six or seven inches in length, are sold for bait for tautog fishing, save a few that go to those most delicate palates that delight in chicken lobsters.

The Commissioners recommend the passage of a law forbidding the sale of lobsters less than twelve inches in length, and suggest that it would be admirable if a provision could be made forbidding the sale of female lobsters loaded with spawn. So far as the limit of size is concerned, the Commissioners are assured the law will be most popular.

The State of Rhode Island is at present the market for undersized lobsters from Massachusetts. They are sent here in barrels, the catchers on the Massachusetts coast and dealers in Boston, knowing that it would be unsafe to offer them for sale in Massachusetts, send them to us, and we get the full benefit of such poor and illegal supply.

It would be for the general welfare if all the inland States would pass a law regulating the sale of lobsters, for certainly Western cities are as much interested in this source of food supply as those on the sea coast.

OTAGO ACCLIMATIZATION SOCIETY.

WE have received the report of this New Zealand Society for 1881, and are pleased to note that it is upon a sound financial basis from money received from sporting licenses, particularly from fishing licenses, which have increased. The society has recommended a gun tax to the Government, but no reply to it has been received. They err in saying that such a tax exists in the United States.

The society not only introduces and protects beasts, birds and fish, &c, but extends its protection to native species. Among the birds and animals introduced were "black game," four cocks and six hens; pheasants and partridges bred well, but are becoming scarce where shot. The poisoning of the rabbits, which had become a pest to agriculture, has proved fatal to many pheasants. California quail are reported numerous about Queenstown and Goodwood. Last April eighty Australian quins were purchased and liberated. Starlings are now numerous, as well as blackbirds. Thrushes are not plentiful, but are occasionally seen, and many other imported birds, as goldfinches, greenfinches, house sparrows, hedge sparrows, yellow hammers and chaffinches, are numerous. Deer, both the red, fallow and axis, continue to thrive, while hares are plenty enough for coursing.

Of fish, the English and Californian salmon, introduced from 1876 to 1878, there is no reliable information, although there are reports of their being seen. American whitefish, *Coregonus albus*, were introduced, but it is too soon to look for results. Sea trout are illegally taken before they have become firmly established, but the brown trout are increasing, and English perch and tench are thriving.

We have also received from the Secretary of the Society, Mr. W. Arthur, his "No on Some Species of Migratory Salmonidae," read before the Otago Institute. In this paper he quotes Professor Hind, in *FOREST AND STREAM*, on the use of the hook on the male salmon's jaw in breaking the hymen and thereby forcing the eggs, and suggests that the milk might also be liberated through the fighting of the males. Mr. Arthur gives plates showing the forms of the different species, and also the shape of the operculum.

Another paper, "On the Brown Trout Introduced into Otago," by the same author, is at hand, wherein he says: "In no river of Otago have these fish grown so rapidly, are so fat, or have become so heavy as in the Shag, some in-

dividuals having been seen in Mr. Rich's property supposed to be 20 lbs. in weight."

A SENSIBLE expression of sentiment was embodied in the resolution of the Illinois State Sportsmen's Association at Chicago, last week, to the effect that trap-shooting should hold its place as an incident only of the annual conventions. Let other associations follow the example. All true sportsmen will agree that the pigeon-shooting contests absorb so much time and attention at the meetings of some of our "game protective" societies that there is no opportunity nor inclination to attend to the legitimate purposes of the conventions. The time has come for a change of programme. It ought not to happen again, as it did at Coney Island, that such valuable and suggestive papers as were prepared to be read and discussed in the meetings of the sportsmen should go without a hearing because there was no time to attend to such matters. At one meeting Mr. Ira Wood, of Syracuse, moved that these papers be brought before the convention. The gentleman was ruled out of order. If the gentlemen who have control of the next convention of the New York Association will follow the spirit of this Illinois resolution, and act upon it, we can assure them of the cordial support of all the best sportsmen of the State, in the Association and out of it. Now is a good time to begin.

SOME SOUTHERN SCENERY.—It is our opinion, after a somewhat extensive series of travels over this big country, that in the mountain regions of Virginia, the Carolinas, Georgia and Tennessee is to be found some of the finest mountain scenery in the country. It is a great pity that more Americans do not travel through their own land instead of running off to Europe; it is a shame that so many Northern people are strangers to the charms of the natural scenery at the South. Some of the Southern railroad managers are making praiseworthy efforts to make known the attractions of their land; and while we are not inclined to puff the railroad, we are very earnest in our hope that sportsmen who go to the States named invariably return with glowing reports of both land and people. The "Associated Railways of Virginia and the Carolinas" have published a handsomely illustrated hand-book, giving needed information about routes, distances, fares, etc. This may be had on application at the office of the Piedmont Air Line, 229 Broadway, this city.

MR. HENRY BERGH might with reason devote his attention to the museum at the corner of Broadway and Ninth street, this city. In a cage in the basement of that institution are confined three monkeys, two pigeons, a bob-tailed hen and two rabbits, with a pair of young. The monkeys vary the usual indecent antics, which are common to their kind in captivity, by worrying and tormenting the other inmates of the cage. They pull the feathers out of the pigeons, gouge the eyes of the old rabbits and pinch and claw the young ones. The old hen has no tail feathers, knows how to use her beak and appears to be unmolested by the monkeys. A number of tortoises stolidly hold the fort within their shells, the monkeys evidently thinking them too hard nuts to crack. The small boy—outside the cage—enjoys the mimic wild beast show; and an eagle perched in a wire coop near by gazes fiercely at the sea lion and longs to take a hand in the fun. Six days in the week Mr. Bergh, or one of his agents, may find this show in progress, the monkeys gouging, the eagle glaring, the sea lion growling and the small boy grinning.

THE YELLOW DOG, which followed President Garfield's carriage in the inauguration procession last March, has come to the front again; this time, too, in a sensational way. According to the Alexandria, Va., *Gazette* the dog went to that city after the inauguration, where he remained until the Thursday before the President was shot, when he disappeared from Alexandria, to return one week later with a bullet wound in his back. The course of the ball, says the *Gazette*, was distinctly marked, and an examination has revealed the fact that the animal still carries the bullet. All the circumstances point to the bullet as the first one shot by the assassin at President Garfield, and of which all trace has been lost. The Washington papers chronicled the yellow dog's appearance at Washington just before the would-be assassin's assault on President Garfield. The famous and mysterious animal now wears a brass collar and enjoys immunity from the wiles of the Alexandria dog-catchers, Miss W. A. Penn, of that city, having paid his license fee.

THE NIAGARA DOGS.—In a letter published elsewhere our Suspension Bridge correspondent tells us how "Old Bull" was out to welcome his new companions on the island in the Niagara, and how the two castaways fought it out over their Sunday dinner. In a later note Mr. Lewis says that there is no truth in the report, to which we referred last week, that the dogs were purposely placed on the island, nor that attempts to rescue them have been interfered with by interested parties; but any one who wishes to capture them is at perfect liberty to do so. Well, a New York dog-catcher would have those dogs off the island and into his wagon before a crowd could collect to see the fun; and he would yank them up in much quicker time if he could be induced to believe that he was stealing them. The dog-catcher works quickly when he is also conscious of being a dog-thief.

THE PARADISE FISH.—We give this week a life-like cut of this Chinese fish. In Guenther's Catalogue of the Fishes of the British Museum we find it described as inhabiting the fresh waters of China and Cochin-China, with a note saying, "This may prove to be a domestic variety of a species of *Polycaanthus*." It is described by Lacepede under the name of *Macropodus viridi-auratus*. Mr. Mulertt has reared this fish and gives a most interesting account of their habits in the department of fish culture. From his long acquaintance with pet fish he is naturally observant of the habits of them, and he regards the paradise fish as a great addition to our ornamental fishes. The plant which accompanies the fish in the drawing is claimed by Mr. M. to be superior to *Valisneria spiralis* as an aquarium plant.

THEY NAILED HIM.—A correspondent writes to us of the exploit of two country boys which deserves a niche in our columns: In the fall of '45 or '46, near Mr. Robertson's, twenty-two miles west of Catskill, two lads saw a bear in the woods and shot him with fine shot, of which he took no notice; and when they came to load again, they found that they had lost the shot bag. Having been to the store, they had bought a paper of heel nails (country boys had to, then), and after putting in a good charge of this novel shot, one of them blazed away and bagged the bear. This recalls the story told in these columns some months ago of the buck, in whose head were found some copper and silver coins, evidently having served as ammunition.

A RARE SPORTSMAN'S VOLUME was shown to us the other day. It was a book made up of the papers on sporting topics which have appeared in *Harper's*, *Scribner's* and *Lippincott's*; the series extending back for many years to the time when Mr. Charles Hallock wrote his famous sketches from Canada and Labrador—examples of tourist sketches which are perfect in their way. The papers collected and bound in this novel book cover a wide variety of subjects, and are written by many different authors, most of them illustrated, and all readable. Why cannot the publishers of *Scribner's*—or the *Century*—give us such a volume from their magazine?

THE SKETCH OF A SOUTHWEST VIRGINIA DEER DRIVE, published in another column, the writer tells us is a transcript from life, a faithful picture of just the experience narrated. Into it is woven some of the quaint superstition and some of the slang of the Southern backwoods' hunter, and many of the phrases will be recognized as more firmly fixed in the common vocabulary of the people than are the more scientific terms affected by the sportsmen of some other localities. The story is thus something more than a mere recital of sport—it is a study of peculiar idioms and of some peculiar notions.

PLAYED 'POSEUM.—It will be conceded that that one particular 'possum has been played—to use a slangy expression—for all it is worth. The original seeker after truth on the subject expresses himself as fully satisfied, and returns thanks to us; we are satisfied, and also return thanks to those of our friends who have so acceptably responded to our call. One or two communications on the subject are still unpublished, but they will be given in due time—

When the 'possum
Is in blossom.

OLD FORT McPHERSON, Neb., was sold at auction the other day, and so passes away another landmark. Many of our readers will remember the fort, and many a romantic story is connected with its history since it was built fifteen years ago. The town of McPherson will still preserve the name and memory of the gallant officer who fell before Atlanta in 1866. There is much of romance and of local history in the names of our towns in America, and an inquiry into the origin and meaning of such names will almost always repay the study.

In last week's issue we published in our kennel column a paper from an old and esteemed correspondent relative to the castration of dogs. Since the first article of this writer appeared in the *FOREST AND STREAM*, June 6, 1878, he has never lost an opportunity of observing the effects of castration on the dog. He now says that he is fully persuaded that what he then presented is a truth, which, if put in practice by those interested and influential, would save for the country thousands of dollars annually.

RIFLES AND GLASS BALLS.—A correspondent suggests that when a club has become so expert at shooting glass balls with a shot gun that there is no longer much excitement about the sport, they take up a 22 calibre rifle and try the balls with that. Rifle shooting at the trap has been practiced to some extent, and many of the Boston marksmen are experts. It is an excellent form of practice for quick shooting. We endorse the suggestion of our correspondent.

"THE MAGIC NORTHLAND" is the title of a manual of information about the health, pleasure and game resorts of Minnesota, Wisconsin and Dakota. It is handsomely illustrated, and is full of practical directions for the sportsman tourist. Published by Hopkin, Palmer and Dimond, Minneapolis, Minn.

ANOTHER VICTIM to the fatal "thought-it-wasn't-loaded" delusion. Last Saturday a thirteen-year-old boy in Bridgeton, N. J., picked up a gun and playfully pointed it at his mother, assuring her that it was not loaded. The gun went off and the mother was shot through the heart and instantly killed. This is a peculiarly distressing case. How many more warning examples must be recorded before people will use a grain of common sense when handling firearms?

AN EXAMPLE WORTHY OF IMITATION is set by the Messrs. Gillman Bros., of Detroit, Mich., who issue as a card of their restaurant an epitome of the game laws of their State. They are not numbered among the slayers of the goose that lays the golden egg, and their praiseworthy attitude as intelligent sportsmen deserves the recognition of their many Michigan friends. Their friends, by the way, are not confined to the Peninsular State—the fame of mine hosts is spread abroad.

WILD CELERY.—Mr. D. W. Cross, of the Winous Point Shooting Club, kindly volunteers, in a letter published elsewhere, to supply buds of the wild celery for planting next fall, and it is to be hoped that some of our wild fowl shooters who are in a position to make the experiment will do so. If wild celery can be cultivated it will very materially increase the ducking territory. Can any of our readers give us further information on the practicability of cultivating the plant?

A LAWN TENNIS TOURNAMENT will be held at Newport, R. I., August 31 and September 1, 2 and 3. The Secretary's address is Clarence U. Clark, Germantown, Pa. The game of lawn tennis is the fashionable sport of the day for ladies and gentlemen.

THE FOREST AND STREAM takes this opportunity of thanking the numerous correspondents who have so kindly called attention to the change in the Minnesota prairie chicken shooting season.

THE MICHIGAN ARCHERY ASSOCIATION will hold its second annual target meeting at Battle Creek, Sept. 6, 7 and 8. The Secretary is Mr. C. C. Beach, at Battle Creek.

THE ANTI-PIGEON SHOOTING BILL introduced at Albany during the last session failed to be made a law.

OUR POLITICS.

A valued friend of the FOREST AND STREAM writes: "I congratulate you on the excellence of your every issue, but especially upon your successful concealment of your political complexion. May it be ever thus! Consistency is a slippery jewel, but an accomplished angler has bagged a few eels knows the necessary grip."

The Sportsman Tourist.

A SOUTHWEST VIRGINIA DEER DRIVE.

"GEORGE, go the old 'Spring,' she'll be in the woods in an hour; she's playin' round the pup and leadin' him by the ear, tryin' now to git him to follow," said old Pat Bowman, our hunter host, a long, crane-like biped, standing six feet two inches in his boots; long, grizzily gray beard under his jaw-bones; hair hanging around his coat collar, combed sleek and flat on his head; his clothing of homespun jean, and his trousers inside of a huge pair of cow-leather boots; but with all of his homilies as kind hearted a creature and as good liver as ever enjoyed the world. Sure enough, "Spring," a nimble, beautiful, blue ticked deerhound, was capering and fondling with her apparently over-grown, awkward-looking black-and-tan pup, and in dog language beseeching him to the hunt.

"Boys," said Pat, "we'll have a right day to hunt to-morrow. Look how the moon shines. Deer will roam round all night."

This was in the middle of the month of October. We were lounging around the doors after supper, commenting on the hounds. It was late twilight; a full grown moon was swinging gracefully through a clear, blue sky, rendering nearly as light as noonday the bottoms which gather in prairie-like profusion around the noiseless waters of Clinch, forming the boasted "Richlands." And well may the possessors of this choice land boast! On the surface of the mountains which encircle it stand boundless forests of gigantic timber, and these are the haunts of deer and other game. Beneath the surface of those mountains there is coal enough to give summer heat to New York city for a century. The soil of its lowlands is bottomless. The game birds revel in the "fruitful fells." Clinch has its fish and water fowl. It has all a generous soil and climate could have.

Old Pat, who through life had, in the proper season, been a hard worker and an excellent farmer, had withal been an improvident wretch—had always been a tenant of the best farmers and graziers; loved hounds and horses; cat all he made except what he drank—and paid all his honest debts.

Gathered around the free and easy board of this jolly hunter was this group of half a dozen young men—cheerful to steal, after a long summer's work, a few days for a "deer drive." This group was of the village businessman and country farmer; as congenial, however, as if their shops adjoined, and were all to the "manor-born," save one whose frosty accent and curt tones proclaimed him the lord of a colder climate; but he had no frosty soul, as no sport man ever has. Pat could see in this "brogue," as he called it, that a "furriner" was in his house.

"What did you say your name was, Mister," said Pat, "and where yer from?"

"My name is Herbert Kendall, Mr. Bowman, and my residence is on the bank of Geneva Lake, Wisconsin."

"Then yer a Yankee, haint ye?" said Pat,

"Well, I believe you call all Northern men Yankees, don't you, B-w-man?" "I'm a Northwestern man." "Come out like a man and say you are a Yankee," said Pat; "and may be you are one of these damned reverends." "I can't fancy what you mean by reverends, Mr. Bowman," said Kendall, evidently perplexed and looking at us for help.

"Why," said Pat, "I mean these postiverous cusses who jerk us up for sellin' a nigger a hand of tobacco for a day's work, or a poor devil for countin' it, and sellin' a drink of corn whisky, and take him slap to the United States Court and let him play checkers with his nose till his poor brains die in rags. If you are this sort of a man," cried Pat, excitedly, "git away from my—"

"Stop, Pat," interrupted Melton. "Keep cool now. We promise you Mr. Kendall is a perfect gun man, and loves to hunt as well as you, has heard a great deal about you and, in fact, came here to pay you a visit."

"I think I understand Mr. Bowman now," said Kendall. "I say to him I am a Federal official not detective. I have a pleasant home and plenty. True, I was born in Vermont."

"No, Pat," said Melton, "there is a vast deal of difference between a Northern gentleman who comes among us and the 'reverends,' as you call them."

"Well, if there haint, cuss the Northern gentlemen," said Pat. "You hear'n of them," continued he, "meetin' poor Bill Smith drunk on the road the other day, and says to him, 'My old feller, gim me a drink, Mr. orful dry; and poor, kindhearted. But gim him a snoot and the revenue says, 'Stranger, yer too poor to give this to me, here's a quarter of a dollar, and off he goes and takes out a warrant agin Bill, and he is now in jail, and he has eleven children.'"

"Well, Pat," said Melton, "I tell you, Mr. Kendall is not one of these people, but I can tell you what he was. He was a good Yankee soldier. How do you like that?"

"Was you in fact a blue belly, Kindie?" said Pat.

"Yes, Mr. Bowman, I was a Federal soldier and continued in active service until I was badly wounded in your State—marble by you; they say you were a good Rich."

"Here's my hand, old fellow," said Pat. "If you was a good soldier you are apt to be a fast-class boy. We'll break no more squares—the latch-string hangs on the outside to the fighting boys, whether gray or blue."

"Thanks, Mr. Bowman," said Kendall, "I could say the same to you were you in my Northern land; we fought like soldiers—we forgave like friends."

"Yes, but," said Pat, "you fought us unfair—you sent to the old country and got them bottle-bellied Dutch to fight us with."

Well, Mr. Bowman, to tell the truth, we were forced to do that to fill up the ranks you fiery Southern soldiers swept away."

"You are an honest Yankee, Kindie," said Pat, "and I'll bet was a good soldier!"

"Mr. Bowman, I'm almost a Virginian—was badly wounded in 1864 in Virginia, from which I have never recovered, and I come to the country every summer which deprived me of health, to get a share of it back from your delightful climate and mineral waters."

"And you were wounded in Virginia, Kendall?" said Melton. "What battle?"

"In a skirmish at Hanging Rock, near Salem, on Hunter's retreat from Lynchburg," said Kendall.

"I happened to have a hand on the other side in that myself. We did a little retreating to Lynchburg first," said Melton.

"Were you the chap, Melton," said Pat, "that stuck a tar barrel to the Natural Bridge and tried to burn it before the Yankees passed on that raid?"

"Take care, you old crane!" said Melton; "I'll tell what a fool a trick you did when you set fire to a barrel of oil on the bridge across the James at Buchanan—set fire to the end next the Yankees—then had to swim the river and got a bullet in the end nearest the Reds, too, you old numskull; then got drunk and swore you'd fight the whole army before they should take the town of Buchanan, because it was named after your grandfather; fell in the gutter and let the Yankees capture you."

"Keep that damned oily tongue of yours in your chops, you little snip," said Pat; "there is no truth in it, no how. As for the Yankees gettin' me, that's none your business. I was crotch by a clever blue-coat, give him a drink and told him how I got shot and drunk and he slipped me in the brush."

"I was on the advance guard right at that bridge when burnt," said Kendall, and his eyes twinkled as though he remembered more, and Pat gave him an inquiring glance and seemed inclined to change the topic.

"Say, Whitten," said Pat, "haven't you fed yer dogs yet? Go, get 'em a bit of mush. Let them fill themselves full of it to-night—eat the best of all food to run on—and they must have but a bite in the mornin'." They were called up and "filled full" sure enough.

"Look here, Whitten," said Pat, "do you think them little spiny-legged dogs of yours can jump the red brush with my hounds? I tell you, boys," continued Pat, "for a deer dog give me a right big one—wide 'twice four legs, strong legs, short pasty joints, big feet and hard as a ho-se's' huf—want a foot that won't let claws wear off and a dog that won't run from a fice. You laugh at me, boys, but I know. It stands to reason that any strong animal is the best for strong work."

"I don't know, Pat," said Whitten, "how my dogs will stand a deer—they are capital on a fox."

"Boys," we'll have a right day to-morrow; it's time you were going to roost. We'll have breakfast at half after three in the mornin' and Whitten and Joice must be on the deer afore daylight. I wish I had a flax break for that lyin' snipe to snore on."

Half fatigued from a day's ride we retired, but forced to steal from the refreshing sleep that awaited us a few moments to muse over the pleasure of the mornin'. Free of all care, how pleasant to anticipate the sight of the nimble, flying deer, the music of the eager and faithful hound, the dash over the splendid mountain road, to sniff the virgin breeze of the giant mountain, see ivy roughs and laurel-hedged mountain brook and the graceful, swaying hemlock! With these bright fancy pictures, whose mind could spare room for malice, envy, meanness or goveling idea? Certain it is that all industrial business men will and ought to have their recreations and sports in spite of the mere of the prophetic croaker the hunt seems more ennobling at least, than the ruinous cards or the effeminate and less attractive billiards, full of their absurd and undignified wrangles, where saint and sinner may with impunity swear and tear. The hunter's season is but a short one in the least busy time of the year, but most pleasant and healthful. The fero bank and billiard saloon hold but one season—that the year round

—and become most attractive when the "wicked love darkness better than light."

"Git up, men," said George, "breakfast is ready. I've said he drempt of blood last night, and I never knowed it to fail that a deer was kil ed when he drempt that."

"Hey, boys, crawl out of here!" said Pat. "I drempt of blood last night, and of killin' a deer and its tongue fallin' out on the right sid' of its mouth. Now, boys, this is a certain sign that something breaks the charm. If you met a woman to-day, boys, I want to caution you, it's bad luck, unless you can make her back track. Egal! pay her to go back home, or else I'll swear you won't kill a thing. I've sct fifty bushels corn in my life brin' of 'em."

"What sort of a mornin', old boomer, is it?" said Melton. "Capital—foggy down here but frost on the mountain; not a particle of wind, not a leaf fell last night to river tracks."

"That's all right," chimed a half dozen voices.

In we go to the dining-room. We meet at the door the aroma of venison, "baked pork," fried sweet potatoes, buckwheat cakes, delicious yellow butter, and an appetite for much else that we found on the copious table.

"Eat hearty, boys," was Pat's command, and we obeyed. "Hello! Somebody at the gate, old man," said Pat's cheerful old spouse. "John Maloney, boys," said Pat; "he ricks a pison fine sorrel and would kill him any time for a deer. Take care, Saurer, he don't tan your jackets to-day!" And he was trained to a horse and rides like a Comanche.

The horn sounded, and its thrilling echoes broke the stillness of the early morn, ringing higher and higher from peak to peak until its countless reverberations reached far away into the shaggy wood, where the startled deer had not yet ceased to nip the tender bud, and then were lost. Then came the chorus of dog yells.

"Boys," said the old lady to Joice, one of the "drivers," "you had better put a snack of something to eat in your pocket." "No, indeed," said Joice; "don't you know what a fool a hound is?—they'd smell the victuals and sneak behind us all day."

"Boys!" see you all have some sense—you don't take many traps with you," said Pat. "You'll need more spurs than powder and lead to-day." "I have taken a load or two of small shot, Mr. B-w-man," said Kendall. "I thought I might see a partridge before we took our stands, if you will consent for me to shoot one." "How in the thunder do you expect to see a partridge in the woods, man?" said Pat; "they say in the rag weeds in the bottom."

We had six miles to ride. The fog lay thick in the valley, around the Richlands, and reached high up the mountain, and three miles were left in the rear before we emerged from this thick vapor, which seemed perfectly level, hiding the valley and looking like the face of a calm lake. Through it here and there twined in their grand and rugged majesty the peaks of the neighboring mountains. The sun, just rising, shot its beams along the bosom of this ocean of fog and struggled to penetrate below. What a pity to be disturbed in our admiration by one of Pat's ludicrous freaks. While all were intent a grouse flew up and circled near Pat, and Kendall followed it with his gun, and when ranging on Pat he "dropped" beautifully to shot by rolling off his sleek horse flat on the ground. At the report of Kendall's gun a cloud of feathers told the tale.

"Are you a stater named, teetotal damned fool, Kindie?" said Pat. "You'd a shot me if I hadn't dodged."

"Fine partridge this is, boys," said Kendall, holding the bird up.

"Partridge the devil!" said Pat. "That's a pheasant. They say you Yankees are always inventin' something, and now you want to make a new name for this old bird."

"Get on your horse, you old crane, you," said Melton. "The deer will be through before we get to our stands."

"Well, you couldn't kill it if you was there, ficey!" said Pat.

Off we went at a brisk pace. Who is it that has sniffed the woodland autumn air that can forget its intoxicating effects? The frost was fast melting before the sun's rays from off the sun-cured leaves, distilling the sweetest and most refreshing of all perfumes. "Hush!" said Saurer. "Listen—the dogs!"

Distinctly came the eager and eager bay of the irrepressible Spring. But a moment and the "p" joined in the music upon a fresh and warm scent. The rugged red hounds and pine spar they go, but still far beneath us. The sounds, softened by distance, arose and came on the crisp air as if muffled by the wires of the telephone. A perfect yell! "Listen, boys," said Maloney, "it's jumped; keep a look out." Nearer they come—one continuous roar, but fierce and eager above all the din was the foremost cry of savage Spring and her dashing shadow, the pup. Yonder it is. Click, click go the locks. "Oh, p-haw, boys! it is passing below us," said Maloney. "My ears are flying like the wind," said Kendall, as his eyes fairly jumped from their sockets at the sound of the dogs. "Gosh! they are settin' the woods afire!"

"Where will it take water, Maloney, do you think?" inquired Melton. "At the Cold Spring at the end of Stone Mountain. See that bare, rough cliff?" responded Maloney. "How far is it, Maloney?" "Seven miles," he responded, as he gave loose rein and leaned forward on his leaping sorrel at the mention of miles.

"Good-bye, old snail!" said Melton to Pat.

"I'll bust my boss's neck or my fur jacket, you aggravatin' cuss you," said Pat, mad as bixen. He clinched his spurs in the sides of his quiet horse, and off he went like thunder.

"B-yes," said Saurer, as we reached the mountain foot, "I'll kill that deer at the Spring, and have a julep fixed by the time you get there, and like an arrow his resive gray shot through the verdant laurel bottom and out of sight. Soon we joined our comrades at the Cold Spring, and cold indeed it was, as the half-icy bubbles, baded by the lichens, over the limestone gravel and down the cedar-covered precipice with a leap to the river. "Hello! old boy, where's that deer and julep?" said Melton. "Yonder comes Joice and Whitten, they can tell," was the reply. "Boys, I heard the curs bother the hounds on the creek," said Joice. "Spect some of them have been torn up, or the Walls have killed and bid our deer. I'll gallop back and straten 'em, and off he shot. "Melton, you stand here," said Maloney, "and don't leave a moment, and I will scatter the others along the road as fast as I can." Here came the tired dogs along the bare stones on top of the mountain. The tireless pup, leading on the cold trail fairly gnawing the rocks to find it.

"Here, Whitten, it's been among a gang of sheep," said Joice.

Kendall had joined the "drivers" by that time, and inquired of Joice how he knew the deer track from a sheep's,

"Why," answered Whitten for him, "a deer's hoofs are much more pointed, spread more, and its dew claws are sharper and go into the ground. And," continued the graduate in woodcraft, "you ask why it got among the sheep. It is something in their nature that always makes them go among any kind of stock, when dodging, which sometimes loses a dog completely."

"Look here, Melton," said Pat, tip-toeing, "you've bin outen this stand," when to the mortification of the Cold Spring hero, the dogs traifed in ten feet of him.

"Well," said Melton, "I did grow restless about an hour ago, and left this stand for just five minutes by my watch."

"Thunder and Tom Walker!" said the irate Pat, "hain't you one grain of sense? Don't you know that's just long enough to let a deer pass? Just like you town fellers—fine standers! I told you not to go back after your confounded old dog this morning, that you'd have had luck."

"Look here, Bowman, you are a little too personal; take care you don't make a donkey of yourself before this hunt ends."

The hounds passed to a slope facing the east, which was moist, and they became more eager. "Boys," said Whitten, "it's lying just over the cedar point."

"Well," said Melton, with the sharpness of ill humor, "I'll kill that deer yet and redeem myself or break my own or my horse's neck."

"Yes," said Pat, "you'll play thunder!" Such a roar! "Look yonder, boys, see that deer!" said Saurer. "Now Maltney, Kendall, here's to the slayer," and he cocked his double barrel and fairly rose from his saddle.

Melton seemed no madder than his stormy black, whose nostrils spread and showed his heated blood. Maltney dashed to Melton as if to banter, and then the reckless rider took or deer! Dash over the rail fence, which flew right and left—sprang into the broad field. All took fire, for Kendall was close along with Saurer's careful eye, as Pat came thundering by on his now unmanageable horse. The froth flies from the mouth of the screaming tan pup as he heads out, stretching like a rubber string, fast on the heels of the poor distracted deer. One dash and Maltney's steed has the better of him and passes the deer. Poor Bowman's horse was now far off at a tangent, and with crazy fury approaching a precipice, and as he reached its edge turned short and over it hurled poor old Pat; and was out of sight. "My heavens!" cried Kendall, "poor Bowman's killed," and in a flash he turned from the chase to his rescue. With a vicious sharp crack from Melton's trusty gun the deer, without a struggle, fell amid gathered rustics, drivers, hounds and horses, and Melton had redeemed himself.

But poor old Bowman! Where was he? With one accord all bounded to his relief. And where was he, sure enough? Below the cliff, where he was hurled, grew a heavy topped and bushy hornbeam, with its little branches, entwined in which was the thick growth of wild grape vines. Pat had fortunately struck this tree in his fall, and his legs were thrust up to his crotch among the tops. Melton's eyes were from some cause moist when he heard of his old friend's fall, but as he peered through the vines at Kendall extricating the fallen hero with his knife he greeted him with "Hello, rooster, why don't you crow? we've got the deer." "Goodness! Melton, there's no fun in this. I'm nearly split open. All I want is to get out here to shoot that cursed deer. I've sented me over here," and Bow, was extricated with only such injuries as skinned knees and shins, and a stiff spine from the sudden jar.

A week passed off with hunts more or less varied in their results and excitement. The evening before the day fixed for our departure, Melton, Kendall and Saurer had spent in bagging pheasants. The day closed with a sleety rain, chilling the bird hunters severely, and on their entering the cheery sitting room they were confronted with a glowing wood fire. "Pat," said Saurer, "brush up the hearth and put a dozen good ripe apples before the fire to roast, and let's give Kendall a farewell with an old-fashioned Virginia toddy." "Enough said," chimed Pat, "maybe it will warm up my stove-wood." "Melton," said Saurer, "have you any of that old peach brandy left?" "Yes, look in my valise, in a morocco covered quart flask, and you will find it full of brandy Bill Wallace made four years ago out of fine peaches, from which he extracted the seed before stilling." "Don't take the apples up yet, Pat; let them scorch a little," said Saurer. "Do you want anything else to make the stuff with," said Pat; "any other flavoin?" "Get me a ten-kettle full of clean water and heat it hot, and some sugar. I would like to know how you could improve the flavor of the peach and apple mixed?" said Saurer. "That's a mess, hot water, apples, sugar and liquor all mixed," said Pat. "You old scrub, take this glass and take back what you said about it or I'll throttle you in a minute," said Melton. A short interim passed and the moisture came on Bow's brow, and he said sprily, "Boys, it's better nor I tho'-le's have another," and he turned and tipped Kendall's glass. "Kindle," said he, "here's to all such Yankees as you; here's to them bold and numerous children you talk of; come to my house every year, it shan't cost you a red." "Yes, may he live to tree you agin next fall, old coon," said Melton. "Yes, cuss you, you'd laugh if I broke my neck next year; you've got no feelin' no how!" The cups were drained.

"Pat, do you know I'm the man who let you loose when wounded at Buchanan at the bridge burning you spoke of the other night?" said Kendall. "By golly, Kindle, I believe you. I have some brandy for my life. I've seen you afore, and if you shoot me that day and was a Yankee, all right." "I was a soldier, Bow; I have found men like you in the South do not harbor malice at us, and I shall always remember you with kindness and return to see you again." Pat mopped his brow, went weaving to the door with "Good night, boys."

The whip cracked over our teams by daylight next morning, and we went sailing homeward. Thus did the hunters of the Gray and Blue mix.

CARP IN TEXAS.—Kosse, Texas, July 23.—I now have a fine, never-failing carp pond, or two of them, and intend spending more time and money so that I can catch and sell the young fishes. I have some beautiful carp, sent from the government ponds here before last, measuring about eighteen inches, and weighing six or seven pounds. I am in hopes that my pond is full of young carp, but so far have been able to catch any.—S. B.

LAKE TROUT FISHING.—Fishing at Lake Keuka is good; it is said that a lake trout weighing 17lbs. was caught one day last week.—J. O. F.

TO MY BETTER, "SCOUT."

BY FRANK H. SELDEN.

YOU are a tried and loyal friend.

The end
Of life will find you and I, unwary
Of tested bonds that naught can rend,
And even if years be sad and dreary
Our plighted friendship will extend.

A true friend man never had.

'Tis said

That 'mong all earthly friends the fewest
Unfailing ones should be to trust clad
In canine loveliness; yet, truest
They, be their treatment good or bad.

Within your eyes methinks I find

A kind

And thoughtful look of speechless feeling
That Memory's loosened cords unwind,
And lets the dreamy past come stealing
Through your dumb, reflective mind.

Scout, my trusty friend, can it be

You see

Again, in retrospective dreaming,
The rim, the woodland and the lea,
With past Autumnal sunshine streaming
O'er every frost-dyed field and tree?

Or do you see now once again

The glen

And torn, the highland and the thistle?

And do you still remember when

We heard the bright-eyed woodcock whistle

Down by the rippling shrub-edged fen?

I see you turn a listening ear

To hear

The quail upon the drowsy-plod heather;

But, doggie, wait till uplands are

And then the Autumn's vaning weather

Will bring the sport we hold so dear.

Then we will hunt the lumpy swale,

And read

The snipe, their cunning wiles o'ercoming;

And oft will dush the beved quail,

And hear the partridge slowly drumming

But echoes in the leaf-strewn dale.

When wooded hills with crimson light

Are bright,

We'll stroll where trees and vines are growing

And see birds warp their southern flight

At sundown, when the Day-king's throwing

Sly kisses to the Queen of Night.

But when the leaves of Life's fair dell

Have fell,

And Death comes with the Autumn's even

And separates us, who can tell

But that, within the realm of Heaven,

We both together there will dwell?

Medusa, Conn., 1881.

A WEEK OF FRAGRANT MEMORIES.

IT was a quiet afternoon just at the close of June. In a boat on a little lake in Pennsylvania (no matter where) a man of middle age and two boys were seated; say, rather, three boys, for on such occasions the man becomes a boy; or, as one of the boys prettily said: "It is only a difference in years; we have much the same kind of hearts in us after all." In due time the boys' best feet—two with anticipation of the coming sport and one with anxiety that the others should not be disappointed in their expectations.

The boys were enthusiastic Waltonians, but, hitherto their efforts had been confined to the smaller sorts of fish, and they were anxious to try their hands on black bass. The boys had seen some fine specimens, they had heard and read much of the gallant fight for life made by the fish, of the skill needed to take them with light tackle, and with the ardent nature of boys they were anxious to begin the sport. The trip had been long planned; in fact it was arranged last summer, and when the warm weather and lengthening spring days came and told of the approach of the fishing season, tackle shops were visited, questions asked, purchases made, and some dreams dreamed in which fish of unheard of size were taken only after inconceivable effort. And now at length the last recitations in school had been made, the examinations passed, and the boys were free.

Saturday night brought them to the place of rendezvous, where they were to join their older companion. The hour at which they rose on Monday morning no one knows. Certainly it was long before any one else in the family was astir. An early breakfast over, our traps were placed in the carriage which took us to the station, and never did a railway train carry a happier party than did the train that day. A few hours in the cars and one in a stage brought us to our destination. A hurried meal was taken, and a more hurried tramp to the water. A boat was secured for the entire stay. And now the three boys are in it, and off we go, one gallant little fellow managing the oars admirably. There is a thrill of pleasure as we push off, and the bright color mounts the cheeks of all the party. The senior boy is full of happiness; it is high pleasure for him to see the brightness and buoyancy of his young companions.

I had been at the lake before. I knew the coy manner and fastidious tastes of the bass. Sometimes the wriggling worm is greedily taken, sometimes the minnow is the food they most want, while again grasshoppers are a tempting lure; and there are other times when they will none of these, but greedily rush for black crickets; to the fly they never rise. Hence there must be some experimenting. Supplied with worms and crickets (the two most easily procured baits) we tried our luck, but crickets and worms alike proved failures, and the result of the afternoon's fishing was disappointing.

Next morning arrangements were made for a supply of minnows, and till they could be procured we determined to try grasshoppers and trolling spoons. Again disappointment attended our efforts. Some others, meeting with a similar lack of success, became discouraged and were preparing to leave. As we wound up for dinner, I said, "Boys, shall we follow their example and go too?" "No, sir," came the prompt reply; "not a bit of it; we came to fish, and we will not give it up so easily. No, sir; we will stay." And then we all

shock hands, and I said something about "the right spirit." Our minnows secured, we proceeded to try them. They proved to be just the needed bait. It was not long before I began a fight with a large bass. The whole performance was new to the boys, and their excitement can better be imagined than described. They fairly yelled when the fish gave his characteristic leap. At last he was secured in the landing net, and then transferred to the boat. He was handled and admired, his size and weight speculated upon, and then came most naturally from both boys, "I wish I could take one just like him." They had not long to wait for the fulfillment of their wish. Harry soon felt the peculiar tug at his line, and with a shout, "I've got him," stood up to begin the struggle. Breathless with excitement as the fish leaped wildly from the water, he almost forgot his part of the work; the line was again, he grasped the top of the rod was not kept up; again, he could not run out. The line with both hands, so that the line could not run out. You wonder, kind reader? Do you remember the work you made with your first bass? And you were a man, too. Have seen men, more than once, break their rods with their first heavy fish. A word or two from his senior recalled Harry to his work, and right well he did it. Five minutes of battle and another fine fish lay in the boat. It would have been difficult to say which showed most signs of excitement, the captor or the captive, but I know certainly that I was not often seen a happier or a prouder boy, and he had a right to be; he acquitted himself most creditably. There were handshaking and congratulations.

And then came John's turn. John is usually a quiet boy, but under the quiet outside is hidden away a deal of force—force that will tell when he reaches man's years and enters his life work. But just then the quiet outside suddenly vanished, and with a shout like a war-whoop, John sprang to his feet; and then he grew pale as the contest waxed fiercer, and he trembled as the fish sprang from the water trying to shake the stinging hook from his mouth. But with some directions and a little aid he landed his fish, and the third fine bass graced our boat. Then came reverses, for Harry lost two—one just as it seemed ready for the landing net—John lost one and I lost two. There were some long and not very happy looking faces just then. But we did not lose courage; we kept right on, and when our little catch was carried to our hotel a goodly string of fish. I do not think that the three happier hearts anywhere than the three hearts that night in the little country inn beside 8—lake; two because of their first experience in bass fishing, and one in the enjoyment of the others.

Day by day for a week we repeated the work of this one afternoon. Nice strings were taken; boxes of fish packed in ice were sent to father and grandfather at home.

And we not only had the pleasure that comes of innocent amusement, recreation and sport; we enjoyed to the full the beautiful country, with its high hills, its fields of ripening grain and its grand old forests. The mountains in the blue distance lent their charm. Light and shade followed each other over the lake and the peaceful fields as sunlight and cloud alternated in the sky. One night a grand thunder storm awed and yet thrilled us with its terror and magnificence.

We used to take supper with us and eat it in the boat in the quiet hush of the evening, amid the glories of the fading day as the sun went down behind the surrounding hills. What a delight was that quiet hour, spent in the midst of the waning splendors of the sinking sun.

But the end of that happy week came. Our lines were reeled up for the last time, our rods unjointed, traps packed and good-byes said to the kind people of the inn who had done so much for our enjoyment. We could not but feel sad that our pleasure there was at an end, but we were glad and thankful that we had been allowed to have so much of it. We turned our faces homeward; the boys to finish their vacation in a beautiful country town; I to work. But there is in my life to-day a strain of music and a bit of brightness that was made there by a week with two bright, kindly, pure, affectionate boys. Dear young hearts, I wonder whether you know what a place you have made for yourselves in the older world. I wonder whether you know how much of this world's intercourse and constant association has endeared you to your companion. May we live to have many such "good times" together; and when I shall have unjointed my rod for the last time, may you, in the midst of your enjoyment, think of him who gave you your first lessons, and say in the words of dear old Walton, "May the blessing of St. Peter's Master rest upon mine." M.

August 4, 1881.

THE MAGALLOWAY COUNTRY.

MAGALLOWAY RIVER, Maine, July 26. AS I have been in disagreeable conditions of mind for the past eight years I think I can safely say I have discovered a gold mine this season in the way of hunting and fishing. Large game is very plenty, embracing moose, caribou and deer, and small game is abundant. With a good fly-rod and landing-net you can have all the fun with the speckled beauties you desire. Our friend Eaton has just returned from Sunday pond with four fine trout, weighing respectively, 23, 34, 35 and 43 pounds. This little pond is in full view of the lake, and whether you know how much of this world's intercourse and constant association has endeared you to your companion. May we live to have many such "good times" together; and when I shall have unjointed my rod for the last time, may you, in the midst of your enjoyment, think of him who gave you your first lessons, and say in the words of dear old Walton, "May the blessing of St. Peter's Master rest upon mine." M.

There are five or six ponds within a short distance, well stocked with trout, and up the river four miles is the large and beautiful sheet of water called Parmachenee Lake, to which the readers of the FOREST AND STREAM need no introduction. Deer can be seen nearly every day at sunset on the edge of the pond opposite our camp, and in June two moose came regularly down to the water to drink, but as the season advanced, fearing the guns about the pond, they left for some safer place in which to quench their thirst. Last Tuesday our guide, Flint and myself went to Upper Metallic Lake fly-fishing and on returning saw before us a large moose in the water. As I did not wish to try him with my fly-rod we had the pleasure of paddling up within about three rods of him before he knew of our presence, but when he saw us he gave up his fish and went into the forest.

This section, during the full months one can have all the sport he desires in the way of hunting or fishing. If it were in the season for still hunting I could give your readers some of my experience in that line, but as it is out of season I will forbear. However, I can assure them if they will come to Flint Camp they can have all the sport they wish for.

For the benefit of those, if any there be, who may wish to come to this place, I will give full directions for getting here from Boston. Start from the Boston and Lowell depot with

an excursion ticket to Colebrook, N. H., and return via Concord, Boston & Montreal R. R.; take the stage at Colebrook through Dixville Notch to Errol Dam, Bragg's Hotel; thence by steamer up the Magalloway River to Brown's farm; from there by private conveyance to Fred Flint's camp at the head of Escholt Falls. There you will find guide F. L. Mason, who will take you by boat up the stream twenty-five miles, to Elms Landing at the foot of the falls, and after thirty minutes' walk you will be where I now sit, and you will, in season, find a good, hot supper of moose or deer steak awaiting you, which I have no doubt you will enjoy.

S. H. B.

FROM MOOSEHEAD LAKE TO THE MAIN ST. JOHN.

IN THREE PARTS—PART III.

ON the morning of June 4th we bade adieu to our log camp and hastened on our journey. A pull of thirteen miles took us to

DEPOT FARM.

before described. Here we tarried for an hour with a veritable Robinson Crusoe with his little dog, although he answered to the name of John Harvey. He and his dog are the sole occupants of the forest herabouts. In a little log hut he lives, and since last fall he had seen no human face till the day before we came, when a party of three came across from "Seven Islands" on the St. John, but no party had been through over the route we came. We regaled ourselves with fresh milk, learned from him that there was a log camp some seventeen miles ahead, procured some corned beef and some salt and eggs of him, and resumed our journey. A matter of twelve miles took us through another section of the Alleghash River, into

SQUARE LAKE.

and two more through it, into the third section of the Alleghash.

From here (the foot of Square Lake) it is three miles to a log camp. (As log camps are very important to a sportsman in his journeyings I have been very particular to locate all I am familiar with.) It is a comfortable camp, except the roof has been removed from one side to furnish material to build an oat-bin hard by; the remaining roof, however, is tight and in good condition. It is on the left bank, about fifteen rods from the shore, at the foot of the second pitch of water after leaving Square Lake, opposite a big eddy, and may be seen from the river if you look sharp. During the night, while camping, I was awakened by Newt's melodious voice, shouting, "Sam! Sam! Sam!" each time louder. I thought at first he had the night-horse. Then I heard Alf mutter, "Dod butler it." What ails him? Sam, however, awoke finally (but I declare I thought he never would), and grunted out, "What you want?" "What's that, gnawing?" answered Newt. By this time we were all awake, and distinctly heard a loud gnawing outside the door. "Something trying to get our stores," shouted Ned, as he grabbed the rifle, and "Dod butler it!" lighted a match. As the match was struck a large rabbit slipped lively away, but he was not the disturber of our peace; outside was a big hedgehog, trying to get at our salt; but before Ned could get a bead on him he got!

The next morning, June 5, was lowery, with occasional light rain, which continued in light showers till the middle of the afternoon. We, however, broke camp at an early hour. About a mile and a half below, on the right bank, we passed

MUSQUACOOK STREAM.

which affords fine trout fishing, and some three miles below this is

FIVE FINGER BROOK.

which empties in on the left. The latter stream I have never seen on any published map. It deserves attention as furnishing fine fishing ground in the summer and fall. From our camp of last night it is about twelve miles to the border of civilization, which announces itself by a little log hut on the right bank, occupied by Joseph Gilbert. We were advised this is not the most promising place to stop at, but

FINKLY McLELLAN'S.

whose house is somewhat larger and whose possessor is rich! which means here from two to three thousand dollars. McC's is a few rods below on the same bank.

From this point to Alleghash Falls it is about three miles, and if a few scattered log houses along the bank of a river constitute civilization, then indeed we are out of the wilderness, and I confess it hardly seems so to me. Between here and the Falls are four log houses or huts, three on the left and one on the right bank. The water herabouts is quiet, with occasionally quick water, but after leaving McLeellan's it is mostly quick till you reach Alleghash Carry. We tarried at McC's for half an hour or so and chatted with the old folks while we warmed our shins before a huge cooking stove, for it was quite cold in the humid atmosphere outside. About noon we continued our journey, and made the run of three miles to

ALLEGASH CARRY.

in thirty-three minutes. At the head of the carry we got up a fine dinner of corned beef hash, and then dragged our pattern over the carry (a fair road) some forty rods, on a wooden sled or skid which is kept there for that purpose.

"THE FALLS OF THE ALLEGASH"

are decidedly picturesque and impressive. The river narrows up at this point and discharges a large volume of water through a very narrow gorge cut through a solid ledge. The water is directly precipitous only some thirty or forty feet, but it has a fine fall of some seventy feet, covering a space of some fifteen rods in its whole decline, reminding one strongly of Trenton Falls.

Below the falls we again embarked. There are several pitches of water between the fall and the St. John, but none dangerous, only a little lively. There is much shoal water also, and we scraped and bumped along at times, but got over them without much trouble. About 5 P. M. we made our junction with the

MAIN ST. JOHN.

where the whole feature of the country changes. The banks of the St. John from here down are mostly cleared, and from scattered huts you come to small settlements and extensive farms, with fenced lots, growing crops and waving grain.

Before leaving the Alleghash I must note two or three scenes that impressed us all strikingly, which was the sudden falling off of the river bed at times when a long, straight stretch of a quarter of a mile presented itself before us. Sometimes it would appear we were riding down a steep hill on the ice, and the rapidity of motion was the current. This was especially noticeable at the mouth of the Alleghash. At

first we thought it an optical illusion, but we found it not to be so. At this point the decline of the bed of the river is very great, and the water runs with exceeding swiftness, yet the surface is almost unbroken, and from the upper point you look down the incline as you would if you were sliding down hill, and the sensation of running this quiet water is a peculiar but pleasant one. About half a mile below the junction of the Alleghash the St. John—is the worst pitch of water we encountered on the whole trip. It is some twenty rods long, quite sharp and choked with rocks on every side so there is hardly a channel anywhere.

The birches went ahead and chose the south shore, which happened to be the proper channel, hard in shore.

Expecting to find the best water, we took the very middle. We had just entered the seething current when a native shouted to us from the shore, "You can't get through there, the channel is on this shore." This was indeed pleasant to contemplate, dashing as we were rapidly toward rocks which threatened destruction. "What shall we do, John?" said Sam. John paused for a second only, for time was indeed precious, when he replied, "I guess he's right; I don't see any way through here."

"Shove her across, then, with all your might, if you get a chance, and try for the channel," shouted Sam.

And a moment after John headed her for the south shore, but, alas! it was of no use, we were hummed in. "It's no use," ejaculated John, "we must go through straight, somehow." At the same moment, Thump!—and we brought up on top of a rock; for the water was so shallow that it shivered and trembled, while the maddened waters piled up around us; but, thanks! they proved our salvation, for they finally got under us and lifted us off the rock, and we took a new start and ran safely out of the vortex.

I learned that evening that a boatman was drowned on that pitch last spring. As an Irishman would remark, "The next time I run that pitch I'll go around it."

A mile lower down and you reach

JOHN GARRY'S,

where sportsmen always tie up if they delay here, and where we tied up for the night. His house is on the left bank.

They make no pretensions to accommodations, and we found them poorly off in the way of provisions. Could give us pork and potatoes, but ham, eggs, bread—no. We might borrow their stove, and they could furnish a little milk and some butter. So Ned pulled off his coat, and while talking money to a pretty French servant girl, he got up a good supper; but, O! such biscuit as he made with milk.

"O, I'm what you call him, that rises on top the milk," he replied, when we praised those puffy biscuits.

But, patient reader, I have not yet said the patience much longer; I have been prolix, I know, but I have endeavored to give an accurate history of this trip in detail, that you might profit by it if you should ever desire to make it. The distances and other statements of facts are as true as my poor ability can furnish.

In a few words I will take you to the end of our trip. June 6 we resumed our journey down the St. John, reaching

ST. FRANCIS PLANTATION,

ten and a half miles from Carleton Place, in two and a half hours, passing through two or three strong rapids, but plenty of water, and drew our boat ashore at Martin Savage's, nearly opposite St. Francis River, where we hoped to get dinner. It is a large farm, with a large and pretentious house and inviting surroundings and where formerly travelers were heartily received and provided for, but Mr. Savage was away and the lady of the house said they had not entertained of late, as they had a large family of workmen to care for, so we re-embarked and stopped off at

WATER CROCK'S,

three miles below, on the left bank. They did not keep public house, but would get us a dinner; and they did—a good one—but would make no charge. We, however, remembered the servants.

Mr. Connor is quite well off and very hospitable, it is said, but he was away on a "drive." He is building quite an elegant house here, for these parts, and may he live long to enjoy it.

Leaving Connor's, log-houses are more frequent and small settlements appear. Seven miles we left our small red church upon the left bank attracted our attention, so picturesque was it, nestled among the rude habitations about, with green fields setting it off to good advantage. From Red Church to

FORT KENT

is five miles and mostly quick, but good, water. We made the distance in a little less than one hour. Fort Kent is on the right bank and consequently in Maine. On the opposite bank is Middle St. Francis, a Canadian settlement. We stopped at Samuel Storey's hotel, a good table. Fort Kent is very prettily situated at the confluence of Fish River, which makes in from the south, and the St. John. It is quite a thrifty little village, with a store, post-office and Catholic church. We found the church open and entered. It was a rustic affair, but somehow impressed me wonderfully. In the body of the church were rude wooden seats, without cushions, paint or ornament of any kind. A rough stairway, without railing, leads to the gallery, which we mounted, and found there one of the best benches. A rope leading to a primitive belfry hung idly by, for it took time to set the tongue of the little bell a-vibrating, but we profaned no solemn stillness that reigned within. Descending the stairs we approached the altar, around which imitation wax candles stood ready for lighting. Here and there hung cheap prints of the Saviour nailed to the cross, Mary and the saints. With noiseless step we retreated from this hallowed precinct, closing carefully the heavy door behind us, that we might not disturb the holy silence that prevailed. We next visited the District Church, a bird by, which plays an important part in the history of Fort Kent. It was built some forty years ago as a fort, in anticipation of a war with Great Britain, over the boundary line between Maine and Canada, but the matter was finally settled by treaty in 1842 without bloodshed. It is built of heavy timber, with loopholes for rifle and cannon, and is situated on an eminence overlooking the St. John and Fish rivers and near their junction. At Fort Kent we sold our bateau, agreeing to deliver it at Edmundston.

At five the next morning, June 7, we resumed our journey in order to reach Edmundston, the terminus of the New Brunswick R. R., in time for the train, which we were told left at 10:30; as we were also advised it would require five hours to reach there—twenty miles. We, however, did some good pulling, and reached there in three and one-half hours—viz., at 8:30, and were there informed the train would leave at 11:30, thus giving us three hours to spare. The ride from Fort Kent to Edmundston comprises one of the most

interesting sections of the whole trip. The wilderness has now disappeared from the banks of the river, and log huts have given place to more modern structures, although many rude affairs are still frequent. The soil along its borders, however, is rich and fertile and picturesque in appearance, and I was more than once reminded of the Rhine of Fatherland as I saw it ten years ago. Much of the way, on either side, the land is level for a distance back from the borders of the river, when it gradually slopes upward till it rises with a graceful incline several hundred feet above the bed of the river. In many places along it is entirely cleared of wood and subdued into tillage, pasture and mowing lands.

The most charming scene which engaged my attention along this section was at a point on the south bank of the river called

FRENOUVILLE,

where near the bank is a small settlement, a rustic village with a neat little church and open square. In the background is a long, high range entirely subdued, and mostly devoted to grass and grain, thus presenting different shades of green to the eye. From the summit of the range to the village, long stretches of fences appear, running mostly one way only—i. e., from the top down, as is chiefly the case on the Rhine.

A solemn quiet prevailed as we passed this secluded spot, giving the whole picture a dreamy aspect, which was at once charming and impressive. There are but few rapids between Fort Kent and Edmundston, and in this respect the trip grows less exciting and more monotonous, although the scenery all along is inviting to the lover of nature.

We encountered some logs *en route*, but got through without difficulty.

EDMUNDSTON,

Little Falls, or Madawaska, as you please, are one and the same place, and is situated on the left bank of the St. John and right bank of the Madawaska at the confluence of the Madawaska River, which comes in from the north, and the St. John. The railroad station is on the same side of the St. John, but the left bank of the Madawaska. The village is small, with a hotel which is passable—i. e., you had better pass it. At Edmundston we bade good-bye to the river, delivered our bateau, got our canoes and luggage to the station, and at 11:30 started for Grand Falls, thirty-nine miles distant. The road is a very rude affair, and slow time a necessity. We made the distance in three and one-half hours, or about twelve miles an hour. At

GRAND FALLS, N. B.,

are two hotels, the Grand Falls Hotel and the American. We stopped at the former, which is the better, and which we found exceedingly good, considering their facilities. Grand Falls is quite a romantic place, with a population of some 800, on elevated ground overlooking the falls, which are some seventy-five feet high and quite picturesque. Below the falls is a suspension bridge for ordinary travel, from which you get a fine view of the falls and river below. Below the falls is a deep chasm with beetling cliffs on either side. On the west side is a rustic stairway leading to a small ledge overlooking the river. In the summer season Grand Falls is a favorite resort of summer boarders. A great drawback to an American would be the want of facilities for reaching it, for, while they have a railroad, they make short runs and long stops. From Edmundston they run to Aroostook, twenty miles below here, fifty-nine miles in all, returning as far Grand Falls the same day. You reach Aroostook at 4:20, and must remain here over night. At 9:30 next morning you leave Aroostook and reach Woodstock about 2 P. M., where you must remain until the next morning, when you leave at 9 A. M., and thus reach Bangor in time to take the evening train for Boston, hence three days from Grand Falls to Bangor, 252 miles! So tedious are they that even the Government sends its mails by a one-horse wagon, which runs night and day, and thus beats the railroad one day out of three!

In our haste to get along we took a wagon at 6 A. M., June 8, from Grand Falls to Aroostook, eighteen miles for \$10, reaching there at 9 A. M. in time for the train, and arrived at Woodstock that night, stopping at the Gibson House, which is the best in the place.

At 9 A. M., June 9, we left our stopping place at McAdam Junction on the E. & N. A. R. R. at noon. At the station we got a miserable dinner. At 6:15 we reached Bangor and took a coach to "Bangor House," where we got a first-rate supper. At 7:45 we took a sleeper for Boston, arriving there at 6:30 the next morning.

GENERAL REMARKS.

And now, patient reader, after the manner of a minister toward the end of a long-winded sermon, I will draw my discourse to a close.

Regarding the best time to make this trip: If the objective feature is hunting and fishing, decidedly September and October are the better months, as there are few deer; fly-fishing is in its prime and both large and feathered game is more readily found. Partridges are very plentiful at this season. Running the rivers is not as easy then as in the spring, unless the fall rains have raised the streams; yet there will be no great difficulty in that direction. As to the place to rendezvous for the best hunting for large game, Eagle, Churchill and Long Lakes stand pre-eminent, although there is not a mile of territory between Chamberlain Lake and the mouth of the Alleghash that does not abound in large game. Deer, which are scarce everywhere else in Maine, have latterly been increasing rapidly and now are quite plenty. Trout, it is hardly necessary to say, are abundant, at the mouths of nearly every stream that flows into the main river, as also in the still waters about the falls and rapids.

As to provisions it is better to take some kinds with you as can get a better quality and variety at home than on the lakes. This we found notably so regarding salt pork, an almost indispensable article in the woods. There is plenty there, but not nearly so cheap as we carried in. The same is true of meal, hardtack, coffee and tea. Onions are sometimes difficult to get *en route*, and they play no mean part at one's dinner; in chowder they are a *sine qua non*; while cut up in vinegar they are a great appetizer (although perhaps a superfluity in that respect). Potatoes, good butter, flour, sugar, etc., can be procured readily at Greenville, but after leaving there they are more uncertain—especially butter, make sure of that at Greenville. Sugar should always be taken in the lump, as it never wastes in this shape. If you get them at Bangor, where you can also if you wish get everything.

After leaving Greenville we got short of butter and were placed on short rations with that article for several days. Potatoes, pork, etc., however, we found at Suncook and Chamberlain farm. As to the quantity of provisions to take, that is a conundrum, as appetites are so uncertain, and while

gorge a trout seven inches long. I am quite sure the fish was dead when he took him, as I saw two dead ones that morning and I found but one when I went with net to take them out. I think they rarely have trout on bill of fare. Two years ago I passed by one of my ponds. All was quiet. Fifteen minutes later I came back and saw about one hundred trout attacking a garter snake. I took a rake and lifted him out of the water. His "goose was cooked." I saw a dead one in same pond since.—A. F. Y.
Escautau, Mich., Aug. 1.

HOW DID THE FISH GET THERE?

I HAVE for four or five months been making a carp pond by digging out a piece of ground below two small springs and immediately between the springs and a running branch. About two months ago I quit work on my pond and let the water accumulate in it until two weeks ago, when I drained off the water, and to my surprise found a lot of fish, a dozen or more, some as long as seven or seven and one-half inches. They consisted of cat and perch, such as inhabit our creeks here. Some of those that I caught were not more than one or one and one-half inches long. Now, there was not a bucket of water in all when I quit work in the pond, and there has been no possible chance for any water from any other source than the spring to get in it, with one exception. At one time, when it rained, I made a trough, and from a hillside where there was a small gully running near the pond I turned it through the trough and allowed the rain water to pass into the pond. Now, the gully I speak of is only one of those that conduct off the rain water and was dry as soon as it was done raining, and I know there was not a fish put in the pond, for I had a picket fence ten feet high around it. Now, can you tell me where the fish came from?
The springs run some fifteen feet before they get to the pond, and do not run a stream large enough for a minnow to go in; besides, both springs have barrels in them, and I have never seen any sign of fish in the springs.
R. C. S.

ALBINO SWALLOW—SISLERVILLE, N. Y., Aug. 5.—Seeing mention of an albino swallow at Newport, in a recent issue of *Forest and Stream*, induced me to report a similar occurrence. I observed one at Dunkirk, N. Y., on the 20th ult. It was with many others of its species flying about the docks and elevators. It was pure white all over except on the breast, where it was of the usual pale chestnut of the barn swallow (*Hirundo horreorum*). From this fact, as well as that the majority of its associates were barn swallows, no doubt it belongs to that species. Last summer two white birds were reported as nesting near here, and this season I hear of them again. I consider the reports reliable, and from the descriptions given, suspect them to be wood pewees (*Contopus virens*). I regret that I have been unable to get a look at them.
J. M. E.

WRIGHT OF WOODCHUCKS—Hornellsville, N. Y.—A perfectly black, full-grown woodchuck was killed here last week; also a woodchuck that weighed over 18 lbs. Do you not call this a large one? I never weighed one before, and only weighed this one as it was such a large one.—J. OTIS FELLOWS.

Holland Shooting Suits—Uphergrove & McLellan, Valparaiso, Ind.
Bad Dreams, Disturbed Sleep, Indigestion, Stomach Gas, all vanishes before HOLLAND'S.

Game Bag and Gun.

THE ILLINOIS SPORTSMEN.

THE annual convention of the Illinois State Sportsmen's Association was held at the Palmer House, Chicago, last week, delegates being present from the following clubs: Ft. Clark of Peoria, Canton, Geneseo, Maple City of Geneseo, Macomb, Peoria, Quincy, First Lee of Franklin, Glenview, Gen. of Quincy, Oak City, Aurora, Astoria, Chicago, Delaware, Egyptian of Cairo, Forester of Chicago, Cumberland of Chicago, Lake George, Staunton, Ridgeland, Blue Island, Waukegan, Mak-saw-ba, Alton, Milwaukee, South End, Evanston, Mercer of Rio, and Wyanog.

Mr. Abner Price, the Secretary, presented to the Convention a report of the Magnor case, and asked that a voluntary subscription be made to reimburse the firm of Chicago lawyers, Messrs. Palmer & Durkee, who had at their own expense carried the case of the club through the courts and secured the conviction of Magnor. To this Hon. J. L. Pratt, of Syracuse, objected, on the ground that the prosecution of Magnor had been the work of the local clubs, and it was not the duty of the State Association to help to pay for it. Senator W. T. Thompson, on the other hand, thought that it was the business of the Association to be something more than a pigeon shooting society, and it ought to do something practical in the way of game protection. He urged that the money be paid. The subscription was taken up and the game laws of the Association given thereby. In fact, the good work has gone on all the while. The Chicago club have a fund of \$3,000 for the purpose of enforcing the game laws, the men most active in this effort being Messrs. N. R. Fairbank, L. Z. Leiter and Geo. L. Dunlap.

The following motion was introduced by Mr. Felton and adopted by the convention:

"Resolved, That it is the sense of this association that trap-shooting is but an incident connected with our annual convention and not the primary purpose for which it is convened; that the practice of managers of tournaments of venturing in our annual announcements their programmes of contests at trap-shooting is out of taste and injurious to our work and should not be permitted; that the only contests which should be advertised as a part of our convention work are those which are authorized by our convention and by the directors of our annual conventions, and that the Board of Directors be requested to separate altogether its annual announcements of programmes of tournaments, which usually follow our convention contests."

The next convention, in 1882, will be held at Chicago. The following are the new officers for the ensuing year: President, Dr. F. B. Norcom, South End Gun Club, Chicago; First Vice-President, Chas. E. Willard, of Chicago; Second Vice-President, Geo. S. Wells, Geneseo; Secretary, John B. Wiggins, Chicago; Treasurer, Abner Price, Chicago.

FOREST AND STREAM GAME TABLE.

OPEN SEASONS.

The seasons, in which it is lawful to shoot game in the several States and Territories, open as designated in the following table.

States.	Deer.	Woodcock.	Quail.	Ruffed Grouse.	Plains Grouse (Prairie Chickens).	Wild-fowl.	Wild-Turkey.
Ala.	Oct. 29.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Oct. 1.	Oct. 29.
Cal.	July 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 1.	Sept. 1.
Conn.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 1.	Sept. 1.

* In these States there are special county laws. A deer law applies to sale or possession. A wildfowl not protected on the coast. In Upper Peninsula deer season opens Aug. 15. In California quail protected to 10 a. m. in season. In Colorado quail season opens July 1; in Missouri and California, Sept. 1. First open woodcock season begins July 1; will close Aug. 1. Quail shooting prohibited to Nov. 1, 1882, in counties of Montgomery, Schenectady, Saratoga and Albany. Wildfowl season in Long Island waters opens Oct. 1. Woodcock shooting in Dutchess County prohibited during August. A deer law relates to female deer only.

NEBRASKA GAME GROUNDS.

NORTH PLATTE, Neb., 1881.
IN the Birchwood Creek country, twenty-three miles from here, reached by wagon or horseback ride, sportsmen can find deer, elk, and an abundance of ducks and grouse. Good accommodation can be had at Brot's ranch. After staying here a few days the hunters can pull up and go to Cody's ranch, and to North's ranch on the Disual River, sixty miles from North Platte. They will find an abundance and variety of game there, and a most cordial greeting by Major North and W. F. Cody or, as he is better known, "Buffalo Bill." There are some buffalo in that country now. They can go to Smith's and D. W. Baker's ranch, on the Loup River, where they will find all the hunting they want.

It costs little to hunt out here. They may think the boys a little rough; but we are big-hearted and always do all in our power to make our friends enjoy their stay. A good rifle should be provided for the game.
P. H. M.

A GOOD WORD FOR ADIRONDACK GUIDES.

Editor Forest and Stream.
I have lately seen paragraphs in the daily papers which speak harshly in a general way of the Adirondack guides. The *Evening Mail* said: "Adirondack guides would seem to be a class of men to be let severely alone. Recent events will discourage tourists from availing themselves of their services and future events will see some of them in State Prison." Now, from all that I have been able to learn, the only act that has been committed by a guide that would give any cause for this paragraph was the atrocious assault by a guide named Parker upon a lady he was guiding from Forked Lake to Long Lake. This was the representative of the whole bunch, and the guide who committed this crime was far from being himself to perpetrate such a crime well deserves State Prison or something quicker and more relentless in its punishment—a running noose over the limb of a tree.

But because one man has sinned, are they all to be put under the ban?

In my wanderings through the Adirondacks, which have extended through a good many years, I have met and become intimate with many of these guides and, while there are great differences between them as to talents and ability, I do not know of one in all my circle of acquaintance that would hesitate to tramp the woods or paddle upon the lakes with at any time or under any circumstances. I have always found them honorable, upright, sterling men—faithful in the discharge of their duties, honest in their dealings, cool and collected in times of danger, pleasant companions and faithful friends.

It grieves me to see this whole class insulted and maligned solely for the wickedness of one of their number. When Adam fell he was the representative of the whole human race, and the curse of his sin clings to every son of Adam down to the last man; but in this case Parker, and he alone, is entitled to all the odium of his wickedness.

These noble fellows have hard work and none too much

pay for their services. Don't let anything be said or done that will lead their customers to look upon them with distrust or suspicion.
JAMES.
New York City.

POT-HUNTING BLACKBIRDS.

A LONG the Delaware River below Chester the market shooters are killing blackbirds by the hundreds, having adopted a new and most deceptive method for their destruction. A blind is built in the course of the morning and evening flights of the bird, and the gunner patiently waits its appearance. Three or four poles are driven into the marsh, and on these poles branches are fastened so that every twig can be swept by the shot from a large-bore gun. On a pole at one side dead birds are placed as decoys. As the birds begin to fly shortly before sunrise the gunner has all his preparations completed soon after daylight. The first flock decoy best; the poles are soon black with the chattering crowd. Three or four dozen are often killed at a shot, and from fifteen to twenty dozen is an average morning's work. After eight o'clock the shooting is over, as the birds are scattered over their feeding ground. As they return in the evening the slaughter begins again and lasts until sundown. Blackbirds now are young and tender, and are easily sold to restaurants in Philadelphia, and these market birds and waders in the evening, which lasts until red birds are permitted to be killed. By that time the blackbirds are covered with pin-feathers and are very difficult to pick, but still frequent the reed marshes in millions. Their condition—for they do not seem to fatten on the seed of the reed as the rail and reed birds do—and their being in the mouth causes them to be unmolesated in a great measure, the market shooters paying all attention to the latter named, as they bring a much better price.

We are having a long spell of dry weather here. All the small streams are dried up, and the water, in order to exist, has taken up its quarters in the river bank crevices, where the ground is kept moist, and in boring condition by the rise and fall of the tide. These crevices and thickets are being industriously worked out by market shooters with their spaniels, the gunner keeping on the outside while the spaniel drives out the birds into the open where they present an easy shot to even a bungler, and are killed before they fly into the thickets again.

Grass plover have appeared in the fields around Philadelphia, and their note is heard every evening as they fly their way over our city.
Hosio.

SHOOTING AT PORT JEFFERSON.

PORT JEFFERSON, Suffolk Co., L. I.
WHILE roaming around the fields and through the woods surrounding this growing country resort I came to this conclusion: that quail shooting is going to be grand this fall. On every side, over hill and valley, the numerous notes of Bob White can be heard. There are thousands of fields of wheat and buckwheat stubble which make excellent feeding ground for quail and wild pigeon, within a radius of ten miles of this place. Woodcock shooting is very good now, and a large number of birds have been killed since August 1.

While conversing with Mr. W. H. Raynor, of the firm of B. R. & W. H. Raynor, proprietors of the Port Jefferson Hotel, or, in other words, the Sportsman's Retreat, he informed me that they have spent the morning to date everything in class for the accommodation of city sportsmen. He being a good-natured, whole-souled sportsman himself, knows how to make everything comfortable for those around them. They have everything requisite for a good day's sport. First class dogs well-broken on game, guns, fishing tackle, live decoy ducks, sail and row boats and bathing houses, are all provided for the pleasure of the guests of the hotel.

Adjoining the hotel is a shady lawn for playing croquet and lawn tennis, and their terms are very reasonable—only \$7 to \$12 per week. Mr. W. H. Raynor will go out hunting or fishing with any guest who may favor them with a call, whether it be of long or short duration, and there are no mosquitoes to trouble you, and the evenings are delightfully cool. It has secured the privilege of hunting over a great many farms, where there are signs up that no trespassing is allowed, and can take sportsmen over new ground every day as long as shooting lasts.

Wild ducks are in abundance, and no one need go two or three hundred miles to find good duck shooting. It is an every-day occurrence to see gunners going up the bay with their forty ducks in a morning's shoot during the fall of the year. This was such a generous offer that I desire every reader of the *FOREST AND STREAM* to know of it and give him a trial, as the "proof of the pudding is in the eating of it."
F. M. S.

A BRACE OF WOODCOCK.

MONTVILLE, N. Y., Aug. 8, 1881.
FOUR of us had been scouting in the latter part of July, and had found some "patches" which promised excellent shooting. In fact, as late as July 25 in one patch the dogs would put them up on every side. So three of us arose at three o'clock August 1, hatched up, and started for that patch of about ten acres of small cedars. Our only anxiety, that some of these "City" larks, who had come up Sunday would be in before us. We arrived about sunrise, and found the exact clear, sent in the dogs, after posting ourselves around the outside. Dogs sent out one in about five minutes, bang! bang! and mark to the man on the other side bang! and "Send us another," told that this one was saved. Seeking better positions and scolding the dogs for their lively work, we spared ourselves for the next one. Five, ten, fifteen, twenty minutes and he didn't come. Now rate the dogs for slowness. Afterwards, as they were tired, but at the same he refused to come out. An hour passed on, the dogs came out looking disheartened and well worn.

A counsel of war is held, and we determine to try another patch, but our high hopes are "petting out." By chance I happen to cast my eye on the old dog a few rods away in the grass; he is as stiff as a saw horse. I step that way and give him the word and we have two. It is now six o'clock, and we try another patch and start one but lose him. Then we get a horse and drive five miles and try again; couldn't raise a feather; go on three miles where we were to hunt them (in July), not to be found. Well, we will go down to the spring and brook two miles further. Yes, we got one there, making us one piece; started for home about 4 p. m., and were overtaken and nearly overwhelmed by a thunder

shower; but we had the birds—who cares for weather? Crossing the N. Y. C. R. R., we discovered a hunter, from Syracuse, worn and weary, and with empty bag. His forlorn condition aroused our sympathies, and we handed him a brace to keep him from succumbing.

This letter may be lacking in quantity of game when compared with those which appear in your columns from week to week, nevertheless I believe it excels them in truth, and that is desirable.

Believe the man who approves of August 1 as open season for woodcock is just a month too late for this section of the country.

I hear of many woodcock being shot the last week in July, and kept on ice for Monday, the 1st of August, but don't know of any. I believe the law is very generally respected. Yours for earlier season, NOVOIE.

WILD CELERY.

IN the FOREST AND STREAM of July 7, 1881, inquiry was made concerning the cultivation, sowing or transplanting of wild celery (*Valeriana spiralis*) in waters to serve as food for wild fowl.

Although I am not prepared now (others may be) to give all the information solicited, yet in a cause of so much interest to sportsmen in the food attractions of wild fowls in any given locality, I should be glad to see the experiment of transplanting tried and will cheerfully give all the information and aid I can.

It grows in enormous quantities on the grounds of the Winous Point Shooting Club, in Sandusky Bay, where the canvas-back, red-head, widgeon and other water fowls resort in great numbers to live and fatten on its nutritious roots. The seed blossom is produced upon a small spiral stem and floats upon the surface of the water; but I think seeds could not be gathered in condition or quantity for sowing. But as it grows annually from its roots these can be gathered in any quantity desired, and must not be sown, but would readily grow and spread if transplanted in suitable grounds. The water may be from six inches to six feet deep over a mud deposit of at least two inches deep above the clay or hard bottom where the plant is made.

I think it should be planted in the fall, after the bulbs are matured and before ice is formed—somewhere between Oct. 15 and Nov. 15; and if any one desirous of trying the experiment will address a letter on the subject before the 15th of November I will endeavor to have the roots gathered, packed in moss and forwarded. There will be no expense outside of boxing and transportation. D. W. CROSS.

433 Euclid avenue, Cleveland, O.

PRAIRIE CHICKEN SHOOTING.

AKONA, MINN., August 2.

Editor Forest and Stream:

I think the law prohibiting the killing of prairie chickens before Sept. 1 is a good one, although many object to it. From my observation (and I have shot in this State several seasons) I have found many coveys not full grown on Sept. 1, especially when their nests had been destroyed by burning prairies, or other causes. But in many sections of the State, I am sorry to say, the law is a "dead letter," and many chickens are killed in the early part of August. Indeed, some have been killed in this section already. And what is one, who is here seeking his health, an ardent sportsman, desirous of getting all the exercise and pure air possible, to do under the circumstances? Would you advise him to passively abide his time till Sept. 1 and then go out to find no chickens, or to endeavor to enforce the law and get kicked out of town?

But enough of this. I did not expect you to answer these questions, but as I had frequently thought over my position here and what I should do, the same thoughts come into my mind now. The prospect for chickens is good throughout the State and some are two-thirds grown already. The writer is from St. Louis seeking health, and will be in the State till about Nov. 1. About Sept. 1 he will probably go to Kandigobi, in the county bearing that name, where there is said to be an abundance of game and few hunters. In fact, one can find game plentiful all over the larger towns. GEO. G. COLE.

PHILADELPHIA NOTES.

THE fall season of the Germantown Hare and Hounds Club will open in September with a drag hunt. Mr. Waln's packs of imported English fox-hounds will make their first American appearance on this occasion. Much is expected from these dogs, as they came from some of the finest kennels abroad. A better test than a drag hunt would be the participation of Reynard himself, but it is not always a live fox can be had so near Philadelphia.

Philadelphians at Atlantic City say the fishing there has never been better for many years. This is the effect of the prohibition by law of early seine fishing. It is likewise felt at Great and Little Egg Harbors and at Barnegat, N. J. Our friend Kinzey labored arduously for the passage of this law, and deserves the thanks of all lovers of "the gentle art" of angling.

The Philadelphia schooner-rigged yacht Vega is in the Gulf of St. Lawrence with a party of Philadelphians on board.

The extreme dry weather for twenty miles around Philadelphia during the two past weeks has driven the woodcock to the river creeks and drifts, and quite a number have been killed along shore by market shooters. As all the wet feeding places inland have become parched and dry the birds are obliged to seek the thickets bordering tide-water streams, as the only ones remaining where food can be had. By-the-by, speaking of woodcock, we noticed in last week's Forest and Stream a letter from a correspondent, in which it was stated that one of these birds was seen in company with some sparrows in your Reservoir Park "pecking about." Can it be that a woodcock was seen pecking at sparrows? Surely your correspondent, if he was acquainted with the woodcock at all, must have known that their bill can only be used for boring, and then only in soft ground. Perhaps the bird he saw was woodpecker.

At the Zoo last week a son of Mr. John L. Bullock, of our city, while endeavoring to throw a ground nut into the monkey cage, was caught by the finger by one of the monkeys and the first joint bitten entirely off. There should be a close wire screen at the bottom of the cage to protect children from just such accidents as this, or the monkeys should not be allowed to be fed by visitors at all, and the peanut

venders deprived from offering their stock in trade for sale within the Zoo enclosure. A suit for damages might result from just such accidents as this, and the management should attend to the matter.

Last week a resident of Trout Run, north of Williamsport, Pa., while out berrying, accompanied by his dog, was attacked by a huge bear and two cubs. With nothing but a pine-knot, hastily picked up, the bear was kept off until the dog in the front, snapping at her heels, attracted her attention and the frightened countryman made tracks for a tree and saved himself. It has been many years since a bear has been seen so near Williamsport.

The woodcock shooting in the neighborhood of Philadelphia has been very poor this July. Few have been shot. On Tinicum Island during the first week of the month the market shooters bagged a respectable number; but since that time, I learn, "it has hardly been worth while to go after them, besides, it is too hot." Grass plover have shown themselves over our meadows, and every night their mellow whistle is heard as they wing their way over the city. This is early for the field plover to appear. We hardly look for him before August 1, and then he is not the fat, plump bird he is about the last of the month. HOMER.

OSAKIS, MINN.

Editor Forest and Stream:

In answer to your inquiry as to a good point to camp, etc., I would recommend Osakis, Minn. It is a town of about 300 inhabitants, on the St. P. M. & M. R. R., 130 miles from St. Paul. It is situated on the south end of a lake fourteen miles long, abounding in fish. On the south is a boundless prairie and on the north heavy timber. The prairie furnishes chicken and duck shooting and the timber deer and ruffed grouse. There were 2,000 deer killed within fifteen miles of this place last fall, with an occasional bear. The prospect this fall is just as good. The duck and chicken shooting never looked more favorable than for this season.

I have spent fourteen years in Minnesota in different locations, and, taking all things together, I like this point the best. Should any of the readers of FOREST AND STREAM want to visit Minnesota this fall, I can recommend it for good fishing, shooting and a good hotel. Any letter of inquiry directed to me will be cheerfully answered.

S. W. SCOTT, Osakis, Minn.

DUCK SHOOTING RESORTS.

CHILLICOTHE, Peoria County, Ill. IN your issue of July 28 is a letter from J. W. B. desiring to be put in communication with some one who is a professional duck shooter in the West. Should our location suit him (on the Illinois River, 140 miles south of Chicago) I shall be pleased to enlighten him in regard to Western duck shooting. He may address Box K, Chillicothe, Peoria County, Ill.

Our prospects for shooting are better than usual this season. The lakes are full of rice and other feed for ducks. Prairie fowl have done well, and quail, notwithstanding the last severe winter, are seemingly as numerous as ever. I have hunted for the last twenty years, am well acquainted with all the duck country for 400 miles below this place, and think that Chillicothe is the best point for ducks I ever saw.—LEOY.

CLEAN GUNS.—The gun cleaner devised by Dr. T. Yardley Brown, of Reading, Pa., is attracting much attention. The doctor has a large practice and confesses his killing to game only, sparing his patients. He has sent out a great number of the cleaners, which consist of a brush with cone and patch for oiling and loosening the dirt in the barrel, and a rubber cone with patch called the cleaner to remove it. The cones on cleaners are nicely fitted to the caliber of the gun, and are readily covered with circular flannel patches, which are removed when dirty and clean ones substituted. The cleaner is encased in a neat leather pocket book, four and one-half inches long and two and one-half inches wide, containing patches and a towel.

On Wednesday, the 3d, Dr. Brown—who has in his possession a large number of testimonials from such men as Gen. George Crook, the Indian fighter, and poor Major Thornburgh, who was killed several years since, and who purchased fully a dozen of them for his friends—took advantage of the opportunity afforded to display the merits of the article and went to the Pottstown encampment. He secured an audience with Adjutant General Lutts, Major General Hartranft, Brigadier General Snowden, Major Ryan and quite a number of other notable old soldiers and exhibited the appliance. The doctor shot a blank, showed the foul gun to Gen. Hartranft, made two draws with his cleaner, and then exhibited the inside of the rifle as bright as a dollar. When the report for the day was made the gun cleaner was incorporated among the recommendations, and it is likely the Pennsylvania Guard will be fitted out with them before long, each man being supplied. At present but three companies in the service are using them—the Reading, Hamburg and Pottstown commands—and they would not part with them on any pretense. The invention would prove invaluable in keeping the State Arms in trim.

The cleaners are made for all styles of shotgun and rifles of all the various calibers.

EAGLES AND DEER.—Until within a year or two I have tried to protect that "noble bird" from all attempts on his life by my "breathing" of the gun, but I've been converted, and he may number me now among his enemies. I have had many talks with a Florida ship-timber man, and found him thoroughly posted. He informed me that great numbers of deer were killed by wild animals and human hunters, but that the destruction by man and beast combined was nothing compared to the bloody work of the eagles. He says they will sit on a tree in the swamp for hours watching a doe and fawn, and when they find them separated a few feet swoop down on the fawn, and its fate is sealed.—DIIVY.

AMMUNITION WITH A RECORD.—ROCHESTER, Mich., Aug. 2.—Editor Forest and Stream:—I have just received a quantity of the best of waterproof gun caps, the history of which is this: They were bought of Wm. Billingshurst, of Rochester, N. Y., in the year 1856, by Dr. F. M. Wilcox, and carried by him on a trip of several months into the northern Canadian wilderness. By chance part of a box of these caps have been retained by the Doctor until now; and have been taken by him on numerous trips, so that they

have seen more than a year of camp life altogether. In 1873 they were, by a railway accident, submerged in a trunk in the Walland Canal, lying in the water twelve hours. They were then taken on to New York State, and with the other contents of the trunk unpacked and dried. The caps were completely melted, the box not being waterproof. Now please examine these caps, which have been exposed in long camping trips besides the submerging they got in the canal, and are at least a quarter of a century old, and see if they are good. We find here that every one goes.—G. F. WILCOX.

We have tried the caps and find them all right.

A WEEK AT GOOD GROUND.—On Monday, August 1, I started for a week's cruise after the bay birds at Shinnecock Bay, Long Island. I boarded the 3:20 P. M. train on the Long Island Railroad, and, after a rather leisurely hour's ride, arrived at Good Ground, where I was met by Mr. Lane's son John, who conveyed me to that haven for sportsmen, William N. Lane's. Bill was as jolly as ever, and informed me that the prospects for shooting were good. Although there were several foggy days during the week, the average bag was about twenty-five birds, and if the weather had been favorable I would have done much better. I had for a guide St. Foster, better known as the "Baby." He weighs about two hundred and fifty pounds and is one of the oldest and best guides on the bay. The flight of willet are expected every day, and when they come you will hear of some big bags. The prospect for ducks and quail were never better, and good shooting may be expected this fall. Any sportsman who wants good shooting within a hundred miles of New York cannot do better than to go to Lane's.—THAT OFFICE BOY.

WORCESTER SPORTSMEN have always had a good name, not only in Massachusetts but through all New England. Just now the clubs there are making themselves known in an energetic manner, and we shall take great pleasure in recording the fact whenever they raise their quarry to earth. The papers of Worcester contain the following advertisement:

ATTENTION, SPORTSMEN!

Information Wanted—\$50 Reward.

The above reward will be paid for information that will lead to the conviction of the party that is known to have shot Partridges on Bailey Hill, Tuesday afternoon, Aug. 2.

One of said party was a short, thick man, drove a gray horse and Concord buggy.

Also, a liberal reward will be paid by the undersigned for information which will lead to the conviction of any violation of the Game Law of the present season.

A. B. P. KINNEY, Pres't. Wor. Gun Club.

E. S. KNOWLES, Pres't. Wor. Sportsmen's Club.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

FRESH WATER.

Salmon, *Salmo salar*.
Brook Trout, *Salvelinus fontinalis*.
Rainbow Trout, *Salmo iridis*.
Dolly Varden Trout, *Salvelinus malma*.
Grayling, *Thymallus tricolor* and *T. melanops*.
Black Bass, *Micropterus salmoides* and *M. paludis*.
Mudminnow, *Umbra nubilus*.
Pike, *Esox lucius*.
Pike-perch, (wall-eyed)

Stizostedion americanum, S. priscum, etc.
Yellow Perch, *Perca flavescens*.
Striped Bass, *Morone saxatilis*.
White Bass, *Morone chrysops*.
Rock Bass, *Ambloplites*. (Two species).
War-mouth, *Chernobryus glaucus*.
Crappie, *Pomoxis nigromaculatus*.
Rock Bass, *Pomoxis annularis*.
Shad, *Semotilus corporalis*.
Shad, *Alosa sapidissima*.

SALT WATER.

Sea Bass, *Centropristis atraruna*.
Striped Bass or Rockfish, *Morone saxatilis*.
White Perch, *Morone americana*.
Bluntnose or Taylor, *Pomatomus saltatrix*.
Scup or Forgie, *Stenotomus argenteus*.
Polecat, *Polydora carolinensis*.
Tautog or Blackfish, *Tautoga onitis*.
Spanish Mackerel, *Chasmocentrus maculatus*.

Weakfish or Squeteague, *Cynoscion regalis*.
La Fayette or Spot, *Leiostomus xanthurus*.
Channe Bass, Spot or Redfish, *Sciaenops ocellatus*.
Sheepshead, *Archosargus probatocephalus*.
Kingfish or Barb, *Menticirrhus nebulosus*.

AND now I leave you, with this injunction; and, though I have mentioned it before, I do so at parting that it may be the more impressive:

ALWAYS KILL YOUR FISH AS SOON AS TAKEN FROM THE WATER, AND NEVER BE SATISFIED WITH A MODERATE CREEP.

By so doing your angling days will be happy, and your sleep undisturbed, and you and I, and the fish we may catch, can say, with the sweet singer of Israel: "The lines are fallen to me in pleasant places." DR. J. A. HENSHELL, "Book of the Black Bass."

AN INTERNATIONAL FISHERY EXHIBITION.

WE have announced that it was proposed to hold an international fishery exhibition in Edinburgh in 1882. Those interested in fishery matters in England are now asking Scotland to hold off and to unite and have a grand one in England the year following. It is claimed that if one is held in the United Kingdom that England is the proper place for it and London the proper city.

We can say that we do not believe that the United States would care to exhibit as soon as next year. Congress does not meet until winter, and an appropriation could not be made in time. It is doubtful if our country would care to make an exhibit at all. We know that the U. S. Fish Commission did not wish to at Berlin, and that Prof. Baird never would have asked for a cent for that purpose. It so happened that the Berlin Exhibition was gotten up by the German Fishery Association, an enthusiastic body of fish culturists, many of whom are members of the German Parliament, and that our Secretary of State at that time, Hon. Carl Schurz, was a German. The Prime Minister of Germany daily telegraphed Mr. Schurz on the subject until he got a bill before Congress making an appropriation for the purpose. Then Professor Baird was appointed Commissioner and deputized Professor Goode to go and represent him.

We know that neither of these gentlemen care to make

another exhibition, and that without the collection of the National Museum and the U. S. Fish Commission any exhibit from this country would be a poor show. Therefore, if our English friends want the United States to be represented, we can say to them that they must work for it this winter in the proper quarter, and work hard. We hope they may succeed in getting our country to display her fishy resources, but doubt if they will. The *London Fishing Gazette* of July 30 says:

A meeting was held at Fishmongers' Hall on Tuesday last, at which the Marquis of Exeter, Sir John St. Aubyn, M. P., Mr. Birbeck, M. P., Sir Cunliffe Owen, Sir Andrew Lusk, and other gentlemen attended, for the purpose of considering the advisability of holding a grand international fisheries exhibition in London in 1883. A sub-committee was appointed to arrange further details and to convene a public meeting, which it is expected will be held at the Mansion House under the presidency of the Lord Mayor. A large number of noblemen and gentlemen have promised to support the movement, and the Fishmongers' Company have voted liberally toward the expenses and the guarantee fund. Government support is expected and also royal patronage; under these very favorable auspices, and judging from the great success of the Berlin and Norwich exhibitions, we have no hesitation in saying that the London International Fisheries Exhibition of 1883 must prove an enormous success.

At first it was proposed that an angling society should be the parent of the exhibition, but now we believe that the Fishmongers' Association will have it placed under their supervision. This seems to us better; although if England had a fish cultural society that would be the proper one, for fish culture should be the main feature of all such displays. The means of capture are worthy of attention, but to enlist the sympathies of the American people, at least, the means of production should take first rank. Our large fish dealers are interested in the culture as well as the sale of fishes, and the American Fish Cultural Association numbers among its members several prominent members of the Fishmongers' Association. We hope that fish culture will be awarded the front seat at the coming exhibition.

Since the above was written the following cablegram has been received:

LONDON, August 8.

TO FOREST AND STREAM: A meeting to promote the proposed International Fisheries Exhibition in London, in 1883, was held here on Saturday, the 6th. The Marquis of Exeter presided. Sir John A. Macdonald, the Canadian Premier, addressed the meeting in support of the scheme. He said he could confidently state that the news that it is intended to hold such an exhibition would be hailed with great pleasure in Canada, where the fishing interests are so immense. He had no doubt that his colleagues would cordially support the idea. A committee was appointed to make the necessary arrangements for the exhibition.

BLUEFISHING AT CAPE MAY.

THE CRUISE OF THE MILTON R. STUDAMS.

THE writer having been invited, through the kindness of a friend, to accompany a party on a cruise to the fishing banks off the Capes of Delaware, gladly availed himself of the opportunity thus afforded. The owners of the Milton R. Studams, a beautiful little schooner built about one year ago and registering 59 50-100 tons measurement, had tendered their vessel gratis for the trip, and no craft could have suited the purpose better.

At half-past 12, July 18, 1881, the following-named party stood on the wharf at Port Norris, on the Maurice River, ready to be taken on board: Frank Vanderherchen, Nathaniel Wilson, Capt. Wm. Haley, John Smalley, R. Meredith, Dr. Newell, Dr. Robt. Elmer, C. C. Compton, Anthony Taylor, Isaac M. Smalley, Capt. S. B. Martz, Capt. L. Garrison, C. Lowry, A. M. Loudon, Daniel Sharp, J. Boyd Nixon, Capt. Hunter, Sheriff D. McBride, of Cumberland County, and Edward Pitman last, though not least by any means, for to his care had been assigned the provisioning of the vessel, and all will bear testimony to the very efficient manner in which he performed the duty.

Nothing but thought and kind could provide was wanting. An ice-house had been improvised in the forward hold of the vessel, in which a ton of ice had been stored, and imbedded in the ice were placed all perishable articles. The butter, packed in two-pound cans, one for each meal, came on the table each day as hard and fresh as from a dairy, and during the whole time we were at sea we had fresh tomatoes at every meal. Too much praise cannot be accorded to Mr. Pitman, for it must have cost him a great deal of thought and careful attention, and there was nothing any one could ask for in reason that did not come out of that ice-house—pickles, olives, canned corn, etc.

In a few minutes the boats came off and safely conveyed all on board, the anchor was weighed and, with Capt. Garrison at the wheel, we were tacking down the tortuous course of the river toward Delaware Bay, which, with a good stiff breeze from the northwest, was reached at 2 p. m. Once fairly out in the bay, which at this point is some twenty-five miles broad, a direct course was laid for Cape Henlopen and, running before a strong wind, the Capes of Delaware were reached at quarter past five p. m., without a single tack having been made from the mouth of the river to the Capes, being an unusual run. It had been intended to stop at the mouth of Maurice River and draw a small seine for menhaden, for bait, but as there were a thousand clams on board and the wind was so favorable it was decided not to lose any time, so the idea was abandoned. As such a quick run had been made to the Capes, we concluded to go to sea at once, so the vessel was headed for what are known as the Southern Banks, lying off Indian River, State of Delaware, and just out of sight of land. A heavy sea was running, and as our craft fairly danced over the waves those of us who did not possess what are termed "sea legs" were obliged to navigate around the deck in a very gingerly manner.

About dark the vessel was brought into the wind, the anchor let go in fourteen fathoms of water, and, as it afterward proved, we had struck the right spot, for on the following day we did not have to go far from the vessel in the boats for good fishing. As soon as we were anchored some of the important part of their line, over the side of the vessel at once, and were rewarded by catching a few sea

bass, but the catch was small, though there would have been enough for breakfast if the steward had cooked them. It is a singular fact that but comparatively few sea bass can be caught by fishing over the side of a vessel, while from a small boat, and from perhaps only a hundred yards away, they may be taken rapidly. The writer did not get a satisfactory reason for this, but failed. As sea bass are fished for on the bottom, one would naturally think that at a depth of eighty feet a vessel would not scare them. It had been decided to put out the boats—three in number—at four o'clock the following morning, and the writer was one of those detailed to go. Now, the avoirdupois of the individual in question being something over two hundred pounds, he did not feel exactly easy in his mind when the information was imparted to him. There was a vague kind of feeling as he stood and looked over the side of the vessel, that for a man of his weight to clamber down the side and drop into a small boat being tossed about in a rough sea, with the chances decidedly in favor of going overboard, was not exactly the agreeable thing to him that some might think it, but he said nothing, though the thought haunted him for the rest of the night. Four o'clock came, and all hands were summoned on deck. One glance was sufficient: a very heavy sea was running, and the schooner was rolling and pitching greatly. From that moment he made up his mind, and, with a friendly friend that he had not slept well (how could he with such a nightmare?), and had concluded he would not go out that morning. As it was, the light and active ones had all they could do to get into the boats, only two of which went off. They were, however, amply rewarded for all their difficulty, for when they returned to breakfast the large baskets of sea bass, ranging from one-half to two pounds in weight, attested to their skill as fishermen and showed they had made good use of their time.

The natural meal having been disposed of, fishing was in order, and the boats went off again. At dinner time the baskets full of fish. In the afternoon, the sea being calmer, the writer concluded to risk getting into a boat, which he accomplished without much difficulty, and captured his full share of fish; and so the day passed and night came again, the sun going down in a bank of clouds, and as the party sat clustered around the wheel, all agreed that it was a beautiful and tranquillizing scene. All hands were physically tired, and one by one they departed to their blankets and repose.

It had been agreed that the same programme should be repeated on the following day, but Capt. Wm. Haley, chief officer, quietly remarked that if he were not mistaken he would have all hands out before four o'clock to get up anchor, for he thought the appearance of the sky portended a blow; and he was right, for by one o'clock the schooner was rolling and pitching at a terrible rate, and plenty of water was coming on board, and at four o'clock all hands were called on deck; not for bass fishing, but to get up anchor, and soon the vessel was running for "the snapping mackerel" grounds off Cape May, as almost every one is aware, this is a local name of the bluefish, and those gamy and beautiful fish, built like a clipper ship, are taken by trailing a squid from fifty to one hundred yards behind a boat going at a good rate of speed.

By the time the grounds were reached the sea had gone down and some seven or eight lines were put overboard—more could not be fished without fear of tangling—and soon the cry of first fish was raised, and in a minute or two a beauty of six pounds was flopping on the deck. Soon another, and another, until all were busy with their lines, and all of the fish laid out. It was sometimes proving to get a seven-pounder almost on deck and then have it strike the rail and go overboard off the hook. The work was now becoming exciting and hard, for it is no child's play to haul in a six or eight pound fish from fifty or one hundred yards behind a vessel going at a good speed, and one has to be careful to avoid having his fingers cut by the line. It was at this juncture that it became necessary to have some one to take charge of the fish which were lying around the stern in all directions; but, as usually happens, some one generally comes to the rescue, and in this instance the gentleman who took upon himself the work proved equal to the self-imposed task. Blood was in his eye, and very soon he had blood all over the deck, for with his own hands, and without any assistance, he cleaned and prepared ready for our ice-house sixty-one large fish, and then Capt. M. came to his assistance and helped him finish the rest. Early in the afternoon we had, by actual count, eighty-six fish averaging six pounds each, making, with the sea-bass he had taken the day before, forty-eight hundred pounds of fish.

We then ran in to Cape May Point and anchored for the night, and notwithstanding the hard day's work all hands had engaged in, and the early hour at which they had come on deck, some of them seemed to have a hankering for the shore, and quietly slipping below doffed their blue shirts and came on deck looking like respectable mortals, and were soon pulled to the beach.

It had been our intention to try the mackerel the following morning, but when day broke, the storm signal was flying from Cape May point, and though it was then quite calm, in an hour it commenced to blow hard, so it was decided, as we had plenty of fish and it would not be prudent to go to sea, to run up the bay to Maurice River. In an hour more the wisdom of our course became more apparent, for a very heavy blow came on, and as we sat at our table on deck for breakfast we frequently got a washing of salt water.

Several of the party being desirous of remaining at Cape May, they were put on shore just as we weighed anchor, and none too soon, for the boat had difficulty in making her way on board. The boat that was to Maurice River was made very quickly, and it was quite a new sensation to enter smooth water again. The time from that point to Port Norris was fully occupied in packing valises, strapping blankets and boxing fish, and when the latter were taken from the ice-house they were frozen solid. The writer sent from Port Norris by express quite a large box of fish a distance of over one hundred miles, and when the box was opened on the following day the ice had not disappeared and the fish were as firm as when taken from the water.

Taken altogether, no expedition of the kind could have been more successful, and during the whole time nothing occurred to mar the pleasure of the trip, while the verdict from every one was that it had been thoroughly enjoyable. The thanks of all are due to the officers of the Port Norris R. R. for courtesies extended, also to Capt. Hunter, Haley, Martz and Garrison for their self-imposed duty of managing the vessel. Dr. Newell, who had been elected president at starting, performed his duty admirably, except in one particular—viz., that when making arrangements for the rest of the trip the doctor was not there to preside, he having deserted the ship at Cape May without leaving any substitute, so Capt.

Wm. Haley was elected in his place, who presided with dignity over a meeting expressive of thanks to all who had so largely contributed to our comfort and pleasure.

At Bridgeton the party separated, all well pleased with the cruise. In conclusion, the writer would say that he wonders more such trips are not taken. They are comparatively inexpensive, and though one may catch little about fishing he is amply repaid on such a cruise by the freedom from care for a few days, the cool, fresh ocean breeze and an experience perhaps perfectly new to him.

PHILADELPHIA, Pa.

THE BLUE GILLS—1881.

TUESDAY, July 5, found the writer and all the tackle he could scrape together "all aboard" bound for Wisconsin, fish and health. All three were found. That is our story in a nut-shell. In telling it more in detail we shall relate facts, and as we received no favors and paid dear for our trip we, not being under obligation, care not if we tread on the toes of several.

We received a copy of "Summer Saunterings in Northern Wisconsin," a very interesting and readable book, published in the interest of the Wisconsin Central Railroad by the General Passenger agent. The "Summer Saunterings" is one of the best decoys out. We read that book from end to end several times and nearly learned it by heart. Having accomplished this much we bade good-bye to our dear family and started for Chicago, where we arrived at 9:30 a. m. Night came, with it our train. We hopped on and took twenty-three hours of the hottest and dirtiest and most disagreeable ride of our lives. Reaching Ashland, the northern terminus of the Wisconsin Central, we jumped off the train for a rest. Some one wanted to charge twenty-five cents for doing so; we demurred; mounted a bus steering for the "Hotel Chequamegon," which is controlled by the railroad company. The attempt is made to run this house on the Goney Island style; but save the mark! There is no "you pay your money and take your choice"; it's all pay and no choice. The town of Ashland is like the fishman's castle—four miles long and two rods wide—nothing of it but a great big empty hotel, and more sidewalk on one side of the street than there is in all New York. We took a light supper (all we could get), permitted ourselves to be pestered by mosquitoes for a couple of hours, then took a nap; had a still lighter breakfast and started for the boat-landing, where we met the first gentleman on our trip, who was not too selfish or too rich to try and make it pleasant for a working man, and that was H. D. Thompson, master of the Eva Wadsworth, the staunchest and safest tug on the Bayfield line. He makes it pleasant for all, and nothing will vex him, even with his field, our destination, a pleasant little fishing village lying south and west of the Apostle Islands. A majority of the male inhabitants fish for a livelihood, whitefish being the principal catch. N. & F. Boutin have a large packing house in which several half-breeds are kept constantly at work. Fishing smacks arrive and depart hourly. The town is a neat place, situated at the base of a magnificent hill on which is a large spring which supplies the town with pure water through pipes running in the yards and houses. (Ashland drinks bay water). I took rooms at Mrs. La Pointe's private boarding house; and the living and accommodations received at this house far surpasses the Chequamegon and all like houses; in fact, it is a home for the tourist, and the "sportsman" is made welcome.

We scraped an acquaintance with several of the Boutin brothers, fishermen, etc., and found true friends, especially in Duffy and Ed., and settled down to rest for a few days, till our bosom friend, Peter Morganthaler (Gipsy Pete), should arrive. In due time we embraced; arranged our tackle for trout, and started out alone, although dozens of guides were ready to assist at two dollars per day. Well, talk about trout, brook trout, we found them thick as flies, and averaging a pound. I have heard about such fishing, but never until now did I enjoy it. We made a rule to fish only every other day so as not to waste as we wanted not. During our stay this glorious fishing was continued in Pike Creek and Sioux River. We brought home 300 pounds of salmon for our friends, which were duly appreciated, thereby paying us for our trouble in getting them here.

A few more words for Bayfield, Wisconsin, and we are done. The best, cheapest and most pleasant way to reach it is by water from Detroit. No mosquitoes in the place, cool, bracing air, pure spring water. Trout fishing plenty, as the residents do not fish for them. Trout are caught averaging two pounds along the rocks at the edge of the bay. Smith's Hotel and Fountain House are the two leading hotels. La Pointe, a French Canadian, runs the Ronte Cote, a private boarding house and can accommodate eight persons. She sets a good table and affords accommodations that make you feel at home; rates \$8 per week. Henry La Pointe is the best guide, although there are several other good ones. Some one or other of the Northern Transit's beautiful steamers enters this natural harbor daily, a luxury that Ashland does not enjoy. You will not find a news stand, barber shop or lively stable at Bayfield; neither is there telegraph communication, but a telephone line runs to Ashland. The air at Bayfield is perfectly delightful, and the cream for health. The town is inhabited by French, Indians and half-breeds. Only one white person has died there in two and a half years. Two Indian reservations are within twelve miles of Bayfield and the Indians flock to town by hundreds on Sunday. There is much novelty about the place. It is somewhat homesome, but the overwork and tired find sure rest and improvement in health. Bass fishing is grand thirty miles inland. The surrounding country for miles constitutes the sportsman's paradise.

Go to Bayfield by water if possible, and when once you have the lay of the land you will return there again. Ed. Boutin does not act as guide, but will cheerfully give all information desired.

Everything at Bayfield ran so smoothly that we were unable to chronicle a joke, accident or mishap. We do not regret it. The following is what the Bayfield Press says of us:

Peter Morganthaler, wife and three children, and Willis D. Maier, all of Port Wayne, Wis., are spending a few weeks with La Pointe. Mr. Maier is deputy clerk of Allen county, and Mr. Morganthaler is one of the proprietors of the Sam, Pete & Max, extensive clothing house at Port Wayne. Mr. La Pointe says the gentlemen are the best boarders he ever entertained, as they have kept the supplies with them, and their stay has been a great benefit to the gentlemen caught over one hundred brook trout at Pike's Creek on Monday, and in one day last week, at Sioux River, they caught eighty-eight large trout, and on Wednesday over one hundred. The party returned all small trout to the stream, and their example should be followed by all visitors, but we are sorry to say it is not.

Cochman, evening dun, bee, silver black and hackles were most inking dies. Fishing is done by wading; too many loas and too much driftwood to use boats. The Forest and Stream are making friends here every week. It truly is the "gentleman's sporting paper." You cannot find a single can of "Dittman" in our place since your *expose*, unless some business man has it trying to sell on commission. *Fort Wayne, Ind.*

WILLIAM D. MATHIE.

CAMPING AT LYNNFIELD, MASS.

LYNN, Mass., July, 1881.

SHAKING the leather scraps of this city of shoes from all our boots, about 1 o'clock P. M. we pulled out of town with a covered express wagon containing all the paraphernalia for a week of outdoor life, bound for Lake Sautaga, some six miles north of town, just out of hearing of the shoe-factory whistles, fire alarm bells, and the noise and bustle of city life.

Driving down to the shore of the lake, we pitched our tent in the shade of a clump of oaks, on a bluff overlooking the water, and just distant enough therefrom, with low land to the south, to always insure a breeze sufficient to render the air deliciously cool and fragrant with the pine balsam from the numerous groves near by.

Here we are spending the week in this delightful spot, enjoying the pure air of the forest and lake, drinking at every breath the invigorating essence of Nature, or lying in the hammock at full length sky-dreaming. What will take the mind so completely from every part of our everyday routine as to gaze into the azure depths of the clear blue in the zenith and allow the thoughts to wander on and on? This beautiful sheet of clear spring water, with the tall waving pines stretching along its shores nearly the entire distance around it, and Saltunall's Island, of an acre or two in extent, partially intercepting the view to the east; a gentle slope, carpeted in Nature's green, with here and there a giant oak that has perhaps stood silent sentry over the lake and forest when none save the red man, the deer or other forest denizens had ever trodden the soil, all forming a scene of beauty, a perfect picture of Nature in her loveliest garb, can we wonder the eye could dwell so long on it? No man who had no more appreciation of the beautiful in Nature than I possibly know the difference between the thrilling sensation of cutting down a canvass-back at fifty yards, going down wind, with a choke-bore, and the murderous satisfaction of riddling a red squirrel on the fence at twenty paces with an old "dash in the pan" Queen's arm loaded with a handful of buckshot.

The Indian name of Sautaga was given the pond after an old chief whose home was on its shores. It afterward was called Humphry's Pond, from an early settler by that name, to whom the English gave 500 acres of land bordering on the lake in return for some important service he did for the Queen. Humphry's land, including the island, was subsequently owned by one Doubly, who afterward disposed of it to different individuals, a Mr. Newhall being the principal buyer. The lake was stocked with black bass five or six years ago; and now the fish are very plenty and of fair size, a four pound one being taken to-day. They are not biting sharply yet, as they are hardly off their beds yet; however, we get enough to feed the family as a pan fish, cooked on an old cook stove with top blocked up with rocks and earth just high enough to build a fire underneath, and topped out with five or six feet of old pipe for draft. We are taking our fill of enjoyment of life out here in the pure air out of doors.

Speaking of pouts I think they are second to none as a pan fish, except the trout. And right here I wish to give the uninitiated a receipt for dressing them: First remove the fins and slit them down the back; now grasp your pout with the left hand, lay him on his back and bend the knife edge toward his head, draw the knife from where the back fin was taken out to the head, taking out a piece of skin an inch square. Now cut through the neck joint or back bone, but don't cut the head wholly off. Keep your hold of the head with the left hand, and with the thumb and two fingers of the right hand take a firm hold of the end of the back bone and pull it out with the fish adhering, leaving the head, skin and entrails in the left hand. This "knack" is easily learned with a little practice and, at first, a good deal of patience. It is surprising what rapidly they can be prepared for the pan by one who is an adept.

H. J. M.

NOVA SCOTIA FISHING.

NEW GLASGOW, N. S., July 25.

FISHING has been very good this season here, and some fine trout have been taken from the lakes in this vicinity. Salmon have been plentiful on the Margaree River, and a good many fish have been caught. The number of visitors to this river has not been so many this year as usual, consequently those who did go had good sport. The second run of fish in the St. Mary's River were late coming up, owing to low water in the river. A good number of fish were taken at the Stillwater and Parks, and good sea-trout fishing will be had when the first freshet comes, as fish are reported plenty at the mouth of the river. Very few moose were killed last winter, and good sport may be looked for in September. The license fee for non residents has been reduced from \$50 to \$30. We have formed a Rod and Gun Club in New Glasgow; our first shoot takes place on the 16th Aug. The officers are: President, W. B. Moore; Vice-President, Norman McKay; Secretary and Treasurer, Howard Cavanagh.

GLOBE SMITH.

CANADIAN SALMON RIVERS.

NOTICE in your last number an invitation for communications regarding the average of run of the salmon in Canadian rivers this season, and although I have not been able to visit my usual fishing grounds this season, yet, having had several years' experience, extending over a great part of the salmon fishing grounds of the Gulf and river St. Lawrence, I am encouraged to send you a few lines. On the Baie des Chaleurs the net fishermen report the fishing very poor, and as far as I can judge from the reports of rod fishermen the catch has not been nearly up to the average, although much better than last year. The fish which have been taken are very large and the average weight very much above the usual thing. From this I should judge that the late run of salmon will be the most numerous, as it is a well-known fact that the large fish always strike the river first, the smaller ones following on the 1st of July. One reason for the small take with the rod is the quantity of lumber

which is being driven down the rivers, filling the pools with logs and making the landing of your fish very precarious after striking it. To any one desirous of leaving a river I should advise him to make choice of one that has no saw-mill at its mouth, as then he will be saved the disappointment and disgust of finding his pools filled with saw logs instead of salmon. The lumber camps are always on the sides of the stream, and this makes the guardianship of the rivers a difficult task during the spawning season, as one guardian cannot be everywhere at once. And though salmon then are not in their best order, lumbermen seem to think them a very pleasant addition to the camp kettle. The Government should, I think, make some better regulations for the driving of the logs in salmon breeding rivers, such as that the drive should all be made in the spring freshets, thus leaving the river free for the salmon to come up and the pools free for those who pay for the fishing rights and the protection of the river. I think if a representation of this grievance was made to our able commissioner in Ottawa, he would, if it lay in his power, remedy the matter. *G. P. Montreal, July 4, 1881.*

CANADIAN FISHERY STATISTICS.

WE have received "Supplement No. 2 to the Eleventh Annual Report of the Minister of Marine and Fisheries for the year 1880. Fisheries Statements." It is an octavo of 306 pages, filled with tables and statements concerning the fishery industry. The report on fish culture in the autumn of 1880 at the ten hatcheries shows the total number of vivified eggs of salmon, California salmon, brook and lake trout and whitefish to be 26,212,000, being 2,157,000 less than in 1879.

The schedule of fishery officers in all the provinces, with their salaries, and a statement of expenditures follow. Tables giving the kinds and quantities of fish, the number and value of vessels, boats and nets give much valuable information. Mr. W. H. Rogers, Inspector of Fisheries of Nova Scotia, claims that the decrease in salmon is due to overfishing, which has been stimulated by the rapid modes of transporting fresh fish to distant markets. Mr. W. H. Venning, Inspector of Fisheries of New Brunswick, says that the decrease in salmon has been fully thirty per cent, as compared with former years, but declines to give the cause. Mr. J. H. Durar, Inspector of Fisheries of Prince Edward Island, gives 9,000 pounds salmon this year, against 8,905 pounds last year, but declares the apparent difference due to a more careful collection of statistics. Mr. Alex. C. Anderson, Inspector of Fisheries of British Columbia, gives an interesting account of the fur-seal fishery, with the new theory that the "pups" are born in the water.

The report is of such a nature that its contents cannot well be summarized, owing to the large tables of statistics, but it will prove a valuable book to those who wish to refer to the fishery interests of the Provinces at any time.

THERESA, NEW YORK.

LOCKPORT, N. Y., Aug. 6.

IN your issue of July 21, you ask for information for a cool place to fish. At Theresa, Jefferson Co., N. Y., on Indian River, eleven miles from Alexandria Bay, is good fishing. My sons, Fred and Arthur, have been there for the past week, and report a number of muscalonge being taken weighing from six and one-half to twenty-five pounds; the latter was caught by a little girl eleven years of age. Besides Indian River, which runs through the village, there are ten lakes in the town of Theresa from one to eight miles long, in most of which is good bass fishing. Yesterday the boys started down the river from Rossie, twenty miles from Theresa, where they enter Black Lake, which is twenty-five to thirty miles long and lies in St. Lawrence Co. They will return to Theresa in about a week where they will remain the balance of the month fishing and hunting, and return home the first of September.

Fred, the oldest, who is an amateur ornithologist and taxidermist reports finding a number of marsh wren's nests just finished. He has never succeeded in finding any about here, and they were quite a novelty to him. He expects to secure a nest or two with eggs to add to his collection.

J. L. D.

TIM POND AND THE SEVEN PONDS.—Many of your readers are acquainted with the reputation of Tim Pond. Recently the "Rev. D. D." and I have made reference in your columns to "The Seven Ponds." I have not yet visited them, but intend to in the latter part of this month. The way to Tim Pond is now well-known. To go to the Seven Ponds the route is first to Tim Pond, whence Kennedy Smith has made a road three and one-half miles to Beaver Pond, which is small but alive with trout. At this point there is but one small cabin. From here the road winds along near Alder Stream—the home of many a speckled beauty—and around the foot of Black Mountain, four miles further to "L" Pond, which is one of seven large ponds. All are stocked with trout which have enjoyed their home unmolested since the history of trout begun, till now Kennedy Smith has opened a backboard pathway for sportsmen to the waters where they dwell. A pathway is used also by the natives of the forest, the bears, deer, caribou and ruffed grouse, who, from time to time, meet the hunter on his tramp. This road has been opened so recently that only two parties, one of them from Worcester, Mass., have been through, but their encomiums on the size and quality of both game and fish exceed even their estimates over Tim Pond.

J. W. T.

LARGE PENNSYLVANIA TROUT.—August 3.—Some time ago a correspondent asked about the largest trout caught in Pennsylvania waters. I send you an answer to an inquiry I made in regard to a trout caught in July, 1855, by Mr. John Harter, of Newville, Pa. S.erry that the weight could not be had. This letter is entirely trustworthy. A trout twenty-two inches long ought to weigh something. What do you suppose he weighed?—C. X.

NEWVILLE, Pa., August 3.

Dear Sir: Your note of the 30th ult. came to hand. In reply I would say that it was neither myself nor brother Sam that caught the trout, but it was my brother John. It measured twenty-two inches in length, but I cannot give you the weight as it was not weighed. Father sent it to Philadelphia, but to whom I cannot say. It was caught in a stream that runs through a large area, and is called "Big Spring." It has a length of three miles, and, at one time, ran seven miles there. Now five grist, one steam tannery and one paper mill run along its banks. All in operation except the paper mill. My

brother Sam is living near Harrisburg, but I cannot tell the place—cannot remember it. As for the date of the catch of the trout it was in the month of July, and previous to Buchanan's election, but cannot tell the year.—ISAAC HARMER.

THE RICHMOND PONDS, Md.—Ranglee, Md., August 3.—During the heated term trout do not take the fly except in the snailier lakes. At Kennebag and Seven Ponds fly-fishing is reported good. In a few weeks trout will again rise readily in the big lakes. Several hundred salmon have been taken this season in the Tanglee Lake, one weighing, it is reported, over five pounds. C. T. Richardson, of Mooselucum guntic House, Hiram's Landing, is now swamping out a road from Birch Point to the Richmond Ponds. The first pond is one and a half miles from the Point. There are several ponds in the vicinity, all well stocked with trout and salmon visit d. "Walt." Twombly, the noted guide, will put in some boats and build a camp. Major Richardson's is the most central point for the several routes for fish and game. At his house with the long name, all visitors feel at home the instant they enter. His twenty years' experience in that vicinity enables him to direct sportsmen to best ground. The gallant Major, let me add, served with credit in the Mexican war, and honorable scars attest his record. *WATFIELD.*

"BREAM" FISHING IN GEORGIA.—Wadley, Ga., July 31.—I use a single strand of saddle's black silk for bream fishing. September is our month for bream. So clear are our streams and so wary the fish, nothing but a line of green or black saddle's silk will catch them. There is fun, for it is like fly fishing. You sit in a bateau and cast (with no sinker) under the bushes and into the coves of the stream. It is the duty of the gentleman of the African persuasion who handles the paddle to throw your boat into the middle of the stream when you hook a "bald" bream. They weigh from one-half pound up to one and one-half pounds. You use a very light bamboo rod at least eighteen feet in length, tapering to a point. Not fly fishing, but next to it.

Perhaps you may ask how one strand of silk will hold such fish. I answer, remember how you have caught *Silmo fontinalis* upon a much weaker line. It's all in the handling.—ST. CLAIR.

CHANNEL BASS FISHING.—Jacksonville, Fla., July 10.—To-day that friend Mr. Pryor, resident from report, and facing that some of your readers would accuse me of spinning "fish stories," I deemed it advisable to furnish some late data. Before leaving Mayport he fished for a short time on five different days, and his daily catch averaged from five to ten bass, ranging from 30lbs. to 50lbs. He informed me that yesterday Mr. McCormick, of Mayport, anchored at Mill Point on slack water, and in a very short time landed ten bass averaging 40lbs. He also said that Mac's catch would have been gooder but can't failed. I think that you will agree with me that this is fair fishing. Bass have commenced running early, and from this time until the middle of December the fishing will improve. I sincerely hope that some of your Northern fishermen who can enjoy good fishing will favor this portion of the world with a visit, for I will guarantee them such piscatorial sport as none in the Northern States. *AL. FREESC.*

THE BEST FLIES.—Boston, July 23.—I have just returned from a month's trip to Second Lake, where I found "Uncle" Tom and Ned Norton in the best of health and spirits. I think "Von W." is, in a late issue, is mistaken about the "taking" flies at Greenough Pond. I was with him for the three days spent there, and the only fish killed with a bright fly was the only one killed by "Von W." and that was at four in the morning with a scarlet bias. All the rest of our fish were taken with black gnat, brown alder and a few with dark wing Montreal.

The silver doctor is a good September fly there, but I think of no account much earlier. I find the same experience at Second Lake—small, dark flies took. Last year I found the Jenny Lind, Professor and Doctor good in August both at Greenough and Second Lake. *G. L. C.*

TROUTING IN MAINE.—Monson, Me., August 3.—Yesterday, Messrs. Frank Storer, of Dexter, Me., and A. W. Chapin, of this place, caught seventeen (17) trout on "Monsion Pond," about two miles from this village, which averaged near two pounds each. They were caught with a fly and the fishing was splendid for bait. The number taken with a fly was four. I did not learn. This sheet of water is about one and one-fourth mile in length and one mile wide. The trout weigh from one to five pounds. This is only one of the many excellent trout ponds and lakes in this vicinity.—PISCATOR.

Fish Culture.

DO OWLS EAT TROUT?

IN a paper on Poachers, by James Annin, Jr., of Caledonia, N. Y., read before the American Fishcultural Association at its last meeting, the owl was noticed as a possible poacher. Mr. Annin said of them: "What made me first suspect that they were up to some mischief was that I found them in the steel traps set for muskrat, mink, etc. In setting traps for these we place them under the surface of the water from one to four inches, and when I found the owls in them I could not make out what they were after in the water, but I soon found that it was for the fish-food in the stream, such as the fresh water lobster, caddis worm, shrimp, etc."

Mr. Annin did not then think they took his trout, judging from his tone, nor do we know that they do, but our curiosity to know was excited by the following correspondence to *Land and Water*, (England).

"A few days since I discovered in a common brown owl's nest a trout about six or seven inches long with the head gone. After a few days the trout had disappeared, the owlets being about three weeks old. Is it a common occurrence for owls to eat fish?"

To this the editor adds:

"It is very curious that brown owls to feed on fish. Any one who cares to watch a brown owl's nest, if at all favorably situated near a stream, will not have to wait very long before he sees the parent birds conveying live minnows, bullheads, or, it may be, if there are ornamental ponds, by gold or silver fish, as well, to feed the young birds. In fact, in fact, is by no means only a 'mouser,' he is a very apt fish-poacher, and his brood soon to appreciate this kind of diet."

We hope that this will stimulate American observers to look closer to the little owls, as well as the big ones.

CHINESE PARADISE FISH (Macropodus).

WATER-PLANT (*Sagittaria natans*)—BOTH NATURAL SIZE.

THE PARADISE FISH.

MACROPODUS VENEZUE.

THE paradise fish, like the German canary bird, is a product of cultivation, as there is no place known where it is found in a wild state. It is a native of China. There they are cultivated and kept in aquaria as ornamental fish only. The male, the larger of the two sexes, measures when full grown, from the mouth to the end of the caudal-fin, three and a half inches. The body is shaped very much like that of the pumpkin-seed or snailfish. Its colors surpass in brilliancy any fish heretofore cultivated for the aquarium. The head is ashy gray, mottled with irregular dark spots. The gills are azure blue, bordered with brilliant crimson. The eyes are yellow and red, with a black pupil. The sides of the body and the crescent-shaped caudal-fin are deep crimson, the former having ten or twelve vertical blue stripes, while the latter is bordered with blue. The under surface of the body is continually changing color—sometimes it is white, at others gray or black. The dorsal and anal fins are remarkably large, hence the generic name of the fish—*macro*, large; *podus*, the foot or fin. Both fins are shaped alike. They are striped and dotted with brown and blue and bordered with blue. The dull-colored ventral fins are protected by a brilliant scarlet-colored spine, extending three-fourths of an inch behind the fins. The pectorals, situated directly above the ventral fins, are well shaped, but being transparent, show no color. All these colors above described are most brilliant when the fish is excited. For instance, when engaged in combat for the possession of a female, or when courting, he shows the most brilliant colors in order to attract the attention of his lady-love, who being specially fond of bright colors.

On such occasions he expands all of his fins to their greatest extent; the caudal-fin appears then to be covered with little pearls, like the eyes on a peacock's tail, and the under surface of the fish becomes jet black. The colors of the dorsal-fin change constantly from brilliant green to indigo blue, now and then showing white spots; and the whole body is in a tremulous motion, radiating colors of every conceivable hue. The entire body of the paradise fish, from the mouth to the beginning of the caudal-fin, is covered with small round scales.

Their mode of living, when compared to American fishes, resembles that of the marbled dace and the rainbow darter. Like the former, they go to the surface for air. They are also fully as inquisitive, as the dace, and like to stay near the glass side of the aquarium, and observe what is going on outside of the water. Like the rainbow darter they are fond of resting on rocks, or on the branches of water plants. In fact I have frequently seen them lie down, as a person would on a lounge, with their head upright and their body resting sideways on the bottom. They are graceful swimmers and peaceable and agree well with other fishes. Their food is the same as that for goldfish, but it should be given to them oftener. I imported a few pairs of these interesting fish last fall, and having succeeded in breeding them, I am enabled to add to the above description of the fish their mode of reproduction.

The Paradise fish is a nest builder, to a certain extent. Its nest is not as complicated as that of the stickleback, nevertheless it is a receptacle on which it places the eggs to be hatched. As soon as the warm weather approaches the males commence fighting with each other for the possession of the females. The victor lends off his female to a suitable corner in the aquarium, and here their family life begins. The nest is constructed by the male. In building it he takes a position about an inch below the surface, and frequently takes air into his mouth, which he ejects in shape of little bubbles. These bubbles seem to be covered with some viscid substance, which mace them last for several hours. He keeps this up until a little floating platform is formed of about six inches in circumference and one-fourth of an inch in thickness. When the nest has reached the sufficient size, the female approaches and swims around him several times until he notices her. He follows her now round in a circle, immediately under the bubble platform, and all at once, with a very graceful motion, he seizes her by folding his entire body and fins around her, at the same time turning himself with her over in the middle of the water, so that the ventral parts point toward the west. Now he presses against her and causes the eggs to flow, which in passing him become fertilized and rise to the surface. This act being over, the male's attention is occupied by gathering the eggs with his mouth and placing them on the platform. Should one accidentally fall to the bottom, he carries it up again immediately. When

all the eggs are cared for the female makes her appearance and repeats the operation until about a thousand eggs are laid. The eggs are of the size of a period used in ordinary type, and of creamy-yellow color. Thirty-six hours after the eggs are laid the young fish make their appearance. They are very small and have the shape of tadpoles. The father takes special care of them by keeping away all enemies—he even attempted to attack my hand when on the side of the aquarium, looking upon it as an enemy coming to devour his little ones. During the first three days his object seems to be to keep his young near the surface, where he can see them all; after that he scatters them by blowing among them. He is now seen very busy everywhere in the tank, and often gathers some weak ones with his mouth and spits them to the surface. This may be to instruct them how to breathe. (?)

As the young increase in size his duty is to teach them to find their food. For that purpose he takes a mouthful of young ones from a thickly settled place and carries them to an unfrequented spot where food is more likely to be found. In short, he has a system about raising a crop of children. During all this time the female is kept in a far-off corner. He does not allow her to go near the nest, although I have never seen a female injure any of the young, which were sometimes close around her, some even nibbling at her nose. When they are ten or twelve days old the young have the shape of the old ones and can support themselves. They are now one-sixteenth of an inch in length. Now, while I am writing this, my first crop of young paradise fish are six weeks old, and some measure as much as one inch in length and show some of the brilliant colors of their parents.

HERO MUELLER.

Cincinnati, Ohio.

A GERMAN BOOK ON GENERAL FISICULTURE.

Mr. von dem Borne has given the public a new edition of his valuable book, which is rendered more valuable by his experience at the late International Fishery Exhibition at Berlin. We wish for the benefit of our readers who do not read German, that it was printed in English. It is 22mo., of 174 pages, with 64 illustrations of aquatic and fish. The fact that it is written by one of the leading fish culturists of Germany is a guarantee that the author has a practical knowledge of his subject.

Her von dem Borne compresses much valuable information in a small compass, and shows his familiarity with fish culture in his lands by giving the prominent inventions in use in them. He covers the whole ground of pond building, spawning, rearing and the general care of fishes, as well as giving some space to the literature of the subject. The only thing which we were disappointed in is the absence of an account of the breeding of our favorite grayling. This fish has a place among our authors' descriptions of fishes, but we miss it among the directions for spawning and rearing. We have watched carefully in all European accounts of this fish for differences to habit from our American species. Her von dem Borne tells us that it lives in large brooks and rivers, with strong streams and stony or gravelly bottoms; and that it does not love spring water. "Therefore," he says, "it does not go so high in the spring brook as the trout does, although it lives in some portions of the stream with that fish. It grows colorably well, but not so fast as the trout, and grows to only 3 lbs. weight. It spawns in March and April. The eggs can be taken by hand, but the fish do not ripen them in confinement, and therefore they must be obtained near their natural spawning places."

This account tallies with our observations on the grayling, except that portion which says that they do not ascend brooks as high as the trout do, and on this point observations have been incomplete in America, owing to their restricted and distant habitat. The culture of the grayling is not carried on to a great extent in Germany, but a few of the fishermen have propagated them. The price of the book is 25 marks, about 60 cents, in cloth.

*Die Fischzucht | von | Max von dem Borne, | Ritttergutsbesitzer in der Neumark. | — | Zweite, um bearbeitete Auflage. THE DOG CASTAWAYS.

SUSPENSION BRIDGE, N. Y., Aug. 2.

THERE are now three dogs on Taylor Island. First is the original old bull dog (he was thrown from the bridge). Next is a large-water spaniel that undertook to retrieve a stick from the water at the foot of the bridge, and was thrown over the Suspension Bridge. He got too far out into the current and seemed determined to secure the stick, and I believe did secure it, but could not, owing to the strong current, reach the shore; so down he went and landed on the island. Several other dogs were watching him, and as soon as all hope was lost they ran on to the bridge to see him reach the island. "Old Bull" was out to meet him, and gave him a hearty welcome.

Several days later I went down with some food to throw over, and discovered a small black and tan dog on the island. How he got there no one seemed to know. Several attempts have been made to rescue one of the dogs, but thus far all have failed. The "Yokes Family" remained here two days and spent considerable money in trying to rescue the bull dog, but finally gave it up.

The bull dog seems quite happy, and the other two spend most of their time in wandering about. Last Sunday a terrible battle took place on the island between the spaniel and bull dog. The little dog acted as referee. They fought for some time in plain sight, but finally got too far under the bridge and could not be seen. They were fighting over a Sunday dinner. I saw them both the next day, and they appeared to be as good friends as ever, so I presume it was a draw.

Two young men of this place are building a large box trap to be lowered to the island. They intend to put it down this p. m. I will report their success.

C. E. LEWIS.

THE PREVENTIVES OF HYDROPHOBIA.

Editor Forest and Stream: PHILADELPHIA, July, 1881.

The following article appeared in one of our daily papers some years ago, and I believe was copied by only one journal, and that a daily in the Southern States. The writer of the article, deeming it his duty to make known to the public as widely as possible, has respectfully requested in the form I send it to you. He is a very highly respected citizen of our city, and a donor as to the veracity of his statements cannot for one moment be entertained. Since the publication of this remedy for hydrophobia many cures have been effected by it. Although the remedy is now so generally known, I have made them so public through your columns.—HORO.

[From the Public Ledger, April 18, 1877.]

PREVENTING HYDROPHOBIA.

Mr. Editor: My attention was drawn to *Elecampaus* many years since as a preventive of hydrophobia. The active medicinal principle of this plant is found in the root, and is called *indulin*. From my experience I believe this indulin neutralizes the virus or poison of hydrophobia. Allow me to give a few instances where this plant has been used. My own nephew, then a small boy, was bitten badly in the face by a dog unmistakably mad. This occurred within a few miles of this city. The father of the lad came immediately to town to obtain medical advice. We called on an eminent physician (now deceased), who at once prescribed the *Elecampaus* root. One of the root was obtained and administered as herein-after directed. No symptom of hydrophobia appeared, and the lad, now a hale, hearty farmer in Montgomery County, lives to show the scar of the wound in the face.

The physician above referred to related to me a number of instances in which the remedy had been used, and always with success. He, in fact, remarked, "I never knew it to fail when properly administered." I will give but two cases: First—Two men living near this city were bitten in the hand by the same dog, and within fifteen minutes of each other. The dog was a stranger to them, was secured and impaled to await an owner. The next day he showed unmistakable signs of madness, and finally died with hydrophobia. Alarmed for their safety, both men came to the city and waited on the physician quoted above. He prescribed the *Elecampaus* root. One of the men exclaimed, "That is an old woman's remedy," and refused to take it. This man, returning to his home, placed himself under the care of his own doctor, who cauterized the wound and administered medicine to salivate him. On the ninth day he was seized with spasms and died in agony. The other man, who was a fortunate man, took the *Elecampaus* as prescribed, and never suffered in the least degree from the dreaded disease.

Second—A number of cows feeding in a pasture were all bitten by a mad dog. The owners, owing to the knowledge of those who had heard of this *Elecampaus* remedy, thought it a good opportunity to give it a trial. The cows were accordingly separated. To one-half the number the root was administered (in form of decoction), and not one of the cows suffered from hydrophobia. The other half of the cows, not so treated, died from such bites, where their effects were shot. In quite a number of cases coming under my own observation of persons bitten by dogs imposed to be mad I have recommended the use of *Elecampaus*, and have yet to learn of the first case of hydrophobia resulting from such bites where the root was used. I think, therefore, I have good reason to have confidence in the remedy as a preventive.

Whether, after a manifestation of the disease, it would have a good effect, or any effect at all, I am unable to say. I doubt whether it would. But the remedy is so simple and so readily obtained that it would be almost criminal not to employ it. Having said this much, allow me to give the mode of using the remedy. To one and one-half ounces of good, sound *Elecampaus* root, bruised in a mortar, add one pint of new milk; boil to half pint, strain off, and when cool, add one pint of water. Give this decoction to the dog should be taken for from three to five hours at intervals. Repeat the dose on the third morning, allowing no more to intervene, and again on the fifth morning. The above quantity is for an adult; for children, given in proportionate doses, say one of twelve years, half the quantity.

R. E.

DETROIT, Mich., July 16, 1881.

Editor Forest and Stream:

My attention being called to the article in the FOREST AND STREAM relating to the fearful death by hydrophobia of a little

Chief of Mr. G.H.H.'s Tilly.
Dashing Duke and Dashing Daisy—Mr. Wm. Wilkinson, West Philadelphia, has a pair of *Dashing Duke* and *Dashing Daisy* for Mr. LeWellen street puppies, white and black, whelped June 8, 1881, by Mr. W. W. Kendaals cell (imp. Belton-Brangle) out of owner's *Princess Pearl*, Earl of Carlsruhe.
Flying Kettle, Flying Cloud, Flying Seal and Flying Spray—The Lachelle Kennel Club, Whitestone, L. I., claims the names *Flying Cloud* and *Flying Foam* for lemon belton dog pups, and *Flying Seal* and *Flying Spray* for black and white pups, whelped July 2, 1881, by champion Emperor Fred out of Minto, 185 N. Y. 1852.
Cat, Spot—Mr. Eugene Powers, Cortland, N. Y., claims the name of *Cat* for his black and white cocker dog puppy by Wildcat out of *Microph*.

As was proved at the Fly-Casting Tournament at Coney's Island, June 23.

First prize in Champion Class was won with one of our 10 ft. 9.2. Bass Rods: length of cast, 75 feet. First prize in Amateur Class was won with one of our 11 ft. 8 ft. Fly Rods: length of cast, 67 1/2 ft. The Sea World Special Prize was won with one of our 11 ft. 10.2. General Rods: length of cast, 75 ft. Our rods are considered superior to all others by those who have seen or used them. Send stamp for catalogue, with Mass. Fish and Game Law.

LEONARD'S Split Bamboo Rods, WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.

No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 26, 1875). This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.

No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 4, 1875). This split thoroughly strengthens where the ferrule is joined to the wood, which is the weaker part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made.

No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

EVERY ROD WARRANTED.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling & Black Bass Fisheries,

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region,

and the Michigan North Woods are unsurpassed, if

equaled, in the abundance and great variety of fish

contained.

BROOK TROUT abound in the streams, and the

famous AMERICAN GRAYLING is found only in

these waters.

THE TROUT season begins May 1 and ends Sept. 1.

THE GRAYLING Season opens June 1 and ends

Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE,

also abound in large numbers in the many lakes

and lakelets of this territory. The Sportsman

can readily send trophies of his skill to his friends

or "club" at home, as ice for packing fish can

be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The

scenery of the North Woods and Lakes is very

beautiful. The air is pure, dry and bracing. The

climate is peculiarly beneficial to those suffering

with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will

be largely increased in time for the sea on of 1881

by new buildings and additions.

During the season ROUND TRIP EXCURSION

TICKETS WILL BE SOLD AT LOW RATES, and

attractive train facilities offered to Tourists and

Sportsmen.

Dogs, Guns and Fishing tackle Carried Free at

owner's risk.

It is our aim to make sportsmen feel "at home"

on this route. For Tourists' Guide a handsomely

illustrated book of 160 pages sent free. Time Cards,

Folders and further information, address

A. B. LEET, Gen'l Pass' Agent,

Grand Rapids, Mich.

Fishing Season at Rangeley Lakes Again Open.

GUNPOWDER!
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs.

Dupont's Choke Bore.—Specially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 8 1/2 lb. kegs and 1 lb. canisters.

Dupont's Rifle Rifle.—A quick, strong and clean powder, of very fine grain, for rifle shooting. Packed in 1 lb. canisters and 5 1/2 lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—Fg. and FFG. The Fg. for long-range rifle shooting, the FFG. for general use, burning strong and moist. Packed in 1 lb., 1 1/2 lb. and 5 lb. canisters, 6 1/2, 12 1/2, and 25 lb. kegs. Fg. coarse, FFG. fine.

Dupont's Sporting, Mining, Snipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by: **P. L. KNEELAND, 87 Beaver St., N. Y.** N. B.—See note on DUPONT'S Fg. or FFG. for long-range rifle shooting.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard of the country.

ANSWERS TO CORRESPONDENTS..... 53

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C., London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 45 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.
Thursday, August 18.

Specimen copies of this paper will be sent free upon application. We will esteem it a favor if our readers will call the attention of their friends to the merits of the FOREST AND STREAM.

HISTORICAL.—A correspondent is informed that the first number of the AMERICAN SPORTSMAN was published by the Parker Brothers at West Meriden, Conn., in October, 1871. It was a monthly until October 1873, when it was changed to a weekly. The publication office was removed to this city and the name changed to "ROD AND GUN" in 1875.

The first number of the FOREST AND STREAM was issued from No. 103 Fulton street, Aug., 14, 1873. The ROD AND GUN and the FOREST AND STREAM were consolidated in 1877, the first number of the new form appearing May 3d of that year. Our inquirer is further informed that the words "Forest" and "Stream" are not the names of individuals who have been connected with the paper.

TWO OF THE NIAGARA CASTAWAYS have been rescued, as related by our correspondent elsewhere, and "Old Bull" it is hoped, will be present at the London, Ont., Bench Show. "Old Bull" ought to join a circus.

MALARIA IN THE WHITE HOUSE.

THAT the residence of the President of the United States is an unwholesome place in summer is well known. Now that he is lying on a sick bed from an assassin's bullet, various newspapers have called attention to the pestilential flats which have poisoned the air so that several of his attendants have been stricken down with those complaints called malarial. These flats have been complained of for years and various projects have been broached to mitigate their evils.

Other Presidents have been able to escape. One made his summer home at Long Branch and another on the heights of the Soldiers' Home Park, but President Garfield is obliged to stay.

Former Presidents have complained, but the District of Columbia is not a Congressional district, and, having no member of Congress, has no one to urge the members to make an appropriation for this purpose. A short time ago it was reported that the Potomac flats were to be raised from their marshy condition by covering them with a deposit dredged from the river channel. This was claimed to be no remedy at all by Washington physicians, who declared that the deposit from the river bottom contained matters which would decay and prove as vicious as the swamps. This would no doubt be the case, for the river bottom is covered with a deposit from the sewers of the city.

We would call the attention of those interested in this matter to the fact that the old canal and swamp near the Monument, which for years bred malaria and mosquitoes, is now a beautiful carp pond. There is much of the swampy flat in question which might also be made to produce carp instead of miasma, not to mention the beauty of a sheet of water in place of muddy flats.

THE ST. LAWRENCE GAME CLUB.

A STRONG society, of which the membership numbers nearly one hundred, has been formed at Ogdensburg, N. Y., under the name of the St. Lawrence Game Club. Its objects are to stock the St. Lawrence River and the lakes, streams and ponds of St. Lawrence county with food fishes, and to protect the fish and game for the public good. The membership of the club is open to all citizens of the county, the annual fee being but a trifle; and it is hoped to enlist the cordial support of the land owners.

Game protective associations have been so long established in this country, and methods of work have been so fully tested that newly formed societies may readily avail themselves of the experience thus gained by workers in the cause; and there can be no excuse for the adoption by a new society of impracticable or inefficient ways of work. The St. Lawrence Club has started right; and we hope to chronicle its entire success.

WASHINGTON GUN CLUB EXCURSION.—The Washington Gun Club, of Brooklyn, are going on an excursion to Lake Hopatcong, New Jersey, next Thursday. This beautiful lake, famous as a health resort and well known to anglers because of its fine bass fishing, is up among the Schooley's range of mountains, and a more attractive spot for such an excursion as our Brooklyn friends propose it were hard to find. It usually takes two and one-half hours to reach the lake from this city, but the Washington Club and guests are to go by a special train in much shorter time. There is to be a beautiful repast—we have had a peep at the bill of fare—rowing and rifle prize contests, fishing and the various diversions always in order in such a pleasure trip. All the Brooklyn sportsmen are invited by the Washingtons to join the party and share the pleasure. Tickets (\$5 each) are to be had of Mr. Henry Allenbrand, the president of the club, Mr. H. H. deman, corner of Division avenue and Sixth street, Brooklyn, E. D., and at the headquarters of the Brooklyn Gun Club, Harry Miller's, Flatbush avenue. The special train which is to convey the party on the Delaware, Lackawanna and Western Railroad leaves at 8:15 Thursday morning, August 25.

BRYANT'S SPARROW POEM is printed in another column. We should like to supplement it at once with a poetical obituary of the last bird of that race in America.

FROG CULTURE.

DOUBTLESS our readers have seen the item which has appeared in the local papers, from Maine to California, for the past year, on frog culture. One paper has copied it from another, and it has been sent us by a dozen correspondents. It tells how a thrifty agriculturist near Elgin, Illinois, has bred frogs for market and thereby accumulated much lucre. We have explained the impossibility of feeding large numbers of frogs, in ponds or in brooklets, and how the large frog had accommodations in his interior for the smaller ones, which he usually kept full.

We do not want a reader of FOREST AND STREAM to spend time or money in the culture of anything which is neither profitable nor ornamental, and we have pronounced frog culture a delusion and a snare. But the aforesaid article still goes the rounds of the rural papers. To pin down the Elgin "frogist" we wrote to Dr. Pratt, a former fish commissioner residing at Elgin, and, inclosing the slip, asked for information. What he gives us we lay before our readers in the following note:

ELGIN, Ill., Aug. 4.

Editor Forest and Stream:

The man who started that frog-breeding story and gave it to a reporter is a "dead beat." I understand that he is now in State prison in Michigan. It is singular that it was not inquired into before, so many papers copied the article.—W. A. PRATT.

We trust that every paper which has been imposed on by the frog story will do its readers the justice to publish Mr. Pratt's letter, and not let any simple-minded person invest in a frog pond as a source of revenue. An adult bull frog is a cannibal, and a given piece of water will only yield a certain number of adult frogs, no matter how many tadpoles are hatched.

THE TOY PISTOL is just now a frequent cause of coroners' inquests. The latest case is that of a little boy in Newark, N. J., who was "playing forfeits" with a number of children, and when it came his turn to pay a forfeit, handed over a toy pistol to a little girl. He "thought it wasn't loaded," but it went off and killed the girl. The jury returned a verdict of accidental killing, censuring the boy's carelessness, and adding: "We further feel that we cannot too strongly condemn the reckless use of all kinds of weapons of this character by children and youth, and we suggest that the sale thereof be discontinued by the public and suppressed by proper authority." Perhaps it was out of the jury's sphere to have ascertained the name of the toy-dealer who sold this deadly firearm to the unhappy boy and to censure him too; but the sooner parents and guardians of youth hold the toy-dealers personally responsible for all the woe caused by these infernal machines, the sooner will the nuisance be abated. The sale of toy-pistols must be put down by law.

"BIRD-NESTING" is a more heinous offense in England than in this country. A man who robbed a nest at Wadsworth, Eng., was fined the other day 4s, and in default was sentenced to twenty-one days' imprisonment. A heavy enough penalty, but light compared to the trouble which followed the robbing of a mocking-bird's nest in Alexandria Co., Virginia, not long ago. It seems that a Justice of the Peace had had his eye on these particular birds, and had the capture of them all planned out so soon as they should be ripe. Some other bird catcher stole a march on him, whereupon the disappointed J. P. straightaway made out a warrant, and the sheriff arrested the bird thief. The trial, we are told, resulted in a verdict of guilty, carrying with it a fine of \$10 and the costs of the case. The costs were immediately paid, but the fine was not. When the attempt was made by a colored constable to arrest the capturer of the bird's nest, who is deaf and otherwise afflicted, he declined to go with him, and the wife of the accused seeing her husband dragged along by the constable rescued him from the hands of his captor. They were then arrested on the charge of assault and battery, waived an examination, paid the costs, and removed the case to the County Court. "A neighbor who defended the accused in very strong words was fined \$5 for contempt of court. He refused to pay the fine, stating that he was in the Post Office Department and did not recognize the authority of the Justice. The Justice then made out a

mittimus committing him to jail for the non-payment of the fine, and placed it in the hands of the sheriff, who attempted to make the arrest. The sheriff, being resisted, called on several gentlemen to assist him, who refused to interfere. He then called in his son to assist him, who responded, and a scuffle ensued, in which the sheriff's son had two of his teeth knocked loose and received a severe blow in the eye. The difficulty ended by a third neighbor making his appearance and paying the fine." We are not told what became of the mocking-birds.

PLASTER CASTS OF DOGS.—Mr. Palmer, the modeler of the United States Natural History Museum, has succeeded in making some excellent plaster casts of dogs, and the Museum proposes to have a series of such casts prepared to show the characteristics of the various breeds. Skeletons of typical dogs will be mounted for the Museum and these, with the painted casts, will make the collection a most valuable one. It is hardly to be presumed that any of our prominent fanciers are such devotees to the science of dog-breeding that they will be willing to sacrifice their animals to the cause; but it will certainly be a most sensible and satisfactory disposition of a dead dog to forward him to Washington, where his points may be permanently preserved. For modeling purposes, at least, a dead dog is better than a living lion; and the Smithsonian Institution offers to pay the express charges on such finely-bred dogs as may be sent to them.

ADIRONDACK GUIDES are much exercised lest the odium of "Parker's" crime should attach to themselves as a class. Visitors to the North Woods will hear us out in the assertion that the guides there have a record for honorable conduct, which should relieve them from any such unjust imputations. Before the Parker affair transpired, the Adirondack guide was thought to be worthy of the confidence of parties of ladies and gentlemen. To-day he is no whit different. The New York daily paper paragraphers, who dub the Adirondack guides as fellows to be severely let alone, probably never saw an Adirondack guide in their lives, and don't know what they are talking about.

SKYLARKS ON LONG ISLAND.—Those who have been interested in the importation of the English skylark into this country will be glad to know that the experiment made some years ago on Long Island has proved a success. A number of birds were put out at Flatlands, Long Island, near the County Houses, some years ago, before the war we believe, and these birds and their progeny have been seen almost every year since. Mr. Edmund Orgill has frequently seen them there and heard them sing. One remarkable thing about their annual return is that they have always come back to the exact locality where they were at first put out.

WE REGRET YOUR PARBOS. Mr. Wm. Gale, English pedestrian, for failing to note your performance of walking 6,000 quarter-miles in as many consecutive ten-minutes in a Bovey lager-beer saloon, this city. To tell the truth, we think the feat a stupid and useless one. Now we propose that all the long-distance walking idiots and all the fasting lunatics join hands and start off after the fellow who set out a year or two ago to walk around the world in six years. And there are the crazy fellows, too, who sail for Europe in dorics—we can spare each and all of these deluded seekers after notoriety and shekels.

ARE THEY MONOPOLIES?—Our correspondent "Didymus," in a late issue, called attention to the fact that many of the most favored game localities of this country are coming into the possession of clubs, and it was suggested that such clubs were in a sense monopolies. We are much mistaken if a great deal of argument cannot be reduced on each side of this question. In a letter published elsewhere to-day it is shown that at least one club has found exclusiveness essential to the protection of its game. Perhaps there is yet a golden mean not yet attained. We invite expressions of experience and opinion on the subject.

THE FRANK FORESTER CLUB.—At a meeting of the Greenwood Lake Association, Frank Forester Club, held at the office of Messrs. McDowell & Co., this city last Friday, Mr. J. B. Wortendyke, of Midland Park, N. J., and Hon. John J. Blair, of Blairstown, N. J., who is eighty years old, and says he has twenty years more of fishing in him yet, were elected members. Mr. T. C. Banks, of the FOREST AND STREAM, was elected an honorary member, this being the first such election on the records of the club. The annual meeting and presidential dinner will be held at the new club house, Warwick Woodlands, on the first Tuesday in September.

A FOX HUNT was on the programme of sports at Cottage City, Mass., last week, but the S. F. P. C. A. told the projectors of the entertainment that the society would chase them if they ran the fox, whereupon a drag hunt was substituted. We are of opinion that the fox chasers had the strong side of the case, and it is to be regretted that they should have yielded to the officers of the Society.

WANTED.—A file of the "Old Spirit" and of "Porter's Spirit." We shall esteem it a favor if any one knowing of such a file which is procurable will inform the editor of this paper.

GREY-EYED MEN. It is often claimed, are the best marksmen. At the Chicago shooting tournament the other day it was noticed that among the most expert shots grey eyes predominated.

LAKE GEORGE MEET.

THE annual meeting of canoeists on Lake George, Aug. 11, 12 and 13, was an event in the history of the paddle in America of which we may well be proud. It brought together a larger number of men devoted to this fascinating sport than had ever before assembled on American waters. The success of the meet places the American Canoe Association upon a sound, permanent footing, and henceforth the camp fires will glow every year on the charming islets reserved for the knights of the double blade and their friends. The meeting gave evidence enough of the rapid strides in popularity the sport is making, and shows that it has taken root all over the land. Many new clubs sent delegations from the West and from Canada, while the older organizations from the East were on hand in force. New York was represented by the parent institution, the N. Y. C. C., and its younger sister, the Knickerbocker C. C., while the ranks were filled with many sturdy fellows whose names bore on the books of the Ottawa C. C., Toronto C. C., Cincinnati C. C., Cleveland C. C., Peterborough C. C., Whitehall C. C., Lake George C. C., and others with "poor I-o," who may be said to have invented the first canoe, likewise on hand in birch barks of native make, which they propelled after the aboriginal plan with a single roughly cut blade. If they and their craft were fair samples of the genus and the genius of the red man, his pale-face brother has got a long lead on the copper skis, and can discount him in the canoe business badly. The old romance about no one being able to improve upon the Indian canoe was forever dispelled upon actual comparison of the work of both races. After the seventy odd canoes had been beached, tents raised and duflie unpacked, a meeting was called in the evening and the election of officers taken in hand. The old board, so long the head and front of the sport, declined re-election, and after some canvassing the following were chosen to serve as officers of the American Canoe Association for the year: Commodore, Judge Nicholas Longworth, of the Cincinnati C. C.; Vice-Commodore, J. Edwards, of the Peterborough C. C.; Ontario: Rear-Commodore, Arthur Brentano, Knickerbocker C. C., and Dr. C. A. Nelde, of the Lake George C. C., for Secretary and Treasurer. The various races were well contested, Cincinnati carrying off the palm, though their victory was marred by the treachery of the "poor I-o," whose victories were well celebrated upon the club hand "Cincinnati" in a joyous manner, which left no doubt as to where the honors rested. A banquet on the third day at the Crossroads brought the meeting to a close, the canoeists being bound on cruises, single and in company, many spending their summer vacation swinging the paddle, returning to their desks and toll with nut-brown tan and freshly invigorated constitutions. Concerning the racing and the details of the three days' meet, we prefer to let our special correspondent speak at greater length next week.

The Sportsman Tourist.

A STORY OF THE JUNIPER SWAMPS.

WHILE stopping for a rest at the "Hygea Hotel" at Old Point, on my way from Florida last summer, I met an old gentleman named Nixon, from Perquimans Co., N. C., who informed me that before the war slave owners were always very anxious to hire their hands to the shingle cutters in the juniper and cypress swamps, as they always came home at the end of the year in "good condition," and while at work in the swamps always enjoyed perfect health. An officer of the Navy who was present said that the juniper water was always used by United States vessels going out from the Navy Yard at Norfolk on a long foreign cruise, because it kept clear and fresh for years, and the officers and men who used it usually enjoyed good health. Soon afterward I took a trip out on the Dismal Swamp Canal from Norfolk and visited Lake Drummond in the Dismal Swamp. I was surprised to find it a clear, dark lake, margined by a thick forest of beautiful green juniper, and the contrast between the claret-colored water and the evergreen foliage makes a beautiful picture. The lake is deep and full of fish which are peculiar to these waters, and the robin, perch and chub grow to a very large size and are as sweet as any fish I ever ate. A few days' use of the water satisfied me that it was good for me. I drank freely of it and bathed in it. It seemed to have a tonic effect and was very pleasant and agreeable to drink. I think the time is not far distant when the health-giving quality of the water and the pure atmosphere, with an entire freedom from insects of all kinds, and the advantages for bathing, sailing and fishing, will make this a very popular place of resort for invalids.

One would imagine that these swamps were a dismal charnal house. On the contrary, they are the healthiest places on the American Continent. There is no decomposed wood—juniper timber never rots. The trees fall to the ground, but they do not decompose but turn to peat and lie, indissoluble by air and water, for ages. There is nothing in these swamps to create malaria—the rising of the tides and decomposed position of the sun; all is fresh and pure, and the air is laden with sweet odors. I afterward visited the swamps in Dare County and found them like the Dismal Swamps. East Lake, near the mouth of the Alligator River, about ten miles west of here, and the waters of the Alligator River are identical with Lake Drummond in their natural features.

The country between here and there is a perfect wilderness, excepting a few small clearings on Croatan Sound. I have visited different portions of it, and found many things to interest one. The woods are full of game. Bear and deer go in herds. The bear feeds on the gum and huckleberries in their season, and their paths to their feeding grounds are as well defined as cattle paths through the woods in the North. I saw on one occasion seven bears—a family led by an old she bear, so my guide said. She would occasionally stand against a tree and tear the bark, leaving a blaze similar to the marks made by woodmen to mark roads through the wilderness. The woods are full of game. I saw on one occasion seven bears—a family led by an old she bear, so my guide said. She would occasionally stand against a tree and tear the bark, leaving a blaze similar to the marks made by woodmen to mark roads through the wilderness. The woods are full of game. above this city one can stand upon the bank of the San Antonio River, and see its crystal waters as they well up twelve feet below the surface from a rocky cavern in the bank. The stream flows swiftly, and widens until just a few rods below this immense spring. Its width is one hundred feet, while its depth is only two. Its course through the city forms the letter S, and it is spanned by many fine bridges.

Just one mile above the city is San Pedro Park, enclosing a large spring of the same name, with numerous smaller ones, which send forth little purling streams that finally unite and form the San Pedro Creek that also flows through the city.

Attempts have been made to introduce new fish into these waters, with what success I hardly know. At the head of the river is a fish hatchery for stocking the river with salmon, while carp have been put in the lakes in the park. I have caught different kinds of fish from the streams that flow from these lakes. One was so large that several guests enjoyed it with us, and while we did not take up twelve baits, yet all were beautifully supplied.

I will not assume a pen-picture to you of the strangely wonderful old missions in and near this place of which so much has already been written, and volumes might be.

If travelers fail to see these and other interesting surroundings of San Antonio they will miss the Mecca of their pilgrimage.

A. G. S.

DREAMING UNDER THE PINE.

By N. L. YORRES.

We are such stuff as dreams are made of,
And our little life is rounded with a sleep.—SHAKESPEARE.

THE father of Vivian St. Clair lives near the banks of the Cheat River, where it flows through a broad, beautiful valley, and the banks are wooded with oaks. A young professor of natural history and botany in the university of his native State, he had suddenly acquired a princely fortune by the sale of mountain lands, a little time before considered comparatively worthless. He would come out to this wilderness during the summer vacations to engage for the speckled trout and study the wild flora of the mountains. The estate consisted only of barren sands covered with dark pine forests. Great cliffs, moss-covered and pierced with caverns—the home of the lynx and the rattlesnake—were piled up on the steep slopes, their bases hidden by the rhododendron and azalea. But oil was found floating on the waters of spring and pool, for under these rugged rocks, barren sands and dark pine wood was a great petroleum lake. So the place was sold, the chair in the university given up, a beautiful farm purchased on the banks of the Cheat and an elegant villa created by the crystal river at the foot of the great mountains.

Prof. St. Clair was a lover of nature, and everywhere about his farm and home were objects curious, beautiful and rare. On a table under a great bell glass were two little trees of corn, one white as snow and the other red as blood. Around them were shells that had been dyed in the colors of the rainbow, and stained with the glories of the sunset. They were filled with the music of the sea, and murmured all day long the songs of the ocean in voices sweet and low. Over a bookcase were the antlers of deer, and on them was sitting, with half-opened wings, a great Virginia owl, whose big eyes seemed always watching one. When Vivian was a little child he would forget that they were only glass, and from his perch upon the beautiful canaries that sang for him every day from their cage in the ivied windows. In warden cases were growing miniature forests, feathery ferns, silver green and gold, waved their delicate fronds over little mountains and grottoes formed of mingled moss and crystals, mirrors half-hidden among vines looked like the lakes on the mountains fringed with the rhododendron, and white pebbles were built up like the river crags. In aquaria were banded sunfish, silver dace and graceful eels; and little islands of cork, edged with ocean shells and covered with aquatic plants, floated about on the water beautiful as the river gardens of the East. Birds of brilliant plumage from the far Southlands were grouped in their houses of glass, some looking as if they were about to warble a love song, others seemingly ready to mount on beautiful wings to heaven. Showcases were filled with their nests, some simple and coarse, others wonderfully wrought, and with eggs white as snow, blue as the sky, or patterned like the autumn leaves, and polished like the ocean pearl. In reserved cabinets were minerals from every land; the Amazon stone and the ruby, silvers gleaming among masses of opal, amethyst and beryl. On the lawn were growing the rarest trees and the most beautiful flowers. The evergreens and lilies of Japan, the shrubs and roses of China, were mingled with the bulbs of Holland and the ivies of England, and down by the river the balsam fir and the holly tree were growing in their native sands. The conservatories were filled with the rarest plants of the tropics, and the marble fountains played all day long in the summer. Surrounded thus from his earliest years by the beautiful in nature, the boy learned to love the great book whose pictured pages are mountains and meadows, woodlands and prairies, lakes and oceans, planets and suns. Every summer when he came home to spend his college vacation he would wander alone through the forest, learning the secrets of the squirrels and studying the language of the birds. He saw the father collecting the material, and the mother weaving it into the text. This twig is too large, this hair too long, and both are rejected. "I am a bird," said the careful builder, "and everything must be perfectly adapted to the place it is to fill." He wondered why the female never warbled a song. "Is not music," he said, "the language of love, and was not the art of song acquired by the males in endeavoring to attract the attention of their mates? Imperfect at first, it has been cultivated for long, improved and transmitted with all these additional modulations of tone through countless generations, just as our own language has been perfected out of the guttural mutterings of savages." He asked himself why was so richly dressed and the other in plain attire? Then he thought that sitting all day long upon her nest, or hovering over her young, brilliant plumage would only serve to attract the glittering eyes of the serpent, or the keener ones of the hawk.

"If female birds," he said, "have gaudy plumage, they are never seen upon an open nest; it is covered over with leaves or hidden away in the heart of a hollow tree." He stooped one day to gather a flower, but it rose in the air and flew away—a beautiful butterfly. "I am a fly," he mused, "my folded wings look like blossoms, and you are they, concealed from enemies." He accompanied a hunter one day into the dark mountains, heard the howl of the wolf, and found a spotted fawn upon the laurel.

He wondered why the wolves did not know it was there,

and he knew that it must be scentless. "The All-Father," he said, "has given the feeblest creature some protection from its enemies."

"You are right," replied the hunter, "neither wolf nor hound can scent a fawn while the spots are on."

Wandering deeper and deeper among the mountains they came to a shallow stream, whose rocky bed was covered with the footprints of animals. "So the river was not here once," said Vivian, "and these rocks were only a bar of sand; now they have hardened into a page of stone in the great book, printed, perhaps, thousands of years ago, but easy enough to read. Here are the tracks of a wild deer, and close behind an Indian hunter followed in pursuit. It was wounded, too, and in the right forefoot. See, that foot has never touched the sand, and leaves no mark; the others are all quite plain. And it was raining. Here are the fossil drops, and they came from a cloud in the west."

"You have a fine eye," said the hunter, "and would never lose a deer's track in the ferns; you would make a famous hunter."

"I would rather be a famous naturalist," replied Vivian, "and he should have an eye far keener than the chaser of the deer."

When home during the Christmas holidays he would wander alone into the forest when the ground was covered with snow, and the little pines were bending under a weight of white, and the white pines were bending under a weight of snow. The leafless trees were all in bloom—blossoms that would never ripen into fruit—they were only flowers of snow. The impress of little feet are everywhere, and he knew at a glance what animal had made each one. "Here by this mossy rock," he said, "a squirrel has just been digging for the nuts that he buried long ago in the golden autumn. There a hare has danced a merry round in the moonbeams under the thorn, and a wood-mouse has crept to its home in the heart of the hollow pine. A fox crept into this hazel thicket, paused a moment behind the little cedar at its edge, then wandered forward. Did he find a supper there spread out before him on a table-cloth of snow? No; here are the prints of little feet, flying away over the hill. But here on the river bank is blood; a white hare has dashed wildly through the laurel; here is scattered fur; there a spot of blood. How red it looks upon the snow! She staggered here, and her steps have been irregular and slow. Ah! here she lies beside the fallen pine, cold and dead. And here are other tracks going away over the sundial hill. In the shadow of the laurel a deer-race, and the rider's teeth were in the throat of his steed. Murder was done last night in the dark pine wood!"

"This is a pictured page in the great book, too, only it will never harden into stone; the bright sun will burn up every letter, for it is only written in the snow. But does not," he continued, "every event transpiring in the universe write its own history in letters of fire that will burn forever? I drop a pebble into a mountain lake, and the waves grow larger and larger until they have covered all the water; so it is with the waves of light, and if the subterranean fires should burst the solid crust of the earth into fragments and scatter them to space, this moonlit forest picture—the leaping fox, the dying hare, the footprints in the snow—would remain spread out forever before the eyes of the Heaven-Father! Light will travel seven times round the earth in a second, yet if our planet could be seen from the most distant star from us it would appear to dwellers there not as it now is, but as it was millions of years ago. There would be seen no man, or bird, or flower upon its surface; only the tree ferns waving their feathery crowns in the moist and heated air, and the club mosses, tall as mountain pines. Everywhere bright replies are battling with moosters as hideous as themselves, and all the seas and lakes and reedy pools are dyed in blood. There has been war upon the earth from the first appearance of life upon its surface; the strong and cunning destroy the weak and foolish. The history of the earth is written in the sunbeams. Every bird, every flower, every ocean shell that ever saw the sunlight; every city, every battle, every individual action is painted there forever. The universe is the encyclopedia of the Eternal Mind; everything is printed there—the leaves are never closed, the history never finished, the drama never ended; but the pictured pages containing your heart's history and mine are open before the All-Seeing Eye forever and forever."

In the happy summer time Vivian, the lover of nature, would lie down upon the mossy carpet spread out like a fairy garden under the pines, and the song of the mocking-bird and the oriole would lull him to sleep, and the Queen of the flowers would look down in his dreams, and he would ride away in her chariot, all of gold and gems, over the earth and under the sea. Now it is sunset, and he is in the wild Northland. The snow-clad mountains are tinged with all the glory of color, and the clouds are painted over with flowers of gold. The brilliant moon will circle round the dreamy horizon for days, never setting until the sun has run her bright course under the stars. The aurora bursts forth with magical splendor; the sky seems changed into a phosphorescent sea, and the snow is something red as blood and the ice is as green as the emerald. A broad band spans the horizon, more brilliant than a thousand rainbows; streams of many-colored light burst from it, filling all the heavens, passing through all the intermediate shades, from violet and bluish white to green and purple red. The stars shine dimly through the golden haze, and all seems like the unreal world of dreams. It is winter in the trackless waste, and the silence is broken only by the hooting of the snowy owl, or the yelping of the Arctic fox. Most of the animals have followed the sea birds southward, or are sleeping in their burrows under the snow. The icebergs are beautiful as palaces of Parian marble besprikled with rubies and emeralds and flooded with golden fire.

But the fairy chariot flies through the air like a meteor, and all changes into new forms of beauty. The dreamer is in

"That land where the lemon trees bloom,
Where the gold orange glows in the deep thickets gloom,
Where a wild rose ever soft from the blue heaven blots,
And the groves are of myrtle and laurel and rose—
Knowest thou it?"

Birds and butterflies are everywhere; some seem only flowers, so like are they to blossoms, and many flowers seem ready to soar on snowy wings to cloudland, like the angels to doves. Serpents, beautiful in color as the ocean shells, mountain gems, wind slowly among the tangled reeds with motions graceful as the sunlit waves of a rivulet. The evergreen trees are covered with giant creepers, binding together all the forest, and throwing over it a drapery of many-

colored flowers, filling all the woodland with perfume. Beetles, glittering with metallic brilliancy, and beautiful as any gem, illuminate the fragrant forest all the night, and fill the air with drowsy music. Trees taller than our Northern pines bear flowers beautiful as lilies, or furnish with all that he requires—milk, wine, butter, honey, wax, oil, bread, cabbage, manna, candles, bolts, ropes and clothing! The magnificent Victoria Regia, yellow, violet and white—queen of the floral world—floats on the waves of sunny rivers, sinking at night into her couch of waters. The great vault of heaven is spread out before him with all its wealth of moons and suns and constellations, from pole to pole.

But again the fairy-chariot bears him onward over many radiant lands, and sets him down at last in the gardens under the sun. The liquid crystal of the Indian Ocean is gleaming over him, and the sea anemones cover the rocks with their waving crowns, beautiful as beds of mingled lily and rose, and the medusae, and the microscopic crustaceans shine in the obscurity like fairy stars. The humming birds of the ocean, small, gleaming fishes, some bright with a metallic splendor of azure or vermillion, some gilded green or dazzling silver lustre, play around the coral bushes, light as spirits of the abyss. As the day declines and the darkness of night sinks into the depths, the radiant garden is filled with splendor. The white or blue bells of the medusae float through this enchanted world, and every angle beams and shines with living light. All things, which in their liveliest of brown or gray are unillumined in daytime in the universal radiation of bright colors, now shine with the most charming red, yellow or emerald lustre; and to complete the marvels of the enchanted night, the large silver disk of the sea moon gently moves through the whirl of tiny stars. The luxuriant vegetation of the tropics has no such richness of forms or glories as are covered with jewels and sparkle like gems, and the ocean floor is strewn with silver sand and paved with radiant shells.

But what hideous monster is this clinging to the rocks! It reaches out its serpent arms and touches his face. A thrill of horror passes along his nerves and he awakens with a start—it was only the cold nose of his dog pressed against his cheek, and the mocking-bird and the oriole were still singing in the pine. "How rapidly," he said, "the mind flies over the earth in our dreams! I was only asleep for a moment, and yet I seem to have traveled through radiant lands for years."

"The lower animals dream and reason too," he continued, musingly; "my hounds chase the wild deer over the snow in their dreams, and many animals have the gift of language—utter sounds of warning, delight and pain, and are dumb only to the ignorant and the unobserving. The joyful bark of our faithful dog as he welcomes us home we understand—the thoughts that illuminate his countenance and glorify his eyes we cannot always read, and yet his busy mind is ever planning, thinking, dreaming."

"Inferior animals differ greatly from each other in mental power. Some are possessed of marvelous talents, others of the same family are intellectually feeble. Some are idiotic or insane. Like ourselves, they have their kings, queens, soldiers, masons, carpenters, farmers, hunters and sailors. And the agricultural art of Texas cultivates the soil, sows the seed and reaps the harvest; owns slaves and milks its cows."

TROUT FISHING IN NEW MEXICO.

SANTA FE, N. M.

SO many people are now coming West into this new country, among whom are doubtless many lovers of the "gentle art," that a few remarks on sport to be obtained with the trout here, according to my own expert views, may be of some interest by some of my numerous subscribers. Immediately in the vicinity of Santa Fe there is little or no sport to be had, owing to the absence of streams, but by going some twenty miles northeast or west far trout fishing is obtainable. On the north side the various streams from the main range of mountains are get-at-able, as also the Rio Grande, Chama, etc., on the west another point of the Rio Grande, and on the east the Pecos. The mountains are filled with small trout streams, where with worm or grasshopper a large number of small fish may be taken almost whenever one has been seen that, although the popular cry is that water is a scarce article in New Mexico, by traveling a few miles some fun is within our reach, provided we know a little of the country. To give a good idea of what one may expect to meet with, I will relate how a friend and I spent two very pleasant days on the Pecos.

To commence with, I am from the Old Country, where I was initiated into the mysteries of fly fishing some fifteen years ago, which fascinating sport I have followed whenever I had time and opportunity in rivers, streams and lakes of England, Scotland, Ireland, Germany, Switzerland, etc., so that, young in years, without egotism I may call myself an elderly fisherman. On coming to America and settling for a time in the Eastern States, I found I had not sufficient time to pursue my favorite sport, so that there my experience has been limited to a few old-flys.

Very different ideas are held by English and American fishermen with regard to tackle, especially with regard to size of fly. My stock of two old-filled flies was unusually varied, much too small, of no use at all by the Eastern fishermen; and also here I was told I must tie them on larger hooks to meet with success. In spite of these warnings, however, I persevered with the little "uns" and had no cause to repent doing so. I certainly am an advocate of small flies and fine tackle. In the almost virgin streams of America I do not think the matter is of such vital importance, but in rivers where the water is whipped from the beginning to the end of the season several times daily, in a large number of English rivers the trout, without doubt, being more educated and can discern between a real and artificial fly pretty readily. Now, the natural insect's one wishes to represent as, a rule, small; so it seems to stand to reason that by tying them small we more nearly approach nature in our imitations, consequently are more likely to lure the trout. If any one doubts the soundness of this argument let him try, if he has the opportunity, the large-sized flies on some thoroughly fished water in England, and he will find that, every throw he will see the fish making off in all directions, and "divil a fish" will rise. Or else let him give the small ones a fair trial on American streams. Now, I do not wish to be misunderstood. I do not maintain that small flies are invariably superior—for in lakes, by way of example, a larger fly is required—my remarks having special reference to streams not exceeding twenty-five yards in width—in fact

trout streams. One instance I will quote to illustrate my theory: When fishing in the black forest some few years ago I always found that at the end of the day, although a perfect stranger to the river, with my small flies I could double the take of the professional fisherman who used large hooks and had fished the same stream for a living for several years. One objection I have heard raised to small hooks is that one loses so many fish after they are seemingly well hooked. All I have to say is to use a pliant rod and plenty of patience. Landing a large fish on fine tackle requires some amount of skill and gentle handling, which considerably increases the pleasure and excitement. But I must apologize for this digression and return to the subject in hand.

"How far is it to the Pecos?" was the question we asked of every person likely to know, and numerous and various were the answers obtained; but it all ended in our being led to suppose it was twenty-eight miles by the road and eighteen by the trail. We determined therefore to take the latter road. At bedtime in the morning with the indispensable "burro" or donkey, to carry our blankets and camp outfit, ready saddled, we started on our light breakfast. After our journey, after taking the precaution, Bob Sawyer like, to leave word that we had important and pressing business out of town, and would not return for some days, leaving the business to take care of itself. Ten miles up the Santa Fe cañon to start with, then cross the mountains to the southeast were all the directions we had, but luckily falling in with two Mexicans who were going the same way, we joined ourselves to them, aired our meagre stock of Spanish, supplied them with tobacco and kept on the right trail. Three hours' walking brought us to the spot where the trail leads over the mountains. A steep, very steep road, and equally rough, lay before us, but after three-quarters of an hour's hard work we arrived at the top and rested for a few minutes to smoke a pipe and enjoy the view. Down another hill, where we found some water in a hole dug by some one, we concluded to have lunch, after which our road lay up and down steep, rough hills for three hours, and then three more miles took us to a small settlement on the Pecos. During the last two hours of the road the rain came down hard, so that by the time we reached our Mexican house, where we offered to take us in, we were pretty wet and tired. After a bit of supper and the inevitable pipe we were glad to lay our weary bones on a wool mattress spread for us in the covered shed in front of the house.

Six A. M. saw us busy at breakfast, after which I ran down to the river to ascertain its condition after the heavy rain of the preceding night. "Water thick, but just fishable," was my report, so I at once proceeded to clear for action. Rods, flies, lines, landing net all in readiness, then after donning a pair of Knickerbockers and old shoes in lieu of pants and good boots, I went straight to the river and commenced operations. Hour after hour I fished all I knew, changing flies, but it would not do: the water was too much colored, although fining rapidly. By noon I had but half-a-dozen small fish. I was fishing in part of the river below the house so densely overgrown with bushes that it was unfishable from the bank, but I knew that by wading I could manage it. So there I was, up to my knees in water, walking down the centre of the river with nothing but six small fish in my creel. "This won't do," I thought, I looking round for natural flies. "That's the one!" I exclaimed to myself, seeing a small yellow willow-fly glide by me, only to be snatched up by a lusty trout some fifteen yards below. So wading out on to the bank I changed a "March brown" for a yellow willow, a black gnat for a yellow caddis, leaving the leader a red buckle with woodcock wings where it was. Throwing lightly over the fish I had seen rise, the first cast rewarded me with success, for up came the old fellow and sucked in the willow without hesitation. A strong stream helped him to fight well, but at length he succeeded in getting him—a good half-pound trout, as broad as he was long. Now the fun began to grow apace, so that by 3 o'clock I had three dozen nice fish, besides about 100 small ones which I had returned.

By 5 o'clock my basket was full, and thinking it time to go home I walked leisurely along the side of the stream where the water was not deep. A thick dead log against the bank, right in the full force of the stream, looked a likely place for a big one, and after three or four throws close to the tree I saw a flash, and thought, "Missed him, s'elp me, and a big one," thought I, preparing for another try. "There he is again!" I mentally ejaculated, striking the instant he rose. "Got him this time, though." Then I learned what a New Mexican trout can do if put to it. First of all he made straight for the tree, but I induced him to come out of that, when off he rushed down stream, making the reel buzz round at a rare pace, then back again; and, in short, kept me nearly ten minutes trying to get the net under him, which at last I succeeded in doing. He only weighed three-quarters of a pound, but was a regular picture, as broad as he could be without bursting and as bright as a new coin. The prime condition he was in and the rushing stream explains the reason of such a fish making so prolonged a fight. Well satisfied to have a goodly sized one on the top I now determined to make for home in earnest, so forced my way through the thick bushes on the bank, and was rejoiced to find I had not a mile to walk. So good was the water that it took me all day to fish scarcely a mile of river. If any of your readers have ever experienced the doubtful pleasure of carrying a full basket of fish weighing some 18 or 20 pounds, for four or five hours, they are not likely to forget it. This time on relieving myself of the burden I discovered I could but with difficulty raise my arms above my head, and that a lump the size of my fist was raised where the broad web strap pressed on my collar bone.

After getting rid of my wet things and waiting for an hour or so the Mexican fishermen returned together with my companion. The Mexicans had all suddenly taken the idea into their heads that they would also wade a line that day, presumably after seeing one of the Pecos. The best individual take, however, was but a dozen. My friend had but very poor sport, owing in a great measure, I suppose, to having so many satellites round him, as he kept to the open water frequented by the natives. My take amounted to over sixty trout, ranging from one-quarter to three-quarters of a pound, besides the countless number of small ones I returned. This fish, as will be seen, do not run large, but they are "game" as pheasants and as sweet as a nut. A good honest pounder is a *rara avis* from its source, but lower down they are twenty-five miles from its source, but lower down they are heavier.

A few fresh caught trout were soon hissing and spluttering in the pan, you may easily conceive, and were devoured with much relish by the two hungry fishermen. This is the true way to enjoy trout, "first catch him (yourself) and then eat him" (yourself also).

The second day's sport was but a repetition of the first, so a few words will suffice to relate the adventures. Unfortunately I had to wait to try the upper or open water, but after fishing until about 3 P. M. with but sorry sport, having taken but a few small ones, I was disgusted with that part, as I had not seen a decent fish move at all, except once when from my want of success I was fishing carelessly, a big swirl, a few determined struggles, followed by a sudden slackening of the line, told me I had missed a good trout. After this I decided upon again visiting the scene of the last day's work, and reeled up and went for it. My good name was at stake, for if I failed in making a basket this time the reputation I had with the Mexicans would be gone. Two hours and a half to fill a big creel is not much, but it must be done. Half an hour brought me to the place, and in ten minutes more half a dozen decent trout were kicking in the basket. Throw how and where I would I was nearly sure of a rise at one of my flies—viz., coachman for leader, claret and crowding for droppers. At one pool I took six fish in three consecutive casts, only two of them, however, I retained, showing how they were on. In short, by six o'clock my basket was full, and home I went with untarnished reputation, another good haul and in good appetite. This time my take amounted to upward of fifty trout I retained, my friend having but few. The following morning we returned over the same trail to Santa Fe, having enjoyed two of the pleasantest days imaginable, amid delightful scenery and hospitable people, and after many vows relative to repeating the dose on the first opportunity, we tenderly and regretfully laid away our rods and tackle with poor old Wamba's passport, *Pax vobiscum*. WESTWARD HO!

Natural History.

THE OLD-WORLD SPARROW.—1853.

BY WILLIAM C. BRYANT.

WE hear the note of the sparrow bird,
That wailed and sang in our land has been heard;
A winged settler has taken his place
With Tentons and men of the Celtic race.
He has followed their path to our homelands—
The Old-World sparrow at last is here.

He meets not here, as beyond the main,
The Towhee's snare and the partridge's grain;
But snug-built houses on the friendly tree;
And grubs for his chirping family
Are strewn when the winter fields are drear;
For the Old-World sparrow is welcome here.

The insect legions that sting our fruit,
And strip the leaves from the growing shoot,—
A swarming, skulking, ravenous trait;
Which Harris and Fitch so well describe,
But cannot destroy,—may gain with fear;
For the Old-World sparrow, their foe, is here.

The apricot, in the summer ray,
May ripen now on the loaded spray;
And the nectarine on the garden-walk.
Keep firm its hold on the parent stalk;
For the Old-World sparrow, their friend, is here.

The pest of gardens—the little Turk
Who signs with the crescent his wicked work,
And causes the half-grown fruit to fall—
Shall be seized and swallowed, in spite of all
His sly devices of cunning and guile;
For the Old-World sparrow, his foe, is here.

And the army-worm and the Hessian fly
And the dreaded canker-worm shall die;
And the thrip and slug and fruit-moth seek
In vain to escape that busy beak;
And fairer harvests shall crown the year;
For the Old-World sparrow at last is here.

THE OLD WORLD NUISANCE.—1851.

AFTER BRYANT.—TWENTY YEARS AFTER.

WE have listened long to this stranger's note,
And watched it spreading to places remote,
Till the turbulent vagabond has taken the place
Of our valuable song-larks, and driven the race
From our cities and towns by eating the food
Provided by Nature for nobler brood.

He has come to our shores with the murderous gang
Of Nihilists, who emigrated sooner than hang;
Paupers and regicides, red in the hand,
While Europe continually sends to our land
Vagabonds feathered, clothed, white and black,
Good Dame Europa please beckon them back.

The insect army keeps stinging our fruit,
We have still to fight them and the sparrows to boot;
The quarrelsome, noisy, too sociable thugs,
They eat up our fruit and never touch bugs.
A glance at their bill shows ever so plain
That their food is not insects but fruits and good grain.

The poet may sing in the sparrow's praise,
But our great ornithologist, Dr. Coues, says,
In language of truth and in very plain prose,
That the sparrow's a nuisance, and the sooner he goes
The better we're off, so to me it's quite clear
That the Old World sparrow is not needed here.

He defies our porches, there's no denying that;
He has ruined my wife's dress and spoiled my best hat.
He hangs round the bird cage to plifer the seed,
And gives the canary a foul insect bread.
He never eats worms, let us tell it abroad,
This Old World sparrow is a terrible fraud.

American freedom has been much abused;
A home for the homeless never ever refused,
And the poor honest man can here cease his lot,
Bring his wife and his children to build him a cot;
But our long suffering people some morning will see,
Communists and sparrows thrown into the sea.

FRED MATHER.

Bryant's poem on the English sparrow was written at the time of the introduction of that bird into this city by the Reiche Bros., a firm of bird dealers. A number of the sparrows were purchased by Mr. W. H. Schieffelin and liberated in the garden of his Madison avenue residence. It was after spending an evening with Mr. Schieffelin that the poet wrote the verses printed above. Of this importation Mr. Cambridge, Mass., correspondent says: "I know as much about the English sparrow as the majority of folks, and I

have no hesitation in saying that they will not eat insects if they can get grain, much less a hairy caterpillar. They are essentially seed-eating birds, although they prefer the mackerel oats in fresh horse manure to anything else. They will give the choicest bird seed the go-by and go for the manure.

"The introduction of the sparrow was a money making speculation, because those who introduced them were in a position to understand all about them, and could not be excused on grounds of ignorance.

"If any one had asked the person that brought them to your city if a mocking bird or a robin or thrush could live on caterpillar seed he would very likely have considered the inquiry a fool or grossly ignorant as regards the food of birds. To me it seems equally absurd to import a seed-eating, hard-billed bird and expect that when it came to a new country it would change its habits and turn insectivorous.

"In conclusion I venture the opinion that the little Turk (Hessian fly, slug, grub and canker-worm mentioned in the poem has nothing to fear from the English sparrow."

The bird is rapidly making his way over the continent. In some parts of Virginia, as we have already noted, the campaign against him is assuming a serious character. A writer in the *Charlottesville, Va. Chronicle* treats his mind after this manner: "If there is one single redeeming quality possessed by these unmitigated nuisances, the English sparrows, we do not know what it is. No one ever saw one of them destroy an insect. They are neither insectivorous nor carnivorous—strict vegetarians—and about as disagreeable every way as some of the human species that we have known who affect vegetables. They increase very rapidly. One pair of birds may be counted on as certain, if undisturbed, to produce three broods or twelve birds, each. And their reproduction is as sure as fate. Break them up to-day and to-morrow they will have built in the identical spot. The writer of this broke up a nest at 8 o'clock in the morning, destroying nest and eggs; at 2 o'clock of the same day the pair had rebuilt the nest and one egg occupied it. It was again broken up, and the place visited early next morning, and the result was precisely as before. A determination to get rid of them, which was quite as strong as their determination to stay, finally gave them aid and they went elsewhere. But they were not conquered—only repulsed. And although every effort short of shooting and poisoning has been adopted to drive them away they yet remain with their incessant, insufferable, arrogant chatter—a perfect curse. It is said you cannot trap them. One gentleman tried repeatedly and in many ways and failed."

DO GARTER SNAKES EAT FISH?

WELL, if you will allow me a point and consider crayfish in the category, I can answer yes. While on the Upper Allegheny, not long since, I stepped out upon a log which projected into the river and began washing my hands in the water. Suddenly I perceived a quick movement in the river just beneath my hands, which was followed by the appearance of a large, healthy crayfish, which seemed to rise out of the water in a strange way, which I could not understand, but in a moment more the mystery was solved by the head of a snake popping up and showing that it had just caught the crayfish by the tail.

I kept perfectly quiet, while the snake watched me for a minute or two and then, concluding that I looked too good natured to hurt it, it commenced on its meal. It was a garter snake about six or seven inches long and slender for its length. I could not see what it could possibly want with a crayfish, for I did not suppose it was insane enough to imagine that it could swallow such a hard-shelled and clawed creature as that right at it as though it understood its business. Swaying its head (which remained on a level with the surface of the water) from side to side, it worked its jaws as though with a sucking motion, rubbed its throat occasionally upon a little stone in the water and the tail and part of the body of the crayfish was soon comfortably past the Rubicon.

But now came the tug of war, for here was the head and shoulders and huge large claws which were sure to be disposed off. The snake seemed to realize that it had need of all its powers in order to complete his enterprise. It paused for a rest and a breathing spell, and I could readily imagine that it was spitting on its hands for the finish. Then it commenced again, and such a swelling and swaying and contorting would have made a circus clown sick with envy. And all this time the poor crayfish didn't offer a single objection. It simply looked out into space with a vacant stare and didn't seem to have the least interest in the proceeding. I had doubtless been crossed in love at some no distant period and considered the world a hollow mockery, from which it was a blessing to be freed.

Gradually its shoulders were drawn into the cavity, then its head sunk slowly out of sight and the last thing we saw of that luckless crayfish was one of its huge sharp claws illustrating a dissolving view as it was drawn into its living grave. Then that snake's jaws closed like a rat trap; it worked its body, pushing its victim down further—just as you have seen a boy work his throat when choking on an overdose of dried apples—and it licked its lips with its tongue a few times, winked its eye at me as though to say, "There, you can't do that, old man," and then wriggled away under the log to digest its well-earned meal.

COLUMBUS, O.

"THE WAY OF A SEIPENT ON A ROCK."

THE movement of a snake in climbing a perpendicular surface, as I have observed it, is a vermicular, undulating motion, not spiral, but straight up the face of the surface. I have seen a black snake thus glide up a beech tree with a grace and ease, and with a freedom of horizontal surfaces, that of that snake when moving over horizontal surfaces. The bark of the tree, with its irregularities and few inequalities into which the edges of the gastrostegial bands could be thrust claw-fashion, and I have no doubt that atmospheric pressure is the force that holds the snake against such surfaces in climbing, sucker fashion, as the boy lifts the brick with the piece of wet leather. I once knew a black snake to ascend a stucco wall to the second story window, and another I saw go to the eaves of a carriage-house to the swallows' nest; straight up the up and down boards. I have seen them get up the tree to the top and leap down from the top of a large tree, but never saw one descend by climbing down of smooth, perpendicular surface. I have no doubt of their ability to do so, however. I do not believe that this power is enjoyed by the copperhead or rattlesnake, or any venomous sort with which I am familiar, they being heavy and sluggish in their movements.

I have seen them go up on leaning trees and crawl into the foliage of bushes, however. M. G. E.
Washington, D. C.

It is well known to residents of vicinities where black snakes abound that they do climb trees, and that they climb large trees perpendicularly by clinging to the bark; in fact they can even climb the smooth, leafless trunk of a tree, rapidly and readily in almost a straight line upward. As for descending, I once saw a large black snake attached to the bark of a huge oak, perpendicularly and in almost a straight line, and looking there motionless, head upward, and on throwing a stone at its snakeship it took the shortest possible mode of descent by letting go all holds and dropping in a heap a the base of the tree, from whence it glided rapidly away.

Columbus, Ohio. ORANGE FRAZER.

A short time ago I walked into a stable, and leaning against a post which supported a girder overhead, I proceeded calmly to consider the "points" of a horse haltered in an adjacent stall. A slight sound caused me to glance up, and when I beheld a large blacksnake, which instantly glided with great rapidity down the post, thence over my shoulder and down my back to the ground, and disappeared through a crevice in the wall. I make no professions of bravery or cowardice, but I freely confess I was nearly dissolved with terror. Had I been duly informed of the snake's presence, and that it would adopt this novel and unexpected method of descent the effect might have been different.—M. Northside, Va.

THE MOCKING BIRD'S TRIUMPH.

SPEAKING of singing reminds me that before the summer has left us I wish to lift up my voice in behalf of the mocking bird. No bird on earth ever had a more unfortunate name, and no genus was ever more misunderstood than this artist of the woodland. He is not a mocking bird at all. He takes no lessons from any creature under the blue vault. He imitates no sound in nature, and never mimics anything. This is a broad statement, and these are strong words. Now for the proof: Having watched these feathered singers for many years and in many longitudes, both in captivity and in their own wildwood haunts, I suspected that the versatility of the bird was not appreciated, and that his talent and genius were not fully known. We took a young mocking bird out of his nest before he had feathers sufficient to cover his body, and placed him in a cage, and, to the exception of a chirp from his parent, which he interpreted to be a signal for opening his mouth, which he always obeyed to the extent of almost turning himself inside out for fear he should miss a moral. It was late in the season, and it should be noted that the martins had gone away, and few birds sing after July in the latitude of St. Louis. We shut the bird up in the dining room, and he neither saw nor heard a chirp or song from any of that innumerable company which he so much loved to "imitate" the next year. It was in September that we shut him up. During the latter part of the following February he one day perched himself on a wire and, twisting his head in a very thoughtful way tried to "imitate" the liquid note of martins in springtime. It was a miserable failure of course. We laughed at him, and he hopped down; but soon tried it again. After three days of steady practice he succeeded; then he undertook the cry of the jay bird, and after many patient attempts and numerous failures he succeeded. After that he began on the very difficult and otherwise imitable "chirp-a-woo" of the blue bird. In two days he mastered it, but he had never seen or heard a blue bird, and this rare genius evolved from his inner life the marvelous power that he had inherited. What has usually been set down as the "mocking" of this bird is only the exercise by way of suggestion of the talent he possesses, but a first-class singer of this species invariably excels that which he is popularly supposed to be imitating, and other birds recognize and acquiesce in this without any exception.

It is a well-known fact that the brown thrush, the cardinal bird and some others are also "mocking birds" in a limited way. One day I stole quietly under a tree to listen to the varied and exquisite rendering of a difficult piece of bird-music, classic indeed, by a red-bird. Conscious of his success he paused and struck attitudes as though admiring himself in a mirror, and as he poured out his song other birds thereabout were hushed into silence. All at once a regular "mocking bird" took a position on a tree near by, and in a very ill-mannered but eminently successful way struck the bird on the first effort exactly where the red-bird was doing his very best, but the song of the "mocker" was so much sweeter than his own that the red-bird merely glanced in the direction of the great star performer and closed his beak in an instant. Aware of his triumph, and unafraid of interruption, the wonderful mocking-bird ran over all the notes easily and then towering in his matchless song, charged over the great field of music, known only to himself, weaving into harmony and melting into symmetry all the bird-notes ever heard or imagined. He had a great audience that day and knew himself equal to their highest expectations. The red-bird merely hopped to a lower branch and with mute reverence listened. An old fussy, cawing crow stopped and was silent. The little wren spoke never a word to each other, while the doves forgot to whisper love; and a squirrel, poking his head half-way out of a knot-hole far up in a great oak, rested his chin on his hands and closing his eyes enjoyed it in a most unmeditative way. Not one of the audience moved or shifted an open glass, or commented on the dress of the singer. Criticism was disarmed and we were all together caught up into the third heaven.—ROBERT WEST in the Advocate.

AN IOWA MASTODON'S REMAINS.—The bones of what is known as a belemnite were found on the farm of Jerry Hopping, in Washington County, Iowa, a few days ago. Mr. Hopping's boys were bathing in a small creek on their father's farm, when they rasped their knees over something they supposed was the ragged edge of an old stump. They threw the chunk out upon the bank, and, upon striking it a few blows with a hatchet, found it was bone and not wood. It was said to be the shoulder blade of a belemnite. The piece was six inches long and the joint was four inches wide by six inches thick. When Jerry detected its true character he began explorations. He got out several ribs 5 to 6 feet long, 32 inches wide and 14 inches thick; two molar teeth, the largest weighing 263 pounds, 184 inches long on the grinding surface, 44 inches wide and 94 inches deep, with portions of the socket or jaw attached; several pieces of vertebrae in the neck 17 inches long, 9 wide and 4 thick; an axis joint, 94 by 74 inches; parts of the horn or tusk 8 to 10 inches in

diameter and 6 feet 2 inches long, and very brittle, the inner substance crumbling like horn. The lower part under ground was smooth as a cow's horn, and tapered in the same way. It was broken off and was 23 inches around at the base. He has the thigh bone, 3 feet long and 18 inches thick. From the order in which the bones were found Hopping says the animal must have nired down and died with head up stream. He has traced the relics for a distance of fifteen to twenty feet, apparently lying as they fell apart, the horn being under a spur of a bank ten feet high, which he shaved down. The neck bones were under the roots of an elm of good size that was undermined by the late freshets; the shoulder blade was in water about 2½ feet deep.—*Dubuque (Iowa) Times.*

HABITS OF THE HERMIT CRAB.—Glen Island, Aug. 11.—Imagine my surprise this morning on finding a lot of small periwinkle shells occupied by young lobsters! I have often wondered how the young lobster protected itself from the festive bass and blackfish, but my discovery certainly explains the problem. The little lobster first eats the periwinkle and then steals his shell, occupying it for his own protection. Pull one of them out of the shell and place both back into the water and you will see him back into the shell again. Now, I wish to ask you if my observations are correct, and if so, it is generally known that the young lobster appropriates small shells for a home until his own shell is hard enough to protect it from being food for larger fish?

T. J. M.

You have mistaken the hermit crab, sometimes called soldier crab, for the young lobster. The hermit crab never has a shell on its abdomen, and all through life protects it in the manner you mention. There are several species of them, some growing larger than our American species. They do not always eat the inhabitant of the shells, if they ever do, but as they grow they find a larger empty shell and exchange. There is a land species found in Bermuda.

DO CROWS EAT FISH?—Paddling down the stream one day I saw a crow hopping along in the stream at the river's edge, and looking curiously into the water as though it had lost something. Surprised at the strange actions of the bird, I drew my canoe to one side and patiently observed the menagerie. The bird hopped along for perhaps two minutes, looking sharply into the shallow water the while, and then suddenly splashed in and quickly emerged with a good-sized minnow in its beak, which it swallowed with evident relish and then began to look for more. I watched it until it caught and swallowed two fish, when it flew away. A few days afterward I saw another crow perform the same operation of catching a minnow and swallowing it. The only parts of the bird which entered the water were the legs and head. And now, if any one asks you "Do crows eat fish?" answer yes.—ORANGE FRAZER.

Columbus, O.

WHO CAN ANSWER THIS?—South Keene, N. H., June 14.—As I was fishing with a party in Kobb's Reservoir a short time ago I saw what seemed to me to be a young duck on the water some three rods from the shore and twenty-five rods from land. Some of the boys proposed that we give chase and, after some puffing and blowing, we captured the duck, which turned out to be a white mouse. After he had been interviewed he was released, and running out on the top of one of the oars he dove into the water like a school boy and swam away perfectly at home. Now, I have hunted and fished in the wilds of Maine, New Hampshire and Vermont and never seen anything like it before. Will some one tell me what species of the mouse tribe it belonged to, and oblige

MART.

Game Bag and Gun.

AN ARKANSAS TURKEY HUNT.

THE communications that appear from time to time in the columns of FOREST AND STREAM on the subject of turkey hunting remind me of the hours that I have spent in the pursuit of that kind of game birds. In the month of February, 1880, B. and I organized a night attack upon the turkeys that we had been told roosted in great numbers in the timber that grows in the overflow and swamps of Cache River.

Cache is a very sluggish stream in many places, having no channel, its waters creep slowly through thick brakes of cypress timber. In the summer during the dry season one can almost step across it, while during the overflow in the winter or spring it spreads out in places to the width of a mile. It rises in Missouri and flows southward into the White River near Clarendon, Ark., passing in its course through the eastern portion of this country.

It is a fact known to hunters that wild turkeys that live in a low swampy country nearly always roost in the cypress or other timber that grows in the sloughs and along the edges of shallow lakes or sluggish streams. They seem to love to roost over water. In mountainous or hilly countries it is said that they generally roost in the timber on the sides of the steepest hills. Safety is perhaps the ruling motive in both cases.

A full moon was necessary for the success of our hunt, but, after watching it impatiently for several nights, we decided that it would do, and started with but little more than a half moon. We rode that afternoon to the house of a settler who lived on the west bank of the river. The settler's dwelling-house consisted of a one-room log cabin. As we rode up we noticed a number of coonskins stretched on sticks hanging from the walls of the house, telling that the settler was waging vigorous war against the "varnents" that surrounded him. The settler and the hired man expressed a desire "to see them britch-lorders shoot," and, as it lacked an hour to sundown, we took a walk around the cornfield, bagging several squirrels on the ground. When we returned we found that the settler's wife had supper ready. That being soon dispensed with we hastily inspected our shell sacks to see that our "turkey" shells were in proper order. We had loaded them with five drams of Dupont's No. 1 ducking powder and one and one-fourth ounces of BB shot. The settler and hired man had fired off their muzzle-loaders, and were now busy reloading for the turkeys. I noticed the hired man pour about a handful of fine rifle powder down each barrel of his gun, and, after ramming down upon it heavy wads of newspaper, he put in about the same

quantity of OO shot. Everything being ready B. and I stepped out into

"The evening air,
Clad in the beauty of a thousand stars."

We noticed, too, that the moon was promptly on hand to fulfill her part of the programme. We were soon tramping along up the edge of the overflow. The settler and hired man were to follow us in the dug-out. We had gone perhaps a mile and a half up the river when we halted for a moment. So far we had not seen or heard a turkey. Though neither of us spoke a doubting word, and both expressed the opinion that the turkeys had only roosted further up the stream than they usually did and that we would be certain to find them there yet, I knew intuitively that our thoughts were the same, and that we were both beginning to doubt some of those turkey stories that had induced us to take this hunt. Moving on again, we had not gone twenty steps, when suddenly we heard the well-known, sharply-uttered "quit! quit! quit!" from the tree-tops overhead. Then came the heavy flapping of wings and shaking of branches, as the frightened turkeys flew from one tree to another.

"Just listen!" said I.

"My goodness, there must be a hundred of them, from the fuss they make!" said B.

With finger upon the trigger, we peered intently into the tree tops, endeavoring to distinguish a turkey from the immense number of knots and crooked limbs of every conceivable shape.

"I wish," said B., "that the moon was just a little fuller."
"I would be better, but I think we shall get them yet," said I.

B. did not respond, but I saw him suddenly bring his gun to his shoulder—a blinding flash shot up into the air, followed by a crash and a roar that echoed and resounded far away up the river and through the forest. My heart gave a thump, and I listened to hear the turkey fall, but no turkey came, only a quantity of leaves and twigs pattered on the ground.

"Did you kill him?"

"Kiss first, then I'll be switched if I don't shoot at a squirrel's nest! It looked exactly like a turkey."

We concluded, as most of the turkeys seemed to be over the water, to wait for the dug-out, and when it came one of us would go after the turkeys in the timber over the water, while the other remained on the bank to shoot any turkey that might fly in that direction. The settler and his hired man soon came up in the dug-out, picking their way carefully through the timber in the overflow.

The dug-out was just large enough to carry two men. Being long and narrow and running under the bottom, it threatened with the least motion to turn over. Persons skilled in the use of these dug-outs suffer no fear of turning them over. Standing erect in the stern of the dug-out and using a long paddle, with a regular, sweeping stroke, they send them over the water at a fearful speed. Neither the settler nor the hired man was a skillful canoeist, neither having lived long on the river. As for B. and I, we could hardly sit in a dug-out without turning it over. It was decided that the hired man and I should have the privilege of going out on the water, while the settler sat in the bow with my gun in hand, while the hired man sat in the stern holding the paddle.

As we moved out into the overflow the "quit! quit! quit!" and the flapping of wings was heard on all sides, but I could not see a turkey. Still moving onward, we heard what seemed to be the cracking of a dead limb, then a splash as of something heavy dropping into the water. Steering in that direction we soon came upon an old gobbler quietly floating on the water, seeming to be utterly assounded at the unexpected situation in which he found himself. As he saw us approaching he struck off to swim at quite a lively rate. We easily overhauled him. I was in favor of taking him alive, and so proposed, but the only answer I received from the hired man was: "Shoot! shoot! shoot! he'll fly! he'll fly! he'll fly!"

Such lugs as that hired man had! For fear of being deafened I leveled my gun and fired. I tried to shoot the turkey in the head, but found afterward that the charge had struck him full in the body. I knew then that so far as I was concerned shooting the moonlight gobbler was over.

He proved to be an unusually fine bird. He was so heavy that we had to be very careful in lifting him into the dug-out to prevent capsizing. We were now in high glee, and pushing out nearer to the channel of the river where the timber was not so heavy, we obtained several shots at turkeys sitting in the tops of the straggling cypress trees that grew in the river. But I did not bag another turkey. I think I missed them, but the hired man assured me that he heard several fall into the water after being shot. We did not stop there, and I am of opinion that the hired man good-naturedly told us to prevent me from being chagrined by the repeated misses.

When I brought the gun to my shoulder I could not not see the end of the barrel, and could not tell whether I held on the turkey or not. I several times requested the hired man to pull round till he placed the turkey in a line between me and the moon, telling him I could then easily hold on them. But the hired man was excitable, and though when not in sight of a turkey he would promise to obey the request, yet so soon as he came in sight of a turkey you could get nothing out of him but "Shoot! shoot! shoot! he'll fly! he'll fly! he'll fly!"

Whenever he opened up fully I threw up my gun and fired, more to stop the hired man's mouth than with any hope of harming the turkey. I soon grew weary of that hired man's voice, and suggested to him that we pull to the shore and allow the others to use the dug-out awhile. Turning the bow of our boat shoreward we soon came in sight of the fire that B. and the settler had kindled as a beacon to guide us on our return. We landed, I lifted the gobbler from the dug-out and bung him by his spurs from the limb of a sapling. There were various guesses as to his weight, but none below twenty-five pounds. On our return to the house we found that he weighed only twenty-one pounds. (Mem.—When you kill a gobbler of twenty-five or thirty pounds do not weigh him; they generally resent such a proceeding by falling off from five to ten pounds.)

The sight of that gobbler put B. in a fever to get in the boat and go out on the water after them. So far in the hunt he had bagged a bird. He and the settler soon faded like shadows into the night, while the receding splash of the paddle told that they were moving far out into the overflow. While they were out on the water I determined to try a little hunt of my own on land. Striking off into the forest I endeavored to find a sleeping turkey by looking into the tree tops upon which the moon, which was now in the west, shone. I soon found that this was tedious work. Every crooked limb, knot, bunch of leaves, squirrel's nest assumed the shape of a turkey, and by playing on the eye and object between myself and the moon could I discover the cheat.

ASIATIC BIRDS FOR AMERICA.

Editor Forest and Stream:

I sincerely hope Gen. Denny's project will be taken up in earnest and a large number of those foreign birds imported; but I suggest that they be turned out, several pairs together, in some dense jungle far South as the Carolinas, where they can breed unmolested by sportsmen and be safe from snow and cold. But it must be considered whether they are birds that live in cultivated, grain-raising districts in their native country. If they are they may not be able to find a living in uncultivated places.

I believe the lack of thought in that was the cause of the failure to establish the grouse family on the Hempsford Plains of Long Island. I also think a great mistake was made when the great body of the Messina quail were turned out. Instant leads them, on the approach of cold weather, to take a direct line South. Now, if most of those imported were turned out in the Eastern States they threw away their time and money in importing them. They should have been taken to Kentucky or Tennessee; then, if they choose to migrate at all—which I doubt—they did not necessarily drop into the sea. The mandarin duck is far more beautiful than even our wood duck, but as a game bird it would be of little consequence, as it is not heavier than a quail. Gov. Lyon succeeded in hatching some at Rossville, Staten Island, but they were devoured by rats.

As to the woodcock, it would be glorious sport to shoot those princely fellows; but, even if they could be brought over, it would be utterly folly to turn them out anywhere but in some such place as the Dismal Swamp, where they could find a safe place in the world where they were being exterminated.

And while on the subject, let me suggest that it would not be a bad idea to ship a few jack rabbits from the West and let them out in some safe place. He is a noble fellow for the chase, but has a bad reputation for the table, which I believe to be entirely the fault of the villainous stuff on which he is compelled to feed.

The sage hen (a large and splendid grouse) has the same fault, as everything must have that has nothing to live on but that concentration of nastiness, the "sage brush."

I see no reason why this jack, if well fed, should not be a hare.

DENNIS.

GAME IN DUTCHES COUNTY.

WE have taken occasion before this to note the business-like and sensible way in which the sportsmen of Dutchess county, New York, have gone about the protection of game. As we so frequently have inquiries as to how a game protective society should be organized, we give herewith the form of a circular sent out by the gentlemen of that county, and suggest that it may serve as a good form for others to copy. Mr. P. B. Ackert, one of the signers of the address, writes us that it is hoped to secure a county law prohibiting the marketing of game, thus striking at the root of one incentive to the illegal killing of the same. The following address has been sent to the farmers and sportsmen.

MESSENGERS.—The frequent violations of our game laws by unprincipled persons who kill and take game and fish out of season, make it necessary that some one should see to it that the laws are enforced and those who violate them dealt with as they deserve.

Game and fish are becoming so scarce, that in order that they may not be entirely exterminated, a law shortening the season in which they may be taken, and in this way protecting them in part, is a necessity.

To that end laws have been passed throughout the country; yet they are a dead letter unless enforced.

Fair and honest men do not violate them; but there is a large class who consistently do, partly through greed and partly for profit, and gain an unfair advantage over those who wait until they have a legal right to hunt or fish.

Farmers and their sons and other persons who hunt and fish occasionally for the sport and pleasure they afford, as a rule, observe the laws and desire their enforcement.

The State is annually expending money for the replenishing of our depleted streams and lakes for a general benefit. It has also been found necessary to appoint State officers to enforce the game laws.

Local cooperation with them is essential in order that their work may be thorough. To that end nearly every county in the State has one or more associations. The county of Dutchess is no exception in need of it as any.

Trespassers are committed regardless of posted notices, which are frequently torn down with impunity.

If our game laws are not enforced, it would be better if they were repealed; then all would have an equal chance at killing out the little game there is left.

Some of the undersigned, after talking with many of our best citizens and leading farmers in different parts of the county, have adopted this course to secure at an early day a representation to meet at a time and place to be designated, for the purpose of perfecting such an organization and adopting by-laws for its government.

Please circulate the inclosed petition in your town, and secure the names of as many men as possible upon whom we can rely, as your local club, and arrange among yourselves to send two or three number to meet with us when notified, to adopt a constitution and by-laws.

The expense will be trifling in carrying out the purposes of the society. To assure and meet the expense of printing and postage, the sum of one dollar is named in the petition, to be collected by you and paid in the hands of the Treasurer of the County Association within ten days after the adoption of the by-laws and appointment of the officers of the society. *Do not delay in this matter*, and return the petition with the names of your subscribers to P. B. Ackert, Peter B. Hay, Guilford Dudley or E. B. Osborne, Poughkeepsie City, N. Y., within ten days, when notice will be given of the time and place of our first meeting.

Each one signing the petition and paying one dollar shall be a constituted member of the Association. Whether at our annual or stated meeting every member of the Association will vote or by representation, will have to be determined after the organization.

A manifest disregard, by prosecuting to the extent of the law the violators, will have a salutary effect.

This matter has been talked of for several years, yet nothing has been done. Let us make this attempt effectual.

The fact that it is the duty of the District Attorney to prosecute violations of the law and that the county gets the benefit of the penalties collected to a large extent, should greatly commend this purpose.

Although the game laws are not as all of us would like to have them, and although we are not as we have and hope that through our united efforts they may be amended in the future more to our wishes.

FOREST AND STREAM GAME TABLE.

OPEN SEASONS.

The seasons, in which it is lawful to shoot game in the several States and Territories, open as designated in the following table.

States.	Deer.	Woodcock.	Quail.	Ruffed Grouse.	Privatized Grouse (Chick-on).	Wild. Fowl.	Wild Turkey.
Ala.	Oct. 20.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Oct. 1.	Oct. 20.
Cal.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Conn.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Del.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
D. C.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Fla.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Ga.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Idaho.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Ill.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Ind.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Iowa.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Kan.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Ky.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
La.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Mass.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Mich.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Minn.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Miss.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Mo.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Neb.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Nev.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
N. H.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
N. J.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
N. C.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
N. Mex.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
N. Y.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Or.	Sept. 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.

O. Moose.—Ala. Aug. 1; Cal. Sept. 1; Conn. Sept. 1; Kan. Aug. 1; N. Mex. Sept. 1; Utah, Aug. 1; Wyo. Aug. 15.
Plover.—D. C. Sept. 1; Me. Aug. 1; Mo. Aug. 1; Nev. Sept. 1; N. H. Sept. 1; Pa. Sept. 1; S. C. Sept. 1; W. Va. Sept. 1; Wis. Sept. 1; Wyo. Aug. 15.
Rail.—Del. Sept. 1; N. J. Sept. 1; Pa. Sept. 1.
Redbird.—Del. Sept. 1; D. C. Sept. 1; N. J. Aug. 25; Pa. Sept. 1.
Snipe.—Del. Sept. 1; D. C. Sept. 1; Nev. Sept. 1; N. C. Oct. 15.

* In these States there are special county laws. A. The deer law applies to sale or possession. B. Wildfowl not protected on the coast. C. In Upper Peninsula deer season opens Aug. 15. D. California quail protected to 1882. E. In Coos County deer season opens Aug. 1; moose and cariboo, Sept. 1. F. First open woodcock season began July 1; woodcock Aug. 1. G. Quail shooting prohibited. H. In 1882, in counties of Montgomery, Schenectady, Saratoga and Albany. Wildfowl season in Long Island waters opens Oct. 1. Woodcock shooting in Long Island prohibited during August. A. Deer law relates to female deer only.

THE INU-O-MONO.

THE Empress and Empress of Japan have just paid a visit to Mr. Shimadzu Tadayoshi, the head of the great southern clan of Satsuma, who received them with a display of princely hospitality unparalleled since the Restoration. The sum of \$100,000 was set apart for the Inu-o-mono and No-dances, and yet there was a balance on the wrong side after all. Everything prepared for the imperial household was innocent of previous service, and so far as was possible the furniture, apparatus and accessories were all new. What was old, however, was all the more valuable for its age. The great display of the imperial visitors were covered with brocades three centuries old.

The Inu-o-mono is "the game of shooting at dogs." All the most skillful archers of Kagoshima, it is learned from the *Japan Weekly Mail*, were summoned northward, and this meant a good deal, for the Inu-o-mono has long been a favorite pastime in the Island of the Nine Provinces; nay, indeed, has generally been regarded as a specialty of the Satsuma men. Two hundred dogs were provided for the performance, and from them were selected the fittest. Some thirty made their appearance in the arena, and "but," says the *Mail*, "they were dogs, not curs like those that lay down on the sand and refused to be prodded or goaded into motion at the exhibition got up for General Grant's delectation." The Satsuma knights hunted in parties of eight. They were all provided with lacquered bows, except their chief, Shimadzu, whose bow was of milk-white wood with a golden string; the arrows were blunt. The horses were splendidly caparisoned—embroidered saddle-cloths, inlaid stirrups, saddles adorned with gold-lace, and the stables decked with gay tassels, while the riders wore bright silk doublets and trousers of deer or tiger skin. Over the whole arena was sifted fine, dark sand, that covering a small, slightly raised circular space in the centre being, however, white. To this central spot the dogs were led, one by one, and so soon as they bounded were cut they bounded off as though they quite enjoyed the sport, though they were "perpetually pepp-red." This went on from about 7 A. M. till noon, when a tiffin on the same scale as everything else was provided, and after lunch there was again a display of great interest.

Concerning this same Inu-o-mono there is a funny story told. The *Mail* gives one version, as follows: "Shortly before the hunt the Secretary of the English Legation despatched a messenger from his home, in Shiba, with a letter for Mr. Shimadzu Tadayoshi. The messenger was followed by his master's favorite dog, which he tied up outside the Yashiki before seeking admittance. When he came out, a few minutes afterwards, the dog had disappeared and all inquiries failed for his whereabouts." "But," says the *Mail*, "he was not dead, however, the pup again made his appearance, but alas! his tail was gone and all his ancient sagacity had been concentrated into the accomplishment of scudding about before mounted archers. In fact, so thoroughly had he assimilated his instructions that whenever he was not tied or held he would bound frantically off and perform a most animated Inu-o-mono on his own account. For a time after being restored to his master he seemed to recover the use of his faculties under the influence of regular diet and affectionate

treatment, but an unluckily heavy shower of rain upset his mental equilibrium again. He mistook the dross for the blunts arrows of his tormentors and ran himself into a temporary hydrophobia. His master, of course—as is customary with foreigners, whether treaties be violated or dogs' tails docked—demanded compensation and, failing to find a reciprocity of sentiment on the Satsuma side, instituted an action at law, laying the damages at \$550."

AN UNUSUAL PERIL OF THE CHASE is hinted at by the Oswego Times, which tells a story of the Hon. Sidney T. Holmes, well-known to many readers of the FOREST AND STREAM. Our contemporary says: "The Hon. Sidney T. Holmes, formerly of Madison County, represented this district in Congress for the term including the years 1865 and 1866. Judge Holmes, after the expiration of his Congressional term, became the business partner of the Hon. Roscoe Conkling in Ulster. A few years ago he located West, though in what State has escaped our recollection. Among his peculiarities was his fondness for hunting; and for this purpose he kept a fine pack of hounds, which, as occasion presented, he followed in the chase. Some weeks since his dogs, for some cause, engaged in a furious fight among themselves. The Judge, hearing the noise, went among them to stop the fighting, when they turned upon him and lacerated him so terribly that it was expected he could never recover from his wounds. While the bruises were tearing him with their mad and apparently blind fury they seemed suddenly to discern what they were rending, and they commenced to lick his wounds, running around and jumping at and over him, whine piteously, and manifesting all the affection for him that it was possible for dumb animals to do. The Judge, after his rescue in the terrible condition in which he was left, refused to have any punishment whatever administered to the dogs, maintaining that they were in no sense blameworthy."

NORTH CAROLINA GAME.—Monroe, N. C.—The extremely dry spell from June 1st till the present, has caused the largest yield of quail ever known in this section. The fields are literally alive with the young droves; all the eggs have all hatched and not one has been drowned as is usually the case. The close season expires Oct. 1st, and the few that are looking forward to a gala day on that date. In my experience I have located fourteen young coveys, most of them two-thirds grown. My pointer, one and a half years old, seems eager for the fray; he was bought for me by Mr. John Davidson, is thoroughly broken and his equal I have never seen. I shall send FOREST AND STREAM in a few weeks a larger picture, 24x30, of my two dogs on a "point" as I have engaged an artist to go with me and take them and the scenery naturally, as they stand with a covey of quail at "bay." This will be a natural scene of our Southern quail hunting, two pointers, one back pointing the other, the quail, a few yards in the stubble, among the grass, and perhaps a creek with natural growth showing in the distance. I have great pride set upon this picture and I will send one to you.

H. S.

MAINE SPORTSMEN.—Portland.—The Maine Sportsmen's Association are to hold their third annual meeting and first tournament early in September. From 150 to 200 of our representative sportsmen are expected to be present. Although the programme has not yet been arranged, and public notice has not been given, yet we have received donations from the American Atlas Co., Boston, of one of their new semi-hammerless guns; from the American Powder Co., Boston, one keg "Dead Shot" powder; from T. Yardley, Brown, Reading, Pa., one-half dozen of his celebrated gun cleaners, and from E. W. Moore, Augusta, a life size crayon portrait of the champion.—F.

NEW HAMPSHIRE WOODCOCK.—Nashua, Aug. 15.—Woodcock shooting has commenced with us and so far has furnished sportsmen with weary days' work and short bags of birds. There are more birds than last year, but they are not so plenty as the signs of July led us to expect. It is the opinion of a majority of old shooters that July should be the open month and August and September the close months for us in this latitude. They say that in July the old birds are strong of wing and in good condition, while the young are mature or well grown and able to take care of themselves; in August the old birds begin to moult and leave their feeding grounds for more quiet and more sheltered and harder to find. The only objection to July shooting applies equally to August—namely, the shooting of young grouse.—WENN.

"FORESTER SCHOOL OF BATHOS."—"Nuff" writes from Washington:

"About two years ago you published a capital editorial on the 'Forester School of Bathos.' You will remember it, because so greatly was it needed that they readers just got up and 'screamed' when they read it. Most of us have been postal-curved fearfully about everything, etc. Where can this article be found?"

The article was published in our issue of December 13, 1879, and if its republication will gratify any of our readers, we shall take pleasure in giving it a place. It will be printed next week.

WILD RICE IN DEEP WATER.—Harwood, Ontario.—A gentleman wrote a letter to your paper last fall saying wild rice would not grow in water deeper than one or two feet. I was passing through a rice bed here the other day which was about two miles in length and half a mile in breadth. I pulled a stalk up which I send you. I measured it, and it was nine and one-half feet in length; the water was seven and one-half feet in depth. Almost the whole rice bed was growing in that depth of water, and I could, I think, find stalks growing in ten feet of water.—CHAS. GILCHRIST.

NEW JERSEY SHORE BIRDS.—Curlews, willetts, brown backs, yellow legs and the other varieties of shore birds are making their appearance all along the Jersey coast, but the main body of them seem to be loath to tarry long until they pass the line of summer resorts, and the feeding grounds sought by them seem to be south of Atlantic City and north of Cape May, where the shores are not so much sought by summer sojourners.—Homo.

VIRGINIA GAME.—Henry Ashton, Esq., a prominent sportsman from Culpeper Co., Va., is in Philadelphia this week. He says quail in his section of the country were greatly reduced in numbers last winter. The season was remarkable for the quantity of hawks seen, and the birds that withstood the snow were killed by these winged robbers.—Homo.

THE SEVEN PONDS.

I WAS considerably interested, and like many more of your readers, no doubt, slightly amused by reading a short article entitled "Tim Pond and the Seven Ponds," in your issue of Aug. 11, in which it was said that the Seven Ponds were "stocked with trout which have enjoyed their homes unmolested since the history of trout-baiting, all now Kennedy Smith has opened a backboard pathway for sportsmen to the waters where they dwell."

It seems to me, considering that some years have elapsed since Messrs. Grant & Richardson, of the Kennebec Lake House, have erected log camps and kept boats at the Seven Ponds for the convenience of their guests who might wish to go there, that the title of pioneer to that region can hardly belong to Mr. Kennedy Smith. I should like here to give most unqualified praise to Messrs. Grant & Richardson for the uniform kindness and hospitality which their guests enjoy at their camp. No better guides can be found through the whole lake region. Their fame is unsurpassed at any point upon the lakes, and I have never known a dissatisfied guest. For parties wishing to camp out they have erected log cabins near the west end of the lake, which are supplied with stoves and the necessary cooking utensils. While it is undoubtedly true that the trout taken here average smaller in size than those of the lower lakes, it is also true that there is no other lake of the Rangeley chain where the fishing throughout the year is to be compared with that at Kennebec. It is the only lake of the chain where trout will rise freely to the fly during July.

For beauty of scenery it has no equal, being entirely surrounded by mountains, and I think nobody who wishes to spend a few pleasant days' vacation in the woods can do better than try the hospitality of the Kennebec Lake House, and from there run up to Seven Ponds two or three days, where trout of small to medium size are certainly more abundant than elsewhere. B.

LARGE BLACK BASS.

HARWOOD, Rice Lake, Ont., Aug. 11.
I SEND you to-day by express a small mouthed black bass which weighed, when caught, six pounds; it struck some in stuffing. On Thursday, the 4th of this month, Mr. Murphy, a gentleman of Toronto, and myself started out for a fish at 5 o'clock p. m. In two and a half hours we caught twenty-five small mouthed black bass; eight of them weighed forty-one and a quarter pounds. The following is the exact score:

6 bass of 5 lbs. each.....	30 lbs.
1 bass of 54 lbs.....	54 lbs.
1 bass of 51 lbs.....	51 lbs.

Total for the 8 (out of 25).....414 lbs.

Rice Lake is now full of fish, both muskungee and large and small mouthed black bass. The large mouthed bass is called "yellow," or "mud bass" here.

CHAS. GILCHRIST.

The bass came to hand nicely stuffed and mounted, and is the small mouth species, and looks to have weighed six pounds.

RHODE ISLAND HAS A LOBSTER LAW.

PROVIDENCE, Aug. 12.

PLEASE put Rhode Island right on the lobster question. We have a law, passed at the last session of our Legislature (Jan. and Feb., 1881), limiting the catch to ten and a half inches, which, in the wisdom of our law givers, was enough to begin with. It is a good beginning, and we hope to raise it an inch soon.

A lobster was taken about July 1st half way up the bay (Narragansett) that weighed twelve and a fourth pounds in a sweep seine. We sent one to the Smithsonian that measured one and a fourth inch, perfectly formed, caught off the gasnet pier. What is not known about the growth of lobsters in their early stage of development would fill a volume. Be sure the U. S. Commission will soon find it out.

NEWTON DEXTER,

Commissioner Inland Fisheries.

WORMS IN BLACK BASS.—Watsonowd, Pa., Aug. 12.—Can you enlighten me on the cause of the black bass being literally alive with worms? It is not only one in a number, but all that are taken from our beautiful river—the West Branch of the Susquehanna—and I believe if the bass are dissected soon, they will be found that all are so at this time of the year in all waters. The worms are found in great numbers along the back-bone; remove the skin and the worm will be easily found, and in nearly all will be found a small black egg. Can we hope for a disappearance of the worm after August? Can you explain the cause? If you wish I will send you a bass to dissect. I have an idea that all fish are more or less affected with this same worm at this season of the year. This has put a damper to our dreams of taking this grand game fish.—J. R. H.

The bass are often, if not always, wormy at this season. We eat them and never look for worms. The worms and the bass taste alike, the same as the worms in cherries or in cheese taste like the thing that contains them. See Answers to Correspondents.

HOW TO MAKE A CLAM BAKE.—Putnam, August 14.—First secure what clams you want, and a bushel or more of new rockweed, or seaweed so-called. Select a flat rock, then build a fire, and also heat a half bushel or more of flat stones about three pounds weight each, also one or two flat stones of the same weight. When the rock is sufficiently heated, then, having it possible with you a pair of tongs, take off the heated stones and sweep off the ashes from the rock. Now dash on some little water so the rock will not scorch the rock weed and make the clams taste smoky. Then have a clean barrel with both ends out. Set the barrel on the heated rock. Now put in six or eight inches of rockweed; then say half of your clams; then more rockweed; then the hot stones; then more rockweed; then the rest of the clams; then more rockweed. Now put the largest flat hot stone on top; then put on the rockweed until the barrel is full; then cover up the barrel as tight as possible, so that no steam can escape; bank up a little round the bottom of the barrel. In a half or three-quarters of an hour your clams are done. I generally have a piece of old sail cloth to put over the top of the barrel.—G. F. W.

A FLY CASTING MATCH IN ENGLAND.—Mr. R. F. Mureton, editor of the *Fishing Gazette*, is about to introduce this sport to them. He offers prizes and asks dealers to add to it. We will watch for its coming and hope that he may meet with the success which he deserves. It is interesting to note that his scale of 100 points differs slightly from ours. It is:

Across the wind.....	20
With the wind.....	20
Style of delivery of flies.....	30
Accuracy.....	30

The contest is to be for single and double-handed fly-casting; longest cast from the reel, "Nottingham style," and for longest cast with line coiled at the feet, "Thames style."

VERMONT BASS FISHING.—Montreal, Can., August 9, '81.—I have just returned from a ten-days' fishing tour at Bass Lake, Franklin, Vt., and at Lake Champlain, near Missisquoi Bay. Our catch was wholly black bass; the largest kicked at five pounds. Bass fishing is all there this season. Friend Casneau, of Shelton, Vt., has captured during the past month some six-pound small-mouthed bass at Bass Lake, and there are more left, even larger than those taken. These fish, on a Greenhatch rod, give lively sport.

The writer and a couple of friends dropped into the Ottawa Hotel here to-day for dinner, and the courteous manner in which we were received by the manager, Mr. John Warner, who is a devoted disciple to the rod and gun, caused us to that our lines had fallen in a pleasant spot, and that to the Ottawa is the best sportsman to patronize while in this city. No puff about this, but solemn truth.—STANSTED.

GREENWOOD LAKE TO BE RESTORED.—At a recent club meeting of the Greenwood Lake Association "Frank Forester Club," it was resolved: That the Treasurer of this Association be authorized to act as trustee for a fund of such voluntary contributions as shall be made, to wit, for the purpose of continually restocking Greenwood Lake and protecting the same; and that Elias Vidler, Samuel Garrison and John Hazen be and are hereby appointed a committee, full and discretionary power as to the use of this fund, and the Treasurer is instructed to pay the same out on vouchers approved by them.

BIG CATCH.—Mr. George Le Bar, of Bushkill, Pa., took one fishing party on Saturday, July 24, from the Buena Vista house, consisting of Mr. Samuel Kay and D. W. Robinson, of New York, who secured a total of 31 black bass, one of which weighed five and one-quarter pounds and another four pounds. This is considered remarkable for this season of the year.—J. O. R.

DELAWARE RIVER NOTES.—Philadelphia, Aug. 11.—The season during which fishing on the Delaware River with nets is less than two inches meshes is practically expired yesterday, but the fish wardens will still continue to enforce the law against fishing on Sunday.—Homo.

TROUT IN NORTH CAROLINA.—MT. AIRY, N. C.—Splendid trout fishing about twenty miles from here, and superb scenery. J. M. B.

Fishculture.

STRUCTURE AND OVARIAN INCUBATION OF THE TOP-MINNOW (*Zygocetes*).

By JOHN A. RYDER.

SINCE we have taken up our temporary residence at Cherrytree we have found this interesting genus of cyprinodonts in great abundance in fresh and brackish water streams, also in a fresh water pond in the vicinity, a few miles south of where our station is located. In the latter place the fish are collected in large numbers, all of which are in breeding condition—we will not say spawning condition, as they do not, as do most other fish, commit their ova to the care of the element in which they live, but carry them about in the ovary, where they are impregnated and where they develop in a very remarkable manner.

Of the manner of impregnation we know little or nothing, except the evidence furnished by the conformation of the external genitalia of the two sexes. In the adult male, which measures one and one-eighth of an inch in length, the anal fin is slightly modified into an intromittent organ for the conveyance of the milt into the ovary of the female; a tubular organ appears to be formed by the three foremost anal rays, but one which is greatly prolonged and united by a membrane. At the apex these rays are somewhat curved toward each other, and thus form a blunt point, but the foremost one of the three rays is armed for its whole length with ridges at its base and with sharp recurved hooks at its tip, the other two at their tips similarly with hooks, and between their tips are two small fenestra or openings which possibly communicate directly with the sperm duct from the testes. The basal elements of the fin are aggregated into a cylindrical columnar truncated bony mass, which is prolonged upward into the cavity of the air-bladder for the distance of nearly the eighth of an inch; from it a series of bony bands pass to the dorsal and posterior wall of the air-bladder to be inserted in the median line. Whether this bony column serves to steady the fin in the act of copulation, or whether it serves to give passage to the sperm duct, is an unsettled question with the writer. The modified anal fin of the male develops a third of an inch in length. Other peculiarities of the male are noticeable—for instance, as the more abbreviated air-bladder or space which also occupies a more oblique position than in the female. The most remarkable difference presented by the male as compared with the female, however, is his inconspicuous anal space, which is only 160 milligrams, while that of the gravid female is 1,030 milligrams, or nearly six and one-half times the weight of the male.

The female, as already stated, is larger than the male, and measures one inch and three-fourths in length. The liver lies for the most part on the left side. The intestine makes one turn upon itself in the fore part of the body cavity and passes back along the floor of the abdomen to the vent. The air-bladder occupies two-fifths of the abdominal cavity, and at its posterior end the intestine duct traverses it vertically, to be enlarged near its outlet into a fusiform urinary bladder of very much the same form as in many embryo fishes, as demonstrated by Professor Kupffer and myself. The ovary is a simple, impaired organ which lies somewhat to the right and extends from the anterior portion of the body cavity to the posterior, and is enlarged near its lower end when fully developed. The ova, when full grown, are each enveloped in a sac or follicle supplied with blood from a median vascular trunk which divides and subdivides as it traverses the ovary longitudinally in a manner similar to that seen in white grapes as the bunch are attached. In this way it happens that each egg or ovum has its own independent supply of blood from the general vascular system of the mother, from which the material for the growth and maturation of the egg is derived, and which afterward becomes the nutriment of the embryo. The life of the developing embryo is maintained while undergoing development in their respective follicles in the ovary or egg-bag. The

ova develop along the course of the main vessel and its branches, as may be learned upon examining a hardened specimen, where the very immature ovaria eggs are seen to be involved in a meshwork of connective fibrous tissue, which serves not only to strengthen the vessels but also afterward enters into the structure of the walls of the ovarian sac or follicle as it is called. The very immature eggs measure from less than a hundredth of an inch up to a fiftieth, and on up to a twelfth of an inch, when they may be said to be mature. They develop along a nearly median rachis or stalk which extends backward and slightly downward and which gets its blood supply very far from the dorsal artery. The ova, after developing a little way, are each included in a follicle, the Graafian follicle, ovicell, ovarian capsule, *membrana granulosa* of von Baer, or *membrana cellulosa* of Coste. As the egg is matured there is a space developed between the follicle and the ova, from the cells of the granular layer of cells covering it. This space is filled with fluid, and in this fluid, which increases in quantity as development proceeds, the embryo of *Zygocetes* or top-minnow, is constantly bathed. There is no trace whatever in the egg of this fish of an independent egg membrane, as is the case with all known forms which spawn directly into the water, and which is usually, if not in all cases, perforated by one or more micropylar openings or pores for the entrance of the spermatozoon. This fact raises the question whether the egg membrane of *Zygocetes* is not a true membrane, or a water-spawning fish is not entirely absent in all the viviparous species. Whether Rathke has recorded anything on this point in his account of the development of *Zoarces*, the viviparous blenny, I am not able to say at present, as I do not have access to his memoir. Since it is well known that with very cautious preparation, staining and dissection of the follicles inclosing the ova of *Zygocetes*, I have completely failed to discover what I could regard as an egg membrane, although personally familiar with the appearance of the follicles of many fishes of more than twenty species, embracing fifteen or more families, such as *radialis* or covering of the egg in other bony fishes is said to be secreted from the cells lining the follicles and is composed of a gelatinous substance, and it is often perforated all over by a vast number of minute fine interstices, which serve as a covering, Johannes Mueller. No such structure existing as a covering for the egg of *Zygocetes*, we are in a position to ask the question why such a unique condition of affairs should exist in this case? The answer, it would appear to us, is not far to seek. In the case of eggs which ordinarily hatch in water it is necessary that they should be supplied with a covering more or less firm and capable of protecting the contained embryo, which in the case of the top-minnow is not needed, because the embryo is developed so as to be quite competent to take care of itself as a very well developed larva when the body of it leaves the body of the mother, will not waste her powers in an effort to make useless clothes for such of her children as do not need them; on the contrary, she is constantly utilizing structures economically, and often so as to be a benefit to her offspring. This is the apparent answer to the query with which we started.

The follicles or sacs containing the ova are built up internally of flat, polygonal cells of pavement epithelium, and externally of a network of multipolar, fibrous, connective tissue cells and minute capillary blood vessels, with cellular walls, which are in all directions over the follicle from the point where the main arterial vessel joins the follicle, and which, together with its accompanying veins and investment of fibrous tissue, constitutes the stalk by which the follicle and its contained naked ovum is suspended to the main arterial trunk and vein. The capillary system runs in a larger venous trunk, which also follows the course of the main median arterial trunk back to the heart by way of the Cuvierian ducts. The very intricate mesh-work of fine vessels which covers the follicle supplies the with growing fish embryo, and also serves to carry off the carbonic dioxide in much the same way as the placenta or after-birth performs a similar duty for the young mammal developing in the uterus of its parent. There is this great difference, however, between the fish and the mammal, that in the former there is no chorion, the development of the follicle in which the eggs have grown and matured; there is no true placenta, but respiration is effected by a foliolar mesh-work of blood vessels, and the interchange of oxygen and carbonic dioxide gases takes place through the intermediation at first of the chorion, by which the embryo is surrounded in the follicle, and later when blood vessels and gills have developed in the embryo they, too, become accessories to aid in the oxygenation of its blood. In the mammal there is a uterus; the egg must leave its ovarian follicle; be conveyed over the uterine cavity before a perfectly normal development can begin; there is no developed richly vascular placenta joined to the fetus, the villi or vascular loops of which are insinuated between those developed on the maternal surface of the uterine cavity. In both fish and mammal the embryo is nourished by the blood of the mother, and in the immediate vascular connection between mother and embryo. In both the respiration of the embryo is effected by the transpiration of gases through the intermediation of membranes and fluids, oxygen being constantly supplied and carbonic dioxide carried off by means of a specialized portion of the blood system of the maternal organism.

There is still another difference which distinguishes the developing fish from the mammal which has not been noticed. The body of the young fish is a gelatinous mass, and the substance of the substance of the stalk into the various structures which make up its organization. In other words, the young fish obtains no nutrition from its parent; there is merely a reorganization of the stored protoplasm of the yolk sac. In the mammal, on the other hand, the embryo is nourished by the blood of the placental structures, though there is a yolk at an early stage; the largest proportion of the embryo is built up from the protoplasm supplied from the blood system of the parent. Judging from the large size of the young of some viviparous fishes, such as in *Embodon*, it is possible that there may be some exceptions to the rule indicated above.

Besides the very intricate network of capillary vessels which covers the follicles of the ovary of *Zygocetes* a large opening of a circular or oval form makes its appearance in the wall of each sac or follicle, or near the point of attachment of the vascular stalk by which they are supported. This opening appears to increase in size as the young fish develops; whether it is present during the earliest stages of the embryonic development, or whether it is not at all, I did not have an opportunity to see those phases. A branch from the main nutritive vessel frequently lies near the margin of the opening, curving around it. Whether this opening serves the same purpose as the micropyle of ova provided with a membrane from which the embryo is developed, or whether it is in the manner the milt, which is probably introduced into the ovarian cavity by the male, could reach the ovum through the wall of its follicle. The opening into the follicle may be named the *follicular foramen*, though it is the cavity of the follicle which is brought into direct communication with the general ovarian space, which, singularly enough, appears to be occluded from without by a temporary closure or plugging up of the oviduct or canal from the posterior end of the ovarian sac, a state of affairs, which, if it is confirmed, and which, if it is not, it resembles, the condition found to obtain in a pregnant mammal, where the uterine os or mouth is temporarily occluded during gestation.

We found ourselves unable to determine the species of the form, the structure of which is described above; none of those described in Jordan's Manual appear to agree with our species. It may be, as some of us have surmised, that the isolation of the form on the eastern peninsula of Virginia for a great length of time may have saved it from the ordinary competition of other species. We leave the determination of the species to the systematic ichthyologists.

Thus far our account has dealt only with the structure of the adults and the peculiar contrivances by means of which reproduction is effected; we will now take up the discussion of the egg and embryo.

The globular vitellus measures about a line in diameter includ-

ing the embryonic or germinal portion. The germinal protoplasm probably occupies a peripheral position, moving the nutritive vitelline portion of the egg as a continuous envelope with strands of germinal material running from it through and among the corpuscles of the vitellus. This peripheral germinal layer, when the egg is ready to be fertilized, migrates toward one pole and assumes a hemispherical position. This is commonly the history of the germinal disk of the Teleostean egg as worked out independently by Professor Kupfer and the writer. Little of a trustworthy character is known of the history of the germinal corpuscle and spot, which has the same relation to the egg as the nucleus and nucleolus do to the substance of the cell of the ordinary type. When cleavage of the germinal disk has begun, it is the first positive evidence that impregnation has been effected.

The disk then begins to spread over the vitellus or yolk, and soon acquires the form of a watch glass, with its concave side lying next the surface of the yolk. Coincident with the lateral expansion of the germinal disk, a thickening appears at one point in its margin which is the first sign of the appearance of the embryo fish. With its still further expansion, the embryo is developed more from the margin of the disk toward its centre; in this way it happens that the axis of the embryo lies in one of the radii of the disk; its head toward the centre, its tail at the margin.

Just before the embryo is fairly formed, a space appears under the disk limited by the thickening rim of the latter, and the embryo at one side. The segmentations of the embryo are enveloped in fluid and grows with the growth of the germinal disk, as the latter becomes concentered into the blastoderm, and does not disappear until some time after the embryo has left the egg as a young fish. And then it often occurs that a space under the yolk sac for as long as a week or more, the embryo of the young of *Cyprin*, *Pareuchypterus*, *Gadus*, *Eleotus* and *Synbranchia*. In regard to this point, I hold views entirely different from any other observers, but inasmuch as the writer has had opportunities to study the development of the embryo of the same species, and representing a greater number of families than any previous investigator, and because the observations are based on material studied without the use of hardening re-agents which either destroy or obliterate the segmentation cavity, and also because it was found to be present in the embryo of the same species which was well studied, it is believed that it will be found in the developing ova of most or all Teleostean fishes. Should this prove to be the fact, the Teleostean egg will be as distinctly defined in respect to the form of the developmental characters which it presents from the developing ova of other vertebrates, as the Teleostean egg is from the remaining classes of the sub-kingdom to which it belongs. The floor of the cavity appears to be formed by the hypoblast or innermost embryonic layer, while its roof is formed by the epiblast or outermost layer. The embryo of the young fish, which has been derived by cleavage from the germinal disk, and the yolk, no part of its epiblast layer being in direct contact with the hypoblast below on account of the presence of the intervening film of fluid, except at its rim. The embryo also appears to be in direct contact with the yolk, and the yolk is absorbed at an equal rate all around its margin; the point where the edges of the blastoderm finally closes is almost directly opposite the site where the germinal disk first appeared; the closure at last occurs just behind the tail of the embryo where a little crater-like elevation marks the point at which it disappears. The embryo now lies along a meridian of the blastoderm; its head at the original germinal pole, its tail at the other. The growth of the blastoderm over the yolk is greatly facilitated by the film of fluid contained in the segmentation cavity, over which it can grow as it grows without friction. This fluid is absorbed by the embryo, and it is proposed in explanation of the method by which the blastoderm grows laterally in all directions down over the yolk. In some cases the yolk sac is frequently much absorbed before the outer blastodermic layer is fully developed. The yolk is absorbed after it leaves the egg and proves very conclusively that the outer sac is entirely free, laterally and ventrally from the inner one containing the yolk.

There are two principal methods by which the yolk is absorbed; the first, where a portion of the yolk is absorbed, and the yolk is developed over the surface of the yolk, and through which all, or nearly all, of the blood passes to reach the venous end of the heart; in many cases no such work is ever developed, as for instance, in the head, nuchal, and dorsal. To the former case, the yolk is absorbed by the yolk sac, which is orange-colored and imbedded in it superficially are a great number of refringent oil globules of small size. There appears to be a sinus beneath the head, continuous with the segmentation cavity in which the heart is developed. The body of the young fish lies in a groove or furrow on the surface of the yolk, and the yolk is absorbed in which I have seen *Zygocentrus* and explains why I have given the preceding general account of the development of a young fish. The somites or segments of muscle plates had been developed for some time. The heart, brain, intestine and organs of sense were defined.

The next important stage observed was when the yolk sac was in great part absorbed and the fish nearly ready to hatch, or more properly to leave its follicle and the body of the fish. The extraordinary condition of the yolk sac, which is almost entirely empty of yolk, was such as I had never witnessed in any other species of young fish. The bones of the skull, although still cartilaginous, were advanced to a condition not seen in the shad until it has been hatched, for three weeks or more. There were no cartilaginous elements in the body of the fish, but the yolk sac was the brain was pretty well roofed over by the cartilaginous cranium; the branchiostegites were developed in cartilage; the opercles completely covered and concealed the gills, the opercular elements being in the form of a shield, and the opercular elements; the neural and bacula arches of the vertebrae were developed in cartilage; there was a layer attached to the auditory capsule; scales covered the sides and back and were developed in pockets of the dermal epithelium; in five, all the fins were already developed except the caudal fin, which was not yet in the stage of the adult. All this, and yet the yolk sac was still not absorbed. I have never seen in any fish embryos of the same age an instance where scales were developed or where the fin had approximated their adult condition so nearly as in this case. The only instance known to me at present where a continuous dorsal and caudal median fin-fold is never developed, is in the case of *Synbranchia*, where the caudal rays are developed before the dorsal ones. Whether the unpaired fin of *Zygocentrus* are, or are not, derived from such a fold would be an interesting observation. A marked acceleration is to be seen in the development of the yolk sac, a study of which, by means of sections, as compared with that of the adult, has furnished me with some valuable clues in following up the development of Teleostean fishes in general.

To sum up, this fish begins its independent career as far development as when it is nearly mature, bountiful and many other fishes are from three to six weeks old. By so much he has the advantages over these types in the struggle for existence in that he is ready to feed, to pursue his prey indiscriminately, as soon as he is born, while the other fish must wait until they have absorbed their yolk sac, although most of them by that time have acquired mandibular, maxillary or pharyngeal teeth or both. The Fish Commission authorities need never be uneasy about the fate of the top-minnows; they will take care of themselves, and I am sure they will. But our study, it would seem to the writer, has not been in vain; because, even though the fish is too small to be of any practical value, it has taught us that where Nature has so effectively provided for the protection of the young fish, it is not necessary to protect the adult to produce the young. In *Zygocentrus* twenty-five to thirty young is perhaps the limit of production for a single female; in *Aplocheilichthys*, or the four-spined stickleback, the male of which is provided, according to my observations, with a spawning apparatus, with which it is able to deposit its eggs in a hole, and after a study of the number of eggs in the number of eggs in the spawning apparatus. Contrasting these small numbers with 100,000 to 3,000,000, the number of ova easily matured in a single season by a single female of many anadromous and marine species, which have a yolk, adhesive or floating eggs, it would appear that the quantity

of eggs produced by different species of fishes is in some way proportioned to their chances of survival. Otherwise we are at a loss to explain the enormous fertility of many marine fishes; the astounding fertility of the oyster and clam are other instances illustrating this principle, where ova are matured by the millions, and where barely one out of a million survives so as to attain adulthood.

Certain adaptations of structure are also plainly noticeable on a comparative study of fish ova. Thus the egg membrane of floating eggs is extremely thin, thinner than that of heavy or adhesive eggs, while the thin membrane is those provided with external filamentous appendages. The most thinly clad hatch out soonest. May it not be that the thinness of the envelope of the egg has some relation to the rapidity with which the oxygenation of the egg is effected and consequently with the rapidity of tissue and embryonic growth. Finally, you would remember to say that all of these modifications of the embryonic envelope are not such as could be developed by natural selection so as to favor the survival of the greatest number of embryos?

Many other general views of a similar character might be drawn from my material, but I fear that there has been too much already too much detail entered into for this note to be of interest to the general reader.

Before closing I wish to state that it is the object of the female to surround the egg and to prolong it into the outermost edge of the anal fin, as I have lately learned. This difference, as compared with *Zygocentrus*, would be useful as a general character, as suggested by Colonel Marshall McDonald, to those unusual, helpful interest. I am deeply indebted for assistance in manifold ways while the investigation of this material was in progress upon which the foregoing account is based.

I append here a note to state that, just as I had surmised in my previous note on the filamentous appendages of fish ova, I have since found the ovarian eggs of *Hemibarbus* provided with filamentous appendages. It will be remembered that I stated it as my belief that filaments would be found on the ova of this genus when they were examined. The *Laboratory of the Experimental Station of the U. S. Fish Commission, Cherrystone, Va., August 10, 1881.*

CARP IN TENNESSEE.

NAVILL, August 8.

At the rate German carp grow and increase in this latitude, in two or three years more there will be a supply on hand sufficient to give every lover of fish food an abundance. Since the first consignments of German carp to this country, by the Commission, from Hon. Spencer F. Baird, the number has multiplied into hundreds of thousands. In several instances they have spawned at less than two years old, and the quantity of fry hatched out proves that even at that early age their fecundity is enormous.

Captain Green has a pond on his farm in which only fifteen or twenty carp were placed originally; now there are swarms of them. In one year's time they will grow to weigh from one to two pounds, and furnish excellent food. Apart from their food value, they afford a pleasure which the local residents and being game enough to be exciting. Col. Akers created a couple the other day, simply to satisfy himself of their growth, and then put them back again. From each recipient of these fish, reports of an equally favorable character come, and as I stated above, in a letter to you, our markets will be supplied with a bountiful number of them.

As yet none of our pond owners have made arrangements for separating the fish as they should do. A series of small ponds for breeders, and others for the young of different ages, and still larger one for the fish intended for market are essential to the successful propagation of them, and bottoms are requisite to their comfort, though in our mild climate not absolutely necessary, yet it is as much the habit of the carp to bury itself at times as for a hog to wallow in the mud, which the latter does not do. It is attended to the pecuniary advantage of carp culture will begin to be realized, and found the largest interest paying investment of the farm.

I regret to say that our fish protection laws are not being respected thoroughly as they should, and to enforce them in the sparsely settled portions of our State, is almost an impossibility, especially as our commissioners are unpaid, and have no fund at their disposal to have the many streams in the State guarded.

It is pity that a portion of the time which the most experienced annually on cheap literature, dime novels and hideous stories of fiction could not be invested in sporting journals, such as many published in this country. Could this change be effected the people would become educated to a true love of sport and its congenial rewards, and the fish protection, by giving an importance of mine occasionally a copy of the *FOREST AND STREAM*, I have transformed him from a pot-hunter to a gentleman sportsman.

The continued drought of July put an end to angling, and was for the time being a wholesale destruction to fish in the smaller streams, but at last we are having copious showers which I hope have come in time to avert the evil. Col. Akers and self think of taking a trip to Syracuse this week. I wish Prof. Matter could be with us. At any rate, I will let you know of our luck. J. D. H.

THE PROPOSED FISHERY EXHIBITION IN SCOTLAND.

A T present writing it would seem that the Committee of the Edinburgh Fisheries Exhibition had no notion of abandoning their project of holding it in that city in 1882, notwithstanding the fact that the Committee of the London Exhibition to be held in 1883, suggest that they should do so. We have received the following circular:

INTERNATIONAL FISHERIES EXHIBITION.

EDINBURGH, 22 Royal Circus, July 20, 1881.

We have the honor to inform you that an International Fisheries Exhibition will be held in Edinburgh in the month of April next.

That Exhibition will be open to Exhibitors from all countries, and is intended to include, as far as possible, objects illustrative of, or connected with, the fisheries of the world. Such for example, as models of boats used in fishing, and of all kinds of fishing boats; models of fishing boat harbors and of fishermen's houses; nets, lines and fishing-tackle of all kinds; fishbaiting apparatus, live fish in tanks, collections of stuffed fish and aquatic birds, paintings, photographs and casts of fish, and all other objects connected with the fisheries of the world. Fishermen's dress and equipments, fresh, cured and tinned fish, preparations for preserving fish, and other objects of a similar nature.

We shall feel greatly obliged if you will give your co-operation and assistance to the proposed exhibition, and if you will favor us with any suggestions which you think may tend to promote its success. We have the honor to be your obedient servants,

SIR J. G. MAC GILL, Bart.

W. S. MENDENHALL, Secretary to the Highland Society.

ANCIENT YOUNG, Commissioner of Scotch Salmon Fisheries.

How Secretaries.

Extract from *The Scotsman*, July 18, 1881.

The International Fisheries Exhibition, held in Berlin in the autumn of 1874, was a great success, and was the means of collecting a greater number of objects connected with, or illustrative of, the fisheries of the world than were ever before gathered together in one place. The arrangements made by the organizers of that exhibition deserve attention in view of the fact that the Edinburgh Exhibition which it is proposed to hold in Edinburgh next spring.

The objects in the Berlin Exhibition were classified as follows: 1. Fish and other water animals; 2. implements and models of implements used in fishing; 3. apparatus used in breeding and preserving fish; 4. methods in use for transporting fish and for keep-

ing them from fishing; 5. preparations for preserving fish for use as food; 6. models of fishing; 7. models of fishing boats; 8. models of fishing boats; 9. models of fishing boats; 10. models of fishing boats; 11. models of fishing boats; 12. models of fishing boats; 13. models of fishing boats; 14. models of fishing boats; 15. models of fishing boats; 16. models of fishing boats; 17. models of fishing boats; 18. models of fishing boats; 19. models of fishing boats; 20. models of fishing boats; 21. models of fishing boats; 22. models of fishing boats; 23. models of fishing boats; 24. models of fishing boats; 25. models of fishing boats; 26. models of fishing boats; 27. models of fishing boats; 28. models of fishing boats; 29. models of fishing boats; 30. models of fishing boats; 31. models of fishing boats; 32. models of fishing boats; 33. models of fishing boats; 34. models of fishing boats; 35. models of fishing boats; 36. models of fishing boats; 37. models of fishing boats; 38. models of fishing boats; 39. models of fishing boats; 40. models of fishing boats; 41. models of fishing boats; 42. models of fishing boats; 43. models of fishing boats; 44. models of fishing boats; 45. models of fishing boats; 46. models of fishing boats; 47. models of fishing boats; 48. models of fishing boats; 49. models of fishing boats; 50. models of fishing boats; 51. models of fishing boats; 52. models of fishing boats; 53. models of fishing boats; 54. models of fishing boats; 55. models of fishing boats; 56. models of fishing boats; 57. models of fishing boats; 58. models of fishing boats; 59. models of fishing boats; 60. models of fishing boats; 61. models of fishing boats; 62. models of fishing boats; 63. models of fishing boats; 64. models of fishing boats; 65. models of fishing boats; 66. models of fishing boats; 67. models of fishing boats; 68. models of fishing boats; 69. models of fishing boats; 70. models of fishing boats; 71. models of fishing boats; 72. models of fishing boats; 73. models of fishing boats; 74. models of fishing boats; 75. models of fishing boats; 76. models of fishing boats; 77. models of fishing boats; 78. models of fishing boats; 79. models of fishing boats; 80. models of fishing boats; 81. models of fishing boats; 82. models of fishing boats; 83. models of fishing boats; 84. models of fishing boats; 85. models of fishing boats; 86. models of fishing boats; 87. models of fishing boats; 88. models of fishing boats; 89. models of fishing boats; 90. models of fishing boats; 91. models of fishing boats; 92. models of fishing boats; 93. models of fishing boats; 94. models of fishing boats; 95. models of fishing boats; 96. models of fishing boats; 97. models of fishing boats; 98. models of fishing boats; 99. models of fishing boats; 100. models of fishing boats; 101. models of fishing boats; 102. models of fishing boats; 103. models of fishing boats; 104. models of fishing boats; 105. models of fishing boats; 106. models of fishing boats; 107. models of fishing boats; 108. models of fishing boats; 109. models of fishing boats; 110. models of fishing boats; 111. models of fishing boats; 112. models of fishing boats; 113. models of fishing boats; 114. models of fishing boats; 115. models of fishing boats; 116. models of fishing boats; 117. models of fishing boats; 118. models of fishing boats; 119. models of fishing boats; 120. models of fishing boats; 121. models of fishing boats; 122. models of fishing boats; 123. models of fishing boats; 124. models of fishing boats; 125. models of fishing boats; 126. models of fishing boats; 127. models of fishing boats; 128. models of fishing boats; 129. models of fishing boats; 130. models of fishing boats; 131. models of fishing boats; 132. models of fishing boats; 133. models of fishing boats; 134. models of fishing boats; 135. models of fishing boats; 136. models of fishing boats; 137. models of fishing boats; 138. models of fishing boats; 139. models of fishing boats; 140. models of fishing boats; 141. models of fishing boats; 142. models of fishing boats; 143. models of fishing boats; 144. models of fishing boats; 145. models of fishing boats; 146. models of fishing boats; 147. models of fishing boats; 148. models of fishing boats; 149. models of fishing boats; 150. models of fishing boats; 151. models of fishing boats; 152. models of fishing boats; 153. models of fishing boats; 154. models of fishing boats; 155. models of fishing boats; 156. models of fishing boats; 157. models of fishing boats; 158. models of fishing boats; 159. models of fishing boats; 160. models of fishing boats; 161. models of fishing boats; 162. models of fishing boats; 163. models of fishing boats; 164. models of fishing boats; 165. models of fishing boats; 166. models of fishing boats; 167. models of fishing boats; 168. models of fishing boats; 169. models of fishing boats; 170. models of fishing boats; 171. models of fishing boats; 172. models of fishing boats; 173. models of fishing boats; 174. models of fishing boats; 175. models of fishing boats; 176. models of fishing boats; 177. models of fishing boats; 178. models of fishing boats; 179. models of fishing boats; 180. models of fishing boats; 181. models of fishing boats; 182. models of fishing boats; 183. models of fishing boats; 184. models of fishing boats; 185. models of fishing boats; 186. models of fishing boats; 187. models of fishing boats; 188. models of fishing boats; 189. models of fishing boats; 190. models of fishing boats; 191. models of fishing boats; 192. models of fishing boats; 193. models of fishing boats; 194. models of fishing boats; 195. models of fishing boats; 196. models of fishing boats; 197. models of fishing boats; 198. models of fishing boats; 199. models of fishing boats; 200. models of fishing boats; 201. models of fishing boats; 202. models of fishing boats; 203. models of fishing boats; 204. models of fishing boats; 205. models of fishing boats; 206. models of fishing boats; 207. models of fishing boats; 208. models of fishing boats; 209. models of fishing boats; 210. models of fishing boats; 211. models of fishing boats; 212. models of fishing boats; 213. models of fishing boats; 214. models of fishing boats; 215. models of fishing boats; 216. models of fishing boats; 217. models of fishing boats; 218. models of fishing boats; 219. models of fishing boats; 220. models of fishing boats; 221. models of fishing boats; 222. models of fishing boats; 223. models of fishing boats; 224. models of fishing boats; 225. models of fishing boats; 226. models of fishing boats; 227. models of fishing boats; 228. models of fishing boats; 229. models of fishing boats; 230. models of fishing boats; 231. models of fishing boats; 232. models of fishing boats; 233. models of fishing boats; 234. models of fishing boats; 235. models of fishing boats; 236. models of fishing boats; 237. models of fishing boats; 238. models of fishing boats; 239. models of fishing boats; 240. models of fishing boats; 241. models of fishing boats; 242. models of fishing boats; 243. models of fishing boats; 244. models of fishing boats; 245. models of fishing boats; 246. models of fishing boats; 247. models of fishing boats; 248. models of fishing boats; 249. models of fishing boats; 250. models of fishing boats; 251. models of fishing boats; 252. models of fishing boats; 253. models of fishing boats; 254. models of fishing boats; 255. models of fishing boats; 256. models of fishing boats; 257. models of fishing boats; 258. models of fishing boats; 259. models of fishing boats; 260. models of fishing boats; 261. models of fishing boats; 262. models of fishing boats; 263. models of fishing boats; 264. models of fishing boats; 265. models of fishing boats; 266. models of fishing boats; 267. models of fishing boats; 268. models of fishing boats; 269. models of fishing boats; 270. models of fishing boats; 271. models of fishing boats; 272. models of fishing boats; 273. models of fishing boats; 274. models of fishing boats; 275. models of fishing boats; 276. models of fishing boats; 277. models of fishing boats; 278. models of fishing boats; 279. models of fishing boats; 280. models of fishing boats; 281. models of fishing boats; 282. models of fishing boats; 283. models of fishing boats; 284. models of fishing boats; 285. models of fishing boats; 286. models of fishing boats; 287. models of fishing boats; 288. models of fishing boats; 289. models of fishing boats; 290. models of fishing boats; 291. models of fishing boats; 292. models of fishing boats; 293. models of fishing boats; 294. models of fishing boats; 295. models of fishing boats; 296. models of fishing boats; 297. models of fishing boats; 298. models of fishing boats; 299. models of fishing boats; 300. models of fishing boats; 301. models of fishing boats; 302. models of fishing boats; 303. models of fishing boats; 304. models of fishing boats; 305. models of fishing boats; 306. models of fishing boats; 307. models of fishing boats; 308. models of fishing boats; 309. models of fishing boats; 310. models of fishing boats; 311. models of fishing boats; 312. models of fishing boats; 313. models of fishing boats; 314. models of fishing boats; 315. models of fishing boats; 316. models of fishing boats; 317. models of fishing boats; 318. models of fishing boats; 319. models of fishing boats; 320. models of fishing boats; 321. models of fishing boats; 322. models of fishing boats; 323. models of fishing boats; 324. models of fishing boats; 325. models of fishing boats; river by the State Fish Commission, no sight of them has yet been seen, and I fear that our fondly-cherished hopes of royal sport with this king of fishes were vain; the Commission, I believe, has given over the attempt to introduce them as vain. The loss, however, has thriven to our fullest anticipations. The James, to which a few years back this fine fish was unknown, now affords to the lovers of the rod and line most glorious sport, especially in its upper waters.

As I am an enthusiastic fisherman I take deep interest in anything pertaining thereto, and Col. McDonald having kindly given me permission to shut down the gates of the ladder at Bosher's for the purposes of investigation, thereby enabling me to stop the fish whereby and thus determine their kind and quantities of fish go up it. I shall make full use of the permission whenever the stage of the water permits, and, if you think it would be of sufficient interest, will send you an occasional report. I've no doubt when the running season opens again I'll be able to make a most encouraging one.

J. W. B.

FISHCULTURAL NOTES.

THE MISSOURI COMMISSION is about to fit up an aquarium car to transport fish. It will be similar to the one that Commissioner Shaw, of Iowa, has used for a few seasons. Mr. Shaw has been invited to meet with them to explain the plans.

At Blackspot, Mo., Mr. Atkins has enough salmon inclosed to yield about 2,000,000 eggs. At Grand Lake Stream he is enlarging the works to a capacity of 8,000,000 eggs, if it should prove necessary to provide for so many. Aqueducts are being laid at both places to take the water to the spawning pens.

Miss Ollie Shaw, daughter of the Iowa Commissioner, is sketching the fishes of the State, and is reported to have succeeded admirably. About twenty have already been transferred to her care.

Mr. George Eckardt, Jr., who arrived from Germany this spring, is engaged with our correspondent, Mr. Hugo Mulert, in making carp ponds near Cincinnati, Ohio. Mr. Eckardt's father is the largest carp breeder in Germany and he has had much experience. The carp farm will probably be made upon a large scale.

BLACK BASS IN NEW HAMPSHIRE.—Black bass fishing is giving rise to considerable sport. The Merrimack River and a number of ponds in the close vicinity being fairly stocked and yearly increasing with the frisky fish. It was the writer's good fortune to gather in two last week, one weighing two and a quarter pounds, the other two and three quarter pounds. Sunapee Lake has furnished much sport and several fine ones can be caught in New Hampshire where a few years ago they were unknown. So much for the Fish Commissioners; they deserve the good will of fishermen. Dr. E. Spalding, of Nashua, has been appointed one of the Fish Commissioners of the State in place of Sam Webber, of Manchester, who has expired. The doctor is a well known sportsman, and well acquainted with the waters of the State.

W. H. M.

SALMON FOR TENNESSEE.—I am advised by Spencer F. Baird, United States Fish Commissioner, Washington, D. C., that after all proximo he can furnish me with any number of California salmon eggs at the expense of anyone desiring to stock the streams of Tennessee, but it must be understood that the parties ordering shall have a hatching house. Yours, etc., Geo. F. Atkins, Fish Commissioner Middle Tennessee.

Answers to Correspondents.

NO NOTICE TAKEN OF ANONYMOUS COMMUNICATION

J. E. Lawrence, Mass.—Will you be kind enough to prescribe for my pointer pup one year old? He seems well enough, but is very nervous in the flesh. His appetite is good, he stomachs well but retains much food. I feed him Indian meal mixed with corn and wheat. Ans. Give him a little good meat three times a week, and a little sulphur now and again.

P. N. C. (Oleto), N. Y.—Can you answer me through your valuable paper, the cause of a high fever in a dog? I have heard the sound on several different times and thought it came from a bull frog, but the people around here say it is caused by a skin which follows up behind the ear for half a mile. The dog makes the noise something like yuh, yuh. Ans. It is impossible for us to say what causes the sound. To represent the sounds of animals even musical notation fails to type, I express it as follows:

C. P. T. Randolph, Mass.—Please tell me the kind of fish of which I found you the fish by mail, labeled "Rogers' fish specimen." You will accommodate a number of your readers by complying. Ans. The fish arrived very much broken. The fins on the back were jammed and the scales were so much broken that they could not be seen. We soaked the dorsal fin out and made eleven spinous rays in it, but it is impossible to determine what fish it was. I gave no clue to the locality where the fish was taken, and you are right in guessing at it. As to the whole it is safer to say that we do not know.

Pistol, PRACTICE, Montreal, Can.—In pistol shooting the usual range was formerly 12 paces, or 12 yards, the regular doubling distance. The range now used is 20 paces, or 20 yards, and the targets, and with Colt's covers matches have been shot at 50 yards. 2. The targets used in the New York galleries is the regular 20 yards target reduced proportionately. "Those used in the U. S. are 25, 30, 35, 40, 45, 50, 55, 60, 65, 70, 75, 80, 85, 90, 95, 100, 105, 110, 115, 120, 125, 130, 135, 140, 145, 150, 155, 160, 165, 170, 175, 180, 185, 190, 195, 200, 205, 210, 215, 220, 225, FOR SALE, dark red Irish setter pups, by Champion Chief, 3 months old. M. WENZEL, 29 Fourth St., Brooklyn, N. J. Aug 1/81

LEONARD'S Split Bamboo Rods, WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.

No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 26, 1875). This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.

No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 3, 1875). This split thoroughly strengthens where the ferrule is joined to the wood, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made.

No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

EVERY ROD WARRANTED.

E. REMINGTON & SONS., 283 Broadway, N. Y. P. O. Box 3,994.

ENOS JAMES & CO.'S BREECH-LOADERS.

We now offer a complete line of these beautiful breech-loaders, all bearing their name, ranging from their plain but found and substantial guns of the lowest grade up to their superb Trap and Triumph Complete Guns, intended for Glass Ball and Pigeon Trap Shooing, where closeness and great penetration are required. What is the use of buying a worthless gun, which the maker is ashamed to put his name upon when you can get an Enos James & Co. gun with their name and guaranty for the same price? Or what is the use of paying an absurd price for a gun made by some old maker when you can buy a gun made by Enos James & Co. which is just as good or better for about half the price. We are sole agents at New York for the Celebrated Colt Club Guns, which are now the standard with all the leading clubs.

We also have a small Job Lot of Webby Guns, of many styles, which we offer at great bargains, and a few of the improved Parker Guns at special rates. Address P. O. Box 480. H. & D. FOLSOM, 20 Warren St., N. Y.

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R. R.
THE ONLY ROUTE TO THE
Trout, Grayling & Black Bass Fisheries,
AND THE
FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF
NORTHERN MICHIGAN.

The waters of the Grand Traverse Region, and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGS, also abound in large numbers in the many lakes and creeks of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the season of 1981 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk. It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time cards, folders and further information, address

A. B. LEST, Gen'l Pass'g Agent,
Grand Rapids, Mich.

Fishing Season at Rangeley Lakes Again Open.

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! Dupont's Gunpowder Mills, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 2 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6½ and 12½ lb. kegs.

Dupont's Choice Bore.—Specially adapted for "Choice Bore" guns, and particularly for trap and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 2, No. 1 being the coarsest. Packed in 6½ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6½ lb. kegs.

Dupont's Rifle P.G. "Sea-Shooting."—Fg. and P.Fg. 11.5 Fg. for long-range rifle shooting, the P.Fg. and P.Fg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6½, 12½ and 25 lb. kegs. Fg. coarse, P.Fg. fine.

Dupont's Sporting, Mining, Snuffing and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Buck, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

CRUTTENDEN FLY ROD.

This Cut is an exact representation of this Rod, which
CANNOT BE EQUALLED FOR THE MONEY.

It has Solid Reel Plate, Nickel Plated, Patented Ferrules, allowing the wood to be used the full size, thus preventing rod breaking where wood and ferrules join. But wound with cane and silk, giving it that desirable appearance and the feeling of the high-priced rods. The first two joints are made from best Selected Second Growth Ash, Stained and Polished. The tips from the Lancashire, polished. The Rod is Well Ringed throughout. Length, ten and one-half feet; weight, from nine to ten ounces. This is the best-made, best-finished Rod for the money in the United States and will guarantee it every way. If by accident any part should get broken, we can send a duplicate, thus saving expense and trouble of returning Rod to be repaired. With short tip it makes an excellent brass Rod.

PRICES:—With one Trout Tip, in Case, \$4.00. With one Trout Tip and one Bass Tip, \$4.75. With two Trout Tips and one Bass Tip, \$5.75.

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 449 Strand, W. C., London, Eng.; and by Em. Terquien, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

USE FOR THE DOG FISH.

AN old saying has it that if a thing is kept seven years a use will be found for it. The dogfish of the Atlantic coast has been "a kee" for centuries and only now has it been utilized by man. This fish is of the shark family and it has been the pest of the fisherman, devouring the menhaden, the cod, haddock, mackerel and other valuable fishes, and tearing nets. It has increased until it was a nuisance of the first magnitude. The day of retribution has come.

The menhaden fishers of Maine have found but little use for their nets this year and have been compelled to look to other things for a living. The dogfish was one of the other things. His liver contained oil and his body could be made into fertilizing material. They tried it and the idle menhaden steamers are now using trawl lines and taking dogfish. The trawls have hooks with long iron shanks and the dogfish gnashes his teeth upon them in vain. The steamers and sail vessels instead of menhaden take from 30,000 to 50,000 of the dogfish per day and obtain one cent each for them. The factories at Boothbay are turning this old enemy of the fisherman to use. His liver will help to grease their way of life, or light them on the road, while his vile carcass will enrich their potato patches. Success to the movement to thin out the dogfish.

COL. JAMES G. BENTON.

COL. JAMES G. BENTON, the well-known ordnance officer and author of several works on gunnery, died at his home in Springfield, Mass., last Tuesday morning, from heart disease.

Born in New Hampshire, in 1820, he entered West Point in 1838, acquitted himself with credit at the United States Military Academy, and was graduated in 1842, receiving a commission as Second Lieutenant of Ordnance in the United States army and served for six years as Assistant Ordnance Officer at Watervliet Arsenal, New York. In 1847 he was promoted to the rank of a Second Lieutenant, and in 1848 to that of a First Lieutenant. During the two following years he was engaged in important work at the Ordnance Bureau at Washington, preparing a system of artillery for the army and writing the Ordnance Manual. From 1849 to 1852 Lieut. Benton was in charge of the United States Ordnance Depot at San Antonio, Texas, and in 1853 served as Assistant Inspector of Arsenals and Armories. Going to Washington in the latter part of that year he was engaged for several years in making experiments to determine the model of a new rifle, and during this time he was also a member of the Ordnance Board and the Instructor of Ordnance and Gunnery in the Military Academy. In 1856, after fourteen years service, he was commissioned a Captain. Serving with honor in the civil war, being for three years in command of the Washington Arsenal, he was brevetted a Colonel in March, 1865, in recognition of his work in the Ordnance Department. In June, 1866, Col. Benton was placed in command of the United States Armory at Springfield, Mass., where he remained until his death.

Early manifesting a taste for ordnance study and applying himself with enthusiasm to that branch of study, Col. Benton had acquired an extensive, thorough and practical knowledge of all matters pertaining to that department, and his services were constantly in requisition on military boards and commissions. In 1867 he was a member of the board on sea-coast rifle cannon, projectiles, carriages, implements, etc., and in 1869 served as a member of a commission to consider the protocol of the International Military Commission relative to the use of certain projectiles in war, and also upon the results of the Perrine shell. He superintended the arming of sea-coast fortifications from Charleston, S. C., to Mobile, Ala., in 1872, and a few months after completing that important work he gave his attention to the subject of determining the proper calibre of small arms. During a portion of the year 1873 he was assigned to examine the manufacture and construction of ordnance and ordnance stores in the various countries of Europe. On the 23d of June, 1874, he was made a full Lieutenant-Colonel, and in the first part of the year 1877 he was appointed to adjust royalties to be paid by the United States on ordnance inventions. After finishing this task he was directed, in compliance with an act of Congress, to select a magazine gun for the United States service. The commission of Colonel was bestowed upon him in May, 1879. Col. Benton was an enthusiastic devotee of his chosen calling, and aside from the every-day duties of his busy career he found time to publish several valuable articles on the subject of ordnance. He was the author of "A Course of Instruction in Ordnance and Gunnery for the Use of the Cadets in the United States Military Academy."

LONDON DOG SHOW.—Mr. Charles Lincoln, Superintendent of the London Dog Show, which is to be held at London, Ont., September 27, 28, 29 and 30, writes that exhibitors from the States will be extended all possible courtesies by the Committee of Management, and their stay will be made as pleasant as possible. We have no doubt of this, for our Canadian cousins are noted for their kindnesses to all those who, for the love of sport, cross the line and stop in the Dominion. We trust that the show will be a complete success, and would suggest to all intending exhibitors that they do not delay in filling up their entry blanks, and then sending them in as soon as possible. This will enable the management to complete all their arrangements at an early day, and will secure for the show its smooth running.

SPORTSMEN TOURISTS are invited to record their field and stream experiences in the columns of the FOREST AND STREAM.

DEFENDING FISHCULTURE.

WHERE fishculture is a new thing it may be well for those interested to reply to its ignorant assailants; or for a local paper to print laudatory reports of visits to hatcheries. But for the FOREST AND STREAM this sort of thing is entirely out of place. Our readers are too well informed of the merits of fishculture to appreciate an argument in its favor, at this late day. They would regard it much as an intelligent community would an article approving of the steam engine as motive power, and recommending its use.

In Canada there are a few men who have arrayed themselves against the fishculturists, and ventilate their narrow views in the newspapers. Our attention has been called to their articles several times, but their talk was abusive, and we have thought fit to notice it, and have wondered that respectable Canadian newspapers would print such stuff. The *Telegraph*, of St. John, N. B., recently had an editorial article on the subject, wherein a correspondent was quoted who asserted that "the people were of the opinion that on rivers where hatcheries are established there had been a steady falling off in the catch of salmon, and that they looked at results in the light of cause and effect."

To this Mr. Everett Smith, a former fish commissioner of Maine and an enthusiastic fishculturist, makes a reply from which we extract the following:

"The planting of seed cannot render fertile waters barren, and for practical results accomplished by fishculture as applied to salmon fisheries, I would call attention to the work of the Department of Fisheries in Maine.

"When the work of restocking the Penobscot River with salmon was begun by the Commissioners of Fisheries for Maine, the eggs were purchased of Canadian officials. But the salmon have greatly increased in numbers, owing to continuous and systematic protection and artificial propagation, so that now the Maine Commissioners are enabled to procure from fish caught in Maine rivers all the eggs desired for stocking purposes, and at a cost of less than one-tenth formerly paid for eggs purchased in Canada for the same purpose."

That Mr. Smith is correct there is no room for doubt, but it appears to us like using heavy artillery to kill mosquitoes. The facts are too self-evident to need repeating.

THE CREEDMOOR MEETING.

IT does not at present look as though we were to have a very extensive meeting at Creedmoor during the coming month. Delays of various sorts will contribute to keeping away competitors and the paucity of the prize list may have some effect. The problem which the National Rifle Association must solve, if it expects to receive the lasting support of the community, is that of getting all the members of our National Guard up to a fair level of shooting ability. The newcomers' matches will take care of themselves. They will be participated in by a certain number of lovers of out-door sport, who find in rifle shooting one of the most exciting and healthful of recreations. To encourage military rifle shooting requires a certain amount of organized effort, and the National Rifle Association can best make a plea for the support it so seriously lacks when it can point to a record of work done in the ranks of the military. The State authorities of New York have for some mysterious reason seen fit to frown upon rifle practice, thereby displaying their ignorance of the uses and management of the civilian-soldier element. But the National Guard remains not only in this State but throughout the Union where it is just taking form, as it is in many of the States, it is important that a careful system of practice at the butts should form a part of the school of the soldier.

We have little fear now that rifle practice will be abandoned. Within ten years past the Regulars have discovered what they did not know about rifle shooting, and have become convinced that there is plenty of room for improvement. Enough knowledge of shooting and marksmanship has been scattered here and there among the militia forces to act as a leaven for the whole mass. We are putting together a mass of record. We are formulating what may be called the "expectancy" of a volunteer. We are getting a basis upon which we may stand, and call upon officers and men to reach a certain standard, and falling below that we may point to the statistics and declare them derelict. The func-

tions of the N. R. A. is to keep in advance of all these movements, and to appoint committees of experts to determine many points. There is a warning against some pitfalls in the story of the N. R. A. of Great Britain, and in this connection it is proper to quote what the London *Times* found it necessary to say in a recent issue at the close of the July meeting at Wimbledon:

It may be impossible to banish the element of lucre from Wimbledon; but the committee of the National Rifle Association might probably do something to prevent the abuse of a system. Well-known prize-winners might be handicapped; it is fully clear that no more competitions of the ordinary sort are wanted. A large prize list is little more than a distribution of presents among a few crack shots, already gorged with this kind of booty. Perhaps the best system of the reform is to be discovered in the character of the prizes most recently instituted, and exciting a large share of public interest. * * * * * Such competitions must exclude the money-making element, while they advance the efficiency of the volunteer force in a direction not hitherto attempted. In fact, what the public would wish the National Rifle Association to aim at is the improvement of the general shooting among the rank and file of the volunteers, as distinguished from the few hundreds of first-class marksmen. In spite of the reputation which Wimbledon, more than ought else, has secured for the shooting of volunteers, there is reason to suspect that a large and worthless residuum of bad shots remains behind the choice specimens who come to the surface at Wimbledon. The National Rifle Association, will, no doubt, disclaim any educational mission of the sort suggested. But they have already fulfilled what we may suppose to have been their primary object—that of discovering and rewarding the best shots. That is one method of improving the general shooting of the volunteer force, but it does not exclude resort to the method which may be more practically useful and not open to the objection that, like the teaching of some of our public schools, they neglect the mass while they single out and reward the handful of the most proficient."

THE MARKED DIFFERENCE in the number of entries in yacht races in the East and in New York waters has probably not escaped any one. Half a dozen coming to the line, especially among the smaller boats, is to be considered quite a respectable turn out in metropolitan waters, yet when compared to the doings among our Eastern friends, New York suffers severely, and can take little credit to herself if we remember that our "near-by" population is several times greater than that of Boston and vicinity. There they also sail a half dozen matches to our one, but in spite of the rapidity with which regatta announcements follow each other, the entries are always well filled, and spirited rivalry, lively racing, and well-established records are the rule. One cause, and the principal one, of the greater prosperity of the sport among small craft in the East is to be found in their rule prohibiting shifting ballast. In New York, on the contrary, this pernicious custom is still in full swing, and as a direct consequence small yachts have been driven out of existence; the legitimate craft have been displaced by sailing machines, which are so costly to build, to own and especially to race, that even with these very craft, ostensibly built for racing and acknowledged totally unfit for anything else, we are unable to fill a single match to the extent of arousing public interest. We virtually rule out of existence the cheap, handy little boat with fixed ballast within the reach of thousands, and then fail to accomplish anything but occasional duckings and drownings with the expensive, dangerous and unsatisfactory sand-bag caricatures which cost a small mint to run, and give next to nothing in return. So we will continue to play second fiddle to Boston, until some junior club shows itself possessed of intelligence and enterprise enough to take the lowest little boat under its wings, and give her through numbers the power and standing her virtues entitle her to claim in the yachting community here just as well as in the East. The club that takes our hint will become the most prosperous among those devoted to the cause of small "open boats," as they are termed, and will find itself on the high road to popularity and public esteem much sooner than any new crew likely. In place of the score of shabby, soulless, local family affairs called yacht clubs by courtesy, we should have an organization which, except in point of tonnage, might be made the peer of any in the country.

THE FIRST GORAMI IN AMERICA.—The first fish of this species, which it is proposed to introduce as a food fish into Southern waters, arrived in New York last week. It is a male of three inches in length and was sent by Mr. Carbonnier, of Paris, to Mr. E. G. Blackford, of the New York Fish Commission. The female which accompanied it died just outside Sandy Hook. The fish is lively and is beautiful in its dress of green and black. It is now in Mr. Blackford's office in Fulton Market. For a description of this fish and its breeding habits we would refer our readers to the article, with illustrations, by Col. Nicolas Pike, in our issue of June 16, of this year.

AN ESTEEMED GERMAN CONTEMPORARY sandwiches the card of an undertaker in between the advertisements of a wholesale liquor dealer and a powder mill. A most "fortuitous combination."

OLD MEN AS SCIENTISTS.—Recently Professor Huxley said that ninety-nine men out of every hundred became simply obstructive after sixty years old and were not flexible enough to yield to the advance of new ideas. The world, he thought, would be benefited by any man who had taken part in science being strangled after reaching the age of sixty. Will the Professor please remember that, and act accordingly in a few years when he reaches that age?

THE ENCAMPMENT HOTEL at the Warwick Woodlands has been entered at the International Cotton Exposition at Atlanta, Ga., as a cotton hotel, and will be open for guests under the care of L. Y. Jenness from October 5 to January 1, after which it will be removed to an orange grove in Florida for the rest of the season.

MR. CHARLES H. GILBERT, the ichthyologist and collaborator with Prof. Jordan, has been severely injured in the Alps. A telegram from London, on the 18th, says:

A correspondent writes from Zermatt, in the canton of Valais, Switzerland, as follows: "Five American tourists ascended the Matterhorn on Saturday last. On their return a rock was accidentally dislodged, and it struck the head of Mr. Gilbert, a tutor of the Indiana University, at Bloomington, Ind., rendering him partially insensible. He was just able to move mechanically along. Nearly four hours was spent in bringing him to the first hut, which was reached at about 5 o'clock in the afternoon. Some of the party proceeded and brought doctors. Mr. Gilbert arrived at Zermatt at 5 o'clock Sunday evening. He suffers principally from the loss of blood, and will be able to leave there soon. The guides were apprehensive that if he collapsed before he arrived at the hut the party would be frozen to death before succor could be obtained."

FIELD SPORTS AND LIFE.—I never saw the man who loved the woods and the chase but who was brave in war and manly in his civic life; and many is the time in forensic tilts that a knowledge of woodcraft is essential; and as I see the Englishman and American, growing day by day more expert in the manly sport on land and water, I feel that he is growing wiser in head, stronger in body, braver in battle and gentler at home.—G.

The Sportsman Tourist.

CROSSING THE RANGE.

LULLED by the "magic of the time," we had lingered in our cabin on the Larrivee, until, one day, Ignotus, casting his weather-eye up to the heavens, sagely prognosticated that, "first thing we knew, we'd get snowed in, if we didn't hurry up, and light out." The Indian-summer day no which this announcement was made, seemed to laugh at any such absurd prediction; but we knew from past experience that Ignotus was on confidential terms with the Bureau of Storms and the Department of the Weather, and that his utterances on any such point were to be viewed in a semi-official light.

John and the Rhymer had joined us before this, and we had concluded to spend the winter in the lower country, rather than endure the monotony of a six months' imprisonment by snow in Argentina. Two routes were open to us—the one, straight down the Larrivee, to its junction with the Grand; the other, over the range, between El Conquistador and Vahuta, down the Rio Dolores to the Big Bend, and then southerly. The first had the disadvantages of unfamiliar country and of Pococarno-Guinness's band of renegade Pi-Utes, so we chose the latter.

Though there seemed no particular hurry, it was deemed advisable to start early next morning, that we might fairly pass the summit of the range before nightfall, but we merely succeeded in adding another block to that proverbial pavement as it was after noon before we fairly started. Quick as our departure was, however, the change which Ignotus had predicted, was quicker.

When we rose in the morning, the sky was overcast, and by the middle of the forenoon, a fine rain was falling, which we knew would be an icy sleet at the summit of the pass. As long as our way led up the valley, our progress was only moderately uncomfortable, but when we turned aside, and began to ascend the mountain, trouble opened before us.

The trail up the pass was one of the steepest in the country, and was now, of course, rendered tenfold more difficult by the falling sleet which had covered it with a glaze of ice. Riding was out of the question—walking, nearly as impossible. A great part of the way, we were forced to employ primitive means. Tying a rope to the halter of the leading horse, three of us, scrambling upward as far as we could, would haul him up after us by main strength, while the fourth, with "quirt" or "black-snake," reinforced energy below. Slipping, sliding, stumbling, falling—on its feet, on its knees, on its side, the poor animal would at last gain a resting place, and, panting with fatigue, and shivering with cold, wait while the process was repeated with its companions in misery. The many falls, and the violent struggle necessary to rise again, so disorganized the packs, that constant halts were necessary to rearrange them. Owing to these delays, night overtook us, before we gained the summit. To attempt to cross after nightfall would have been madness, and so, just before we came to timber-line, we went into camp. The horses were turned out to find what nourishment they could in spruce twigs, some dry wood collected, a fire made, coffee prepared, and supper eaten. Everything was coated with ice—our clothes were stiff, and arms and legs felt as though incased in joints of stove-pipe. For awhile, the fire seemed to be in league with the spirits of the storm, and refused to do more than to burn feebly, with a dull yellow flame, and a sullen discouraged air. Finally, however, finding that we were too old campaigners to lose temper at its misconduct, it shook off its sullenness, and blazed up royally. The crowding limbs of darkness and cold were driven further and further back—our stiffened garments began to soften and then to steam—our chilled blood to circulate—our numb extremities to regain feeling, until, under the combined influence of the fire, hot coffee, and pipes, we began to feel more comfortable, and to pity those poor fellows who had never experienced the pleasure of a good thorough storm of hail and sleet upon the summit of the Rockies. One does not know what fire is, until he has

seen it in the woods at night, when "Nox and Erebus, and Mars and Notus hold the torch between them." This night, how our fire did roar and laugh! How it clapped its hands, and threw up its arms! How it stood a tiptoe upon its pedestal of spruce logs, a winged Mercury, ready to take flight and soar into the unknown regions of darkness above! How the shadows skulk away, and retreat, pell-mell, into the forest behind! As we lie watching it, the Rhymer quotes softly,

"The broad flame pennons drop and flap
And betty and tog as a flag in the wind;
Like a leucist shirt, the leucist pennons
Hunted to death in its galleries blind:
And swift little troops of silent sparks
Now passing, now pauc away in a year,
Go threading the forests' tangled darts,
Like heras of frightened deer."

The sound of his voice aroused Ignotus, who declares it is time to turn in. John, the Ambidextrous, had, ere this, cut four logs, about eight inches in diameter, and as many feet in length. These were placed in a square upon the ground, our rubber blankets spread between, then the robes and other blankets, and over all the wagon sheet, a huge square of waterproof canvas, which, drawn over, and tuck-d in, amply protected us from the wet. We seldom went to the trouble of pitching our tent, unless our stay was to be a protracted one.

It was a veritable Walpurgis Night. All the spirits of the storm were abroad. The hail rattled on the wagon sheet like musketry, or snote the logs between which we lay crouched, like whiffs of grape-shot. From every point of the compass, the winds met above us, and wrestled with each other as to which should have us for their prey. They swooped down upon us like snarling wolves, caught the wagon sheet in their fangs, and tugged and tried to pull it off. They caught up huge brands from the fire, and sent them whirling off into the woods, lighting up for a moment the black recesses with a train of glowing sparks. When the blasts passed a moment to take breath, we could hear the sullen plunge of rocks, loosed from the peak of El Conquistador, crashing through the spruces till they came to rest in the valley three thousand feet below. As I snuggled down by the side of Ignotus, I felt disposed to be thankful that I wasn't a country physician, or an ardent lover, or of any other profession, in that night force he would have the elements when in such a snarl as they seemed to be that night.

Before morning, the wind died down, the sleet, changed to snow, and when we awoke, and endeavored to throw off our blankets, the superincumbent weight of snow was such that John declared he felt as if the Day of Resurrection had come, and he were the first to appear above the ground. The snow came down—not in flakes nor in sheets—but by the square acre, by the quarter section. At ten feet above, objects were dim—at many yards, invisible. The whole atmosphere seemed to be crystallizing and settling down on us in layers. Our fire, of course, had gone out—buried under a foot of snow. Ignotus, with a woodman's foresight, had tucked away some dry spruce splinters under the blankets at the head of his bed, the night before, making them serve as a pillow, and with these, and a due modicum of patience, we finally succeeded in starting a fire.

In the *dolce far niente* of the preceding evening, the Rhymer, who was also our *chef de cuisine*, had neglected to bake any bread for breakfast, and to do so now, in such a deluge of falling snow, was no easy task. Heap the lid of the pot on the fire, and wait until the boiling water, in three minutes they were quenched, and the lid was white with snow. However, the bread was served at last; as John remarked, "A very well baked on an average—burnt on the bottom, and raw on the top." The dried bacon was a success, though Ignotus complained that Dame Nature had botched the job, by putting too much water in the gravy.

When John suggested that the coffee seemed weaker than usual, the Rhymer accounted for it by calling to our minds, the well known physical law, the boiling point of liquids varies in inverse ratio to the height above the sea level, and as, in our case, this was about 15,000 ft., a slight mathematical calculation would prove that coffee made here would only be about one-half as strong as the normal infusion; and, if we would taste carefully, we would find that the present brew had almost exactly that ratio of strength. Ignotus mildly observed that he accounted for it, by the fact that he had noticed that the Rhymer had forgotten to put in any fresh coffee when he filled the pot with water, and we had been drinking a weak infusion of last night's grounds. The Rhymer contented himself by remarking confidentially to the bottom of his cup, as he inverted it to let the last drop run down his throat, that there was no use in trying to explain natural phenomena to a man who would indulge in a *pro pri* reasoning.

Breakfast over, we met in Committee of the Whole to discuss future movements. It was manifestly "extra hazardous" to continue our journey till the storm should abate, and yet, if it continued, the trail would soon be impassable. Either horn of the dilemma had its own particularly sharp point, upon which we were liable to be impaled. If we started, the odds were great that we should lose our way, and be precipitated over some precipice, or becoming involved in the labyrinth of gulches, wander around till hopelessly lost; if we remained, twelve hours more of such a snow would so blockade the trail, that movement would be impossible. The snow was already knee-deep—by night, at the rate at which it was falling, it would be six feet, and that meant a repetition, on a smaller scale, of the terrible Donner disaster.

Our indecision was brought to an end by our horses, who came up to the fire, and seemed to ask in their patient way, if we proposed to remain there till they were starved or frozen to death. As Rob's head loomed up out of the falling snow, Ignotus rose silently, took down his bride from the branch on which it hung, and, after warming the bit a moment at the fire, slipped it into his mouth. Without a word, we rose and followed his example. Saddling and packing finished, the horses were lined up at the head of the trail to the tail of another—so that the lost footing on the treacherous trail, he might be supported by the others. Ignotus, uncoupling a thirty foot lariat, fastened one end securely around his waist, and passed the other end to John, who did the same. So started the silent procession; Ignotus first, carefully feeling for the hidden trail with his long alpenstock, linked to and followed by John, leading the train with sure-footed and sagacious Rob at the head, and at the rear, the Rhymer and myself, riding. All trace of trail or path was obliterated.

We were climbing diagonally up a white mountain side, trying to follow, under two feet of snow, a narrow crooked trail, which had to be felt for, step by step, and which sometimes seemed to be lost entirely, while Ignotus prodded painfully for it with his staff. The snow fell so heavily that the

"THE RECREATIONS OF A COUNTRY PARSON."

Editor Forest and Stream:

Though I am a clergyman, of the orthodox stamp, I have no patience with the class of pietists who require all literature which is not distinctly religious. Secular books and papers, no matter how refined and instructive they may be, they have trained themselves to regard with feelings of horror; willfully ignorant of the fact that they enjoy of art and science, civilization and even religion, they owe largely to these very publications. They remind one of those fastidious folk who are afraid to pluck a rose lest there be enclosed in it the sting of a wasp. For the most part, they are one-sided, narrow-minded, warped specimens of humanity. Nor am I in any sympathy with that class of extremists who turn in disgust from everything religious and who are wholly absorbed in secular reading, much of which may be of questionable refinement.

In this age, when of making books and papers there is no end, there is need, as everybody knows of wise discrimination in selection. These myriad publications are spread before the people, who have the liberty of choice; and between the two extremes referred to there is a middle ground which all may occupy, and which never fails to fulfill its promise of pleasure and profit to the reader.

Now, a person's occupation goes far to determine the character of the reading which he makes a specialty. It will be in a line with his business. The artisan takes naturally to treatises on mechanics; the merchant to commerce; the farmer to agriculture; the attorney to law; the clergyman to theology and the physician to medicine. But then it is not wise to keep the mind on a constant strain over these special subjects. All have need of mental relaxation, and general information, and this two-fold necessity is met by our daily papers, and weekly and monthly magazines, which are largely miscellaneous in their make-up. They who do not avail themselves of one, two or more of these accessible avenues of current news and intelligence live behind the privileges of their age. They are not abreast with the times; and recent happenings, when they chance to be told of them, sound to their ears as much like fiction as old-time fables.

Mental rest is the immediate need given the mind something as to ally different as possible from that which it has been steadily occupied with. My parish numbers one hundred families. After a tour of pastoral visitation, or after I have been engaged for several hours in study pertaining directly to my profession, I feel the need of rest, mental recreation; and one of my favorite resorts is the *FOREST AND STREAM*, which comes new and fresh every week to my sanctum from the Times Building of the great metropolis. Though sitting at home, reading graphic descriptions of forest, lake and river scenery, and giving account of adventures with the rod and gun, and of rifle and bow, and to topcoats, yet it does not require a great stretch of the imagination to transport one's self right in the midst of the wild woods and grassy lands, and among the happy groups of pleasure-seekers on the land and on the sea. Thus, we sauntering are permitted to enter into their sports, participate in their pleasures and partake of their joys. From their repose beneath the hemlocks our weary heads gain rest. From their exploits our high-strung nerves snatch up bits of needed relaxation, and so our lives, as well as theirs, are sweetened and prolonged.

I also glean thoughts and suggestions here which help me in my work. I whip illustrations out of fly rods, shake them out of yacht's canvas and shoot them out of gun. I find them in the bent bow and flying arrow, and perceive them in the leaping cataract and the music of the woods. I am reminded of the happy hit which the sainted Dr. Bethune once made.

A neighboring minister said to him one day, "Brother, how it happened that while I have labored diligently as you have, and preached better sermons, and more of them, my parish has been scattered to the winds, and yours remains strong and unbroken?" Dr. Bethune then facetiously replied, "O, I'll tell you, brother. When you go fishing, you first set a great, rough pole for a handle, to which you attach a large cod line, and a great hook, and twice as much bait as the fish can swallow. With these accoutrements you dash up to the brook and throw in your hook with *'There, little, you dogs.'* Thus you scare away all the fish. When I go fishing I get a little switching pole, a small line and just such a hook and bait as the fish can swallow. Then I creep up to the brook, and gently slip the line, and I *'twitchee' em out, twitchee' em out, till my basket is full.'*" His.

To all of which the *FOREST AND STREAM* says amen; and to this will be added the enforcement of the many clergyman who are doing our round the year round, and to this as the name appended to many letters in the profession. In this way of contributing his share of the good things to the general fund he follows out the custom of his profession. And just here let us reprint from the *Independent* this rhyme of

A FISHING PARSON.

In a quiet village, far away,
The pulpit was vacant many a day.
Candidates came from far and near,
Every Sabbath for many a year.
Some were too awkward; some preached with ease;
But no one was able them all to please.
At length there came from a distant place
A man of unusual power and grace.
His frame was strong and his eye was clear,
And all were pleased who came to hear.
"This is our man!" said the elders all,
And old and young united to call.
The call was accepted, and early in May
The new parson came to his new abode to stay;
But after the toll of the settling down
In his pleasant home in the little town
The parson was one day seen to stroll
Across the street with his basket and pole,
And take his way o'er field and brake,
To a rippling stream that entered the lake
Just below the town. "What does it mean?"
Asked the goosies and all who him had seen.
"A fishing parson," exclaimed the men,
"How could we so deceive the town?"
The spinners said: "Twas a shame and sin—
A parson to be engaged in
Such worldly sports!" "Twas late in the day
When the parson took his homeward way,
With well-filled basket, and letter still,
A glowing check and a healthful thrill,
Caused by the blood that flowed through his veins
As he toiled for his summer gains.
Some said, with coldness: 'They nevermore
Could respect and love him as before.'

"A fishing parson! Who ever heard
Of a fishing man who preaches the Word?"
Thus spoke the elders and deacons and all,
And before them at once the parson they call.
"A painful duty," the eldest said,
Devolves upon us, and about his head
In a serious way, "Never before,
For eight and seventy years or more,
"Have we as a church been called upon
To remove our pastor for what he has done."
"You went a-fishing the other day,
We think it unseemly in every way,
"Twill injure the cause with the young and the gay,
"Tis scandalous! What have you to say?"
A smile came o'er the parson's face,
As he rose to respond with coming grace.
He came of Peter and brethren three,
Who once went fishing on Galilee.
"These were the men that the Master chose
To carry His gospel to friends and foes."
"Fishing parsons!" yet better men
To preach the Word and wield the pen.
The church has not known for many a day,
They loved to preach, they loved to pray;
Not their Lord they loved to discuss as all
They loved the mountain stork and dell.
"And as for myself, I can boldly say,
I preach the better, from day to day,
"For the strength I gain in my walks about,
While casting my fly for the speckled trout.
"And when in the forest, alone, oppressed,
God speaks to me and I am blest."
No more was said, but as time rolled on
The pews in the church filled, one by one.
And as before, from far and near,
The people flocked to him to cheer
"The fishing parson," for so he was known
By boys and girls and men full-grown.
And at length the meeting-house, which before
Had held them all, with room for more,
Became so crowded that ere the fall
An effort was set on foot by all
To build a new house, with ample room
For all the people who wished to come.
And though the years rolled swiftly by
The true soul glowed in the parson's eye;
And he often said in his pleasant way,
As he labored on from day to day,
That his power to work, with a steady plod
Was due to his love of the creed and rod.
The parson lived long, and rejoiced to think
Of the souls that were saved from sin's brink.
True fisher of men! he had tried to be—
As faithful as those of Galilee.
"Twas at eighty and three, and preaching still,
And serving his Master with heart and will,
That the welcome summons last was sent
To call him home from his mortal tent.
And it was yet on his tombstone deep,
When his last adieu was said to sleep:
"Here lie the fishing parson," and then,
"His master made him a fisher of men."
JAMES H. HODLEY.

"THE FORESTER SCHOOL OF BATHOS."

The following editorial is by request reprinted from our issue of Dec. 18, 1879:

"We have already spoken of the fashion set by Forester, and followed by his disciples, of making the potatoes of the sportsman a prominent feature of field stories; and we have sometimes thought that the author has had a very appreciable influence upon the literary style of amateur writers upon sporting topics. There is a class of young sportsmen who profess to find in the *FOREST AND STREAM* a model of style exhibited by no other English author; and who, consequently, model their own efforts upon his style. Now, without detracting in the least from Forester's deserved great fame, we may suggest that in common with many writers of his time, he is somewhat out of fashion so far as mode of expression is concerned. The adjective does not play so important a part now as it did then. We have nowadays less of vague, expansive soaring, and more of common sense, straightforward, plain English prose. One reason of this is, that one hundred authors are now writing where there were writing ten. To find an audience of one hundred must be much more terse and explicit than it once was necessary for the ten to be. Washington Irving's *Sketch Book* is not read as much as formerly; not alone because it is crowded out by the thousand and one new books of like character, but because its style is too rambling and diffuse for the day. The incoherence and compactness which mark the American's character in other fields, has its influence also in literature. In the literary world it is true this new order of things may be a mistake, but at all events the tendency becomes well defined to any one who will take the pains to compare the old and the new books in a library.

"We have, in the writings of some of the self-constituted sporting literateurs of the day, a survival of the crudities and faults of the American literature of the past. This is not difficult to explain. It is always easier to imitate faults than excellences; to catch the hollow form of a writer's style without at all entering into the spirit of his writings. And again, the influence of a writer who is the only author, or one of a very few, to read by the amateur wielder of the pen, is so much greater that he falls unconsciously into the same set phrases and turns of expression. When a young man reads of Frank Forester's writings, that 'All bear the indelible impress of a master mind, and have the qualities of imperishable genius,' and that 'the bright thoughts of his surpassing genius, as embodied in his writings, will ever remain a grand and indelible monument to his memory, more durable than bronze or granite material, as these shall remain fresh and beautiful for ever, more perishable than the ivory enshrined or the consumed by rust,' and still further, that 'the spirit of Forester is still with us,' and that 'we feel his presence; we are cheered by his inspired thoughts, and under the domination thus afforded, are better able to bear the loss of his material form and awe-inspiring presence;' and when we read such stuff as this, written by a person of the masculine gender, and published in the Year of Grace, One thousand, eight hundred and seventy-nine, we may safely conclude that something more than the literary taste of the writer is affected by

the devotion to 'the lamented master of the craft;' a devotion so intense, indeed, that we are threatened with its outgrowth at a future date, in the shape of a 'work,' illustrative of the literary achievements of the spirit aforesaid.

"It is a relief to turn from this balloon style of adjective to the numberless common sense and valuable papers which are written by sportsmen for sportsmen, and published in the sportsman's journals of the day. The Forester school is only a little orbit within itself, growing gradually smaller from year to year. The majority of those who employ their pens in writing to *FOREST AND STREAM*, even though they are non-professional writers, put their ideas into plain, intelligible prose. Were it not the case we should long since have been forced to suspend publication; for, however much the Forester school may enjoy composing their effusions, it is certain that people will not pay four dollars per year for the privilege of reading them.

"While the writings of Forester hold a deservedly high place in the library of the sportsman, and he likely to maintain that place for a long time to come, we are gratified to see the influence of their style gradually decreasing among writers.

"Some have been found to argue that composition is a direct measure of culture; that if a person has appeared in print—even though it be only sandwiched in among the advertising columns of a tall paper's monthly—it is a step in intellectual growth. The mere publication of the article does not, in itself, argue such an advance, but its subject matter does. Possibly, too, even in the latter case, it would have been better worth the literary aspirant's time and trouble to have absorbed the writings of some standard thinker, than to have palmed off his own crudities upon the world.

"The best writing is that of him who has something to say. The plain statement of an observation in natural history, of a principle of mechanics, or a practical description of a shooting or fishing trip, and kindred communications, are more acceptable to the sportsman than all the effusions of aching imitators of blank verse. Posing on the rim of a cup, or a people may make the populace open wide its mouth in wonder, but it is, on the whole, neither a useful nor a lucrative performance."

It may be added that the sixteen goodly volumes of the *FOREST AND STREAM*, with their current numbers of its Seventeenth Volume, afford a light and shining example of what is wanted by the American sportsman of to-day.

AN EXHAUSTIVE REVIEW OF Gantner's "Introduction to the Study of Fishes" and "Ichthyology," from the pen of Prof. Theodore Gill, is now in type and will be published in our next issue.

THE MOCKING BIRD'S SONG.

SPRINGVILLE, N. Y., Aug. 22.

I NOTICE in the last issue of the *FOREST AND STREAM* an article from "Robert West in the *Adelphi*" on the mocking bird, in which he claims that this peevish singer is imitated, that he is not the clack-bird at all, but merely a wonderful bird, who sings an original song, but which somehow singularly happens to be composed of the identical notes of other's masters or aviators, and attempts to prove his assertion by the fact that a young bird raised apart from other birds acquired, or originated, according to Mr. West, the same notes as birds grown under the tutelage of old singers. It proves nothing of the kind. It seems strange that any one should assume such a position. Did "Bob White" and the innumerable company of other birds give their notes as the mocking bird? Will a blue bird or robin, raised in confinement, fail to pipe the notes of his parents? It is hereditary as much as his shape, and so to a great degree is the incomparable potpourri of the mocking bird, yet not altogether. Centuries of practice have bred in this bird his wonderful powers as surely as his individual plumage, and raised in confinement he will naturally reproduce a song, if not all, the selections of his ancestors. Nevertheless, he is a mocker as much as a singer. To say he is not is to assume that he originated it not as of other birds. Birds of different species do not have the same song. He either originates these songs or he belongs to several dozens of different species, or he is a nigger.

And Mr. West says "a first-class singer invariably excels that which he is popularly supposed to be imitating, and other birds recognize and acquiesce in this without any exception." Can perfection be excelled? When a mocking bird reproduces the note of a sparrow or a thrush or a cat, "gnat-hew!" how is he going to excel it? He may play a few variations on it, by supplementing or preface it to some other imitations, but on imitation pure and simple he can't excel, in the sense Mr. West uses the word.

As to the statement that other birds recognize and acquiesce in the mocking bird's superiority, it is one of the pretty things that can't be proven. I don't deny that they will might do so, but that they do so "without any exception" is assuming a position which no circumstances warrant.

My home is in Plattsburgh, and I have heard quite a number of mocking birds and, being a lover of music, I have paid considerable attention to the wonderful powers of this star singer. The comb of my wife is the stage whereon a couple or more exhibit their acquirements to the public daily. The orange trees are alive with them, and many have the same succession of notes, liquid drops of sweetness, wonderful melody which they trail after them as they fly from tree to tree. He runs over with song. Even when sitting he can't keep quiet, but spreads his wings and flutters his wings continually, while at the same time he pours forth his music. He sits on the chimney top and begins his overture with the loveliest little pianissimo trill, and when once the door is opened he must sing or die. He warbles, he trills, he shakes, he whistles, he gives you note of quail, yellowhammer, night-bawk, whippoorwill and a yonder or other, while interwoven intricately are his own inimitable comments on it. At intervals during this entertainment he lifts himself by an impassioned wing-beat or two into the air, a sort of exclamation of his sentiments, and settles singing a note on his perch to continue with crescendo and diminuendo, legato and staccato, repeat and da capo. The imprisoned melody presses up him, and when the surging, quivering notes escape him they soar abroad through all the delighted air in wondrous harmony, at ebbing the love and omnipotence of the Creator. In the stillest hush of night, when the stars look forth from the lake, when no sound but the hoot of the owl in the distant swamp mars the quiet, the

sleeping mocking bird in the orange tree near my window dreams of music, partially wakes and warbles a few soft, sleepy, delicious notes, a beautiful musical soliloquy, stopping as abruptly as it began; and he dreams again to watch the sleeper, near him with a royal salute to the coming morn, when the east flushes and the stars grow dim.

DO OPOSSUMS FEIGN DEATH?

THAT the opossum will feign death that he may live is known by all acquainted with their habits. Hence the saying "play possum" where the opossum lives.

When collecting botanical specimens, many years ago, in Wilcox County, Alabama, I saw an opossum up a small tree of only about three inches in diameter. To see if he would pretend to be dead I armed myself with a green stick of the size of a large cane and began shaking the tree. He was about ten feet high, next the body of the tree, on a small limb. The shaking caused him to run out on the limb and also to lose his foothold, but he caught the limb by the tail and remained suspended until repeated shaking caused him to fall.

Several blows on the head stretched him on the ground, seemingly dead. I held him up by the tail and threw him down, and he showed no signs of life. I then stood and watched him until I saw him breathe slowly and at distant intervals. I went several rods distant, where he could not see me. Finally he opened his eyes, raised his head, looked around, got up and ran into his hole a short distance off. He then upturned roots of a large fallen tree. I did not know that his home was so near, if I had I should have closed the entrance and killed him.

Opossums are common in this portion of Texas. I have killed many of them when they came after my chickens at night. One I thought I had killed and threw him down with a bloody head. Next morning he was gone, since which I make sure when in killing them.

According to Prof. Baird in the Mexican Boundary Survey, and also in Vol. 8 of the Pacific Railroad Reports, the Texas "possum" is not known to live in Texas, but the Texas "possum" is the *Didelphys californica*, a smaller animal with a larger tail.

The "possum" of this region seems to be identical with the one east of the Mississippi in size and appearance, nor have I ever heard any one speak of the Texas "possum" as being different. I believe a full investigation of the matter will prove them to be the same species.

The "possum" runs faster than a man, hence, in a fair field by moonlight, he is easily outdone. I have killed two females, each of which had nine young ones in pouch attached to dogs.

A few years ago a "possum" was killed near Naples, Ontario Co., N. Y., where it is so rare that many people do not know its name.

S. B. BUCKLEY.

Austin, Texas, August, 1881.

HOW A SNAKE CLIMBS.

NEW ORLEANS, August 17.

HAVING noticed in your issue of 11th inst. the remark that none of your correspondents upon the subject of snakes climbing trees had described the manner of ascent I would state that I happened once to witness the act.

Returning from a trout-fishing excursion in the Alleghenies, traveling by the turnpike that runs along the north fork of the south branch of the Potomac, in Pendleton, W. Va., West Virginia, my attention was attracted by a black hawk, about four feet in length, flattened against the trunk of an oak of about three feet diameter. It had got some four or five feet from the ground and was making its way slowly upward in an almost perpendicular direction. Every muscle appeared to be at its greatest tension; the body was rigid and drawn in irregular serpentine folds much more marked than those made in progression on the ground, taking hold by the abdominal plates upon the corners or projections of the corrugated bark and so drawing its length upward as from step to step in the manner suggested by you. The surface of the bark, broken by irregular upright channels and ridges, with transverse breaks in the latter, afforded so many points *d'appui*, from one of which the snake would lift a section of its length to another and so on upward, slowly but surely.

I was so struck by this acrobatic feat of a legless reptile that I have retained a lively recollection of it to this day.—G. A. W.

A CUNNING OLD SQUIRREL.—PLATTSBURGH, N. Y., May 9.—Editor *Forest and Stream*.—On the 7th of May, a friend and myself took a ramble in search of some hawk's eggs, as I have not yet quite lost my old spirit of a "nest-robbing urchin," but confine my collection to the eggs of the hawk, owl, crow, etc., against which I have a crossless war. Our first nest we found in a large maple tree. We had a boy to do the climbing and adjusting the climbers to his legs he was soon up to the nest. He cried out that it was an old hawk's nest, and threw it down. Where it struck the ground a great chattering was set up, and on examining the nest, we found in the interior of the bunch of sticks and dead leaves three young gray squirrels whose eyes were not yet opened. We arranged the nest as best as we could, and covering the young squirrels up with leaves, left them at the foot of the tree, in hopes that the old gray might find them. On our return we came to a large maple tree, where we saw, but on watching the tree we found squirrels and nest gone, and in a tree near by was a new nest. On looking closer we saw the old gray squirrel sitting in a crotch about a yard from the nest. On seeing us the squirrel jumped into the next tree and sat up again. We drew nearer, to get a better view of her, when she jumped into the next tree, and so gradually led us away from the nest. Now it certainly looked as if the old squirrel had, during the day, made a new nest, transferred her young to it, and upon seeing us return, had led us fully one hundred yards from the nest, when thinking her young were safe, she ran up an elm and was out of sight in a twinkling.

T. B. JOHNSON.

CLIMBING WOODCOCKS AGAIN.—New Castle, Pa., July 7.—Two instances of the kind came under my own observation. One day last fall I was hunting squirrels in the eastern part of this county. Seating myself on a log to rest, I noticed some large, dark animal climbing or, as it seemed to me, sliding up a side of a tree of nearly eight inches in diameter. I was quickly slipping a couple of heavy shells into my ten-gauge. I made my way to the tree. The woodchuck—for such I found it to be—went on up the tree to where it forked, and sticking his head through the forks, proceeded to "take in" the surrounding country. But he "took in" more than he had

bargained for—a charge of No. 4 shot—and then took a tumble. It was the largest one I ever saw. This spring, while hunting ducks on one of our streams, I saw a woodchuck jump out of a small willow tree where he had been sitting about four feet from the ground. Before I could throw my gun to my shoulder and pull, he was in a hole at the foot of the tree. It is very common for him to tree when hotly pursued by dogs. I have a friend living in the country who has shot at least a dozen in that way.—WOODCHUCK.

THE ORPHAN ROBIN'S FOSTER-FATHER.—In Rocky Hill a tame male robin is kept by Mrs. Ryer in a cage. He would come back to the cage, when liberated, after flying about out-doors. Near by, in a dwarf pear tree, a pair of robins had a nest. The house cat, just about the time the young robins were hatched, succeeded in catching and killing the mother bird, and the other two, being the same cat also killed the mother bird, thus leaving the young birds unprotected. Mrs. Ryer took the nest out of the tree, and placed it, with its gaping and hungry little inmates, in the cage of her tame cock-robin, together with a dish of boiled eggs, as an experiment. The old bird looked at them, and apparently thought the matter over in a reflecting mood. Then he proceeded to feed them a little—giving to each little wide-open throat a morsel of the egg-yolk. Having disposed of the first morsel, he then flew off to a search for worms. In the course of the day, the bird continued very industriously to forage the gardens thereabout for the benefit of those nestlings. These latter grew apace, and in due time were big enough to be encouraged to get out-doors themselves and try their wings. Whether the old cock-robin after that taught them by example how to find and secure worms for themselves in the sward of the lawn and in the garden has not been reported, but that in the case of robins the parent birds do teach their young is shown by this very summer. In the Rocky Hill case the young robins became able to take care of themselves; and then their benevolent self-appointed guardian went back to his cage.—Hartford (Conn.) Times.

LARGE DEER HORNS.—MORA, near the Adirondacks, July 29, 1881.—The deer are, for some reason or other, more plenty in the St. Regis district than they have been before in several years past, although they have been hunted ever since the middle of May. Parties who have been up to the Sixteen-mile Level during the past two weeks have found them plenty as ever. A very large buck was killed there last week. They have the horns at the Blue Mount House, and all who see them say they are the largest they ever saw. They are in the velvet yet, and I have sixteen prongs started, eight on each horn. They measure eight inches in circumference near the head, and are eight inches broad at the widest part near their ends. The parties who killed the deer had no means of weighing it, but think it would weigh over 300 lbs. It was very fat and they got a large quantity of tallow when they dressed it. Another buck was killed there last week, near the same place, nearly as large as that one, but it had not such large horns; and two deer were shot there Wednesday night last, and both got away wounded to death. This is the curse of night hunting. As many get away wounded and are left to die a lingering death as there are of those killed on the spot and got by the hunters.—A. C.

Game Bag and Gun.

A CAMP HUNT IN ISSAQUENA COUNTY.

IN my earlier days of hunting in the swamps of Mississippi it was considered entirely *hors de convenance* while following a pack of bear dogs, to shoot at any other game however the temptation. Many times has it occurred to pass a fine great buck or a drove of turkeys, not daring to break through the prescribed rules of the country. On one occasion, however, in company with my father and several English gentlemen, on a grand camp hunt, I broke the prescribed rules, and with so little bad effect upon the dogs, that since then the old rule has been placed on file, not even to be referred to.

Before telling the circumstance under which I laid myself liable to at least severe censure, I will try and give the readers of the *FOREST AND STREAM* an account of that, my first experience of camping in the wilderness. It was in the fall of 1850. The weather had been remarkably fine, and the mast more abundant than ever known before. The country was very sparsely settled, and the wood full of game, panthers and bears being so plentiful that it was the constant talk of the inhabitants as to their boldness, and the great depredations they had made upon the few heads of stock which was in the country. Our camp equipage was not only complete but luxurious; negroes to wait upon us, and any number of mules to pack our baggage. We even carried along a couple of canvas canoes to facilitate crossing bays, and to do duck, goose and swan shooting from. After leaving the cleared land some few miles, we were dependent upon the compass for our guide as though we had been in the middle of the Atlantic ocean. Time was no special object, so we did not attempt to hunt or unsnap a bound until we had gone several miles and come to the bank of a beautiful, clear-running bay, where we determined to pitch our tents, and from there start upon our first hunt.

Our negroes, under the direction of my father's old body servant Rupert, were left to attend to the camp details, and after taking observations as to our exact position, the dogs were uncoiled. We had seen a good deal of deer sign, and the old hunter, "Liz," had discovered a bear track or two. It was not a few minutes before old "Spot" opened (we were in sight of him at the time), and I was particularly struck at his manner. He was standing perfectly still; every few seconds he would put his nose to the ground, and then suddenly raising his head, he would give one of those peculiar, long, musical howls, as only the thoroughbred hound can. This state of things lasted several seconds; the other dogs showed impatience, yet they seemed to wait. At last, "Liz" broke away as though he had sighted the game, then followed the others, opening their musical throats with such intensity of purpose that their conduct seemed perfect in having business ahead. It was rather difficult to keep very close up to them, on account of the briars, undergrowth and fallen timber, but such absolute silence prevailed in this virgin forest, outside of the beautiful notes of the pack, that we could hear them

distinctly; the chase at times was most exciting; as the dog would find a place where the trail was freshest, their yelping and barking would have made one unaccustomed to this kind of hunting think that they had found the bear; then would come a pause, caused perhaps by the bear crossing a creek, or else, when closely pursued (they are as cunning as foxes), they will run through water on top of logs and sometimes go in a hollow tree to throw the dogs off the trail. That was not the case, however, with this one; the pack was fresh and thirsting for blood, and Bruin was allowed no time for his pranks. He turned first one way and then another, and must have gone at a tremendous speed for at least an hour and a half; when overcome he took to a cane-brake, and in a few minutes was up on his game, and after the sharp crack of his heels, and when we got up to them, which we did by dismounting at the edge of the brake, and with cane knives cutting our way to them, they were at its base, barking and yelping with such fury that it is no wonder that the poor beast had not the courage to turn and meet them in combat. As I had killed my bear already, one of the Englishmen, Hon. M. E. P., was allowed the shot. He had a Lancaster double barreled and double grooved rifle, carrying an ounce ball, which he drew on his game, and after the sharp crack of the report down tumbled Bruin as dead as a mackerel.

As none of our party were any too clever at "boxing the compass" had it not been for the sagacity of a mule I was riding we would have had some trouble in finding our camp. Here we found everything in splendid order. The tents pitched, a splendid fire burning, camp stools set out in front, and a table improvised from a few poles, and a lot of stray canoes stretched tight across them, upon which was laid a white table cloth, ornamented with silver spoons and forks, plates, tumblers and napkins. Such a dinner and such appliances can only be had under such circumstances. We had a capital soup. "Rupert" had put one of the men to fishing (black bass in quantities) and he took a gun (when we were out of hearing) and bagged a few fine mallards which, added to the supplies brought along, made us a sumptuous repast.

The day's work had not been heavy so a fox hunt was proposed. That night all joined except myself, and I not, simply because being near-sighted I had no chance to have a shot, besides, I knew that my father, his brother and his sons to go out hunting as possible. Before going to sleep in the deathly stillness which reigned I heard three or four reports of guns, which in the morning proved to be fruitful of a fine fat doe weighing some ninety odd pounds.

We remained at this camp until the varmints began to know of our whereabouts, and kept clear of us, requiring too long ranges to find game, so we up traps and made for the banks of Little Sunflower. Here we had royal sport killing several bears, two panthers, and any number of deer and turkeys, and it was here when the dogs were in hot pursuit of a bear that I made my terrible innovation upon the former stereotyped rules of the bear chase. I was left behind on the banks of the bay on at a place where bear tracks were plenty and fresh. Supposing that he might attempt to cross there the hounds could be distinctly heard, and they seemed to be running in the direction of my stand so much so that I had both barrels of my gun cocked ready for any emergency.

The dogs were apparently coming closer and closer, and I was straining my eyes to catch the first glimpse of the cause. At once I heard a tremendous rattling, and cracking of the cane on the opposite bank from where I stood, and made sure I would soon see the bear; the noise continued, as though whatever was making it was undecided as to which way to go. I was, I must confess, getting quite nervous, the dogs in the meantime, judging from the sound, had passed the point opposite where I was, and from their weak cry I fancied they had lost the trail. The rattling noise in my front continued, and I took courage behind a large cypress tree close to me, and I was standing. In about two minutes still looking opposite me, there came at a rattling pace down the bank a magnificent buck with a pair of splendid antlers, into the bay he dashed and was making toward my side. I remembered the rule of not shooting at any game when the hounds were on a bear track, but the temptation was too great, I raised my gun to fire, but then thought if I shot and did kill the buck in the water he would sink, so I kept cool until he began clambering up the bank, and when within about twenty feet of me I fired, and he fell, and such a kick my gun gave me that it incapacitated me for shooting the rest of the time we were out. I got on my mule and he kindly took me to camp about two miles away. I described as well as I could where my buck was, and having blazed several trees on my way back with my cane knife, the men had but little difficulty in finding him.

When the others came in at night they said they had heard my gun, but it was no use, as the remaining of the dogs. Since then no hunter who uses the hounds were to use the same game were allowed to pass, and the bear dogs did their duty just as well. We were out about ten days when the beautiful weather changed to rain, and we broke camp and went home, not having been more than twenty-five miles distant all the while, and having broken camp but twice. As the *FOREST AND STREAM* goes to England I hope some of the gentlemen who were of our party could see this little narrative. Many wonderful changes have taken place in that country. My father is since dead, so is Liz, and of course, not a vestige of the strain of our old dogs is in the country. There was seen the most beautiful cotton plantations in the South with their hundreds of darkies to entice them, now there is nothing but ruin and desolation.

J. D. H.

MAINE GAME NOTES.

Moose, Maine, Aug. 15.

This morning, at about six o'clock, Mr. James C. Bishop, of this place, started a fox about three miles distant with his English fox-hound Spot. He started him in the Thompson woods, and after a chase of twenty minutes, the dog succeeded in driving him into his hole, when Mr. Bishop captured him alive. It was the first fox of the season, and was a common American red fox, *Vulpes fulvus*. This gentleman is the owner of several other valuable dogs, among which are an English bull terrier, and a native fox-hound bitch named "Bessie." He informs me that the prospect for fox hunting in this vicinity is excellent.

Sportsmen who desire this kind of sport would find this a rich field for operations.

When the season for ruffed grouse and woodcock opens sportsmen here are looking for lively times.

In the old Elliottsville township, at the north of us, and in the neighboring towns of Howard, Bangor and Shirley are many miles of solitary and most forsaken highways running through dense forests where these birds abound in great numbers.

RINGWOOD.

You often publish the constitutions of game protective societies, and I have no doubt that such forms give very valuable and substantial aid in the formation of new societies. Now here are the rules of an old deer hunting society, the Graveland Society, established in 1862, and which is now assembled at the Darent, and the same Darent family which has become known because of its alliance by marriage with ex-President Grant. In fact, President Grant's father-in-law, you will see, was one of the signers of the document. Do not think that these rules are sent to you to be used as a model for other organizations, for, confidentially, I am of opinion that, with the exception of Graveland, there are no such societies in the United States. I have been a few examples of warning to the rising generation, their regulations are hardly up to the present standard of hunting clubs. They belong to the category

gory of the Sheridan fishing rules, recently published in your columns. The original document is now in possession of Mr. Charnaud, of the Recorder's office, of this city, and has about it a sort of horse-laugh humor which gives us a hint of what was thought to be fun in those days. The rules are as follows:

1. The society to be known as the Gravois Hunting Club.
 2. The company shall consist of such commissioned and non-commissioned officers as prescribed by other hunting societies, unless a majority deem it necessary to alter them.
 3. It shall be the duty of the president to appoint the necessary number of officers, who shall hold their offices until December 31, 1844, when there shall be a general election.
 4. Persons failing to attend either a meeting of the club or a drive, after being notified, shall pay for the benefit of the company one quart of whiskey.
 5. Any member who shall shoot at a deer at the distance of sixty yards or less, without killing, shall pay half a gallon. If he fails to draw blood he shall pay one gallon, and if he neglects to shoot when within sixty yards he shall pay not more than two gallons, at the discretion of the company.
 6. No person shall read a newspaper on his stand under a penalty of one quart, and in case of such fine it shall be placed to the credit of the driver.
 7. Any person going to sleep on or near a stand shall forfeit one quart, and if he shall snore so loud as to be heard 100 yards he shall pay one gallon to the driver.
 8. Any member who shall fail to feed a dog belonging to the club when it is in his power to do so, shall forfeit half a gallon for each dog, to be credited to the dog's master.
 9. Any member who shall sit by the fire for more than half an hour without telling a deer story or calling for a horn shall forfeit a quart.
 10. No member is allowed to get so drunk after a drive as to require four persons to carry him to bed, under a penalty of one gallon.
 11. The members who go to bed with their boots on shall pay for the benefit of the landlord one-quarter of venison.
 12. Any members who shall refuse to take a slice of good venison when invited shall forfeit one gallon for the benefit of the club.
 13. Any member getting so drunk as to shoot at a horse, cow or sheep by mistake for a deer shall foot the bill at the first dram shop and have his grog stopped for six months.
 14. Any member who is guilty of contributing for distant charitable purposes when his charity is needed at home shall forfeit two gallons.
 15. Any member who shall discover an individual of our opposers or enemies driving or keeping a horse and bid in his barn, or still-hunting under a pretence of amusement or necessity, shall receive a premium of five gallons and two plugs of tobacco, to be paid by the treasurer out of any liquor or tobacco not otherwise appropriated.
 16. Any member who shall play a game of cards without a stake of tobacco shall pay for the benefit of the club not more than one plug nor less than one chew, at the option of the president.
- To the above rules and regulations we pledge ourselves, our lives, our fortunes and our kill in shooting.
- The signers were: Thos. M. Richey, President; James Bailey, Vice President; Harrison L. Long, Council; Abner E. Bailey, Captain; Andrew J. Cromwell, Gamekeeper; John J. Bailey, Treasurer; Oliver Cromwell, Sergeant; Lewis D. Dent, Clerk; John C. Dent, Secretary; John F. Long, Recorder.
- I wonder if some of the older readers of the *FOREST AND STREAM* cannot give us a glimpse of other old-time hunting clubs.

WAGONWHEEL.

A COLORADO BEAR HUNT.—Denver, Col.—You see it all happened in this way. Doc. drove up one morning with his bronchos and light wagon outfitted for hunting. Said he was going up Brush Creek, where he "lowed there was bear. Frank said if he'd wait a few minutes he'd go along. I said I was crazy to go too. Off we started, Doc. entertaining us with pebbles of the bear scraps he'd been in. "Hold on," said Frank, and he jumped out of the wagon, and under a tree he jumped before we could check the team. As we stopped we could see him behind peering along the ground as an Indian would hunt for a trail. "What is it," we cried. "Fresh bear tracks," he answered. Out I jumped and, sure enough, there in the dust was the fresh track which, I imagine, resembled Cruso's man Friday's as much as anything.

Well, where there were tracks we knew there had been bear; and so we hurried on, more eager than ever. Soon we reached Brush Creek, and then down our way into the canyon over a rough road and up a rough trail it was torture to ride. We safely made camp about noon, luckily finding a comfortable log cabin at our disposal, which had been used formerly by the choppers. After a hasty lunch we loaded our rifles and started out. I did not get back until 9 o'clock at night, having seen neither deer nor bear; but before night I had come across a covey of black grouse and had bagged four or five. The others were more fortunate. Doc and Frank, having joined forces, took a fresh deer trail, jumping up two fine bucks and killed both.

For two days we hunted for bears without avail, and as Doc was anxious to get home we decided at noon to pull out. So we packed up, Doc. going ahead with the team, Frank and myself following after. As we neared the mouth of the gulch the canyon widened, and off to our left another wide gulch came into the main one. As we neared it all at once we saw in the road the freshest kind of bear tracks, which proved to be those of an old one and two cubs. We lost no time in bagging Doc., and quicker than it takes to tell it we had our team unhitched and tied to the wagon and were off after our game. It was an exciting experience following through brush and over rocks the trail, which every moment seemed fresher and which every moment led us deeper into the gulch and away from the hill on our right. After we had traveled for a mile and the brush seemed thicker, Doc. remarked that we had better be getting out as we were liable to be caught at a great disadvantage. No sooner had he spoken than, "who was in the rear, saw our bear rise up on her haunches some 100 yards to our left. "There she is," I said. "Hold on," said Doc.; "let me have the first shot." So Doc. up with his rifle and pulls at her shoulders, overshooting and only causing her to rise on her haunches. "Now is my time," I said, and held for her head. Doc. all the time crying not to shoot as we'd surely get tangled up in the brush. I told him he had his shot and now I was going to have mine, and I pulled, hitting her in the breast, but making only a flesh wound. The way she jumped over the bushes and started for us was a caution. It started Doc. on a run in the opposite direction, with Frank and I bringing up in the rear. But that didn't last long, Doc. getting out of breath and onto higher ground. There we reconnoitered and saw our bear

going back to the mountains and endeavoring to entice her back to follow. But we made short work of these proceedings by pouring into them a shower of lead from our repeating rifles that caused them all to hite the dust—or rather snow, as a heavy snow squall had set in ten minutes before. We marked our bear and deer heads and realized handsomely besides the exciting sport which we had.—J. A. B.

A NEW YORK BOY'S ADVENTURE.—Conway, N. H., Aug. 12.—We have had quite a sensation here this week. Four young men (city boys) went from here to Swift River interval, in the town of Albany and among the mountains, some fifteen miles from this village, to camp out a few nights and hunt and fish. On the second afternoon one of them started off by himself to see if he could shoot something; and in a short time he discovered that he was lost, and that he did not know which way to go to reach his camp. He wandered around till it began to grow dark, and then went up into a large tree and passed the night in it not sleeping a wink all night. The next day he traveled all day, and not having any food with him he shot a partridge and kindled a fire and roasted part of it and ate it (without salt). About 5 p. m., feeling tired, he sat down under a tree to rest. Being very weary, he soon fell asleep, and when he woke up he found it the 7th next morning. Seeing a large hill (it is called Greene's Cliff) he thought he would go up and look off, when he discovered houses, and having a small compass with him he took his course for the nearest one and struck a bee line for it. He found it very bad walking as it was through swamp and over windfalls, but coming up to the river at last he heard a cow bell on the opposite side; he crossed over, found the cow, followed her home and arrived at the house at 7 p. m., having been out two and a half days and two nights. He asked for something to eat, although he said he was not in a starving condition, and also asked if that was Swift River interval, and being informed it was, told his story. The house was about four miles south of where he went in. His father resides in New York city. He says he is going back in about a week to try it again, and thinks he won't get lost the second time. J.

THE BRADFORD BANQUET.—The recent publication of the bill of fare at the banquet of the Washington Woodmont Rod and Gun Club prompts a Bradford friend to send us the bill of fare of a supper given to the Audubon Shooting Club, Buffalo, New York, by the Bradford Shooting Club, of Bradford, Pa. June 9, 1881. The "spread" was given at the St. James Hotel, Humphreys and Pierce proprietors, and the members of the visiting club—but, why say what every one understands—of course the occasion was one long to be cherished in memory. The menu was as follows:

Terrapin Soup.		
Brook Trout, Fried, Mountain style.		
Restigouche Salmon, Boiled, Lobster Sauce.		
Leg of Southdown Mutton, Caper Sauce.		
Turkey with Cranberry Jelly.		
Spring Lamb with Green Mint.		
Sweet Breads, Larded with Purée of Spinach.		
Spring Chickens, Broiled à la Audubon.		
Rissoles of Fowls' Livers, Financière Sauce.		
Shrimp Salads.	Chicken Salad.	
New Potatoes.	Green Peas.	Sweet Corn.
Asparagus.	Apple Plum Pudding, Brandy Sauce.	Lemon Meringue Pie.
Pine Apple.	Assorted Cake.	
Strawberries with Cream.	Neapolitan Ice Cream.	
Fruits.	Vienna Coffee.	Assorted Nuts.
		HAFTED.

NEW ENGLAND SHOOTING WANTED.—Editor *Forest and Stream*: I wish to find some place either in the State of Maine, Vermont or New Hampshire where good duck and snipe shooting or ruffed grouse and woodcock shooting could be obtained from the 10th to the 25th of September; also the person's name who will take boarders in locality. D. D. D.

Read last and present issues.

You might go to Grafton, Vt. Of that locality a letter just at hand says: "Grafton, Vt., Aug. 22.—Agreeable to your request for information as to good grounds for sportsmen to visit with reasonable chances of success, I take the liberty to suggest that we have found of the finest sports grounds in our immediate vicinity, which are square and appear to be well stocked with cock. We have no local hunters with us and very few birds have been killed here at any time. I have no doubt but with good dogs and hunters who are up to the business fine sport could be had. We have a fine hotel and lively stable here, which make very low charges. Just now the hotel is full, but after the first of September they will have ample accommodations for sportsmen. Woodcock are seen constantly in the gardens of the village citizens and I hear of them in many localities.—S. W. G."

SOME SNIPER SCORES.—Louisville, August 5.—The neighborhood of Vincennes, Ind., is said to be the best snipe ground in the State. In an old memorandum book of my dear friend Capt. Gusele, now dead, one of the best sportsmen and loveliest men Kentucky ever produced, I find the following memoranda: "Near Carlisle, Illinois, April 4, 1868.—Four of us killed 244 snipe; April 5 we killed 230 snipe, April 7 we killed 330 snipe, April 8 three of us killed 259 snipe." The best snipe shooting I ever had was on the rice plantations near Charleston, S. C. The fields are square and separated by ditches, the ditch banks being five or six feet above the fields. Four of us hunted in different fields, the snipe flying from one to the other. The snipe were in clouds, like grasshoppers in the fall, and would often alight right at our feet. I am sure that I sometimes saw more than a hundred on the wing at once.—L. P. Y.

ELEVATION IN SHOOTING SHOT.—Recently I bought a new breech-loader, the best in market of course. I ordered a 9-lb., 12-gauge, choke-bore, expressly for long-range shooting, chiefly to use course shot. Upon testing at target with No. 4s, sixty and seventy yards, I found that by sighting direct at the centre in a forty-inch target the greater portion of the charge was found below the centre, but well distributed. Adhering to my old notion that when shot are driven with

such force they could not drop at that distance (sixty yards), I continued the trial, with the same result. By good luck I had found in a book store a pamphlet called "Game Birds," by Thos. Alexander, in which I find many valuable suggestions. Among others he said that shot will drop four inches in forty yards. I concluded to act upon the suggestion, elevating to six inches above the centre spot at sixty yards, and to my satisfaction found the charge every time where I wanted it. At other trials since have had no difficulty in planting from ten to fifteen No. 2s near the centre at 100 yards every time, elevating in the latter case about two feet. Of course in shooting in trees this rule does not apply. Perhaps there are others of your readers, like myself, who have not considered that the law of gravitation acts upon a charge of shot as well as upon a ball.—J.

ADIRONDACK GUIDES AGAIN.—New York, Aug. 20.—I spent over two months last summer on the Fulton Chain of Lakes, and during that time came in contact with a great many of the guides, both from the upper and lower lakes, and found them to be perfect gentlemen in every respect. I did not meet one that I would not trust any lady with at any time and under any circumstances. I believe them to be as a class finer men than you will find in almost any work, in other words, men that are square to the letter. The article in the *New York Mail* is unjust in the extreme, and it is evident that the writer has never been in the company of an Adirondack guide or he would have known that he was entirely wrong and unjust in saying that "the Adirondack guides are a class to be let severely alone."—Vex.

AN UNUSUAL ACCIDENT.—I would ask you the cause for a rifle's holding fire in this manner: A young man out shooting woodchuck had snapped his rifle at one and for some reason it did not discharge. He lowered the gun, drew the ramrod and was driving the charge home, thinking the powder had not entered the tube. The gun discharged while in that position, driving the rod and charge through his hand, which, it is thought, will cause him to lose the use of it. Is it right to suppose a piece of lint in the tube had caused the gun to hold fire, acting as a train to the powder?—Mrs.

[The supposition of our correspondent is as plausible as any we can suggest. The action of the gun was very curious, although not without parallel in our experience. The powder may have been damp and caked, especially if the charge had been in the gun some time.]

BEAR DOGS.—Many years ago when bears were more plenty than pumpkins in the Empire State, it used to be common for hunters to find where they made nocturnal visits to corn-fields and then to take a little whiffet dog, that was trained for the business, and hunt them in the same way that coons are hunted now. The little dog would generally scare the bear and put him to flight and then nip his heels as he ran, which would cause him to take to a tree the first chance he might get, where he would remain long enough before getting over his fright, for the hunter to come up and give him a dose of lead by the light of a torch or large fire. One old hunter, Elijah Dibble, who lived in Delaware Co., was the owner of a well trained dog, and was noted as a great bear slayer. J. H. A.

NEBRASKA CHICKENS.—LINCOLN, Neb., August 18.—It turns out that chickens are not as abundant as was anticipated. The hunters were out for some of the 15th inst. in other words, men that are square to the letter. Mr. Hallett and I stayed in the country Sunday night and began work at early dawn the next day. During the day, after a tramp of nearly twenty miles, over a good dog, we got thirty-seven chickens, all of them pretty nearly grown except three. So far as we can learn it was the best bag made that day; but it was arduous work. It may be, cooler weather will show more chickens.—BURN H. POLK.

ILLINOIS DUCK SHOOTING.—Chicago, August 15.—Duck shooting commenced in this State to-day. Ducks are numerous and we are anticipating fine sport this fall. Chickens and quail are also plenty. A great deal of illegal shooting is going on here and just over the "line" in Indiana, by alleged sportsmen's clubs. Several parties have been fined for shooting ducks out of season, but this does not seem to stop the shooting. Black bass fishing in the small lakes in this vicinity is unusually good.—JIM.

DUCKING ON CHAMPLAIN.—Troy, N. Y., July 30.—I see by your last that some one wants to go duck shooting. I am making arrangements to go to the north end of Lake Champlain on the 10th of September next. Another party is going with me, but we would not object to a third. Am myself acquainted with the ground, and can show him some fine sport. If he wishes he can correspond with me on the subject.—H. W. BRUCE.

PAPABOTTES.—Indianola, Tex., Aug. 16.—Have at last had a fine rain, and the shooting around this place is splendid. "Papabottes" are very plenty and fat. I should say that there are at least a hundred birds a day killed in a radius of three miles of this town, a single gun in an afternoon getting as many as forty and fifty. A few miles up the railroad chickens are very plenty, and there will be plenty of quail this season.—G. A.

NEW JERSEY.—Coster, Aug. 20.—Woodcock shooting has been very poor during July. We may have a fall light, but that is uncertain. I am afraid Bob White has forsaken us, as I do not hear from him as I did last year. I think they will be scarce. Partridges none.—J. I.

KORTSBURY, N. Y.—I have often seen woodchucks climb trees. Partridges have been bred in vast numbers here this summer and promise good shooting in the fall. Woodcock shooting will also be good. Squirrels and rabbits are plenty.—CAT OWL.

ALBANY, N. Y., Aug. 17.—Woodcock are very scarce here this season. I was out with a friend yesterday and day before and bagged six birds only.—J. W. P.

WISCONSIN CHICKENS.—MENOMONIE, Wis.—Chickens are large in size, and larger still in number in this section. MAO.

We learn from Messrs. Upham and McCallan, of Valparaiso, Ind., that the demand for their Holabird shooting suits this season is unprecedented. Utilizing only the very best material, and engaged exclusive manufacture of these suits, enables them to give a perfect outfit.—JAGV.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

FRESH WATER.

Salmon, Salmon.
Brook Trout, Salvelinus fontinalis.
Rainbow Trout, Salmo trutta.
Dolly Varden Trout, Salvelinus malin.
Grylling, Thymallus tricolor and T. variatus.
Black Bass, Micropterus salmoides and M. punctatus.
Macaroni, Esoc. nubilifer.
Pike, Esox reticulatus.
Pike or Pickerel, Esoc. lucius.
Pike-perch (Walleyed pike).

SALT WATER.

Sea Bass, Centropomus atrarius.
Barred Bass or Rockfish, Roccus taurus.
White Perch, Morone americana.
Bluefish or Taylor, Pomatomus saltatrix.
Sculp or Porgie, Stenotomus argy.
Pollack, Polachius carbovarius.
Tautog or Blackfish, Tautoga onitis.
Spanish Mackerel, Cybium maculatum.

Patience, certainly, is a necessary qualification in an angler. Indeed, I remember a Thames fisherman who, on my enticing some displeasure at not having the good sport be promised me, very coolly told me that I should never make a good angler if I could not fish a whole day in a bucket of water without showing impatience.—**EDWARD JESSE.**

ON KING'S LAKE.

OUR club, the "Troy King's Lake Fishing and Hunting Club," has not so long a name, nor so large a membership as some, our constitution limiting our numbers to seven, beside Wacosta, the cook, called "Coose" for short. We are all business men residing at Troy, Lincoln County, Me., a village of about four hundred, more or less, situated in the midst of a splendid farming and grazing country, and by the way, a point well worth visiting by any person desiring to move West from the older States. Land is fertile and cheap. We are twelve miles from two railroads, with another railroad graded to run through the town. Best advantages in the way of society, churches and schools; not a whisky shop in the town, and only three in the county. King's Lake lies in the eastern part of Lincoln County, Me., and is formed by the widening of Bryan's Creek. It is a large lake, long 300 yards wide at widest, and from five to twenty feet deep. It empties into the Mississippi River, which at moderately high water backs into the lake, bringing in vast quantities of fish, many of which run out when the water falls. The St. Louis King's Lake Fishing Club have a club house on the eastern bank, one and one-half miles above the foot of the lake, commodious and well cared for. Their members, so far as we have formed their acquaintance, are gentlemen, and our club is under many obligations to them for favors shown.

Catching out each year as we have done, experience has taught us to reduce our traps to necessities, hence only two wagons are required for our transportation. Sunrise of each third Monday in October find us en route; 11 o'clock finds one wagon with three men catching minnows in Sandy Creek, seventeen miles from home and five miles from our camp on the lake. The other wagon with four men and Coose has gone on to camp. By the time we arrive there at three o'clock, they will have the tent set up, and will be gone for a load of straw for our beds. The remainder of the evening is used up in fixing up for housekeeping, and getting fish for supper and breakfast.

We own two tents, one of twelve ounce duck, fourteen by sixteen feet, the other eight by ten. In the commissary department for our two weeks' supply we have fifty pounds of home-made bread, fifteen pounds of coffee, roasted and ground; twelve pounds of butter, twenty pounds of sugar, ten pounds of lard, ten pounds of bacon side, spices, pickles, cakes, etc., *quantum suff.* All these are packed in a mess-box, the feet are by two and one-half feet deep, with a movable shelf half way down. We also own a dozen plates, a dozen tin cups, a dozen knives and forks, a dozen tea spoons, p. t. s, kettles and pans, axe, hatchet, saw, heating stove, fish box, minnow box, minnow seine, etc. Our total expense for the last four years has been \$3, which includes the purchase money for our entire outfit. It also includes \$25, which whisky cost us the first two years. The last two years we have used no whisky, and find that we do as well or better without it, hence have decided that we'll have no more of it.

Tues day morning finds us all gone from camp, some hunting, some fishing. The fish we have are the black bass from eight pounds down, striped bass from two pounds, and croppie from eighteen inches down. The latter are the most plentiful, and a good catch is about seventy-five per day for each rod. As a matter of sport catching croppie don't diminish much. When they are biting free, all that is necessary is to provide any kind of a hook, line and pole, a two-bushel bag, lead or silver plump, your best down into a brush heap, and you get bites fifty to the hour. The first thing for the tyro is to learn how to drop a hook three feet deep in a tangled brush heap, and to get it out again without losing a hook or line at every other drop. A half ounce sinker helps the matter somewhat; patience and perseverance do the rest. When a croppie bites you lift him in—no kick—no run—no nothing, but to take him off and put him in the can.

Catching bass is a different kind of business, and much slower than the fact that a brush heap will only afford two or three, and you may be sampling round for an hour before you find them. When one bites you'd best "look a little out," or you'll lose fish, line and all. In fishing for bass don't forget to have an open space so that you can run him out of the brush or away from the log. Should you try main strength and awkwardness on him ten to one he gets away unless you should be fishing with tackle only becoming a pot fish. The striped bass of King's Lake is the handsomest fish in these waters, and the greatest. One of a pound weight will fetch equal to a black bass of a pound and a half, and when you get him out he stares at you with his big black eyes, every fin erect and bristling, a picture of rage and defiance. We have named him the "tiger." Four of our club have reels, joint rods, etc. The others, making hunting more a specialty, fish with the ordinary reel pole. I don't know but they catch as many fish as we do, but for my part I don't en-

joy fishing unless I can wind up short, or throw out long, as fancy strikes me, and sometimes I want to put a hook way into a brush heap where a long line couldn't go; or, too, if I should strike a bouncer I'd like to show him to him. In King's Lake we never fish with a fly. Firstly, the water is not suitable in color, and the fish would not rise to a fly. Secondly, fish are only found in brush heaps and drifts, or under old logs, where a fly could not get to the water.

Getting back to our camp as the shadows fade, we find the hunters all in, sitting around the blazing fire, toasting their feet and recounting the adventures of the day. Hanging on the adjacent trees, sundry bunches of mallard, teal, quail, etc., attest that they have not been idle. Cris and Ponto (sleeping under the wall of the tent; Coose is turning the croppies on the pan for the third time; a fragrant aroma of boiling coffee greets our olfactorys, and we hasten to put off our long boots and our slippers and join the crowd. By this time the merry rattle of the gong (dish pan) calls us. For half an hour "the crackling of the bones, Kate, is all the sound we heard." Supper over, a soothing pipe, while more tales occupy half an hour, by which time the lamps have been lit in the parlor, a good fire made in the stove, the table spread, chairs couched up, and the good night is said in the evening. For three hours every fellow tries to break the Colonel. When this happens, which it does once in about two years, the shouts and yells of laughter may be heard a mile, while general handshaking and congratulations pass all round. At eleven silence reigns supreme, save the frogs in the ponds, the occasional paddle—paddle of a steamer going up or down the river, a half a mile away, and the resonant coffee mill grinding of Bonny and Jim.

As goes one day, so goes the next—unless it rains; and then how cross every fellow gets, and how he wishes he was at home with the old woman, and wonders how he ever was such a fool as to leave the comforts of a home to come way down here to wallow and wade around in the mud; we get tired of reading, sleeping, playing, talking and tired of the world generally. Supper is a drag, and dark finds every one asleep or grumbling because his rheumatics won't let him sleep. That's the way in most camps, but not so in ours. We have rubber fish boots and overcoats, while rim hats and duck shoes for men, and rubber boots and duck shoes for women, and we have a ditch and banked all around, and we can be just as comfortable as if we were at home. When Sunday comes we shave, put on white shirts, some of us go over on the bluff to church, some go up the lake visiting and some while the hours away reading and sleeping.

Our bed is of straw a foot and a half deep. Each man is required to bring two blankets and a pillow. After a day's work this seems like a feather bed. Uncle Alex tried a cot bedstead one year, but he became tired of his cot in two nights, and was glad to come down and bunk with us. On our October trip we have no mosquitoes. In warm weather, when they are bad, we take our tent down during the day, leaving the stakes standing. After night falls we put it up, climb under, raise the wall a few inches for ventilation, and not a skeeter skeets under, although outside we hear their hum like a swarm of bees.

The question of one of your correspondents prompts me to write a description of one of our boats. What we wanted was a boat large enough to carry two with their gear, and constructed that it could be hauled across country twenty-three miles without leaking, and steady, besides being cheap. We took two dressed clear pine inch boards, twelve feet long and fourteen inches wide for gunwales, sloped the ends a foot, leaving six inches face at the end; fastened a half-inch clear four inches from the top for four seats to rest on; fastened a cleat at bottom for ribs to rest on; cut ribs, seats and end boards thirty-four inches long. Ribs are two and one-half inches in centre, sloped to one inch at ends; eight of them are enough to support the false bottom of the boat, although we have eleven. The bottom of the boat is of canvas, 44 inches wide, waterproofed with beeswax and tallow, melted or ironed in with a hot sad-iron. (The next time I will lay on the wax and set it out in the sun to melt.) The canvas laps over and is fastened to the gunwale by battens and screws at such distance as will stretch it tight. Three iron rods, similar to the rods in end gate of a wagon and made of quarter inch iron, tighten and hold everything together. The rowlocks are set on a six-inch piece of inch stuff and bolted to the gunwale with quarter-inch bolts and project three inches above the top of gunwale. We use seven foot ash oars. A mast twelve feet high carries fifty square feet mainsail and a spinnaker of thirty square feet, and with a fair breeze carries us about six miles per hour.

When knocked down for transportation the seats, ribs and rods are put in a two-bushel bag; the canvas is rolled up, and gunwales and false bottom lie loose in the bottom of the wagon-bed. She weighs about 100 pounds and cost, including three coats of paint, \$10.50. Can be taken down and put up in about fifteen minutes. She floats like a duck, and is as steady as a raft. Two men can carry her anywhere. She suits us exactly.

The third Monday of October will find us there again for three weeks, three-quarters of a mile below the club house.

OLD HICKORY.

WORMS IN BLACK BASS.

JERSEY SHORE, Pa., Aug. 15.

ABOUT seven years ago our river, the west branch of the Susquehanna, was stocked with black bass. We have been fishing for them for the past three years. They are caught in reasonable numbers and of fair size, up to four pounds in weight. But our sport has been considerably interfered with by the discovery, within the last two weeks, that the fish are full of worms. The worm is about one-quarter of an inch in length and one-thirty-second in diameter, thicker at one end than the other, yellow in color, and when taken from the fish are quite lively. In moving their motion is similar to that of the common anglo worm.

The fish present a perfectly healthy appearance, both inwardly and outwardly. The presence of the worm is not indicated by any sore spots or marks of any kind, but is found imbedded in healthy meat. What we would like to know is, it is a common thing with this fish? What is the cause? And does it unfit them for eating? By giving us some light on this subject through your paper, you would not only oblige an old subscriber but a whole community.—**FRANK TRUMB.**

WILKESBARRE, Pa., August 21.—I am sorry to bother you about a question that you have written about in your paper, but I have not been able to find the certain number. It is about worms in black bass. For the last week very many of the bass caught here in the Susquehanna are infested with worms in the flesh, mostly in the back. I have not seen them

myself, but a friend of mine and also my son describes them as resembling the worms found in chestnuts, but smaller. It is a simple matter to deal with the pest. Will you kindly tell me through your paper whether the worms are likely to leave the fish in a short time or how long they usually remain in the flesh? Don't think they are hurtful to the cat, but the sight of them is, of course, enough to give up eating bass. The eels are also said to be full of worms just now.

Ans.—This question is coming in from all quarters. See correspondence in this and last issue. Read article entitled "Worms in Fishes," in issue of June 16, 1881, page 390.

Every year these reports come in. It is natural for the fish to have these parasites, and we eat bass, worms and all. If you want the worms worked up, put a piece of the flesh containing plenty of them in alcohol for a week, and then take it out and wrap it in muslin wet with the same—or put it in a vial of glycerine. Box it and send it to Mr. F. W. True, Smithsonian Institution, Washington, D. C., advising him at the same time, or to Mr. R. T. Morris, New Haven, Conn.

MY FIRST FISHING TRIP TO THE AU SAUBLE.

MY first fishing trip to this river was made in 1874, during the month of June. There were four of us in the party: Geo. MacF., T. B. M., W. J., more often known by the name of "Silas," and myself. We left Stratford about one o'clock, and by dark were comfortably fixed up in our tent on the river bank cooking our first meal and endeavoring as well as we could to work, and kill the insect population at the same time. When we arrived at Port Franks we got three boats from old Adam Kienery, a resident there, then hauled our baggage to the river bank and having stowed it all away, we started down the river. About half an hour brought us to our destination, a nice spot of high land in a small grove of poplars. The tent was soon put in cool shape, and then the before-mentioned supper followed. After this a game of cards and a smoke passed away the time before turning in, the last operation before closing up for the night being the fumigating of the tent with a smudge built in a frying pan to clear out the mosquitoes, and flies, *et id genus omne*. If this process was well attended to, there was a chance of being able to get a little sleep, but if it was not, it was war to the knife until daylight.

The river opposite our camp was about 150 yards wide, and ran parallel to Lake Huron for about five miles, nothing but a range of low sand hills separating them, so we had nothing to do but cross the river and run over the neck of sand about two hundred yards to get the poplars for our tent, and the river was very deep, without any current, and filled in places with sand bars which were great places for the bass in spawning time. The shores were lined with rushes and water plants which gave cover to many a large and hungry pike and bass, who here found a good hiding-place.

On the morning after our arrival I turned out at daylight and, taking one of the boats, floated down till I came to the foot of one of the sand bars which I thought was a promising looking place. Feeling the boat a lump, I pointed my rod and began operations, and with such good success, that by eight o'clock, when I returned to camp, I had nearly sixty fine bass in the bottom of my boat. The others had not done so well, not being accustomed to bass fishing. I first used worms, then live minnow, but soon changed to a small silver spoon painted red inside. This I trolled with the rod, and I seldom had to make two casts without drawing a prize.

The rest of the day was spent in preparing the fish to take home and in rifle practice. I had brought my twenty-two calibre rifle with me, and a plentiful supply of cartridges, so the time passed away pleasantly enough. In the evening about sundown we tried the fishing again with the addition to my score of about half the number caught in the morning. Then supper, and war or smoke again. This night some sand fleas found us out, and they cared nothing for smoke, so it was out of Scylla into Charybdis. The mosquitoes were driven out, but the fleas lit and held on. After vainly trying to sleep, the party took possession of the only hammock, and stringing it up outside, bravely resolved to face all the mosquitoes in the country rather than face other insect tormentors that could not be got at. In parentheses, I would say, when the aforesaid member of the party arrived home a week after, his friends anxiously inquired if he had the small-pox, so covered as he with bites, so much for resolution.

We went daily to the lake and had a bath in its cool waters, which helped to cool down the inflammation of the bites, and soon the sores from our bites disappeared. I find that it flew about in the slightest breeze like dust and penetrated everything not cased in metal. Close your teeth at any time and they gritted on the sand; and cover the provisions as may be still the sand showed up in the butter and the bottom of tea cups after drinking. On the third morning I announced my intention of going some miles up the river and fishing down during the day. "Silas" volunteered to accompany me, so we put in some lunch and started. After pulling about four miles from our lodges, I saw a large, rolling, white sand bar, and the bank on one side of the boat. The luck was very evenly divided, each catching some fine pike and large bass. About two in the afternoon a thunderstorm came up. It was then out and run; but it was up us before we went a mile; so we ran up into the oak woods and took off most of our clothes, which we put under the bank to keep dry, and then sat it out. It did not last long, but was very heavy while it did come down. After the storm the sun came out very warm and the fish bit savagely, and the celebration of our luck back to camp the finer lot fish that came in during the trip.

The rest of the time was spent in much the same way as these first days, and some of the party became very good marksmen in consequence, besides learning the art of catching a black bass with credit to themselves, as two of them caught their first on this trip. Our largest bass weighed within a trifle of 44 pounds and the largest pike 72. I caught one maskalong which stood the balance at about the same as the pike. I must not omit to say that I secured numerous specimens of the turtle tribe, from the size of a cent to one about eight inches long. To say that they were plentiful conveys no idea of their numbers; every small log in the water glistened with rows of them and many of them got upset by collision with a 22 bullet. Of the size and weight of the insects I know nothing; judging from their capacity for drawing blood they ought to have been as large as clip plants, for most assuredly they tormented one more than one of these mammoths would.

One incident of the trip and I am done, as it relates to our mosquito friends. On the fourth night in camp Y. B. had been elected to keep the snuggle in good order during the night so that the sleepers might have a chance to sleep. He faithfully stuck to his post all night in the land of dreams, when he put in a good amount of damp punk, which smoldered away slowly, and laid himself down for a nap. Before doing so he pushed the pan away from him in my direction. I was enveloped from head to foot in a good quilt, which covered my head to help to keep off the assaults of the enemy, and in turning over during the night it was my luck to roll right into this snuggle. At first it was not felt, but presently a sensation like a sharp bite near my lip caused me to scratch the spot, but before I could do more I found myself rolled over by Y. B. and nearly caught up to a state of insensibility, which I was unable to resent or repel. I was soon extracted from my shell and then the damage became apparent. There was a hole in my quilt large enough for me to crawl through, while I was decidedly the worse for wear in my garments which covered the nether man. Sitting down was somewhat painful for some time and had to be gone about carefully, inspecting the chair previously to find out the softest part of the cushion, but I happy to say the trouble was not more serious. AL SAMBLE.

FISH BUTCHERY IN INDIANA.

INDIANAPOLIS, IND., August 20. A new sort of fish butchery is being practiced in this State. They are, from reliable reports, being killed by thousands by use of dynamite cartridges. The "meditative man" will find little recreation in this State if this thing is not stopped soon. Inclosed are a sample of newspaper clippings which may be of interest to readers of FOREST AND STREAM.

"The destruction of fish in the Whitewater by dynamite fish torpedoes is not confined to the locality of Richmond alone, but extends for thirty miles along the stream and its tributaries. It is estimated that ten thousand fish have been destroyed by them. At Cambridge City there are hundreds of them that weigh two pounds or more apiece floating in the old Whitewater canal. Only the best ones are taken by the fishermen; the others are left in the water.

"An initiatory meeting of gentlemen interested in preserving and protecting fish in the streams of Indiana was held on the 15th at the office of Ignatius Brown, and there was a large attendance. A temporary organization was affected by calling John A. Finch to the chair, and electing Frank T. Holliday secretary. Ignatius Brown, Alvin C. Jamison and Mr. Finch were appointed to draft a constitution and by-laws for submission at a meeting to be held at the same place tomorrow evening. Reports were had from a number of counties in central Indiana, showing that dynamite cartridges were being used with deadly effect in the streams, destroying the fish in such numbers that unless the practice is soon discontinued, no fish will be left. Some idea of the effect of these cartridges may be gained when it is known that an explosion kills every water animal within a radius of fifty feet. The dead bodies then float, the largest and the best up to the remainder allowed to float away. One dealer is reported to have sold \$200 worth of these cartridges in one day at twenty-five cents each. Their use was denounced in the most unqualified manner, and the suggestion to abstain from patronizing any establishment that deals either in cartridges or seines met with unanimous approval. The new organization will start off with a membership of over three hundred, composed of gentlemen of abundant means, to see that the fish laws are enforced, and doubtless other organizations will be made throughout the State. SILAS.

BASS AND TARPON FISHING.

IN your last issue I noticed an error which needs correcting. In publishing an extract from my letter to you, you made me state: "From this time until the middle of December the fishing will improve." The word September should have been used.

Now, I have been tarpon fishing and failed to capture one of these specimens of "greased lightning." My main object was to capture a tarpon and do a little bass fishing. I left this city on Thursday, August 21, and arrived at Mayport at 6:30, and soon after landing engaged the steamer and commenced depositing bass chowder, shrimp, fried sheephead and devilled crabs at Burrough's hospitable board.

On Friday and Saturday I fished, when the tide suited, and hooked three tarpon—one six, one seven and one eight feet long. They were not measured, but length estimated when they were performing their acrobatic feats, and I can assure you that their length was not stretched. The seven-footer I played until he was beyond jumping, when we started for shore to bring him to gaff. In towing across friction against his scissor-like jaws parted the snood and he was very soon "sleeping sweetly." Owing to the small size of the boat and the muscular development of the fish, I declined using the gaff and landing him in the boat, and in consequence I came, I saw, but I did not conquer.

As I went tarpon fishing, I paid but little attention to the channel bass, but I captured seven of the following weights: 40, 35, 31, 28, 26, 23 and 21 pounds. Tarpon are hooked almost daily, but none have been landed within four years. I have captured many varieties of fish and in several countries, but never experienced anything to equal the struggles, rushing and acrobatic feats of the tarpon I rendered *hors du combat*. If any of your readers are desirous of enjoying piscatorial sport *par excellence* and witnessing horizontal and vertical jumping, let them visit Mayport, fasten to seven feet of tarpon and their every wish will be gratified. Jacksonville, Fla., Aug. 15. AL FERGUSON.

LARGE TROUT FROM CHATEAUGAY LAKE.

LYON MOUNTAIN, N. Y., Aug. 18.

Inclosed find stereoscopic view of a large speckled brook trout taken here this week by Mr. O. M. Bogart, Jr., of your city, which weighed three pounds six ounces. I only regret that I could not have shown you the fish instead of the picture. Trout fishing has been good here all the season, but this is the largest taken so far. The season has been very prosperous for me, and it is my intention to double the capacity of my house next season.

Though the medium of the FOREST AND STREAM and a few such gentlemen as Mr. Charles Dennis, Jr., Mr. E. G. Arthur and Mr. Charles Stokes, all of New York, and of the Stock Exchange, I believe, I have had a house full of very excellent people, all of whom I think are pleased with the house and lake. M. D. RALPH.

CAUGHT ON THE FLY.—Plattsburgh, N. Y., August 10.—A singular event occurred to the Dominie yesterday, which he is constrained to tell to the fraternity of him who said "I go a-fishing," the "apostolic succession" of the writer touching for its truth.

While casting flies on Mead's Pond, a private trout preserve, the birds were numerous over the water, skimming it, as it were, with rapid flight, catching the bugs that live upon the surface. An unusually long cast had been thrown, perhaps fifty feet, with two flies upon the leader—one a coachman and the other a Montreal—when, just as the line struck the water, a swallow "struck" the fly, hooked himself and fluttered in the air with hook and line pendant from his bill for the space of ten or twelve seconds. How's that for a flying fish? THE DOMINIE.

GREENWOOD LAKE.—Having passed two weeks in a very comfortable manner at the Encampment Hotel, at Warwick Woodlands, on the shores of Greenwood Lake, it is but just to say that the accommodations provided were all that could be desired by any one who can enjoy a tent for a bed-room and parlor, instead of being housed up in a hotel building. The tents will be left standing a few weeks longer, so that any one who desires camping out with the comforts of a good hotel table and attendance, can improve the opportunity. The Brandon, Windermere, Traphagen House and others at the upper end of the lake have been doing a fair business throughout the season and are well patronized at present. The fishing on the lake is fair and catches of bass weighing forty pounds and upwards have been made in a single day. A little episode occurred while still-fishing that was humorous. I hooked a strong 25-pound bass and gave him plenty of line, as my rod only weighed 7½ oz. All of a sudden I could not feel my fish and was trying my best to reel in so as to feel him once more, when my friend said, "What are you doing? Your fish is in the boat." Sure enough, there he was, on my rubber coat, behind me, having run under the boat, and in making a leap landed in the boat.—T. C. B.

DEVIANCE OF LAW IN NEW YORK.—A special correspondent of the Syracuse Standard pictures an organized gang of poachers on Skaneateles Lake. "It is a shame," he says, "that these robbers cannot be brought into subjection, but the fact is, and we can't disguise it, the lake is literally ruled by the New Hope rangers. They act as they please, knowing that the warnings they have already given of their power and daring will hold in check all the efforts to get the upper hand. They have no regard at all for the law, being utterly reckless in what they do. They have hunted horses, sunk boats, stolen horses and done many other things equally as lawless, simply out of revenge for attacks on what they consider their rights. Our Sportsman's Club which had slumbered for years, was reorganized last year for the purpose of attempting to break up the illegal fishing, but the thing flattened out. The truth is most of us were frightened off. Unless some measure is taken soon to quell these desperadoes there will be no safety in navigating the lake unarméd."

The fact that a reign of terror exists upon the shores of Skaneateles Lake has not been of recent discovery, nor is positive knowledge of it confined to the more frequent visitors to that beautiful sheet of water. It is instigated by organized bands of moonshiners, who laugh to scorn the best legislative efforts to protect the fish of the State, and hold at bay those whose duty or desire it is to see the law enforced. The so-called "New Hope rangers" are a body of reckless fellows hailing from New Hope, Cayuga County, on the west shore of the lake. They swarm to the shores after nightfall, cast their seines into the water and draw them full of fish, without an unwholesome giving a thought to such a person as a game constable.

LARGE TROUT IN SARANAC LAKE.—Saturday, Aug. 20.—In your issue of Aug. 14 I saw a note from Al. Burr relating to the landing of a 23 pound trout, nothing being said as to the variety of trout or the manner in which was caught "the largest of the season." During the past month Dr. M. H. Williams, of your city, has been in camp with me at Big Trout Pond, and on Aug. 18 caught, among eleven of lesser weight and size, a speckled brook trout weighing 3 pounds, and measuring 18 inches in length, with a 9 oz. rod and a brown hackle. Mr. Hathaway, in camp with my father—Calvin Brown—almost equalled this the next day, and we think a 20 pound mess of this size fish "no great shakes," and it can be done every day during the season. A five-pounder has risen to the fly several times, and his capture is but a question of time, of which you will be duly notified. LOWELL BROWN, Guide.

A STEP BACKWARD.—The New Hampshire Legislature has passed a bill or resolution exempting the Contoocook River, one of the principal rivers of the State, from the law in force for several years requiring all owners of dams to provide suitable fishways. This river was stocked with salmon some years ago, and it is needed to make them plenty once more in an open way.

All dams on the river, with the exception of one or two, have been so provided at great expense. It seems strange that such an act of injustice should be allowed to pass when the principal party in getting it through was one of the company who have been violating the law for nearly two years.

It was put through in the rush of business at the close of the session, and not understood, or it would not have been approved by so intelligent a body of men.

Where is the New Hampshire Game League? JUSTICE.

LARGE MASALONGUE.—Camp of the "Kingfishers," Intermediate Lake, Mich., Aug. 12.—Two weeks ago to-day I took in Bower's Lake, fifth lake above this, a masalongue four feet four inches long, twenty inches girth at pectorals; weight, about 18 pounds. It was a fine specimen, and was a steel yard that pulled thirty-two pounds. He flipped the ball up vehemently at thirty-two pounds, so we felt safe at calling him a thirty-five pound fish. A Canadian that has speared numbers of them called him a forty pound fish. I took him on a seven and one-half ounce rod, speckled frog; time, an hour and a half.—KINGFISHER.

SULLIVAN COUNTY FISHING.—Eldred, Sullivan county, N. Y., Aug. 22.—There is a lake near my house where perch averaging from a quarter of a pound up to one and a quarter pounds actual weight have been caught by the hundreds; and pickerel from one to four pounds. New York references can be given.—I. M. BRADLEY.

STURGEON VERES'S HALIBUT.—Albany, N. Y.—In a late copy of your paper I saw that the fishermen on the Lakes were smoking the sturgeon and fraudulently selling it for halibut. To an Albanian that sounds like smoking good beef and fraudulently sending it for mule meat. Why the sturgeon, which is much more valuable in my estimation, to halibut should be the subject of so much absurd prejudice I don't see. It is not only a good fish, but a most excellent one, if properly cooked and eaten without prejudice.—ALBANY.

LARGE SHEEPSHEAD.—Jersey City, Aug. 23.—John Peck, of this city, while fishing in New York Bay (off the Sinker Island), on Monday last, caught a sheephead weighing 6½ lbs. Haven't sheephead been strangers to New York Bay for sometime?—RUSTIC.

BLUEFISH AT CAPE MAY.—Aug. 19.—Just now bluefish fishing is fine at Cape May, N. J., and all along the Jersey coast. Anglers are doing good work. At Bitterton the big perch are biting freely and in our Delaware and Schuylkill black bass are being caught in fair numbers. It seems that eight out of ten of the fish are taken after 6 o'clock p. m.—HOMO.

FISHING AT LOON LAKE.—Hornellsville, N. Y., Aug. 14.—In reply to your invitation to tell of any good places for hunting and fishing I would say there is good black bass and pickerel fishing at Loon Lake. Loon Lake is in Steuben Co., N. Y., ninety five miles from Hornellsville and five miles from Wayland or Liberty on the Rochester division of the Erie R. R. The lake is formed entirely by springs, and is one of the highest bodies of water in the State, being over 400 feet above the Cohocton Valley, which is only four miles distant. The altitude of the lake is a strong argument in its favor as a summer fishing place, being healthful, cool and pleasant. No mosquitoes or black flies. There is a good hotel at the lake, Lindenwood Cottage, kept by G. E. and C. Cotton, whose address is Cohocton, Steuben Co., N. Y., Board, \$1 per day, which includes use of boats. It is at Lindenwood that once a month through the season clubs from Rochester, Hornellsville, Genesee, Naples, Dansville, Wayland, Cohocton, Corning and other places meet for a grand glass ball shooting match. No liquors are sold on the premises. Fishing is much better than usual, as there was no fishing through the last winter, the ice being so early prohibiting the same during the winter months.—J. OTIS FELLOWS.

Fishculture.

REBUILDING THE MCGLOD HATCHERY.

DANNO, Santa Clara, Cal., Aug. 2. One prediction has been fulfilled, the hatching house, built on the McCloud River bids fair to be a successful one. When Mr. Stone arrived in May, nothing had been done toward rebuilding the hatching and dwelling houses carried away by the high water last winter, except to get about forty thousand eggs of salmon on the ground. Since then, through Mr. Stone's personal superintendence and the harmonious working of the several forces of men, much has been accomplished toward the reconstruction of the establishment. A comfortable two-story dwelling house for the men and a good built and equipped hatchery, with large houses, 25,000 ft., is rapidly progressing toward completion. This latter building is to contain all the hatching apparatus which is to replace that carried away last winter.

A water wheel of great power, thirty-two feet in diameter, for furnishing the water supply for the hatching house is also being constructed. It is supposed that this wheel will lift a hundred thousand gallons an hour into the hatching house. Mr. Stone expects to have everything in readiness to take the first eggs about the last of August. If possible, he intends to take ten millions. There seems to be an unusually large number of salmon in the river this year.

The bridge across the river is closed, so that no more salmon go up to the headwaters of the river after this.

One prediction has been fulfilled, the hatching house is also being constructed. It is supposed that this wheel will lift a hundred thousand gallons an hour into the hatching house. Mr. Stone expects to have everything in readiness to take the first eggs about the last of August. If possible, he intends to take ten millions. There seems to be an unusually large number of salmon in the river this year.

GEORGE J. WILLIAMS, JR.

FISHCULTURE AT THE PARIS EXPOSITION.

WE have just received the report of Mr. T. B. Ferguson, Commissioner from the United States to the Universal Exposition in Paris, 1878, on fishculture.

The author says that it was a matter of surprise, as well as of regret, that an exhibition so replete with objects of art, and illustrating almost all the products of human industry, should have found deficient in the department of which his report treats. It was natural to expect that France, having taken the initiative in the industrial propagation of fish, under the lead of M. Quatrefages, M. Coste, M. Milne-Edwards and others, and having set an example to the world by taking hold of the question of fish culture, should have represented in the fullest detail the advance of this important industry in Europe. But, as the report shows, the illustration of the modes and appliances of fishculture, and of the implements and means employed in the fisheries, was exceedingly poor.

It may be attributed to the absence of the Germans, now the foremost nation in Europe in fishculture, on account of the bitter feelings consequent upon the Franco-German war. France made comparatively no exhibition of fishculture processes, except in the system culture of the industrial propagation of fish, and in the fisheries of M. Carboneau, being the only exhibitor from France, and he only showed a few implements and devices employed by him about his aquaria. The United States did not attempt a fishculture exhibit, because no provision was made for co-operation in the exposition until very near the opening of the lake to make a creditable showing. The apparatus in the Trocadero Aquarium consisted merely of a model of an apparatus designed by M. Thack, Director of the Establishment at Hueningen, for retarding the hatching of the eggs of the Salmonidae by use of water sucking, a modification of Williamson's California hatching apparatus, a modification of a conical hatchery, alleged to be an invention of Mr. Wilmot's. These and a transporting can of M. Carboneau's comprise the apparatus.

With such poor material Mr. Ferguson makes out to fill his remaining pages with interesting matter relating to French laws regulating the capture of fishes and for their protection, directions for restocking streams and transporting fish, maritime fishing statistics, the relation of the yolk to carp culture, the feeding of young fishes, a list of exhibitors in the fishery department, sea tanks, history, food products, implements of capture, etc. Much space is given to the fresh water aquarium, which was a grand feature of the Exposition.

This aquarium covered a surface of about 3,200 square meters and was mostly subterranean. It was not covered by a building, but erected in the open air, and rocky columns supported a roof, which gave the whole an appearance of a cavern. The report is a very creditable one considering the paucity of material.

"An octavo of 535 pages and 24 plates of fishing vessels and nets, besides several figures of fishculture apparatus. Unbound, bearing the name of the author, the Universal Exposition, Paris, 1878. Reports of United States Commissioners, Fishculture. Thomas B. Ferguson." No imprint of publication office, date, nor index.

FIXTURES.

BENCH SHOWS.

September 21, 22 and 23, at Franklin Pa., Franklin Sportsmen's Club (Gentry) and the Pennsylvania Bench Show. Entries close September 15. Thos. D. Adams, Superintendent; P. O. Box 61, Franklin, Pa.

September 27, 28, 29 and 30, at London, Ont. London Dog Show. Entries close September 12. Charles Lincoln, Superintendent, Tecumseh House, London, Ont.

October 1, 11, 15 and 16, at Lowell, Mass. Lowell Dog Show. Entries close September 6. Chas. A. Andrews, West Oxford, Mass., Superintendent.

FIELD TRIALS.

August 20 and 21, and September 1 and 2, at Norfolk, Neb. Nebraska Field Trials second annual meeting. J. W. McCartney, Secretary, Norfolk, Neb.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. J. R. Stoyton, Secretary, Pittsburgh, Pa.

September 12 and 14, at Pittsburgh, Pa. Colts Trials, held under the auspices of the Pennsylvania State Agricultural Society. Entries close September 8. Eldridge McKenney, Secretary, Harrisburg, Pa.

October 1, at New York City. Eastern Field Trials. Entries close September 15. Jacob Pentz, Secretary, P. O. Box 23, New York City.

November 7, at Gilroy, Cal. Field Trials of the Gilroy Rod and Gun Club. Entries close November 1. E. Leveyer, Secretary.

November 22, Louisiana State Field Trials. Entries close November 1. Edward Ouellet, Secretary, New Orleans, La.

November 22, Grand Junction, Tenn. National American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

THE TWO FAMULAR FLEAS.

Editor Forest and Stream:

Perhaps some of your readers can offer a suggestion, which has occurred to me, by which I may rid my kennels of fleas. I have five bitches and several puppies on my place in the country, which I keep in a barn 30x60, devoted solely to their use. Scrupulous cleanliness is observed on my place in proof of which I may state that I have kept as many as three hundred and fifty chicks in this barn at a time, entirely free from vermin of any kind. The barn is whitewashed with a strong solution of carbolic acid in the water, three or four times in the season. The dogs are washed once a week; they have free access to the light soil outside of the barn, each dog having a sort of "box stall" on the interior of the barn and having separate ten foot runs outside the barn. They are exercised and given unlimited runs in the fields two hours in the morning after sunrise, and twice as long after sunset, and all are given a swim in a fast-running stream on the place once daily. They are fed at the same time, and food is allowed to lie about the place, the entire barn is swept as clean as a pin daily, and bedding added in the sun every morning, changed every third day.

The dogs, bitches and pups are a large Newfoundland, a St. Bernard bitch, a red Irish setter bitch with a litter, a Scotch terrier and a York-hire terrier with pups. With such a small array of dogs and so large and clean a stable for housing them, one would suppose I would be free of trouble from vermin, but they are on the dogs by the thousands.

I treated them with castile soap, but the fleas were back in twenty-four hours. I tried imported soaps and exterminators, but the fleas were there next morning. I oiled the dogs; three days after that was a regular flea picnic on every dog in the place. Desperate, I hit five or six times of genuine castor powder and killed it into three or four infirmities. Result, wholesale slaughter of those on the dogs, but a fresh army appeared on them in three days.

I began to believe they were in the barn, and merely skipped off the dogs at washing time, and was sitting on the beams calmly waiting the return of the dogs when dried. I shut every crevice in the barn and burned five pounds of sulphur; the fleas took it and waited more evidently, for every dog was scratching for dear life a few days afterward. Then I whitewashed (carbolic) the floors, walls and rooming and the dogs lie on straw, stored twenty-four hours in carbonated water and smelling strong enough to knock you over. Result, same as before.

Then I took the dogs over on my neighbor's place and washed them there, hoping they would hop off and stay there. They hopped off but I believe every mother's son of them hopped back again that night.

Then I chained the dogs under the trees and dug up the ground eight inches deep, replacing the soil with sifted road dirt—white, clean, rolled in the wheels of a horse-drawn roller, and sifted line soaked in carbolic acid. Those dogs were scratching themselves when I was at the kennel this morning and I am in despair. I was never so pestered in my life; I am practically keeping fleas and letting dogs run on them. I think this case "takes the cake," but can you tell me what will "take the cake"? To be sure, I am in despair about; perhaps some of your readers can advise me and oblige.

Ridgewood, N. Y.

N. B.—No visitors of dog span, flea exterminator, or insect powder used anywhere. "I have been there," and so have the fleas; and all we returned just as we went.

PREVENTIVES OF HYDROPHOBIA.

Boston, Aug. 15, 1881.

Editor Forest and Stream:

In reading your current number I became much interested in the letters under the heading "Preventives of Hydrophobia." The claim made by R. S. for Elecampene was advanced some forty years ago, but it never proved of any worth. Hundreds of remedies have been announced as "sure cures," but have always failed under trial, and the only mode of cure properly applied is an almost sure preventive, but exclusion of the wounded part is the only method that can always be relied upon.

Does R. S. prove the value of Elecampene? Sir Thomas Watson M. D. F. R. S., President of Royal College of Physicians, London, Physician of Middlesex Hospital says: "But few upon the whole of those bitten by a rabid animal become affected with hydrophobia. Different animals are susceptible of hydrophobia in different degrees. Of dogs two out of three; the majority of horses; cattle less than three; the human being least of all in danger. Dr. John Hunter says in twenty-one out of Dr. Hamilton one in twenty-five. And from all investigations the ratio will be found to be about one in sixteen."

There is no doubt that the majority of human beings who are bitten by a rabid animal escape the disease. This may partly be owing to an inherent inaptitude of accepting it. Some persons do not contract contagious disease though often in the way of it, and on some the contagion even of small-pox has no influence. The symptoms of hydrophobia have been observed in the following cases:

Dr. Golding Bird mentions a case of poisoning by strychnia wherein the symptoms so closely resembled hydrophobia that it was called false hydrophobia.

Dr. Hasell says a patient took strychnia for paralysis. "The state so strikingly resembling hydrophobia continued more than a week."

Sir Thomas Watson says: "It seems from credible authority that the same group and succession of symptoms as characterizing the disease when produced by the bite of a rabid animal have been observed to occur in persons who were never known to have been bitten."

Dr. Huch in his work on Tetanus calls attention to the great similarity between hydrophobia and tetanus.

Dr. Meade in a case of palpitant of the heart.

The majority of accounts are inaccurate and most newspaper reports wholly untrue. I will only cite one instance out of the many. The following account appeared in the Boston Sunday Herald in March last.

"A MAD DOG'S VICINITY."

"A frightful death recently occurred at Dallas, Texas. About a year ago George Arnold, of that city, was bitten by a dog which was frothing at the mouth and showing every symptom of hydrophobia. Mr. Arnold had the wound sutured and was kept every other precaution which was suggested, but at the time under a mortal dread that the virus had gone into his system and would sooner or later kill him. He had a wife and several small children, and the thought that he might suddenly lose his reason and harm his little babies terrified him. The other day he was taken to experience strange delirium and a convulsion. A time had come. He then procured a twelve-foot trace-chain and strong lock and went to the woods. After writing his wife a calm letter, in which he told her what was about to happen, he ran the chain around a tree, drew it through the large ring at the end and then wound the other end around his ankle so tight that it would not slip the foot, locked it with the lock, and threw the key far beyond his reach. The body was found two days after, still chained to the tree. There was all the evidence necessary to show the horrible death from hydrophobia. The account was taken over the full length of the chain, the nails of the fingers wrenched off and all his front teeth gone in biting and scratching the tree, and every thread of clothing off his body."

This infernal lie was published in a paper whose circulation is some 80,000 copies a day. It was a gross violation of its falsity, but, to be sure of my ground, wrote the postmaster at Dallas, Texas, and inclosed a copy of the paper. He sent the following reply:

"Not a word of truth in the enclosed printed statement. I have investigated the matter and know whereof I speak."

Respectfully, A. M. COCHRAN, P. M. R. Boston, Mass., August 17, 1881.

AN UNUSUAL CASE.

MASSENA KENNELS, BARRYTOWN, N. Y., August 3.

Editor Forest and Stream:

I wish to give you and the readers of the FOREST AND STREAM the benefit of some particulars in the case of a dog which I presume was rabid in my kennel, which ended in death of one of the dogs by the disease this morning and my shooting the other two a few days afterward.

On the Monday of my kennel-keeper reported that my dogs had a fight in the yard of my kennel and that one of my hound pups, ten months old, was injured in the hind legs. I went to look at him and found him lying on his side, unable to get up and very restless in the hinder parts and moaned when I moved one of his hind legs.

I saw nothing unusual in the saliva at the time and concluded he had been thrown against the fence in the fight and injured or bruised, and therefore treated him accordingly. All went well until Thursday, when my kennel-keeper informed me that the dog was "foaming at the mouth." I went and looked at him and found that the saliva was running out of his mouth in long, glutinous threads, which he languidly attempted to suck up. So I ordered him watched, but no further important symptoms exhibited themselves except a difficulty in swallowing food; no great thirst was manifest, but there was the same look of frothiness at the mouth until he died—his whole forehead was covered with it.

The other two pups (same age and same litter as the one just died) looked and acted as usual until yesterday morning, when my kennel-keeper informed me that they were worse than the other dog, but waited to see what symptoms would exhibit themselves in the first-named dog and then acted accordingly, which I did, and then shot them both when I found the first one had died from the effects of the disease.

His death I considered conclusive proof of the nature of the disease. Am I right?

I would also like to ask—if a dog which has been inoculated by another dog having rabies, but which never showed, and not exhibited itself, were to go to the same kennel, would that bitch or her offspring be liable to the disease from that source?

JOHN ASPINWALL.

[The symptoms given in case No. 1 are those of rabies, although not specifically so. It is not probable that the offspring would inherit the disease.—Ed.]

MR. HOE'S COCKER BITCH, NELL.

HORNELLVILLE, N. Y., August 15, 1881.

Editor Forest and Stream:

In your last issue I read with a great deal of interest your notice of the cocker bitch Nell, the liver and white cocker bitch, Nell, by Mr. Hoe. My experience in breeding and handling cockers, covering a space of more than twenty years, has led me to think that the measurements of Nell as compared with her weight make a singular comparison. Now, for instance, the old standard Bencel's (which is 15 in.) weighs 34 or 35 lbs.; a girl of about 21 in. length from tip of nose to occiput 32 in., occiput to root of tail 30 in., girth of head 15 in., etc. Now, you give Nell's weight 22 lbs., girth of chest 23 in., girth of head 14 in., length from tip of nose to occiput 31 in., girth of foreleg 5 in., height at withers 9 in.—Wilder will be well up in the thirties, still his girth is but a trifle more than Nell's. Mr. Dalziel may be correct in his measurements, still I am willing to pay quite a sum for a railroad ticket that will carry me where I can see a cocker of the above measurements that will only turn the scales at 22 lbs. I may be wrong, but I am inclined to think those observations were taken through blue glass and with a defective tape. Her girth measure is one inch more than Bencel, length of body the same, length from tip of nose to occiput one-quarter inch shorter than Bencel's, girth of head one inch less than Bencel's. Benedict is six inches higher, but that, of course, must be in leg only, according to girth.

[Our correspondent states that we give Nell's weight and measurements. This is not the case. If he will turn to the article referred to, he will find that we state that the measurements were given by Mr. Dalziel, and that we have no means of ascertaining their exactness. Until he knows that Mr. Dalziel's figures are incorrect we consider it would have been in better taste to have omitted the remarks concerning the "blue glass" and "defective tape."—Ed.]

LOWELL (CLASS.) BENCH SHOW.—There is to be a bench show, held at Huntington and Jackson hills, Lowell, Mass., on December 14, 15 and 16, in connection with and under the auspices of the Middlesex Poultry Association. Entries close December 6. This will be the first of a series of bench shows at Lowell, and it is expected that a large number may be shown at annual one, and those interested, talk of organizing a kennel club. Two years have elapsed since the Massachusetts Kennel Club gave an exhibition, and there is no reason why not only the kennels of New England, but those of the whole country, should have no representation at such a show at this place. But the season chosen, however, is too late, and the experience of those who sent their young dogs to Pittsburgh last January was extremely unsatisfactory. The climate is generally so severe before Christmas, and the changes of temperature are so sudden that a dog must needs have an iron constitution to stand the overcast and crowded hall, and the exposure in taking his runs in the open air, and then pull through without being put on the sick list. Winter shows are not desirable in America, and I trust that those shown your young stock at that season will know the truth of the above statement.

The following are the rules and regulations to govern the show: As this is the first bench show ever held in Lowell, the committee

tee of arrangements find it impossible to name at present the amount of each prize, but purpose to divide all entrance fees (less ten per cent. for carrying forward a year), together with \$100 already contributed, in as fair and equitable a manner as possible; and they would ask of all interested in our canine friends to come forward and exhibit their pets—to give the venture all the advantage they can. The more numerous the entries, the better, therefore, will be the prize.

This show is gotten up, not as a money-making scheme, but to create and cultivate an interest in improving this most intelligent and useful animal, the dog.

Rules and Regulations to govern the Exhibition of Dogs.—[Exhibitors are particularly requested to read and to take themselves thoroughly in regard to the following rules, as errors may be fatal to successful competition.]

Rule I.—Every person who exhibits a dog on this show must be the owner of said dog at time of entry and it is made his entry on blanks furnished by the superintendent, which must be read by addressing Charles A. Andrews, P. O. Box 80, West Oxford, Mass.

Rule II.—No dog shall be qualified to compete or entitled to receive a prize if awarded, which is suffering from mange or any other form of contagious disease.

Rule III.—A person duly qualified, appointed by the committee, shall decide whether a dog is or is not suffering from mange, or any other contagious disease, and shall give his opinion to the committee. If the show, and of course the dog, is afflicted with any such disease, the dog shall be at once removed.

Rule IV.—The judge will be instructed to use his own best judgment in judging every class.

Rule V.—The entry fee for each dog to be charged for each animal except unweaned pups. The entry fee must in all cases be paid before the entry. Entries will be received until noon December 6. Dogs must be at Jackson Hall by nine o'clock A. M., Wednesday, December 14. The entry fee will include care and feed of dogs.

Rule VI.—Exhibitors will be instructed to take home their dogs every evening after the show is closed, upon leaving a deposit of \$5 with the superintendent, which will be remitted on the return of the dog in the morning before nine o'clock. If prize-winners shall be taken out and not returned, the prizes will be forfeited.

Rule VII.—The show will be opened from 10 A. M. to 10 P. M. The judging will be done on the first day and the ribbons will be attached to the stalls of the winners immediately thereafter.

Rule VIII.—It is required that a price be named for each dog at the time of making the entry, to be printed in the catalogue, at which price the dog may be claimed; the exhibitor of course having the option of naming a prohibitory price. A commission of ten per cent. will be charged on all sales and the same must be effected through the Executive Committee.

Rule IX.—The dog will be furnished with a suitable chain and collar. Bitches with pups and small pups weaned will have suitable pens provided. Toy dogs will be furnished with suitable cages.

Rule X.—The authorities will use due diligence for the care and safety of all dogs exhibited (watchmen being on duty both night and day), but it must be distinctly understood that they will not be responsible for loss or damage to any dog exhibited, whether the result of accident or any other cause.

Rule XI.—Judges will be instructed to withhold the prizes offered in any class where there is no competition, unless the animal possesses suitable merit, in which case their discretion shall govern the prize to be awarded.

Rule XII.—The decision of the judge will be final in all cases, unless misrepresentation can be shown. Should this occur the Executive Committee will use their discretion in the matter.

DIVISION I.—SPORTING DOGS.

Class I.—English Setters (native or imported).—For best dog or bitch; for second best dog or bitch.

Class II.—Irish Setters.—For best dog or bitch; for second best dog or bitch.

Class III.—Gordon or Black-and-Tan Setters.—For best dog or bitch; for second best dog or bitch.

Class IV.—Border Puppies.—For best setter puppy under twelve months of age.

Class V.—Pointers (respective of weight).—For best dog or bitch; for second best dog or bitch.

Class VI.—Pointer Puppies.—For best pointer puppy under twelve months of age.

Class VII.—Spaniels.—For best dog or bitch; for second best dog or bitch.

Class VIII.—Foxhounds.—For best dog or bitch; for second best dog or bitch.

Class IX.—Fox Terriers.—For best dog or bitch; for second best dog or bitch.

DIVISION II.—NON-SPORTING DOGS.

Class X.—Mastiffs.—For best dog or bitch.

Class XI.—Bulldogs.—For best dog or bitch.

Class XII.—Newfoundlands.—For best dog or bitch; for second best dog or bitch.

Class XIII.—Shepherd Dogs or Collies.—For best dog or bitch; for second best dog or bitch.

Class XIV.—Doberman Pinschers.—For best dog or bitch.

Class XV.—Black-and-Tan Terriers.—For best dog or bitch.

Class XVI.—Skye Terriers.—For best dog or bitch.

Class XVII.—Scottish Terriers.—For best dog or bitch.

Class XVIII.—Dalmatians or Old English Dogs.—For best dog or bitch.

Class XIX.—Pugs.—For best dog or bitch; for second best dog or bitch.

Class XX.—Spitz.—For best dog or bitch.

Class XXI.—Miscellaneous (for breeds that have not been assigned classes).—For best dog or bitch; for second best dog or bitch.

Class XXII.—Trick Dogs.—For best trick dog.

SLIPS.—Dr. Hydekophor, of the Germantown Mare and Hound Club, is about leaving for Paris to prosecute the study of Veterinary Surgery with a view of taking the chair of this branch of science at the University of Lyons, as it is proposed to add in the near future a department of this nature to this prominent institution of learning. A few days since, Mr. Ab. Priety, of 111 Spring Garden street, Philadelphia, was awakened early in the morning by his young Newfoundland dog leaping on his bed and pawing him. He arose, feeling the animal's head and legs, and found him in a violent condition. The dog was taken to the kitchen. The Fire Department was summoned in time to save the building, and Mr. Priety now values his huge puppy beyond estimate. Mr. James H. Goodsell, of this city, has dispensed with the services of Mr. Frank Boyd, as his valet, and has engaged Mr. Boyd in charge of Mr. E. J. Martin, of Wilmington, Delaware. Mr. Martin, it will be remembered, handled Mr. J. C. Higgins' Dashing Monarch and Mr. H. W. Gansse's Warwick, at Robins Island last year. Mr. Martin came to this city last week and completed his arrangements with Mr. Goodsell. We call special attention to Mr. Priety for a friend asking for a "new suggestion," how to rid his kennel of fleas.

A TERRIER POINTING SPARROWS.—I was much amused not long since in witnessing a very fair attempt on the part of a large, rough terrier to point sparrows in one of our main streets in Lowell. The dog was chained to a post, and was in the way of a gaze, but nevertheless the terrier drew or roared on the birds in good style by sight for some distance, and then became transfixed when he found he had reached the proper limit, and made a very creditable appearance for one of his kind. As soon as the bird was seen, the dog would try to advance and then stand still for fifteen or twenty minutes, industriously hunting up more when those he had been pointing moved away or took to the trees. The dog, evidently a mongrel—border predominating—must have had a better point than the birds he was pointing, but did not show it. As the terrier the attention of the passer-by, as he was at work alone and without a master.—Hoxo.

HOW A CHAINED DOG CAN HAVE EXERCISE.—The following plan for chaining up dogs I find to work well, and by it the animal will have more liberty than if confined in the usual manner.

Each having Distinguishing Merits.
HARMLESS, REFRESHING AND CAPTIVATING.
8 FIRST PRIZE MEDALS.
W. S. KIMBALL & CO., Peerless Tobacco Works, Rochester, N. Y.

Wanted.

WANTED, POSITION as general superintendent of a gentleman's estate; thoroughly understanding practically farming in all its branches, draining and reuniting lands, breeding and raising blood and grade stock, horses, sheep and swine, raising of cereals and all root crops, use and application of all agricultural machinery, erecting agricultural and horticultural buildings; also practically all horticultural professions, such as grapes and plants under glass; vineyardist and thorough orchardist; culture of all vegetables, flower gardening, landscape gardening, lawns, avenues and painting; of thorough executive ability in all departments; keeping accounts. Address QUERCUS, P. O. Box 157, Orange, New Jersey.

Aug. 15, 18

For Sale.

COUNTRY PLACE FOR SALE.—Main house, 40 by 18; extension, 36 by 16; hardwood finish; marble mantels; hot and cold water; stable, henry, etc., two acres lawn, fruit and shade trees. Price \$6,000; cost \$11,000; \$1,500 cash. For sale, six acres near two railroads, Chester, N. J. For sale, 9 acres on western slope of the Palisades, Tenny, N. J. Money loaned to build. Apply to E. H. WILBULL, 40 Fulton street, N. Y., between 10 and 12 A. M.

Aug. 25, 18

DUCK GUN.—Superior double-barrel M. L. duck gun, made to order, 12 pounds, laminated steel 28-inch barrels, curved walnut stock, extra fine leather cover; perfect shooter; used a few times only; will be sold at a great bargain, as owner's health prevents him using it. Address FRANCIS MORRIS, Philadelphia.

Aug. 25, 18

FOR SALE.—Pair finest English Danesque Central fire shot gun barrels made by Trullio Bros., Dublin; will readily fit any Central fire action. Address postal card R. B., 171 Ocean avenue, Jersey City, N. J.

Aug. 15, 18

FOR SALE, a COB B. L. shot-gun, 12-gauge, weight, 9 1/2 lb.; bar rebounding locks, moderate choke-bored, twist barrels; very little used; price, \$40. Address F. C. ANTILES, West Sewing Mach. Co., Hartford, Conn.

Aug. 25, 18

FOR SALE, Double Express Rifle by H. Holland, 1 ounce; 30 calibre, heavy new. Also 3 rods for salmon, trout and general work, and quantity of salmon and trout flies, all from Parlow, London. Address A. J. PALMIST, San Diego, Imperial Co., Texas.

Aug. 25, 18

FOR SALE, a new Remington Midrange Rifle, Verrier, 40 calibre wind gauge shells; spirit level, pistol grip; perfect in every respect. Price \$40. Will exchange for B. L. shot-gun. Inquire of P. O. Box 119, Franklin, N. Y.

Aug. 25, 18

SKELETON RIFLE BUREAU for revolvers, with screw attachment, \$1. PAUL PASINOW, Burlington, Vt.

BENEDICT.

FIRST AND SPECIAL NEW YORK, 1881.

Imported black field blood at the Stud. Fee, \$25. Mr. Hook's strain. Brother to Squaw the Lass o' Devon; brother in blood to Kafir and Zulu Negro, litter brother to Benedict, was second to Kafir and West of show last month.

Black, and liver-colored puppies by Benedict for sale. LACHINE KENNEL CLUB, Whitesboro, L. I. June 1, 1881

LEONARD'S Split Bamboo Rods, WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.

No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 26, 1875). This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.

No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 3, 1878). This split thoroughly strengthens where the ferrule is joined to the wood, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made.

No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

EVERY ROD WARRANTED.

STONEHOUSE ON THE DOG.

Price \$3 50.

For sale by Forest and Stream Publishing Co.

GORDON SETTERS.—In order to reduce the kennel will sell any of the brood bitches and young dogs belonging to the estate of the late Jas. R. Tiley, who, during his lifetime, had spared no pains or expense to bring this strain of dogs up to the very highest standard. They combine the blood of Copelan's imported shot, Moore's imported grouse, Farrar's imported Ruppert, Stoddard's imported Duke. Parties familiar with Gordons will at once see that this blood cannot be beat. Several bitches are now in whelp to Duke of Louisa Valley, by Mr. Moore's grouse out of Dream. For field qualities refer to Col. Albert J. Sisco, Vincennes, Ind.; Mr. H. Malcolm, Baltimore; Col. Jas. Gordon ("Hous Jem's") Pontotoc, Miss. Address for full pedigree, etc., GORDON KENNEL, Locust Valley, L. I. Aug. 14, 18

TO COCKER BUYERS AND BREEDERS.—A. W. Langdale, of 5 Newmark Terrace, Victoria Road, Leytonstone, England, late owner of champions, Lawver, Bachelor, Ladybird, Ladylove, Lizzie, Louie, Leicester, Limerick, Libba, Laurette, Lena, Lyndey, Bebb, Young Bebb, Bessie II, Baines, and many more important winners at our best shows; also, contributor to Vero Shaw's new work on spaniels, will buy on commission spaniels of any breed, and has on his books a number of grand specimens; deposit system. Mar. 11-18

COCKERS FOR SALE.—3 solid liver colored dogs whelped July 4, 81, out of Gro. Grass ex-black Charlie, \$15 each. Also a solid liver field spaniel bitch ten months old, imp. Bulb ex-Henry (Chama. River ex-Champ. Brush) \$25. Address Burr, Hollis, Burdett Kennel Prop., Hornellsville, N. Y. Aug. 15, 18

FOX TERRIER PUPPIES (smooth) for sale. A litter whelped July 6 by Ruthertons Royal (see Forest and Stream, July 1) out of overtail Waspden by Ragnan out of Vic by Trap. Dog puppies \$15 each. WM. R. HILLS, Albany, N. Y. Aug. 15, 18

DINE LODGE KENNELS.—I am prepared to take a limited number of dogs, other setters or pointers, and train them thoroughly. I give my puppies seven months' work out of the twelve, and guarantee satisfaction, if he dog has all the natural instincts. References on application. Prices, \$25 and \$75, according to length of time I keep the dog, with discount to parties at long distances. A. WINTER, Cairo, Thomas County, Ga. Oct 2, 18

NEMASKETT KENNEL, Richmond & Vaughan, Proprietors, Middleboro, Mass.—Sporting dogs boarded, broken and handled by men of experience. Setters, Pointers, Fox Hounds and Beagles trained for their respective work. Satisfaction guaranteed. Also, a number of well-trained setters and pointers for sale. Address BOX 335, Middleboro, Mass. H. B. RICHMOND, N. H. VAUGHAN. June 21-18

FOR SALE, four prize-bred Irish terrier pups, whelped July 1, 1881, out of imported Norah, by Home Ruler. For price, etc., apply to D. K. NIVEN, London, Ont. Aug. 1

FOR SALE.—Two pure bred Gordon setter puppies, dog and bitch, three months old. Address A. WEEKS, Locust Valley, L. I. Aug. 15, 18

FOR SALE, a brace of beautiful black and white Llewellyn setter pups by Champion P. C. E. LEWIS, Suspension Bridge, N. Y. Aug. 4, 18

PURE OPPORTUNITY.—Pointer bitch, ten months old, dark liver and white, by the Flackville dog Chiswick; just fit for the field; having no time to work her, will sell at a sacrifice. Address FRED, Box 96 New York P. O. Aug. 15, 18

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE
Trout, Grayling & Black Bass Fisheries,
AND THE
FAMOUS SUMMER, HEALTH AND GAME RE-
SORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region,
and the Michigan North Woods are unsurpassed, if
equalled, in the abundance and great variety of fish
contained.

BROOK TROUT abound in the streams, and the
famous AMERICAN CRAYFISH is found only in
these waters.

The TROUT season begins May 1 and ends Sept. 1.
The GLAYLING season opens June 1 and ends
Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCA-
LONGE, also abound in large numbers in the many
lakes and lakelets of this territory. The sports-
man can readily send trophies of his skill to his
friends or "club" at home, as ice for packing fish
can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The
scenery of the North Woods and Lakes is very
beautiful. The air is pure, dry and bracing. The
climate is peculiarly beneficial to those suffering
with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will
be largely increased in time for the season of 1881
by new buildings and additions.

During the season ROUND TRIP EXCURSION
TICKETS WILL BE SOLD AT LOW RATES, and
attractive train facilities offered to Tourists and
Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at
owner's risk.

It is easy to make sportsmen feel "at home"
on this route. For Tourists' Guide a handsomely
illustrated book of 60 pages, post free. Time Cards,
Folders and further information, address

GUN POWDER!
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! Dupont's Gunpowder Mills, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 5 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 5 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters in 16 and 12 1/2 lb. kegs.

Dupont's Choice Bore.—Specially adapted for "Choice Bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 5. No. 1 being the coarsest. Packed in 1 lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 1/2 lb. kegs.

Dupont's Rifle P. G.—No. 1—Shooting. P. G. and P. F. G. The P. G. for long-range rifle shooting, the P. F. G. for general use, burning strong and moist. Packed in 1 lb., 1 lb. and 5 lb. canisters, 1/2, 1 1/2 and 2 1/2 lb. kegs. P. G. Coarse, P. F. G. Fine.

Dupont's Sporting, Mining, Sporting and Blasting Powder of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammot, Hexagonal, Cubical and Pellet Powder. U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by P. L. KNEELAND, 87 Beaver St., N. Y. N. B.—USE NONE BUT DUPONT'S P. G. or P. F. G. for long-range rifle shooting.

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsmen throughout the United States and Canada; and is on sale in Europe by The American Exchange, 449 Strand, W. C., London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.
Thursday, September 1.

Specimen copies of the FOREST AND STREAM sent free upon application.

COURTING.—A correspondent suggests in another column that the Eastern owners of greyhounds hold a meeting during the coming autumn and test the qualities of their dogs. There is no reason why such a meeting should not be inaugurated as the sport of courting is one of the most beautiful and interesting known in the long list of sports that have been transplanted from England to this country. A meeting of this kind under proper management could be made especially attractive, not only to sportsmen but to ladies. In England the meets are always largely attended by the fair ones, and as we write we can see the hills of Shinnecock and Montauk (admirable places for conducting the course) crowned by the gaily dressed charmers watching the speeding and turning of the fleet ones. Greyhounds have for many centuries been the favorites of the women of England. They have appeared in many old family portraits by the side of the beauties of the house, and only a few years ago the Queen ordered that Master McGrath should be brought up to Windsor for her inspection. We should like to see the suggestion of our correspondent put into shape, and if the large hare of New York State should not be found game enough it would be an easy matter to import some of his English cousins to test the metal of our dogs.

ESTO PERPETUA.

IN Westminster Abbey is a stone on which is inscribed: "Sacred to the Eternal Memory of —." The rest is obliterated by time's effacing fingers, and the stone stands in mockery of the puny efforts of transient man to fix his name indelibly as a record that he has lived. What a sermon on the perishable things of this earth is on this stone!

The Egyptians embalmed their dead that they might be preserved "to all eternity." A stranger has invaded their land. Some of their remains so carefully embalmed and affectionately laid away in spices are now in dime museums, others have been taken to England and ground for fertilizers, literally returning to dust, while now artists have discovered that "mummies" make the finest pigment!

The London *Truth* says: "A gentleman, passing through Long Acre the other day, peeped into a little shop and started suddenly at the sight of several dead bodies. They had been dead for over 2,000 years—they were mummies. Where did they come from? From Thebes. Are more coming? Yes; plenty. There appears to be a regular business going on in mummies between Thebes and Long Acre. The mummies are brought over enveloped in their rich bituminous covering, and—*horresco referens*—ground up, bones, cases, coverings, bitumen, and all! What for? Why, for paint. There seems to be no burnt sienna like ground mummy. The artists are willing to pay high prices for this mummy paint. Our Academy walls may be limned with the dust of the Ptolemies."

We are not going to preach a sermon on this, it is a little out of our line, but it will afford thought for those who think, and might suggest that a "precession of the equinoxes" could sweep from the earth all traces that the human race had ever inhabited it. *Sic transit* would be rapid transit, and *gloria mundi* would need regenerating. Verily, Macauley's New Zealander may yet stand upon London bridge and muse on the ancient race who built it, or New York become a polar sea which explorers will perish in reaching, if the earth should be re-inhabited.

YE OYSTER ARRIVETH.

BY the time that this is before our readers the oyster will be in its glory. Its four months' holiday is past and its partner, the clam, which has filled its place during the interval, is now relieved from the burden of furnishing "raws" and falls back to its position in the soup and in the roast.

The fact that transplanted oysters are good all summer is taken advantage of by wicked oystermen to advocate their use in the months whose names do not contain the necessary R. They have even suborned New York editors to keep stating the fact and urging the people to eat them in the tabooed season, that their trade may continue the year round. There is no denying that there are certain facts which are obnoxious and which should be suppressed when they come in contact with a prejudice which is better than the fact, and the prejudice against oysters in the R-less months is one that should be encouraged for two reasons. The first is, that after abstaining for four months the oyster-eater enters upon the season with a fresh appetite and makes up for lost time, and so the wicked oysterman really sells as many of the mollusks in eight months as he would in twelve. The second reason is, that during the forbidden time the delicious "Little Neck clam" opens the banquet and furnishes the daily or evening lunch, and so really has a season of its own, without which its excellencies might never be known to many; and there are those who prefer the young and tender clam to the oyster.

To show that we practice our faith in this matter we will relate an incident which happened yesterday, the last day of August. We entered our favorite restaurant and, stepping up so the oyster counter, ordered a "Little Neck raw." There were piles of oysters on the counter and we asked the conchologist who opens the bivalves if many oysters had been called for during the past month. "Oh, yes, sir," replied the oyster surgeon, "the people eat 'em just the same; that's all humbug about their not being good in months wot ain't got no R." It was evident that this bivalve shucker was in league with the wicked dealers and oystermen, and was trying to break down the wholesome prejudice, so, remember-

ing how Col. John Hay tells "The Pledge at Spunky Point," we expressed to the student of mollusc science our abiding faith that no oyster was good until after the hands of the clock had marked one minute past midnight on the last of August, and that, like the hero of Hay's poem, we should sit up and watch for it that night. "Jes like watchin' the old year out and the new year in," remarked the malacostracologist, with a smile at our credulous simplicity, as we handed him a "quarter" and bade him good morning.

INTERVIEWING A SENSIBLE TROUT.

THERE is a prize within the boundaries of that quiet pool, for, "quivering with almost the tremor of life," the leader with its flies had scarcely touched its surface when, quicker than lubricated lightning, one of those golden-tinted princes took hold and sped away, turning the reel fast as the indicator on a gas-meter goes round. The prophet Baalam was not more surprised when his ass spoke to him than was this trout, when in the simplicity of his innocence he rose so greedily only to discover that the Montreal fly was "a mockery, a delusion and a snare."

His madness that he had become the victim of trickery rendered him desperate. A bundle of nerves under galvanic action could not have been more restless. Physical pain had nothing to do with his erratic movements after the hook had been fastened in his jaws. He was angry at the unprovoked trick that had been played upon him. It was anger unjustifiable, for no fish that can augment the sum total of human happiness and help replenish human larders by being caught can reasonably expect any sympathy in his self-imposed insanity. If he is so unreasonable as to consider himself a martyr, very well; but let him emulate the examples of John Huss and Konarski and other models and suffer his martyrdom in silence.

Hold on! hold on!—that would not afford the angler so much sport; so plunge ahead, old fellow, and welcome to your freedom, if you can gain it—even at the loss of my line and leader. If we had the faintest suspicion that we were causing you needless pain we would whip out our knife instanter, cut the line, and promise never to repeat the trick that enticed you into your present predicament, for it were downright cruelty to punish you for your thinking you could make a good square meal off a few feathers and a fish-hook. But honestly, old fellow, don't you enjoy it?

"Not a bit of it. I know the afterclap. This is glorious fun slashing around in this pool, but it is the toasting you will give me your shanty that I do not like. You had better believe we know what comes of our being landed."

"Then why don't you leave my flies alone?"

"You put them on the water in so artistic a manner that I thought they were only such food as Nature provided for us, and was deceived into taking what I thought was mine by right."

"You would talk and flatter us into letting you go."

"It's the truth I'm telling you. I would scorn to earn my exemption from your broiler at the sacrifice of truth."

"Does the hook hurt?"

"Not a particle. There is nothing jollier in our watery kingdom than being yanked about on the end of a good, springy rod, if the man at the butt end of it understands the correct manner of manipulating it. It is just the kind of circus we enjoy."

"Why, then, are you fighting so desperately?"

"It's your deuced fly-pan."

"Never mind the frying-pan. Don't borrow trouble. Just as soon as you have finished your frolic and we have landed you we promise on honor to put you out of misery by severing your vertebrate column."

"All right! Proceed with the exhibition. I see you understand our case exactly and it is a real pleasure to be caught by you, and yet you would little blame me if I managed to give you the slip."

"None whatever. A good game fellow like you, who earns his freedom after a desperate fight, is heartily welcome to it."

It is a real pleasure to talk with so sensible a trout. He honestly admits that, properly hooked, he suffers no pain, and if on being landed he receives a quieting and soothing crack of the neck that sends him in a twinkling to trouty's heaven

it makes him better for the tangle than if allowed to flounder in the basket until he contracts a fever and dies a miserable and lingering death.

There are no nerves in the cartilaginous part of a trout's mouth, and his being hooked there, as is most frequently the case, causes no more pain than a man's experiences in the chair of a skillful barber.

Try it MILLARD.

THE ENGLISH SPARROW'S OBITUARY.

A POEM OF THE FUTURE.

WHEN we published the other day Bryant's English sparrow poem, we intimated the pleasure it would afford us to print also an obituary of the last bird of that race in America. Our long-time friend, Mr. Isaac McLeellan, responding to our note, has thoughtfully furnished us a poem fitted for such a purpose. Unfortunately, however, the English sparrow is still with us, and to publish a triumphal song over his extinction were premature. In fact it was not so much the song that we wanted as it was the occasion for the song. We look out now from the desk where we are writing, and in the dusty City Hall Park we see the squabbling hordes of these chattering birds twittering about, fearless of the tramps on the benches, and noisily assuring us that the English sparrow is here—and proposes to stay. We shall not dispute it. We shall not attempt to deceive ourselves nor our readers in this matter. The English sparrow brood has a long life before it in America. Publishing its obituary will not intimidate it. No words will intimidate it. Fine shot might. But we publish the poem. We put it on record in the files of this paper. The hope inspires us that in the future of promise, when the chair in this sanctum shall have been filled by another, and by yet another, some one of the editors of the FOREST AND STREAM may at length herald the going of the sparrow, and republish from this, then old and forgotten Volume Seventeen, the poem which we print here this day, September 1, 1881, descriptive of what shall then be the native song bird's swan of joy over

THE DEATH OF THE LAST SPARROW.

The song-birds rejoice in valley and wood,
For the sparrows have gone, that pestilent brood!
The meadow lark warbles his peans of praise,
Robin reed, east is sweet with his jubilant lays.

The blue-birds that perch on the old garden gate
And the little blue jays now with joy are elate,
The black-birds with unsatiate chatter declare,
As their hovering pinions circle in air.

That the fierce, fighting sparrows no longer molest,
To sting with their bills or harrow the nest,
And no longer in orchard or green forest glade
Will the haunts of the innocent warblers invade.

The cat-birds that lurk where the thickets are dense,
The martins that rove d' the barn eaves now skin;
The swallows that feed on the insects of air,
The humming-birds brilliant as emeralds rare;

The oriole splendid with purple and gold,
The bright little yellow-birds, fair to behold;
The gay bob-o-link, whose minstrelsy flows
Like the bubbling brook thro' the meadow that goes;

The b own thrush, that hermit of deep solitudes,
The lone chickadee that chirps in the woods;—
All these native harpists, a musical band,
Rejoice that the sparrow is dead in the land!

These foreign invaders all scorn'd a fat slug,
Scor'd army worm, Hessian fly, forest moth and bug;
Woe did not feast on the insects that poison the fruit,
That strip the green leaves which garland the shoot.

But stained are their bills with the blood of the grape
Whose clusters of nectar the trellises drape;
They feed on the strawberry, luscious and red,
And on all the sweets of the garden are fed.

On the round, ruddy globes of the peach tree, that fills
With fragrance the air as the honey distills;
On the brown, juicy pears that burst as they fall;
On the sweet purple plums that drop o'er the wall;

On the cherries ambrosial, whose clustering gems
Clasp and crown the light twigs with rare diamonds,
But now since the sparrows have met with their doom,
The harvests may wither, the gardens may bloom.

Yet! now the broad acres of ripening grain
May brighten in sunshine and freshen in rain;
The fruit of the orchard their treasures may store,
The song-birds may warble as ever of yore,
For the sparrows will rob and molest never more.

Shelter Island, Aug. 22.

ISAAC McLELLAN.

DEATH-TRAPS AGAIN.—We have a list of some fifty "accidents" to yachts this season, one and all traceable to a lack of depth and low weights. The list is unfortunately not yet complete. The *Herald* of Sunday adds two more of these so-called accidents. A "yacht" turns turtle on the St. Lawrence, off Murray Bay, Aug. 23, and her crew of three are drowned; and, nearer home, another yacht, the *Mahei Emma*, rolls over near Long Beach, the same day, spills her contents, and Colonel William Chalmers, of this city, expires with his life the blunders of the beamy light-draft school. Next week we will print a letter from General Frazer to the Boston *Advertiser*, which shows we are no longer alone in the crusade against the man-traps a perverted taste confounds with craft entitled to the appellation "yacht."

MANY ENGLISH SPORTSMEN are visiting America this season and seeking sport at the West.

BLOOD POISONING FROM FISH.

WE know of several persons who cannot eat fish, lobsters, oysters, etc., either one or all, without experiencing a most intolerable itching and often an eruption upon the skin. We also know a lady who is afflicted in the same manner after eating strawberries. One person can eat fish which have been out of water some days, but a visit to the sea shore and an indulgence in fish fresh from the water produces the poisoning described.

A doctor who was applied to in one instance recommended the heroic treatment of eating fish and scratching, until the system became reconciled to the diet, as in the case of the use of other poisons. This would require the devotion which the small boy brings to the mastery of tobacco, and would require his enthusiasm, which is not usually found in adults. This deprivation of fish food is, to those who love it, a serious matter, and we have written this at the request of a sufferer, in order to see if some of our medical readers cannot suggest a remedy.

A ROMANCE IN REAL LIFE.

IT gives us much pleasure to chronicle an incident which took place at Whitestone, Long Island, Tuesday evening of last week, and more particularly so as the circumstances reflect great credit upon a gentleman well known to many of the readers of the FOREST AND STREAM Mr. George Macdougall who upon the occasion referred to took a header into Long Island Sound, and pluckily rescued from drowning a young lady, who had inadvertently tumbled into the same. Like the brave young oysterman, who in the ballad said

To save his dear
Leander swam the Hellespont,
And I can swim this here,"

he gallantly bore her to the shore.

One of those ever-present "Arrys, whom *Punch* delights to picture, was of course on hand, in the shape of a newspaper man, to claim the glory. The young miss was pleasant, pretty and picturesque, and, if newspaper reports are to be relied upon, instead of saying to a rather pertinent question, "No, George; oh, no, George! not just yet," she looked up or down, we know not which, into the large blue eyes of her hero and said "Yes." We wish them joy. It was a brave act, and nothing could be more fitting than that the sequel should be the approved happy one of the Oliver Optic story-books.

JOHN P. MOORE, whose name has been prominent in the gun trade for more than half a century, died at his residence in this city, last Saturday, August 27, at the advanced age of eighty-one years, having been born in this city in 1799. When eighteen years old he entered the employ of Benjamin Coper as an apprentice in the trade of gunsmithing, and began business on his own account four years later at No. 206 Broadway. His building erected not long after on the site of the present *Evening Post* building was the largest on Broadway at that time. In 1860 he retired, leaving the business to his sons. Mr. Moore had an enviable reputation for sterling integrity, and held in the course of his business career many positions of trust, having been for some time a Director in the Mechanic's Bank. At the time of his death he was a Director of the Jefferson Fire Insurance Company, an office he had held for twenty-five years. He was one of the earliest members of the General Society of Mechanics and Tradesmen, and took much pride in the success of its Apprentices' Library. For many years he was President of the society. The school in charge of the society became one of the best in the city during the time Mr. Moore was Chairman of the Committee on Education.

ICHTHYOLOGICAL STUDENTS will do well to read Dr. Gill's criticism on Dr. Günther's "Introduction to the Study of Ichthyology," in another column. The need of such a work as Dr. Günther proposed to furnish has long been felt, but those who are competent to furnish it are so engaged with advanced work that they have neglected it. We had hoped that the book of Dr. Günther would prove a boon to the beginner, but Dr. Gill thinks otherwise. A book of this character bearing the name of any recognized American ichthyologist would no doubt be in demand. Hardly a day passes without application being made to us for such a work. We realize the difficulties which beset a beginner who has no teacher and knows not where to commence, for we were ourselves led into all sorts of bye-paths in trying to find a road to ichthyic knowledge.

AN ARCHERY TOURNAMENT will be held at the Fair Grounds, Waverly, New Jersey, on Friday, Sept. 20, in which all the clubs of this vicinity are expected to take part. The Corresponding Secretary is Mr. W. Holberton, of No. 65 Fulton street, this city. Lawn tennis and lacrosse are also on the programme.

A NEW MAINE MAP.—Mr. Thos. Sedgwick Steele is preparing a map of the Maine canoeing region to accompany his forthcoming book, "Paddle and Portage." The map, we understand, is prepared from original sources of information and will doubtless prove indispensable to the Maine canoeist.

WILD CELERY.—Mr. D. W. Cross writes that he has had several letters about transplanting the wild celery, and in all probability the experiment will be so thoroughly tested that the question of its success will be definitely settled.

The Sportsman Tourist.

"OLE WHEELER."

IT was nearly noon when our party emerged from the forest into a little clearing. Struck by its appearance, they rested upon its edge and gazed around. Very beautiful was this little opening in the vast forest—this oasis in the desert of tree trunks. It disclosed a broad, blue belt of sky, of which only a speck here and there had been visible in the woods. The sun, too, which sent but few pale rays into the forest depths, here shone in full brilliancy, caressing the tree-tops with its sparkling light, warming the grass and bushes and bringing a deeper blush to the raspberries, whose clustering vines filled the greater part of the clearing and ran riot over the mouldering tree-trunks. The stillness of mid-day rested upon the scene. The breeze scarcely swayed the graceful foliage of the elms, above whose tops two hawks were lazily soaring. The rippling of the little brook, hurrying over its bed, as if impatient to gain the cool of the forest beyond, was the only sound.

"This is the place, folks, and a pleasant one don't lie in the whole South woods," said Wren. "If there was only a little lake by I'd like to camp here for the rest of my mortal days. These elms show good soil."

"Where's his hut?" asked Sigourney.

"Some might call it a hut, but if he hasn't put a French roof on it since I was here last I should denominate it a novel. Over here." And he led the way to the centre of the clearing. A large elm tree shaded the brook, which here widened a little, and from its grassy banks sloped away. On one side was an irregular pile of logs and bark, covered with leavess. Wren went to one end of it and, stooping down, pushed away some boards.

"There is nobody at home. The mansion is vacant. Look!" and he stepped aside.

Merciful God, is it one of thy creatures that exists here! Through a single pane of glass, fastened in its place by a few pegs, the interior was dimly lighted. The damp earth was covered with mould and a pool of stagnant water stood in the middle. On the farther side, where the hole had not been dug as deeply, lay a ragged sheepskin—the man's bed. A shelf held a few bottles, traps and cooking utensils and in front was a stone fire-place, in which the ashes of fifteen years were standing. Wren knew they had been there fifteen years, for the man had lived there that time and such a heap couldn't have been collected in any less. The party were still curiously gazing into the den when Wren whispered, "Here comes 'Ole Wheeler' himself."

With long, swinging steps, and gun at a trail, a figure was swiftly approaching from the woods—a tall, gaunt figure, bent and awkward. A face—a face that will never be forgotten by those who then met its gaze—looked out from a matted beard and long tangled hair. Surely fancy would have named this creature some old river god, some mighty genius of the woods, had it not been for his ragged pants, torn off at the knees, and the quaint old swallow-tailed coat fastened by its brass buttons tightly around him. The Professor recognized the same figure which he had seen crossing Grass River. The man stopped and surveyed the four hunters. His eyes, black and restless, moved from one to another—eyes that glowed with a wavering light that told plainly the loss of reason.

"Have ye come to steal me taters or me sugar, Mr. Wren?"

"Neither one nor t'other. We're four honest men as wants to take dinner and be sociable-like with yer."

"Ole Wheeler appeared assured and laid aside his rusty gun. Hand and shoulder he put on a friendly and a twinning meal of jerked venison and bread spread out on the ground. "Berries!" exclaimed Wheeler, emerging from his burrow.

"Yes, that's so," said Wren. There were about six quarts of rich, ripe raspberries.

"Sugar!" said Wheeler coming up out of the tomb again.

"Right again," said Wren.

The Professor, however, declared it was syrup; maple syrup in that delicious half-way state in which you find it only in the woods. With it the berries were delicious. But the purpose of the parties' visit was to hear "Ole Wheeler" talk, and accordingly Wren soon put him on the trail.

"Do I like to be alone here? Yis, I love to; I love to sit here nights an' watch the stars an' the moon sir. I've watched 'em these fifteen years, and I know 'em every one; as well as I know the lakes an' the hills. I know how they move an' I can tell yer. Have I read the books about 'em? Yes, an' they lie sir, they all lie; they're made to sell—*to sell*. What I've seen for years an' I know it true an' no book learnin' can make me believe otherwise. Why don't I write a book? Well, I'm poor an' folks think I'm ignorant, an' they wouldn't believe me; but maybe I shall write some day. I've got papers and drawin's made. No, the books deceive ye. I know the sun isn't fur off as they say it is. I've measured it here an' I know it's near me. I can feel it warm me, an' the moon and the stars, they ain't fur off; an' sometimes in bright e'en' nights they talk to me, an' they tell me about the good God. Ye sir, I like to talk with 'em an' with the trees an' the animals, they're better'n me. Have I a family? Well, my wife is livin' sir, but she's dead to me. My son, he went to California where the rivers run gold, but the Indians killed him. My nephew said seven year ago he'd come an' visit me, and I expects him. We shall live on taters. My taters are the best in the county."

After making the old man a few presents the party started for camp. As they struck off into the trail they heard him say:

"If ye meet my nephew, tell him to hurry. Say he shall have taters an' sugar."

They promised and walked on in silence. What is that which we call the love of nature, that power which draws man to her, which has its influence over the coarse and the cultivated mind, and often endows him who passes his life with her with those refined traits of character which make him in the truest sense of the word "Nature's nobleman?" All classes of men are drawn to her. The rude hawkeaswoodsman loves her solitudes, he knows not why. The cultivated man delights in her company. The careworn merchant, the student with weary brain, seek her musing and are refreshed. The tempted commune with her and are strengthened. The upright man finds with her peace and security. The criminal trembles when she alone is by. The soul embittered by some wrong flees to her. The heart stung by some great sorrow seeks consolation with her. In that "society where none intrudes" she speaks with man; she calls to him from the vastness of the mountains, the mad dashing of the rapids, and the awful gloom of night; from

the calm lakes, the leaping brooks, the trees, the birds, the flowers. She tells him that there in that vast wilderness he is alone in the presence of his Maker.

On the sand beach at the head of Massawepie is a lovely grave. The birches bend tenderly over it and the waters of the inlet ripple by in an unending dirge. Tradition says that years ago a maniac, who had escaped from his keeper, wandered off into the woods and made his bed here. When too weak to walk he had crawled back and forth to the little brook for water and some hunters found him long after, lying dead upon his couch of leaves. No one knows what led that being to flee from his fellow men to the solitude of the wilderness, but it seems certain that to those bereft of reason, to those who are denied rational intercourse with their fellows nature speaks a powerful language.

A few fatherly men, under to a weak and helpless child, so the kind Father of all looks mercifully down upon these most helpless of his children and reveals hidden beauties to their eyes. For love of nature is love of God.

AN INVAILD IN THE FIELD.

IT is a clear, cold October morning of which I write. The woods are in the "sere and yellow." The prairie grass has died of grief, perhaps, for the bright flowers that have wilted earlier, or more likely, has had the emerald tint knocked out of it by Sir John Frost, the destroyer.

I have been confined to my room for ten days playing a game of patience ("a game I do not understand") with a severe fit of rheumatic gout; but on this morning, after fearful groaning, I have dressed and, mounting my crutches, hobbled to the window to look out.

My dogs, Don, an English setter, and Stella, a pointer bitch—both "natives"—are sleeping on the gallery in a patch of sunlight. A tap upon the window and both heads "come to attention;" another tap and their bright eyes turn toward the window and, catching sight of my face, they bolt through the hall to my chamber door and whinnying beg in the most piteous manner to be admitted.

"Open the door, mother, and let them in."

"Nonsense, Bob; they'll be sure to hurt you."

"I'll risk it; here, give me that low chair. Right; now turn that high chair—no, not that, the one with the cane back—in front of my feet and knees; all right. Now let them come."

The door is opened and in they rush! It is well that I have entrenched myself or their affectionate onslaught might have been a serious injury, they eagerly leap upon me and with low whines of intense joy, my cheeks, and their honest eyes beam with an expression of love more plain than any spoken words can express. Ah me! how pleasant it is to be the object of such unselfish devotion, dumb brutes though they be! And yet they tell us that these loving and intelligent, though, dumb, companions have no "hereafter;" that after serving us for years, learning to know our thoughts and share our feelings, they die and there is no more of them for us. Believe it who will, I do not. The preachers tell us of material joys and pains in the world to come, of golden streets and jasper walls, but who wants to walk on golden streets unless sure of leaving their ills behind them, or rather, who would walk at all if there be angelic wings with which to fly. As for jasper walls, they are doubtless beautiful, but to my mind more ornamental than useful. For myself, I could never endure "city life" in this world and I am sure I should not enjoy being cramped in the next. No, sir; God is good, and I verily believe that all of the many dogs and cats that I have owned and loved here, and who have gone before, are now awaiting me on that other shore; and to be once more with them on those eternal hunting grounds, with a hammerless gun, smokeless powder and undying youth in which to follow the chase—ah, me, but that will be heaven!

I look out at the window again, then glance at my dogs, now quietly sleeping upon the hearth rug, then at my gun-case, and the longing to be afield once more becomes irresistible. Turning to my wife I say: "Mother, will you take me on the prairie this morning in the buggy?"

"Why, Bob, are you crazy? How could you get into the buggy?"

"Not crazy, mother, but a sudden attack of 'Cacothetes'—what the deuce is the Greek for hunting?"

"I'm sure I don't know," she says; "but you certainly don't mean to take your gun."

"I most certainly do. You shall drive me—I'll shoot from the buggy."

"And come back half dead with the gout!"

"Not so, my wife, it will cure me! So, good now, please have the buggy harnessed at once. My soul's in arms and eager for the prairie!"

"But you've got the gout and can't get away!"

"Confound it, madam, will you—oh! ah! oh! Whew!"

"What's the matter with you now?"

"I struck my lame foot against that infernal chair-rocker. Ah me! but hurry, mother, and let's be off."

And now, while she goes to order the buggy, let me explain that our only living son has attained to his majority and gone out into the world to carve out his destiny, for weal or woe; and our only surviving daughter, having married years ago, has a home and children of her own. So that we, with the exception of an occasional visit from our children and grandchildren and the necessary dependents, are left alone in the old home. That is why Mrs. C. is nearly always my companion in bird hunting and fishing, and though she cannot herself shoot a gun, she takes great pride in my shooting, and "chaffs" me unmercifully when I shoot badly. But here she comes to tell me that she is ready.

With much pain and the aid of kindly hands I am helped into the buggy. Mrs. C. takes her reins, and away we go.

Ah, ha! how deliciously exhilarating it is to one who has been for days confined to a close room to drink in huge draughts of pure prairie air. How pleasant to a hunter to inhale the peculiar aroma of dead grass and weeds that in the fall pervades the prairie atmosphere.

But Don and Stella are eagerly quartering the ground from right to left, meeting and passing each other in front of the buggy, so we have no time to poetrize. Suddenly Don checks and, catching sight of him, backs for a second and then moves as he does. There is no need to caution them, but in my heart I think, "Ah, my beauties, how I love you!" Now Don halts and becomes rigid, his lips "going in an out" with suppressed breathing until his head turns slightly, and his bright eyes say to me, "Old man, they are here; I've done my work, now do yours." Meantime Stella is backing like the darling little thing she is, in the most beautiful manner.

"What is it?" whispers wife,

"Quail, I reckon; too close to timber for chickens. Turn Dandy a little and drive slowly to Don's right—a little nearer, I wish the horses to flush them." (N. B.—I always walk by my birds, and do not intend to flush in my judgment, unreliable.) "Now, Mollie, watch the old man take 'em in!" Whirr-whirr-rang! bang! "Eh, what—a miss with both barrels. Oh, confound it!"

"Not a feather," says Mrs. C. "Ahem, is that the way you take 'em in, old man?"

"Well, you see, mother, I'm weak and nervous. But see, Don has another point. Drive to the right of him again—there." Whirr-r—an old cock quail, and straightaway I throw up my gun, and, resisting the impulse to pull trigger until he is fairly between the hammers, and then my finger contracts. A few floating feathers in the air, but I feel the bird is mine.

"A long shot, Bob."

"Well, yes, so so; the fact is I had to kill him or go home. When I find myself nervous at the start I must, by a powerful exercise of the will, overcome it at once or I grow worse and make a bad day of it. Dead bird, Don, fetch. Come in, Stella, it's Don's bird." When hunting two dogs I let the dog that points the bird retrieve it, if killed; it is his right and he expects it.

"Did you mark them down, Mollie?"

"Yes; three or four dropped near you tall vesin weed."

"Good; drive that way—lie 'way Don, lie 'way, Stella!"

The dogs quarter the ground, and when near the designated weed they point at the same instant, but at different objects. "To which shall I drive first?"

"To Don; he's nearest."

"Yes, but Stella is young and may break point at gun fire, while old Don will stand all day."

"Yes, and all right, too, the dear old fellow! but we will trust Stella, and if she breaks—I point to the dog whip at our feet. The dogs are not over twenty yards apart. Wife drives slowly to Don, and up jump a brace of quails. I am ready, and remembering the result of firing too quickly at my first birds I hold hard, and with slow haste score a clean kill of both birds.

"Dead; Don, fetch." He's off at the word (and never before) retrieving both birds, of course, singly.

"Well, Mollie, how did Stella stand the racket?"

"Beautifully," she answers, enthusiastically. "At the first report of the gun she dropped to shot, but only for a second, when she resumed her point."

We turn the horse toward Stella, and Don, getting sight of her, backs her like a gentleman. We get close to the bitch but flinch nothing.

"It must be so close to her nose as to be paralyzed with—"

when out bounces a rabbit, and away goes Stella in full chase. I whistle and call frantically, but she heeds me never a bit. After a chase of a hundred yards or so the rabbit is lost in the high grass, and then Miss Stella hears my whistle and sees the buggy heading down upon her. Instantly realizing the enormity of her offense she absolutely melts under a sense of fear and shame. I stop the buggy, and order her to "come in." She starts to us dragging her feet as though they were weighted with lead.

"Here, wife, take the whip, jump out and punish her."

"Now, Mrs. C., whose *enbontpoint* is one of those self-evident facts about which there can be no discussion, is not much of a jumper at any time, and in this instance her kind heart makes her rather slow in getting out. I look to see if the bitch is coming, and lo! she is making a splendid point.

"Get back, Mollie, S'ella is pointing."

"Perhaps she's found her rabbit again."

"No, I think not; besides, look at Don!" who was now cautiously working his way toward the bitch and on arriving within fifteen or twenty steps he points in her direction. Evidently the birds are between them.

"Bet thinks they've found chickens!"

"Thanks," no. "Neither bet nor drink," says Mrs. C.

"Pardon me. Of course I didn't mean to bet with you. A man and his wife being one cannot bet with each other."

"Except as to drinks they may be one, but I'm sure that your drinks never gave me the gout."

"Don't make personal remarks, mother; bad taste—very. Drive around so as to come between the dogs."

The horse makes one or two steps, when—"whirr-r"—up jumps four or five "chickens." Although unready and a little startled, I let drive with both barrels and down once, while another gets away with both legs dangling.

"Mark the cripple, Mollie!"

I slip a shell in each barrel. "Now drive between the dogs." They have kept their points, and as we get close in, up get the chickens in a bunch. I swing my gun round and cut away right and left at two that have separated from the others, miss one, and drop the other. Stella holds her point still.

"Drive close in front of her." An old cock gets up with a tremendous clatter, but drops at the crack of the gun.

"Dead, Don! Dead, Stella! Fetch!"

"Now, mother, for the cripple."

"Wait a moment," and she picks up the dog-whip and makes a move to get out.

"What are you going to do?"

"Whip Stella for chasing that rabbit!"

"Whip your granny! Give me that whip. Don't you see that she has repented and brought forth meat for repentance."

"Job—When found make a note."

"All right; and for your scriptural quotation is correct, there's a typical example in my Bible."

"Well, I quote from memory only; but let's go for that wounded chicken and then home, for my feet begin to pain me fearfully."

"Just as I feared."

The dogs soon find and retrieve the chickens, and we turn our horse's head homeward. I am assisted out of the buggy and into the house. I lie down upon the lounge, which my wife rolls in front of the fire and hands me the hot Forest and Stream, saying else.

"Yes, ma'am; give me a dose of colicum, please."

She pours out a spoonful, which I no sooner swallow than I cry out: "Mercy, mother! What is it you are giving me?"

She snatches up the bottle and gives one look.

"Oh, Bob, I'm so sorry! I've made a mistake in the bottle and given you—"

"What? poison?"

"No, it's—it's—"

"My God! What?"

"Vermifuge!"

"Vermifuge—la! la! la! Why, confound it! don't you know I'm past—"

But she had left the room. Well, the Lord's will be done; but fancy giving a fellow "wormin'" medicine for the gout!

Crockett's Bluff, Ark.

Bob, H. C.

"PODGERS" DISCOURSETH.

AND PROMISES TO TALK SOME MORE.

DOWNS EAST, Aug. 21, 1891.

Editor Forest and Stream:

Have just been reading the last two numbers of FOREST AND STREAM from beginning to end, lying flat on my back on a lounge, with coat off, a good cigar, and feet at the usual orthodox angle, the mantel of No. 89, Young's Hotel, doing duty as a foot-stool.

This time it is not stories of big fish and wonderful catches, but the burden runs more to "possum and climbing snakes. It is wonderful what a deal of experience and modern intonances the mere suggestion of a case or a query brings forth. The 'possum question has certainly been well ventilated, and snakes have now had a good run. Strikes me the friends of FOREST AND STREAM have had an undue experience with snakes; had some myself, but not the sort I fear many of those gentlemen know most of. I acknowledge a total absence of 'possum experience; really don't believe I ever saw one, much less ate one, not or cold. Do remember going out once from Virginia Springs for an evening 'coon hunt, with a dozen niggers and dogs, but beyond the dreadful hubbub, barking, and noise and flashes of torches and final death of something said to be a 'possum, I know nothing.

But when you talk about snakes I am with you, remember that. I mean the veritable, not the imaginary, and I can write a snake story for every number of the FOREST AND STREAM for the next five years. But the question mainly refers, I believe, to climbing snakes or snakes that do or don't climb. The climes certainly have much to do with it. In tropical countries we know the great boa or python climbs trees; and well he may, for it is easy for such a monster to do it. As for our common snakes, I am with the *pro's*, for I have seen them doing it, and especially in spring time when the birds were nesting and the young ones about hatching, although for that matter their snakeships are not over-particular; they will take the eggs before hatching. But all the snakes I have seen climbing did so with the spiral motion in the descent they did not so particularly, being generally considerably hurried by its boys.

I think old Otsego County, in my native State of New York, could at that period claim precedence over any other locality for snakes, big or little, especially the black and the dreaded rattlesnake. There was a ledge of rocks back of my native village and a cave under it which was designated "Rattlesnake Den." In the spring of the year, when the sun began to warm things up, the snakes would crawl out and lie on the shelf rocks, idle we boys, from our secure perch overhead, waiting until a good lot of them had gathered, would launch at a concerted signal a ton or two of collected boulders, and then gathering up the slain, drag them into town with a string and sell them to a weird old woman—generally considered a witch by us boys. What she did with them we never knew, but surmised that she used them in her incantations. She probably extracted the oil, which by popular belief contained wonderful healing properties. These snakes included all sorts—the garter, black and venomous—being in harmony, or at least had apparently spent the winter together.

That black snakes do climb is a fact forcibly impressed on my memory by the following circumstance. My governor was a man who would have made a splendid and staunch supporter of Bergh's Berghories, and a thorough sportsman of the old pattern, *i. e.*, great on deer and fox hunting with hounds, and would visit on us boys the most severe punishment for disturbing a bird's nest. The old claim back of the house was a safe and reliable judgment for nests and family raising, and especially due to the old nest, in a year after year to repair and make use of the old nest, in a smaller offshoot of the main tree. One spring, in accordance with their usual custom, a nestful of young robins were hatched, and one of my daily duties was to go into the garden with a spade, turn up the soil, and expose worms for the benefit of the youngsters, which the old birds accepted, and hopped down to the tip to pick up. From the window where the Governor usually sat in the soft spring days, making flies for the approaching season and rigging up last year's tackle, he could look down into the nest, and so late were the old birds that they would hop out; and so late the open window. One day the Governor, on looking down into the nest, noticed that two of the four young robins were gone. At once the subscriber was suspected; and whether from a previous bad reputation or strong suspicions, his protestations of innocence were unheeded, and the sudden change of temperature from a cool spring day to a most fearful and stormy minute was wonderfully. Such a warming, ending with imprisonment in the article.

The next morning, while listlessly lolling out of the window, looking down at a smaller brother, who was out thus early with a large piece of bread spread with brown sugar, as a special concession for being so much better than his elder brother, I heard a great clattering and to-do in the tree, and on looking, discovered a large black snake approaching the nest. At once it flashed on my mind that here was a key to the mystery. Disregarding the injunction to stay where I was until released, I threw down stairs a the old gent man's room and called on him to look out and see a snake robbing the robin's nest, which ocular evidence was not to be gainsaid. Tableaux—a dead snake with a young robin in its mouth; and another slice of bread and butter, with sugar on it, in mine. The Governor was a man of few words, and on this occasion, seeing the injustice of my punishment, might have had his own views, but did not express them, and in answer to my very regretful and pitying expressions from the mother, merely remarked: "Very true, he was not guilty this once, but we will credit the thrashing on general account, and then there will be quite a balance unaccounted for."

The Governor, however, made the *amende* in a way that was much more acceptable than apologies; he took me along trout fishing a few days later, and I had the privilege of following with my primitive alder rod and worm, while he proceeded with the fly; and precious little chance did I usually have to fish, as one of my duties consisted in picking up the fish as he used them to use them with a peculiar motion of the rod, saving himself the trouble of unhooking by flung off the barb of the hook. Those were the days though when every stream in old Delaware County swarmed with trout, and I usually returned from a two days' fish with a champagne basketful, supplying all the village for several days. What a hand the Governor was with the fly; and his celebrity as a fisherman earned for him the name of The Fisherman Lawyer that no man could hold a candle to. And, by the way, I never could understand what that particular virtue there could be, or wherein lay the evidence of great skill in being able to hold that candle. We hear of many that can't; there must be some that can; and then what?

I wander from snakes to fish, which reminds me to ask if it is not almost time for the summer lies to begin to come in? There's a lot of sanguine young men and tough "old sports" up at the Adirondacks and in Maine, scattered about the lakes there. Isn't it almost time for them to be heard from? Won't somebody with nothing better to do about your establishment collect, codify, and have the FOREST AND STREAM get out an official seaside or railroad edition of "Summer Lies by Angler Sportsmen?"

I would suggest also that a reward of a brass reel be offered to the man who can write an account of his trout or salmon fishing without alluding to the former as "speckled beauties," or the latter as *Salmo salar*. It makes one unwell to see those terms so everlastingly quoted. Let us call things by their right names, and not seek to air our science by scientific terms! Call a catfish a catfish, and not *Piscata felina*, and a big bass a big bass, not a *Basso profundo*. Let's have no D. B. nonsense, but settle squarely to "biz."

Thanks to your Michigan friend, who says he is glad to hear from me again, and is acquainted with that enterprising firm of George & Swindle. If he is a sportsman he must necessarily know that ubiquitous concern. As for hearing from me again, if that makes him happy, he is welcome, for I know no more agreeable way of passing idle time when stranded at a hotel over Sunday (vide present instance) than in scribbling of the pastimes of fishing, shooting or yachting. And yet there are people who make hard work of writing; and worse still, men there are, and they manage to get through their lives, that have no rest for either. For such let us pray, and sympathize with them.

Speaking of yachting, the Eastern clubs, Boston and along shore, have had a foggy time of it for their Eastern cruising. I overheard a conversation at lunch the other day:

"Hello, Jim; thought you were down East on a cruise?"

"Well, I was; but out of thirteen days we only had three clear ones, and gave it up."

"Where's the yacht?"

"Oh, she's coming along."

"Where did you leave her?"

"At Gloucester."

"Why didn't you come back in her? Such a lovely breeze to-day. Come along a-flukin'."

"Oh, well, I was in a hurry. Wanted to get to town. I had to come up by rail."

I watched that fellow. I saw at once what was the matter; looked streaked about the gills, and went in for pickles and acids for his lunch. Got seasick and came ashore.

Speaking of writing, I was exposed to my personal obligations to your correspondent who has given us such a graphic and interesting account of his trip from Moosehead Lake to St. John's. I have enjoyed his papers greatly, as doubtless have your many readers. I would rather have made the trip with him than the tour of Europe.

Well, as it is not fair to monopolize all the space of FOREST AND STREAM with my "remarks," I will put aside my stylographic and subside. Give you another dose when you have worked this off.

It is herewith declared "off."—Ed. More.—O. T. Twist.

A PARROT ON ITS TRAVELS.

I.

From the Forest and Stream, Nov. 11, 1880.

The following story comes to us well authenticated: At a certain club house in Boston there was kept in the billiard room a parrot which was so tame and such a favorite that it was not confined to its cage, but was allowed the liberty of the room, and was often seen perching upon the shoulders of the sportsmen and port wine-drinking men who still use pointers and setters had better observe parrots. On one occasion, when the bird was seated in one corner of the room, a gentleman, a Mr. B., entered, followed by his dog, whether a pointer or a setter we do not know. The dog after a few moments vindictive parrot, drew on it, and finally stood fast. The bird, which had been up to this time apparently oblivious of the presence of the canine, now turned its head slowly and in tones expressive of the utmost contempt said, "Go home, you damned fool." The dog started, looked, and then, turning tail, slunk out of the room. It is said that, although up to this time the animal had been a splendid hunter, he would thenceforth never point a bird.

II.

From the English Land and Water, July 30, 1881.

If a story we read the other day is to be relied on—and our authority is an unimpeachable daily journal published in a rare old city of the West country, famous for its sportsmen and port wine-drinking men who still use pointers and setters had better observe parrots. A gentleman living near the south coast had a fine pointer, of which he was very fond, the dog being staunch, with a good nose, reliable, and well trained. One day, however, the family received an addition in the shape of a parrot, brought over seas by the sailor son of the housekeeper. When first the dog came into the housekeeper's room he stopped at the doorway and pointed at the gay bird perched on the outside of its cage at the other end of the room. The parrot, not at all daunted by the dog's professional attitude, left its place and came mingling across the room, "with many a flirt and flutter," and squared itself in front of the setter. The two confronted each other for a second, and then the bird remarked impressively "You're a rascal!" The dog was for a second transfixed with horror at the unprecedented phenomenon of his "game" so roundly abusing him in the human tongue. It was too much for him; he had never "blinked" his game before, but now his tail sunk between his legs, and he slunk away. From that day a valuable dog was spoiled, for the pointer would never point a bird again.

III.

From the Sacramento, Cal., Bee, Aug. 20, 1881.

A gentleman living near Port Jarvis, N. Y., says an exchange, has a parrot which knows a good deal more than the law allows. Last summer a friend of his, whose name we withhold for obvious reasons, called at his house one day. A valuable young dog, a pointer, was with him. The two gentlemen sat on the porch smoking, and the parrot, which is very tame, was seated in an interstice in the trellis about the porch. The dog was lying on the floor at his master's feet; and finally his attention was attracted to the bird, which he was roundly abusing him in the human tongue. It was too much for him; he had never "blinked" his game before, but now his tail sunk between his legs, and he slunk away. From that day a valuable dog was spoiled, for the pointer would never point a bird again.

SWEEPS AWAY THE COCKLES.—FOREST AND STREAM comes to us like the visit of an old friend, cheering me, and sweeping the cockle burrs out of my soul. More power to your elbow.—ST. CLAIR.

THE FRIENDS OF MR. G. L. GILDERLEEVE, of Brooklyn, will be pained to hear of the serious accident which befel that gentleman one afternoon last week. While attempting to board a Brighton Beach train, he fell and broke his leg. At last report the unfortunate member was doing well.

Natural History.

GUNTHER'S LITERATURE AND MORPHOLOGY OF FISHES.

A REVIEW BY PROF. THEODORE GILL OF GUNTHER'S "INTRODUCTION TO THE STUDY OF FISHES."

SMITHSONIAN INSTITUTION,
WASHINGTON, Aug 17, 1881.

Editor Forest and Stream:

In response to your favor I herewith send the review of (Günther's recent work published in the *Nation* of August 11, but have intercalated much new matter, so that the present gives a complement to the first chapter (the literature), and a tolerably thorough analysis of the second chapter of the "Introduction," i. e., the "Topographical Description of the External Parts of Fishes." I have been especially led to complete the review of the second chapter since I have read the notice of Günther's work in the January number of the "Westminster Review." The Westminster reviewer thinks "The second chapter, called a topographical description of the external parts of fishes, gives, in a manner altogether masterly, not merely an account of the structures of which it treats, in their immense variety, but some idea of their functions, with sufficient reference to individual fishes to invest a technical subject with interest and precision." (Am. Ed., p. 142.) You will thus perceive that I have said what I have not without knowledge of what can be alleged on the other side, and in order that you may be able to refer without trouble to what has been said about Dr. Günther's work I append a brief list of notices of it.

The following are all favorable reviews, but deal in generalities:

- "Saturday Review," v. 50, pp. 769-771, Dec. 18, 1880.
- "Westminster Review," v. 115, Am. Ed., 142-144, Jan. 1881.
- "Annals and Magazine of Natural History," (3), v. 7, pp. 63-64, Jan. 1881.
- "The Academy," 1881, pp. 11-13, Jan. 1, 1881.
- "Nature," v. 23, pp. 215-216, Jan. 8, 1881.
- "The Athenaeum," 1881, pp. 97-98, Jan. 15, 1881.
- "The Spectator," v. 54, pp. 479-481, April 8, 1881.
- "The Zoologist," (3), v. 5, pp. 221-226, May, 1881.

The succeeding (the first by Prof. Cope, the balance by myself) take an unfavorable view of the work and give specific details:

- "American Naturalist," v. 15, pp. 222-223, March, 1881.
- "The Critic," v. 12, pp. 123-125, April 21, 1881.
- "The New York Times," May 29, 1881, (3 columns).
- "Forest and Stream," v. 16, p. 428, June 30, 1881. (Reprinted with additions from the "Critic.")
- "Science," v. 7, pp. 323-326, July 9, 1881.
- "The Sea World," etc., v. 1, p. 7, July 13, 1881. (Reprinted from "Science" in part, i. e., the last 13 paragraphs.)
- "The Nation," v. 33, pp. 120-122, August 11, 1881.

As you will attribute the accompanying review to my own name I have been more explicit in my criticisms—more "personal" if you will—than I would feel authorized to be in an anonymous notice.

You ask, "How do you like Henshall on the nomenclature of the *Micropterus*?" Much as I dislike the change, I am glad to admit that he is right—he unquestionably is. In this new disturbance we have another example of the results of the neglect at Washington to procure the essentials for the student. I had long endeavored to have the original edition of Lacépède purchased here, but it has only been lately bought, and we were obliged till then to use what now proves to be a bad and misleading edition. As soon as I examined the first edition I saw at once that the figure of *Micropterus dolomieu* was not a very poor one (for the time) of the name, and that the illustration of *Labeo salmoides* was not a very poor one (for the time) of the name. Cuvier and Valenciennes, as we now know, confounded both species, although their description of *Gryllus salmoides* was apparently based only on the small-mouthed species, while, as you are aware, they failed to recognize in the *Huro nigricans* a relation. The error of Cuvier was corrected as long back as 1843, by Agassiz, and yet Günther, in his late work, still clings to it, notwithstanding that (1) the known elements of the American fauna, (2) the common name connected with the fish record in the Frenchmen, (3) the description, (4) the anomalous morphological deviation the admission of the type would involve, as well as (5) the unanimous testimony of American ichthyologists would have prevented a careful man from such a blunder. This illustration of Günther's negligence and slovenliness must confirm you in the belief that his work is a very, very poor one.

Yours truly,

TNGO. GILL.

An Introduction to the Study of Fishes. By ALBERT C. G. G. GUNTHER, M.A., M.D., Ph.D., F.R.S., Keeper of the Zoological Department in the British Museum. Edinburgh: Adam & Charles Black. 1880. 8vo., xvii-720 pp.

Ichthyology. (Article signed "A. C. G.") in the "Encyclopædia Britannica," ninth edition, vol. xix. Edinburgh: Adam & Charles Black. 1881. Pp. 630-695.

When the announcement was made several years ago that Dr. Günther was engaged on a manual of ichthyology, many looked forward with eager expectancy for its appearance; but a few who knew Dr. Günther well from his previous works, entertained considerable misgivings lest he should be unable to divest himself of prejudices and opinions once assumed. The "Introduction to the Study of Fishes" is destined to equally disappoint the former and justify the forebodings of the latter. Dr. Günther has in him a past due good service to ichthyology, and has given us the only tolerably complete "Species Piscium," in the form of a "Catalogue of the Fishes in the British Museum." This work was issued in eight volumes, from 1859 to 1870, and reflected moderately well the state of science at that period. The author, however, has been unable to any considerable degree to discard what he has once accepted and to bring himself into relations with the science of the present, but adheres tenaciously to beliefs formed in a much less advanced state of knowledge, and in a way of conclusive evidence against tenacity. This mental attitude is prominently manifested in his new work as well as in his article in the "Encyclopædia Britannica." The "Introduction" is really a complement to the "Catalogue" divided into two parts—viz., (1) a treatise on the principles of ichthyology, and (2) a nomenclature of the genera, with definitions of all the including groups admitted by him. The article, "Ichthyology," in the *Encyclopædia Britannica*, is in great part essentially the same, the first or General Part of the introduction being reproduced in full; the second part is condensed, and only the definitions and remarks on

the families and higher groups are incorporated therein, the genera being simply enumerated by name. The criticisms herein are therefore equally applicable to both.

The curiosity with which the experienced ichthyologist will take up the treatise must be soon subordinated to astonishment as he proceeds in the examination of it, for it is scarcely possible that any one should be prepared for the numerous errors of one kind or another that are constantly cropping out on almost every page. It is difficult to believe that one who has written so much on fishes as the author has should make so many lapses. The errors commence on the first page and flow in an almost uninterrupted, but varying stream to the end of the work. Those chapters to which fault might seem to be the least incident are the ones devoted to the history of the subject and the external modifications of the animals under investigation. We can only afford passing glance at the former, but the latter will be of sufficient interest and importance to deserve a detailed examination.

The first chapter has the caption of "History and Literature." In the opening paragraph it is alleged that "Aristotle had a perfect knowledge of the general structure of fishes," and in illustration of the thesis Aristotle is quoted as stating, among other things, that "all scaly fishes are viviparous, but the cartilaginous fishes (with the exception of the sea-devil [*Lophius piscatorius*], which Aristotle places along with them) are viviparous," and that "kidneys and urinary bladder are absent" (p. 2). An unopinionated reader would naturally suppose that inasmuch as Aristotle's knowledge was said to be "perfect," his statements particularized were thereby vouched for as being true. Nevertheless, in subsequent chapters we find statements contradicting them in the most explicit manner.

Thus, as to the generation of fishes we are told, further on, that certain "scaly fishes" are "viviparous" (p. 159), and that of the cartilaginous "the majority of the Rays are oviparous" (p. 336).

(The contradicting statement itself is quite erroneous, for of the 150 Rays, in round numbers, about three-fourths are viviparous and very little more than a fourth a small minority are oviparous.)

Again, as to the kidneys, they are not only admitted to be present but a special chapter ("Chapter XI., Urinary Organs") is devoted to the description of those organs and their appendages.

The remainder of the chapter in continuation of the History of Ichthyology is as unsatisfactory and irrelevant as could well be. There are almost no indications as to the salient features of the progress of the science, nor as to the relations of special discoveries to the perfection of the system. The discovery of *Ceratodus* is indeed particularized in connection with the classification (pp. 25-26), but with incredible effrontery that which belonged to another (Kreft) has been claimed by the author of the work as original with himself. In fact the element of judicial exposition is entirely wanting. It would take too much time and space to traverse the chapter in detail.

A need of no instance that although the majority of the best systematists of the world, and all the recognized ichthyological authorities of the United States, consider the "fishes" to be divisible among several classes, there is no hint in the chapter that there has ever been a difference of opinion as to the limits of the class of Pisces except in the statement that "according to the views generally adopted at present all those vertebrate animals are referred to the class of fishes, living in water, breathe air dissolved in water by means of gills or branchia" (p. 1).

The title of the work is *very important* than some specified by Mr. Günther as descriptive of the "Fauna of special countries may supplement his bibliography of 'Recent Works,' and indicate how defective even this is. In the mode of quotation the titles conform to the Güntherian style and are incomplete.

A. Great Britain.—Add to (1) Parnell, (2) Yarrell and (3) Couch, the following of which the latter is more important than any of them, viz:

- A. W. Loughborough.—"British Fresh-water Fishes." (London, 1879-80), xxvi, 204 pp., about 40 pl.
- F. Day.—"The Fishes of Great Britain and Ireland," etc. (London, 1880, et seq., 8vo.).—The first part appeared in 1880, the second in 1881, and the remainder, in the words of Günther *apropos of the* "Fishes of H. B. Challenger, Fishes by A. Günther," is "in course of publication.")

B. Denmark and Scandinavia.—Add to (1) Kroyer, (2) Nilsson and (3) Friese och Ekström, the following more recent and important works:

- A. H. Widgren.—"De svenska fiskarternas natural historia." (Stockholm, 1870, 8vo., 100 pp., 10 pl.)
- R. Sollett.—"Norske Fiske, med Bemærkninger om deres Udbredelse." (Christiania, 1875, 8vo., title, 240 pp., 2 pl., 1 map.) See also Supplement, 1879.
- G. Winkler.—"Prodromus Ichthyologie Danica Marine." (In Naturhist. Tidsskr., (3) 1879, pp. 1-96.)

C. Russia.—Add to (1) Nordmann the following equally or more indispensable works:

- 2. K. Kessler.—"Fishes of the Government of St. Petersburg." (Russian. (St. Petersburg), 1879.)
- 3. K. Kessler.—"Zur Ichthyologie des Südwestlichen Russlands." (In Bull. Soc. Imp. Nat. Moscou, 1856-57.)
- 4. K. Kessler.—"Ichthyologische Fauna of Turkestan."—Russian. (In N. Mém. Soc. Imp. Nat. Moscou, v. 10, 1873.)
- 5. K. Kessler.—"Fishes of the Black and Caspian Seas." (St. Petersburg, 1874.)
- 6. K. Kessler.—"Beiträge zur Ichthyologie von Central Asien." (In Bull. Acad. St. Petersburg, v. 25, pp. 282-310, 1879.)

G. Seidlitz.—"Fauna Baltica, Die Fische (Pisces) der Ostseeprovinzen Russlands." (Dorpat, 1877, 8vo.)

D. Germany.—[Including the Netherlands, Belgium and Switzerland]. Add to (1) Heckel and Kner, and (2) Siebold, which are confined to the fresh water fishes, the following, of which two also include salt water fishes:

- H. Schlegel.—"Die Dierren von Nederland.—Gewervelde Dieren (Visschen)." (Haarlem, 1860, 8vo.)
- P. J. Van Beneden.—"Les Poissons des Côtes de Belgique, leurs parasites et leurs commensaux." (In Mém. Acad. Belg., v. 38, 1870, 100 pp., 8 pl.)
- G. Lacaze.—"Histoire Naturelle des Poissons du Bassin du Léman." (Genève, Bâle, Lyon, 1874, fol., 209 pp., 20 pl.)

E. Italy and Mediterranean.—Add to the "incomplete" works of (1) Bonaparte and (2) Costa the following complete ones:

G. Casertini.—"Prospetto Costea dei Pesci d'acqua dolce"

d'Italia." (In Arch. per la Zool., Anat., etc., iv, 1866, pp. 47-187, with pl.)

F. France.—Add to (1) *Hirachid*, which includes only the fresh water fishes, the following (a work like Couch's), which includes also the marine species.
2. H. Gervais et R. Boulanger.—"Les Poissons; Synonymie, Description, Mœurs, Frai, Pêche, Iconographie des espèces composant plus particulièrement la Fauna Française." (Paris, 1876, 3 vols, 8vo.)

G. Pyrenean Peninsula.—Insert.
1. F. de Brito Capello.—"Catalogo dos Peixes de Portugal que existam no Museu de Lisboa." (In Jour. Sc. Math., Phys. e Nat. Lisboa, 1869, etc.)
2. F. Steindachner.—"Ichthyologischer Bericht über eine nach Spanien und Portugal unternommene Reise." (In Sitzb. K. Akad. Wiss. Wien, v. 52, 1865, et seq.)

H. North America.—Add to (1) Richardson and (2) DeKay the following more recent and important illustrated works, viz.:
4. J. Kirtland.—"Descriptions of the Fishes of the Ohio River and its Tributaries." (In Jour. Boston Soc. Nat. Hist., v. 3-5.)
5. C. Girard.—"Fishes." (Washington, 1858, 4to. In "Explorations and Surveys for a Railroad Route from the Mississippi River to the Pacific Ocean," v. 10.)
6. J. B. Steadman.—"Ichthyology of South Carolina." Charleston, 1860, 4to.)
7. J. D. Storer.—"A History of the Fishes of Massachusetts." (Boston, 1867, 4to.)

I. Japan.—Add to (1) Schlegel.
2. P. Bleeker.—"Nieuwe Nolezingen op de Ichthyologie van Japan." (Batavia, 1854, 4to, 132 pp., 8 pl. In Ver. band Batav. Genoot. Kunst, en Wet., v. 25.)
3. P. Bleeker.—"Enumerations des espèces de Poissons actuellement connues du Japon." [etc.] (In Verh. Akad. Wet., Amsterdam, v. 18, 1879.)

J. East Indies.—Add to Hamilton, Buchanan, McJelland, Day, etc., the following, containing descriptions of all the species and including groups:
2. J. J. Bleeker.—"On the Fresh Water Fish and Fisheries of India and Burmah." (Calcutta, 1873, 8vo., 2 pl., x., 118, covvi pp.)
K. Africa.—Add to (1) Günther and (2) Peters the following, all of which are much more noteworthy than the unimportant chapter of Günther in Fetherick's work, viz.:
1. Sir A. Smith.—"Illustrations of the Zoology of South Africa." (London, 1840, 4to.)
2. R. T. Lowe.—"The Fishes of Madeira." (London, 1848, 8vo.)
3. A. Dumeril.—"Reptiles et Poissons de l'Afrique Occidentale." (In N. Arch. Mus. d'Hist. Nat., v. 10.)
4. P. Bleeker.—"Poissons de la cote de Guinée." (In Mem. Soc. Holl., Harlem, 1862-63.)
5. F. Steindachner.—"Zur Fisch Fauna des Senegal." (In Sitzb. K. Akad. Wiss. (Wien) 1. abth., v. 60 et seq., 1860, etc.)
6. P. Bleeker et F. Pollen.—"Poissons et Pêches." (Leyden, 1875, 4to, in F. Pollen and Van Dam's "Recherches sur la Fauna de Madagascar.")
7. C. Dabneek.—"Die Verbreitung der Süss- und Brackwasser-Fische in Africa." (In Jen. Zeisch. Naturw., v. 13, pp. 404-456, 1879.)
8. P. Bleeker.—"Contribution à la faune ichthyologique de l'île Maurice." (In Verh. K. Akad. Wet., Amsterdam, v. 18, 1879.)
9. E. B. Sauvage.—"Etude sur la faune ichthyologique de l'ogogue." (In N. Arch. mus. d'Hist. Nat. (2), v. 3, 1880, pp. 5-56, pl. 1-3.)

L. West Indies and South America.—Add to (1) Agassiz, (2) Casteleau, (3) Günther and (4) Vaillant et Bocourt the following:
1. A. Guichenot.—"Poissons." (In R. de la Sagra's Histoire de Cuba, 1843, 8vo., Paris, 1850, 8vo., and 4to.)
2. J. von Tschudi.—"Fauna Peruviana Ichthyologica." (St. Gallen, 1845, fol.)
3. O. Gay.—"Historia Fisica y Política de Chile, Zool., t. 2." (Paris, 1847, text, 8vo., Atlas, fol.)
4. F. Steindachner.—"Die Süsswasser-fische des sudöstlichen Braziliens." (In Sitzb. K. Akad. Wiss. Wien [pt. 1], v. 70, pp. 449-638, pl. 1-6, 1875 [pt. 3], v. 74, pp. 559-664, pl. 1-13, 1876.)
5. F. Steindachner.—"Enumeratio Piscium Cubensium." (Madrid, 1875, 76, 8vo., 1 p. l., 224 pp., 9 pl.)
6. D. B. Gode.—"Catalogue of the Fishes of the Bermudas." (Washington, 1876, 8vo. Additional in 1877.)

Almost equally noteworthy with Steindachner's articles are Lütken's and Cope's contributions.
M. New Zealand and Australia.—Add to (1) Hutton and (2) Hector's Fishes of New Zealand the following:
1. F. Steindachner.—"Zur Fischfauna von Port Jackson, in Australien." (In Sitzb. K. Akad. Wiss. [Wien], Math. Nat. Cl., v. 53, 1. abth., pp. 424-480, 866; v. 56, 1. abth., pp. 320-335, 1867.)
2. G. Krefft.—"Australian Veebrata Fossil and Recent." (Melbourne, 1871, 8vo. Enumerates 439 species of fishes.)
3. F. de Coste.—"Contribution to the Ichthyology of Australia." (In Prov. Zool. and Acclim. Soc., Victoria, v. 1 and 2, 1872-73.)
4. F. de Coste.—"Essay on the Ichthyology of Port Jackson." (In Prov. Linn. Soc., N. S. Wales, v. 3, 1879, pp. 347-401.)
5. C. B. Kunzinger.—"Die v. Mullersche Sammlung Australischer Fische in Stuttgart." (In Sitzb. K. Akad. Wiss. [Wien], Math. Nat. Cl., v. 80, 1. abth., pp. 325-430, pl. 1-9.)

The second chapter is devoted to a "Topographical Description of the External Parts of Fishes," and in almost every paragraph there is some ambiguous or misleading statement. The graver errors which exist may be enumerated and commented on in the order in which they occur:
"In the body of a fish four parts are distinguished—the head, trunk, tail, and the fins; (1) the boundary between the first and second being generally indicated by the gill-opening, and (2) that between the second and third by the anal fin." (p. 35.)
(1) Now, the boundary between the head and trunk may, in a certain sense, be said to be generally indicated by the gill-opening, but when we consider that all the representatives of the sub-classes of Leptocephalians, Cyclostomes, and Selachians fail to have the parts so distinguished, and that even among the Teleosts the Pediculates and others form exceptions,

the statement is too broad even with the word "generally" introduced. (2) The statement that the boundary between the trunk and tail is marked by the vent is unequalled; nevertheless there are a number of forms which furnish exceptions—e. g., the North American Aplocheilichthys and Ambloplites (the latter comprising the celebrated blind fishes) and the South American electric eel, and all the family of the Sternopygids. In the last two the vent is just behind the chin.

"In fishes which are endowed with the power of steady and more or less rapid motion, a deviation from that form of body which we observe in the perch, carp, or mackerel is never excessive. The body forms a simple, equally-formed wedge, compressed or slightly rounded, well fitted for cleaving the water" (p. 35). The form most eminently adapted for rapid progress in the water is exemplified in the tunnies and bonitos; their body is fusiform, little compressed, and boldly rounded. The form of the carp is not well adapted for rapid progress, the fish being rather a slow swimmer, and is also not what is generally known as wedge-shaped.

"In fishes which are in the habit of moving on the bottom, the whole body, or at least the head, is vertically depressed and flattened" (p. 35). In Anomodonts or Sand Launces and the Ophidiids, which are in the habit of "moving on the bottom" and of burrowing in the sand, the body and head are much compressed, and there are many other exceptions to the generalization in question—e. g., the Weevers or Trachinids and the so-called Band-fishes, as Günther designates them. Indeed only a page further on (p. 36) Günther says that the last, as well as the eel, are "bottom-fish [the idea of the bottom being thus especially connected by a hyphen with the fish], capable of insinuating themselves into narrow crevices and holes. The form of the body is strongly compressed, as in the Band-fishes (*Channas, eels, etc.*), it is chiefly the tail which is lengthened, but frequently the head and trunk participate more or less in this form" and are "strongly compressed."

"The mouth is formed by the intermaxillary and maxillary bones, or by the intermaxillary only in the upper jaw, and by the mandibular bone in the lower" (p. 37). This statement is a remarkable one to emanate from a professional ichthyologist and anatomist. Every tyro knows that the Leptocephalians and the Lampreys are entirely destitute of maxillary bones, and that the Selachians have the so-called "intermaxillary and maxillary bones," and have the upper border of the mouth constituted by the palatine bones (p. 69).

"The jaws of some fishes are modified into a special weapon of attack (sword-fish, saw-fish); in fact, throughout the whole class of fishes the jaws are the only organs specialized for the purpose of attacking; weapons on other parts of the body are purely defensive" (p. 37). This paragraph caps the climax of false statements and unscientific generalizations. The implication that the "weapons" of a sword-fish and a saw-fish are both modifications of the jaws is tantamount to the assertion that the jaws and nose are the same thing. Dr. Günther himself has known this (see pp. 336, 337 of the "Introduction"). There is possibility for difference of opinion as to what are "organs specialized for the purpose of attacking," but there is none that the saw of the saw-fish is a prolongation of the snout, and has nothing to do with the jaws, and none that "weapons on other parts of the body are not purely defensive."

If it is conceded that the jaw is a "weapon," which is efficient for the capture of prey in active pursuit, or for active assault on another animal, is *pro tanto* specialized, there are several parts besides the jaws which are subservient to those ends. None of the sub-classes of Leptocephalians or Cyclostomes having jaws, and yet all preying, the parts concerned therein are organs for attacking. (1) In the Leptocephalians the fringed margins of the mouth are concerned. (2) In the Cyclostomes the suctorial and denigriferous oral disc and the tongue-like organ are the agents. (3) In the sharks the palatines bear the formidable structure. (4) In the saw-fishes of the shark order (*Pristiophorus*), as well as of the Ray order (*Pristis*), the saw, admitted by Dr. Günther to be a special weapon of attack, is not formed at all by the jaws, but by the rostral cartilage, and thus we have an exception to the generalization specified in the same line in which it is formulated. (5) Dr. Günther himself, in his "Introduction" (p. 332), informs us, under *Allopietis*, that "when feeding it uses the long tail in splashing the surface of the water, while the saw is in greatly decreasing circles round a shoal of fishes, which it thus proceeds to catch, actually using the tail as prey to its enemy." And thus, even if we discredit the use by *Allopietis* of its tail against the whale, etc., we must consider it as to some extent a special weapon of attack. (6) The Sting-Rays (Trygonids) scarcely confine the use of their spines to defense, and these are at least offensive defensive. (7) The Devil-fishes (Cephalopterids) are said to use the cephalic fins for seizing and grasping (see Elliott's "Carolina Sports," p. 58.) (8) The Sicklebeaks are well known to use the dorsal spines as weapons of attack, and to swim under and rip the belly of their antagonists. (9) The Surgeons, or *Acanthuri*, are credited with using their lancet-bearing tails by actively slashing therewith their antagonists, and it is difficult to surmise what would be the function of their characteristic armature save as weapons of offence as well as defense. (10) The Weevers (*Trachinus*) use their opercular spines at least for offensive-defensive purposes, and Col. Montagu called them "offensive weapons."—It therefore follows that, so far from the jaws "being the only organs specialized for the purpose of attacking," and modifications of them exist in (1) the mouth as a whole (2) a peculiar tongue-like organ; (3) palatine bones; (4) snout; (5) caudal fin; (6) supracaudal spines; (7) cephalic fins; (8) dorsal spines; (9) lateral caudal spines, and (10) opercular spines.

"In Dipnoi and other Ganoids one [nostril] at least is within the labial boundary of the mouth" (p. 38). One unfamiliar with ichthyology would infer from this paragraph that one or more of several dilemmas existed, viz.: (1) that some "Dipnoi and other Ganoids" have more than one nostril "within the labial boundary of the mouth." (2) that other existing ganoids had one at least, or (3) that the characteristic was of too little importance to discuss. It is necessary, therefore, to be specific. (1) Dr. Günther at one time contended that in the Dipnoi both nostrils were intra-oral, and even in the "Introduction" (p. 355) asserts that they are "more or less within the mouth." It is quite safe to say that never has a fish been found in which there were two (pairs of) nostrils within the mouth, and the existence of the nostrils within the mouth would be an incredible anomaly. (2) No other existing Ganoid has more than one nostril "within the labial boundary of the mouth." (3) The development of the nostrils in the Dipnoi is one of the most weighty and suggestive characteristics of the group, and one by which they contrast with all other living fishes.

"In the post-orbital part of the head there are distinguished, at least in most Teleosteous fishes and many Ganoids, the *prooperculum*" (p. 38). Inasmuch as none of the Leptocephalians, Cyclostomes, or Selachians have a prooperculum, and no normal Teleosteous fishes fall to have a prooperculum, this statement is at least misleading, even after allowing full latitude to the vagueness of its phraseology.

"The gill-opening is a foramen or a slit behind or below the head" (p. 38). This statement is absolute, although we have a number of exceptions—notably all Pediculates and, as the author himself afterwards admits (p. 39), the genus *Myxine*. These, of course, have the gills behind the head (not in front), but not immediately behind, as is evidently meant.

"Sometimes (*Symbranchus*) the two [gill] openings coalesce and form what externally appears as a single opening only" (p. 38). *Symbranchus* is by no means the only form in which the two openings coalesce into a single one. *Amphipneustes*, *Monopteris* and *Urolophorus* (each the type of a peculiar family) all possessing the same characteristic.

"The margin of the gill-cover is provided with a cutaneous fringe in order to more effectually close the gill-opening; and this fringe is supported by one or several or many bony rays, the *branchiostegals*" (p. 38). The statement is utterly false, is not true as to any of the representatives of the sub-classes Leptocephalians, Cyclostomes, or Selachians, and, among living typical fishes, the Polypteroids and Dipnoans are also destitute of true developed branchiostegals.

"The space on the chest between the two ram of the lower jaw and between the gill openings is called the *isthmus*" (p. 39). The isthmus is defined as the interspace between the branchial apertures below, and consequently has no determinate relation to the ram of the lower jaw.

"In *Mysine* only the gill opening is at a great distance from the head" (p. 39). It is also at a great distance from the head among true fishes in the Pediculates, and some eels.

"The trunk gradually passes in all fishes into the tail" (p. 39). To this there are many exceptions, as in most rays, and especially in the representatives of the families Trygonids, Myliobatids and Cephalopterids, in which the tail is very attenuated, whip like, and abruptly differentiated from the trunk.

"The vent may be either close to the extremity of the tail or to the foremost part of the trunk" (p. 39). From this statement we would scarcely be prepared to learn that the vent may also be situated below the head and as far forward as the chin, near which position it is found in the Gymnoids and Sternopygids.

"In fishes in which they [the vertical fins] are least developed or most embryonic, the vertical fin appears as a simple fold of the skin surrounding the extremity of the tail" (p. 40). In *Epigonichthys* "the dorsal fringe is distinctly higher and rayed," and the caudal fringe is absent" (p. 66). In *Ophidiids* (*Ophidiichthys*, etc.), in which the dorsal and anal fins are developed, "the extremity of the tail is free" (p. 674), and in a number of other forms (*Trichurina*, *Halsacurida*, *Gymnarchidina*, *Sternopygids*, etc.), in which the dorsal or anal fins, or both, are developed the caudal fin is likewise atrophied. (See pp. 436, 628, 665, 666.)

"Many and systematically important differences are observed in the dorsal fin, which is either spiny-rayed (spinous) (*Acanthopterygians*), or soft-rayed (*Malacopterygians*)," p. 41. These differences have been very exaggerated as to words having a number of the forms regarded as *Acanthopterygian* by Günther have the dorsal fin less "spiny-rayed" than many forms called *Malacopterygian* by him.

"In the *Malacopterygian* type, all the rays remain joined; indeed, sometimes the foremost ray, with its preceding short supports, is likewise ossified, and a hard spine, but the articulations can nearly always be distinctly traced" (p. 41). In the majority of the *Malacopterygian* type all the rays do not remain joined, for the foremost of both the dorsal and anal are articulations. In these foremost rays the articulations can almost never be distinctly traced.

"The pectoral fins "are always inserted immediately behind the gill opening" (p. 42). The pectoral fins are inserted below the gill opening in many sharks, and in all the Rays they extend far forward beyond them. Among the true fishes, in the Pediculates, their bases are in advance of the gill openings which are in their axils (p. 460).

"The pectoral fins are either symmetrical, with a rounded posterior margin, or asymmetrical, with the upper rays longest and serrated" (p. 42). In none of the fishes with pectoral fins having rounded posterior margins can the pectoral fins be said to be truly symmetrical; those in which they are most nearly symmetrical—Gastrosteids—the posterior margin is nearly vertical or emarginate. The pectoral fins are perhaps the most asymmetrical, in the sense used by Günther, in the Lepidopodinae, in which they are "inserted almost horizontally with the lowest rays longest, and with the posterior border emarginate" (p. 435).

"The ventral fins are either behind the pectorals or below them, or in advance of them" (p. 42). They would thus apparently be reduced to three categories or gradations based on those, but in one family (Ophidiids) the ventral fins are at the chin and, therefore, although they are certainly in advance of the pectorals, one would scarcely be prepared to expect such a position from the phraseology used.

"The ventral fins are generally narrow" (p. 42). This is correct, although when we consider that all the representatives of the sub-class of Selachians fail to possess the characteristic a better expression would have been desirable.

"The number of the dorsal and ventral rays is of great importance in the determination of species, the numbers of the spines and rays are generally of the greatest importance. This holds good, especially for the ventral rays, by the number of which the *Acanthopterygian* affinities of the fish can nearly always be determined" (p. 43). Dr. Günther placed the Gadoid fishes *Epiplatys* (*Merluccius*), *Hypsipterus* (young Gadoid), etc., among the *Acanthopterygians*, and consequently has shown by his own example the caution with which this character must be viewed.

"The numbers of the pectoral and caudal rays are rarely of any account" (p. 44). They are generally of quite as much account as the dorsal and anal rays, and in the case of the fully developed rays of the caudal, of more account—in almost all cases of the highest systematic importance.

"In some Gobioids (*Periophthalmus*), Trigluids, Scorpenoids and Pediculate the pectoral fins are perfect organs of walking" (p. 45). It is certainly by the utmost stretch of language that the pectoral fins in any of the Trigluids or Scorpenoids can be said to be organs of walking. In fact, they cannot in any logical sense of the word be said to have that function at all.

"Scales of fishes are very different from those of reptiles, the latter being merely folds of the cutis, whilst the scales of fishes are distinct, having elements developed and grooves

or pockets of the skin, like hairs, nails or feathers?" (p. 46). There are no such differences and relationships. It is possible that Mr. Günther may have been deceived by superficial appearances and confused and reversed what he had read of others, as told by others. The facts in the cases are thus formulated by Dr. Balfour in his "Treatise on the Comparative Embryology," just published (p. 2, p. 326): "The type of osseous skeleton developed on the inner side of the general epidermis is confined to the Pisces, where it appears as scales. * * * The type developed on the outer side of the epidermis is almost entirely confined to the Amphibia and Amniota [Reptiles, Birds and Mammals], where it appears as scales, feathers, hairs, claws, nails, etc."

"Both kinds of scales (the cycloid and ctenoid) may occur not only in the same genus of fishes, but in the same fish" (p. 47). The two kinds may not only occur but do actually *co-exist together in very many species* of the Acanthopterygian type, and especially in some of the Gobies, in which all gradations are found.

"All scales are continually growing or wasting away on the surface, and it seems that some fish at least—for instance Salmonids—shed them periodically" (p. 50). This contains the most misleading and erroneous ideas as to the genesis, development and mode of growth of scales. The *periodical* and therefore *right* "shedding" of scales, if it occurred, would come within the category of innumerable practical men—fishermen, fish-dealers, fishculturists, anglers, etc.—and who of them has observed the pretended phenomenon? *Periodical* shedding would imply periodical renewal of scales. What can Mr. Günther's ideas respecting the formation of scales lead him to believe that such things occur? It is not worth while, however, to pursue the vagaries of our author.

"The contradictions of the generalizations just indicated are in almost all cases furnished by the same name, and the pages which have been devoted to the same name to the pages where the correct information is given. Unquestionably Dr. Günther has known better than might be inferred from the above enumeration of errors. The paragraphs in question are indeed due not to positive ignorance but to temporary forgetfulness (not momentary, for it has lasted from the time of composition to final correction of the proofs) and crude generalization. They are really the expressions of a peculiar mental habit, and interesting from a psychological point of view. Nevertheless, statements have been made, and it will be but poor consolation not to be conceded. But to learn what may have almost become part of his being is to ascertain that his teacher *knows better*. What is wanted is that he should *teach better*, for the work will not be generally purchased as a psychological curiosity, but for the information which it is believed to embody and which the author's reputation will be considered to guarantee. To those who know how to correct all the misstatements the volume is of no use."

It will certainly appear probable that if the author has failed grievously in the treatment of a branch of his subject, of which the data are most readily attainable, which is most within the general purview, and which has been the special object of his study, the chances are that he has failed at least equally in his consideration of the more recondite and less known branches. Such anticipation will be found to be fully realized. Every chapter, every section, will be found to be impregnated with errors. The mental idiosyncrasies already indicated may crop out in the most unexpected places, and there is no telling where fallacies of some kind or other may not be concealed. But the most apparent and radical defects are the disproportion and incongruity manifested in the systematic portion of the work. The author seems indeed to be destitute to an unusual degree of a sense of proportion and of taxonomic tact. To enter on a consideration of such questions would, however, transcend the limits of a review. Suffice it to state that he is in discord with all the best systematic zoologists and original investigators. He commences with the Sharks, and thence proceeds successively to the exposition of the Rays, Holopteleostei and Ganoids; then considers the Pikes like types; thence jumps to the Physostomes and thus places farthest away from the Ganoids the types most like them, skips again to the Lophobranchiata, and ends the Teleost series with the Trunk fishes, after which follow the Cyclostomes, the most generalized and specialized of fishes, and which in a natural arrangement would be near the opposite extremes, being consequently most approximate.

In these strictures it has never been forgotten that work should be considered with reference to the time and rank the circumstances under which it was done. Let it be again recalled then, that Dr. Günther published his truly great work on Fishes between the years 1859 and 1870, and that there was a comparative degree of harmony between its execution and the times and conditions then prevailing. As has been indicated, however the author's conceptions when once expressed became fixed and crystallized in the type in which they were cast. The "Introduction" is, therefore, not an exhibit of the present state of Ichthyology, but of (1) Dr. Günther's ideas of the families etc., defined in 1859 to 1870, in which (2) the families of "Acanthopterygians" are arranged according to his scheme of 1861, and (3) the "orders" retained with the limits, and ranked with the sequence postulated in 1871; (4) genera described since by Dr. Günther (and a few others) are intercalated. The systematic part of the work might therefore have been prepared by any copyist or cut out of the pages of the "Catalogue of the Fishes in the British Museum" and arranged as indicated.

Never has a score of years been so fruitful in researches and results as the period which witnessed the inception of Dr. Günther's "Catalogue" and the present. In that interval Darwin has given to the world his immortal work and revolutionized the methods and objects of biological investigation, while laborers almost innumerable have elucidated the various branches of ichthyology—the anatomy, embryology, the past history, the systematic relations, the species, the geographical distribution of forms, the faunas of the world. All these have been in vain for Dr. Günther. One of the principal discoveries—that of *Varia*—has been recognized by him simply to become a stumbling-block and involve him in one of the most astonishing mazes of error of modern times. Unquestionably the most prominent characteristic of the present time is the acceptance of evolution and its ramification into all the details of biological investigation and classification. But in the "Introduction to the Study of Fishes" no allusion has been made to this principle and the author's treatment of his subject indicates that it has been practically ignored. There is, however, no group of animals to which its application is more fruitful in suggestive

and profitable results than the branchiferous vertebrates. Still scattered in the waters of the globe live here and there as solitary survivors, representatives of types once abounding in species, that enable us to trace the lineage of our branch from the humblest beginnings to the specialized Acanthopterygian and ctenoid and to man in another. And in fishes in one class we find the genesis and the development of different structures more in hand than do the fishes afford in the case of the vertebrates. Morphology and taxonomy march hand in hand; the successive stages of development of the skeleton, the nervous system, the respiratory system, the viscera, etc., are instructively indicated by the conditions of those structures in the Pharyngobranchiata (*Amphioxus*), Cyclostomes (Lampreys, etc.), Plagiostomes (Sharks, etc.), Holocephali (Chimaera), Dipnoi (*Ceratodus*, etc.), Polypterids, Lepidosteids, Amioids, the allied Physostomes (Clupeids, Albulids, etc.), the Haplomi (Pikes, etc.), the Percosoids (Atherinids, etc.), the typical Acanthopterygians (Perches, etc.), and the Anacanthines (Cod, etc.); the grades of organization in their turn proclaim the natural sequence of the types enumerated. It is strange that evidence so striking as that furnished by the forms in question should have been so entirely overlooked by Dr. Günther. The failure to appreciate the facts doubtless results from the method pursued. A certain type has been assumed as "highest" on account of its physiological conceptions and, with this as an initial form, others are successively taken up, till the author has lost his bearings and recklessly dealt with the remainder. A moral seems to be pointed to by the result. Scientific taxonomists have been for some time wont to start their phyla with the lowest and most generalized known type and by successive approximations complete the series, and if they would, in deference to ancient custom, have the highest first, reverse the series they have obtained. Dr. Günther's unhappy scheme, not less than others somewhat like it, teaches us that after all the right way is the only one to be followed. Had our author been compelled to begin his subject with the generalized and then proceed with the more and more specialized types the faults that now pervade his work would doubtless have been fewer.

The existing genera recognized by Dr. Günther number fully 1,136, of which 638 are only noticed by name, while the remaining 478 are more or less satisfactorily diagnosed. If the numbers adopted for the older groups of vertebrates should be applied to the fishes, the number indicated would be nearly doubled.

THE RATTLESNAKE AND THE COPPERHEAD.

CASHIER'S VALLEY, N. C.

FOR the past two years I have had a good opportunity for studying the habits of the rattlesnake; and for the benefit of your readers will give what I know to be facts. In the mountain counties of Western North Carolina the time has been when this family of snakes were quite numerous, but of late years since the mountaineers have begun to raise so many hogs that range *ad libitum* all over the country the rattlesnake has suffered in consequence therefrom. This snake crawls out from its winter home from among the cliffs and hollow logs in the month of June, and begins its search at once in quest of food. Its favorite subjects for food are squirrels, mice, birds, rabbits and not frogs.

There seems to be a wide difference of opinion in regard to how the sex of this snake may be determined. It is the general impression that the black color is the male, and the yellow or buff the female; but on close inspection it has been found that this will not do to settle on in every instance in regard to sex. There are instances where the male has been known to be of a most yellow hue and the female of a deep black, but such is of rare occurrence. They move about in a slow manner and sometimes alarm their food; at others they attack it or lie in wait for it to come within range of their power. If their food is very large, like the rabbit, it takes them more than a day to swallow it. As soon as they catch any little animal it is held firmly in the coils of the snake about the middle of its length, while the head and mouth is engaged in depositing a thin, slimy fluid all over the animal and then the process of swallowing begins. After it has lodged its food into its body the snake remains in a coiled state from two to nine hours—according to the size of food swallowed. While in this state their food is undergoing digestion.

In the month of August, when the weather is the hottest and the small streams begin to dry up, the "rattlers" begin to come down from off the mountains in search of running water in great numbers. Then their mating season begins. While *en route* to hunt water at this season is the most dangerous time to meet this snake, for they are nearly or quite blind, mad, and in a very excited and nervous condition, and then they pair and remain near the spring head until the season is passed, which lasts from one to two weeks, or until a heavy rain has fallen. Their young are born about the 15th of September, and number from six to twelve, according to the age of the mother. They do not lay eggs as other species of snakes do. This is a settled fact, although it has been often disputed. All harmless snakes have been tails and lay eggs; all poisonous ones have blunt tails and lay no eggs. The young are born more than half grown, and are inclined to run and hide while attending to the wants of their young than the male's. They have regular periods of the day in which they move about; they never move from their coiled position while the dew is on the grass and weeds or bushes. When the sun goes down and the air is chilled they seek some dry spot and coil up, and there remain until ten o'clock next day before they begin to move about again. This statement explodes the idea that has gained much ground among the ignorant and superstitious users, who are afraid to stir out at night for fear of being bitten by the rattlers. With few exceptions all the living things upon the face of the earth rest themselves at night. We make a positive assertion that no reliable person has ever seen a rattlesnake after night crawling about in this mountain section.

The reason for their quietude is because the air is chilled, and the grass and weeds are full of dew, and they are either asleep or prefer to remain coiled up until the sun shines out to warm them up. The rattlesnake is a very brave snake. If you come near him he will strike at you, and will coil to a coil, and give an immediate force, loud alarm with the rattles from which it takes its name from. This alarm is made with a number of little rattles on the end of their tails, which are from three to twenty in number—according to the age of the snake—when they are about six weeks old three rattles appear, and from one to two appear each alternately.

On the end of the rattles is situated what is called a button, which is nothing more than an undeveloped rattle. When they give this alarm then is the time that they are mad and will strike or bite. If very mad when in this position they will bite at once; if only a little angry they will make a motion with the head, which amounts to nothing. They do not open their mouths with both jaws to bite, but only with their upper jaw in which is located two, and only two, fangs in the shape of a fish-hook with a groove on the end and to the inside. These fangs cut the way into the object that the snake wishes to bite, and these fangs are surrounded with a fleshy sack which contains a poisonous fluid, which is injected into the cavity made with the fangs while the snake is in rage. This is the dangerous element that does the harm when bitten by a rattler. This fluid is of a rum color, and in bulk about the size of a grain of wheat—it immediately ascends the veins of the system when brought in contact with them, and throws the subject into spasms. The rattlesnake does not poison its food when struggling to master it, nor do they bite while forcing their food into their coils. They never bite or attack an object without giving an alarm, this entitles them to be classed as honorable creatures.

There is a snake which is considerably smaller than the rattlesnake, with no rattles, but resembles the rattler in many respects in regard to color and habits, that is called the "pilot snake." This snake gets its name from being a guide to the rattlesnake, and seems to be a guide for them. They are found in the mountains in the spring, and take the lead in going to their winter quarters in the fall. The pilot is regarded to be more poisonous than the rattler, and it is said that if a person is once bitten by them they never recover from the attack; that if death is not immediate the poison never leaves the system. H. J. LOMBAR.

There are some points in our correspondent's article on which we hold a different opinion. We doubt the story of American serpents covering their food with saliva before swallowing it. We have fed snakes, but have not observed this, which has been a standard "fact" of writers on popular natural history. We wish that the three men most qualified to speak on the feeding of snakes, Mr. Conklin, of the Central Park Menagerie, Mr. Frank Thompson, of Cincinnati, and Mr. Brown, of the Philadelphia Zoological Gardens, would give their experience, which has been very great. Our correspondent has evidently studied his subject some, and is correct in saying that the rattlesnake and "pilot," which is really the copperhead, both carry their young alive, for they are ova-viviparous—that is, they have eggs, but retain them in the body until hatched; but all harmless snakes are not oviparous. The ancient story of the copperhead "piloting" the rattler early needs proof. The question, why should he? naturally comes up. On the subject of charming we do not care to express an opinion at present. We will be glad to hear from him again.

METALLIC CASTINGS OF DELICATE NATURAL OBJECTS.

The following process is recommended by Abbiss for producing metallic castings of flowers, leaves, insects, etc. The object, a dead beetle for example, is first arranged in a natural position, and the feet are connected with an oval rim of wax. It is then fixed in the centre of a paper or wooden box by means of pieces of fine wire, so that it is perfectly free, and thicker wires are run from the sides of the box to the object, which subsequently serve to form air channels in the mold by their removal. A wooden sickle, tapering toward the bottom, is placed upon the back of the insect to produce a runner for the plaster. The box is then filled up with a paste of three parts of plaster of Paris, and one of brick-dust, made up with a solution of alum and sal ammoniac. It is also well first to brush the object with this paste to prevent the formation of air bubbles. After the mold thus formed has set, the object is removed from the interior by first reducing it to ashes. It is therefore dried slowly, and finally heated gradually to a red heat, and then allowed to cool slowly to prevent the formation of cracks. The ashes are removed by pouring into the cold mold a quantity of water, which is poured before pouring it out, and repeating this operation several times. The thicker wires are then drawn out, and the mold needs simply to be thoroughly heated before it is filled with metal in order that the latter may flow into all portions of it. After it has become cold it is softened and carefully broken away from the casting.

SNAKES AFTER SWALLOW'S EGGS.—FOXE BARRACKS, IDAHO.

I saw, in 1878, two chicken snakes (Boie's black snake) or racers killed at Camp Supply, Indian Territory, while they were in the season of swallowing eggs and young of the rattlesnake. The snake-master's storehouse. The swallowed nests were fifteen to twenty feet from the ground.—T. E. WILCOX.

THE CANADA PORCUPINE IN MARYLAND.—Referring to the paper on the occurrence of the Canada porcupine in West Virginia by Mr. Goode, in Vol. I, Proceedings U. S. National Museum, page 264, I wish to mention that this porcupine, *Erethizon dorsatus*, is still, though rarely, found in Maryland. In the museum of the Maryland Academy of Sciences is a specimen from Allegany County, Maryland. Another specimen I saw living in confinement in the Blue Ridge Mountains, where it was caught two years ago. One was killed quite recently near Ellicott City, Maryland.—OTTO LUIGER.

Maryland Academy of Sciences.

RANGE OF THE BEAVER.—Newburgh, N. Y.—I spent last winter in Texas, principally in the counties of Concho, San Saba and McCulloch, and saw many indications of beavers through that section. All the large streams and many of the smaller ones are inhabited by them. These counties are situated between 30 and 32 degrees north latitude. They seem to be quite numerous, but their fur is of little value. I think that they are found much further south in Texas than these counties.—L. M. H.

"THE GUN AND HOW TO USE IT" is the title of a book written by Mr. Gwynne Price, a well-known pigeon shot of St. Louis. The book deals mostly with trap-shooting, being largely on account of Mr. Price's experience at the traps. There are many hints about loading, etc., which may be of use to amateur pigeon shooters. The author, it appears, had, previous to writing his book, been presented with some of Pittman's detonating powder, and evidently felt in duty bound to puff it. Here Mr. Price is behind the times. The FOREST AND STREAM exposed the dangerous nature of that compound so thoroughly a year ago that advice to use it now can hardly help the powder or redound to the credit of the man who gives it.

* * * The horny teeth of the Cyclostomata (Lampreys, etc.) are structures belonging to this group.

Game Bag and Gun.

FOREST AND STREAM GAME TABLE.

OPEN SEASONS.

The seasons, in which it is lawful to shoot game in the several States and Territories, open as designated in the following table:

States.	Deer.	Woodcock.	Quail.	Pinnated Grouse.	Wild-fowl.	Wild Turkey.
Ala.*	Oct. 20.	Sept. 15.	Sept. 15.	Oct. 1.	Oct. 20.	
Cal.*	July 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	
Conn.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	
Dakota	Oct. 1.	Oct. 1.	Oct. 1.	Oct. 1.	Sept. 1.	Prohib.
Del.*	Aug. 15.	Aug. 15.	Aug. 15.	Aug. 15.	Sept. 1.	
D.C.*	Aug. 15.	July 1.	Nov. 1.	Aug. 15.	Sept. 1.

THE LAKE HOPATCONG EXCURSION.

THIS beautiful New Jersey lake lies among the Schooley Mountains, 1,900 feet above the level of the sea. We visited it last week by way of the Washington Gun Club, of Brooklyn, on the occasion of their first annual excursion. The lake is famous for its pike (N. Y. pickerel) fishing and also contains black bass, perch and other fish. The invitation set forth that a dinner, a boat race, a rifle match and a sail on the lake were to be enjoyed, as well as the music of Frank's brass band. So on Thursday, Aug. 25, we boarded the train at Hoboken and, after a two hours' ride to Hopatcong station found a little steamer, which took us three miles up the canal and one of its feeders and then up the lake to the Lake View House, where the sports were to be held.

First came the boat racing, in working boats, for a handsome cup, given by the host, Mr. A. J. Zuck. There were to be four preliminary races and the winners were to then row for the prize. The first one had four entries, the names being given in the order of their arrival at the finish: Dr. Hughes, Mr. Bernheimer, A. Altenbrand and Jost Miller. The second heat was between Rubenstein, Fieldman, C. Orbig and Cotter. The third between Mr. Griffith, of the Delta Ware, Lackawanna and Western Railways; C. Petty, W. A. Behrens. The fourth between Messrs. Trot, Condit, Hopps and Bulger. Then came the final race for the cup between the winners. They came in in the following order: Dr. Hughes, Trot, Griffith. Mr. Rubenstein declining to toss for boats was not permitted to compete. The course was one-fourth of a mile; no time taken. Judge, Mr. Fred Mather, of FOREST AND STREAM. A shell race, with single sculls, over a half-mile course, followed between Messrs. Hayes and Ross. Won by the former.

Dinner was then in order and the following menu was served:

Soup.
Green Turtle, à la Reine.

FISH.

Boiled Lake Hopatcong Pike, with butter sauce.

ROAST.

Fillet de Boeuf, à la Champignon, with Asparagus.

Spring Lamb Chops, served with French peas.

Green Corn and Lettuce Salad.

COMPOTE.

Vanilla Ice Cream, with Cake.

DESSERT.

Washington Gun Club Pudding.

Cheese.

After dinner Mr. Henry Altenbrand, the President of the club, in a neatly worded speech welcomed the guests in attendance and expatiated upon the beauties and attractions of outdoor sports in general. Remarks were also made by Dr. S. J. Brady, Mr. Mather, Captain Miller and Mr. W. Leslie Wilde. Following dinner, the shooting match, open to all

was entered upon and participated in by most of the party. The prize, a silver cup with crossed rifles on the face, was won by W. Leslie Wilde with a score of thirteen. Other sports were engaged in until 7 o'clock in the evening, at which hour the company made a start homeward, arriving in the city about 9 o'clock.

ARE THEY MONOPOLIES?

SANDUSKY, O., Aug., 1881.

Dear X: I have just received a copy of the FOREST AND STREAM of Aug. 18, and I presume I am indebted to you for it. If so, accept my thanks, and I thank you also for the article entitled "Are They Monopolies?" which I feel sure is from your ready pen. I approve of every word of it. But it seems strange that any such defense should be needed. Why should not a man or a corporation have as good a right to own wet land as dry—land covered with water as land above water? Why should he not be permitted to own what he can raise in the water belonging to him as well as on the land? If he cannot, let us abolish all right of property (I suppose this is what "Didymus" and all arrian, communistic sharks want) let everything be in common and thus return at once to the worst state of barbarism and confusion.

I advised the Colonel of the unusual number of ducks in the marshes for this time of the year, have sent my guns and ammunition forward, and hope to meet you and the Colonel on the 1st prox.

E. B. S.

[The above letter was sent to us by its recipient for publication.—Ed.]

INDIANA GAME LAW.

FORT WAYNE, Indiana, Aug. 25.

Editor Forest and Stream:

Herewith find statement of the Indiana game law, as approved April 14, 1881. Open seasons, penalties, etc.—Deer, October 1 to January 1; penalty \$10. Quail and pheasant, Oct. 15 to Dec. 20; penalty \$3 for each bird shot out of season. Turkey, Nov. 1 to Feb. 1; penalty \$2. Prairie chicken, Sept. 1 to Feb. 1; penalty \$10. Woodcock, July 1 to Jan. 1; penalty \$2. Duck, Sept. 1 to April 15, penalty \$2.

Penalty of one dollar for each and every quail, pheasant, prairie chicken, woodcock or duck exposed to sale, possessed or pursued with intent to kill during close season, and some penalty selling or attempting to sell any of said birds that have not been shot. Each bird creates a separate and distinct offence.

Unauthorized to take any fish with a net, seine, gun or trap of any kind (minnows excepted) or set net, weir or pot at any time, penalty not less than ten nor more than twenty dollars for each fish so taken. The use of gill and spear permitted in March, April, May, November and December. Same penalty attaches for killing or attempting to kill fish by use of poison, drugs, giant powder, dynamite, etc. Penalty not less than ten nor more than two hundred dollars and imprisonment for any determinate period added, for using or placing in the water any dip net, gill net, set net, or seine, except for minnows for bait or aquarium.

WILLIS D. MAIER.

NOTES FROM HOLLIDAYSBURG.

HOLLIDAYSBURG, Pa., Aug. 23.

SINCE the opening of the woodcock season, July 4, the weather has continued very dry and warm, but several bags of nearly a score have been made. On the Fourth of July our party of four gus bagged forty-three cocks, all nice plump birds, as sweet when plucked as when shot. We have been out several times since then and succeeded in making good bags, although none so large as the first.

On Tuesday, Aug. 19, our party of three—P. B. P. V. and self—shot six brace of cock, as many doves, one rail (a scarce bird among our mountains) and a huge gray crane over four feet high, with a spread of nearly six feet. P. B.'s ten brace "barker" brought down this gentleman at over seventy yards, with No. 8 shot.

Our shooting is nearly all in the tall weeds and willow scrub of the creek and river bottoms and it requires good dogs and snap shooting to bag the birds. With a few exceptions along the spring runs the woodcock leave us at the latter part of this month and we see them no more till another season.

Quail have been almost exterminated since the repeal of the bounty on hawks, owls and "other vermin," and quail shooting is a thing of the past. Pinnated grouse and rabbits are, as usual, abundant and promise good sport this fall. Gray and black squirrels are reported numerous on the mountains and wild turkeys and a few deer remain for those who can get them.

Although the old canal reservoir near this place, which is over a mile and a half long, by three-quarters wide, and in some places fifty feet deep, and which was stocked with black and grass bass by the Fishery Commissioners, has been drawn off, yet good catches are made in the "Junonia" farther down. Quite a number of fishermen use the fly in catching bass but the majority still stick to their old love, the minnow.

One of our sportsmen recently shot and killed a large crane, snowy white, with a pinkish bill, and the bird was sent to your city to be mounted.

T. D.

THE WILD TURKEY CALL.

Editor Forest and Stream:

I have read interesting articles on wild turkey hunting in your paper, but do not remember to have seen any on the call notes of the wild turkey. On several occasions I have flushed flocks of wild turkeys and all my calling would not bring them back. Quite a number of fishermen use the fly in a dense woods. My friend told me his "caller," made of the small end of an ox-bone. I made frequent calls of seven notes, commencing slowly and rising fast and high. After calling a long while and submitting to the upbraids of my friend that "no sane man ever used such notes to call turkeys," etc., etc., I discovered that we were surrounded by wild turkeys. I killed an eleven-pound young cock and the flock scattered. All the calling I did failed to bring one of them back or even get a response. Some hunters say gun calls are proper, and others say five, with a rise in inflection. I have often tried this and as often failed. Which are the proper notes to call a wild turkey? Will any of your readers explain?—KROOK.

We trust that some of our experienced turkey hunter, will compare notes and give us the result of their calls. The various calls we have used the common bone calls which is made from the hollow wing bone of the bird. The ends are cut off and the call-note is made by venting sucking through the tube. With a narrow chisel hollow out a piece of dry cedar, two inches long and one and one-half inches wide and one-quarter inches thick, so that the sides are about as thick as a piece of tin; but do not let them be too delicate. It should be hollowed out within a quarter of an inch of the bottom and ends. Taking this simple call between your thumb and fingers, rub it crosswise against the butt of your gun on the barrels. No gun is required; the simple sound can be manipulated with a little practice to perfectly imitate the turkey call.

AN IOWA GAME CENTRE.

LOCATION. Humboldt County, Iowa. Can be reached by Illinois Central Railroad to Fort Dodge, thence by Ft. Ridgely Railroad to Humboldt, or by Iowa Division Chicago, Milwaukee and St. Paul Railroad to Algona and thence by stage to Humboldt. Good hotel accommodations at Humboldt, Dakota or Rutland at \$1 per day. Guides not needed. Teams, \$3 per day. The fish are pickerel, wall-eyed pike, black bass and rock bass in great abundance. Game birds are ducks (mallards, teal, wood, spring-tail, spoon-bill, red-heads, hooded mergansers and buffle heads), Hutchins' geese, Canada geese, snow geese, white-fronted geese (brant), sand-hill and whooping or white cranes, pinnated grouse, quail, golden plover, Wilson's snipe, rail, long-billed curlew, Hudsonian curlew and rabbits or hares.

Of course not all of this game can be taken at any one time of the year, but in their season may be taken. The west fork of the Des Moines, above Rutland, is the best fishing grounds in Iowa from Sept. 1 to Nov. 1. Black bass and wall-eyed pike may be taken beyond desire. Bass and pike of six and eight pounds are very common. During September pinnated grouse may be killed by the hundreds, but October and November are the months for ducks, geese and cranes. Hunters will find it easier to reach the shooting and fishing grounds by camping out.

Address Chas. Sherman, Ira E. Welch, or the writer, at Rutland, Humboldt County, Iowa. N. A. PRIOR.

FAMOUS FOX-HUNTERS.

SOME EXTRAORDINARY INDIES.

IT is astonishing with what enthusiasm a man—or woman—enters upon the sport when once a taste for it has been acquired. A regular fox-hunter dies in harness; the older he grows the stronger becomes his love for the pastime. Such, at least, may be inferred from the lives of men who have gained renown in the field. Men who were as blind as bats have followed the hounds with the best riders of their day, and, in one instance, the want of both hands and feet has not deprived a hunter from being in at the death. This seems hardly possible, but of it there is ample evidence. Of blind fox-hunters a dozen or more instances might be given.

The Reverend Edward Stokes, of Blasby, county Leicester, England, may be cited as one such instance. He lived to be nearly seventy years of age and died in 1797. At the time that he lost his sight, then fourteen years old, he had acquired a taste for fox-hunting from his father, whom he had succeeded as rector of the little church at Blasby. During his busy life he never lost an opportunity to mount and follow the hounds, accompanied by an attendant, who rang a bell as they approached a fence or hedge, and both went over together.

But the reverend gentleman was outdone by an officer of the British army, who equally blind, was noted as one of the boldest riders in the Mousgrubs of Granby's hounds. He had no attendant, but went with the crowd and relied on some one to say when he neared a stiff place, "A little to the right, sir," or "Half a length to the left," and over he went without our fear or misapprehension. Lord Bertie, whose portrait has a conspicuous place in Hogarth's picture of "The Cockpit," rode to hounds in the same way; and Lord D'Erhurst, who lost his sight by a fall from a horse, was not deterred by the accident from hunting. Stephen Chase, of Cowfold, was also a blind fox-hunter. But when this infirmity came upon him he reluctantly gave up the hunt and retired across the country on foot, when a chase came off, attended by a servant, and with such good judgment as to the spot where the fox would be killed that he, too, was often in at the death.

John Metcalf was a still more remarkable lover of the chase. He was long known about Knaresborough as "Blind Jack" and was the first person who set up a wheel carriage in Harrogate for the conveyance of passengers to and from places of resort. At one time he was a musician in Colonel Thornton's volunteers (1745) and was taken prisoner at Falkirk. Singularly enough, this man established himself as a common carrier between Knaresborough and York, and, blind as he was, served as guide through the intricate paths of the forest, when covered with snow as well as at other times. Fox-hunting was to him a delight, and he entered upon it heart and soul, following the hounds both on foot and in the saddle, with the greatest precision and without meeting with any serious accident. More than this, he explored the neighboring country, projected and laid out roads and built bridges and bridges by the way.

But Thomas Roberts was the most extraordinary fox-hunter of whom I have ever heard, for he followed the hounds under difficulties that would have discouraged most men. He was born without forearms and had no legs below the knees. Above one of his elbows there was a protuberance, something like a thumb, which was capable of muscular action, and this served him instead of a hand. Yet Thomas had a firm seat in the saddle and, as huntsman to Sir George Barlow, the last baronet of the ancient family of Barlow, he was a successful hunter. With all his defects, there must have been something pleasing in his manners, for he had three wives, who bore him a number of children. Daniel Lambert had the same fondness for fox hunting and he indulged it so long as he could get into the saddle. When he could no longer do that he sold his hounds at Tattersall's and drove to cover in his carriage. This taste never left him and to the last he had around him a number of hounds. Cock-fighting, a questionable pastime even in his day, also had a hold upon his mind, and he was a keen amateur, for his maternal grandfather was a noted cock-fighter.

As I have already remarked, a man once imbued with a love for fox-hunting never willingly gives it up and there have been those who at their death have been anxious for "a

in catching forty five that day. But one old fellow was the smartest of them all. Some negroes were chasing him with dogs and he gave them the dodge. He turned back, ran for a good distance, took to the water and went out and landed, leaving only his head out. We saw all of this from the boat. We went over and I shot and killed him. As for rabbits taking to water, that is nothing strange down South.—L. F. P.

WILD RICE—Ashland, Wis., Aug. 25.—I see in your issue of Aug. 18, Mr. Charles Gilchrist alludes to an article of mine on the depth of water that wild rice grows with him. I have spent the summer at this place, and, to my surprise, find no wild rice here (not a stalk) except the small kind, which amounts to little compared with species I intended in my article. I did not suppose anybody attempted to introduce the small kind, as it bears but little seed and in two feet to perhaps the depth Mr. G. says. He says: "A stalk nine and a half feet long grew in seven and a half feet of water," showing only two feet out of water. The variety I described grows from six to ten and twelve feet, and not in water over two to three feet, and in a dry time out of water. It grows so large and thick you can hardly push a boat through it. This kind has an immense seed pod, while the small variety grows little seed on a small straight stalk along the edge of rivers and sand bars in deeper water, where none but diving ducks can feed on it. The large kind spreads the top like broom, corn not broken down. I consider the large kind the only desirable one.—LUTHON.

MAINE GAME NOTES—Lincoln, Maine, August.—Woodcock are fairly plenty in this vicinity. In an hour's stroll from the office the other day my dog pointed and flushed five. They are not in prime condition here before the middle of September. Ruffed grouse are plentiful. Deer are reported very numerous about the lakes in our immediate vicinity. I, with many others here, have a decided inclination toward the view that we should be allowed to hunt deer; not that we do hunt them—that would be in violation of our laws for game—but we regard the prohibition of hunting wound and an evil to be corrected. The sketch I sent you, "Syseledobis and Passadumkeag," some time ago was the cause of a visit from the "Deputy Warden." In my desire to present a truthful and accurate account of our trip, I forgot the law for the time and introduced a hound which aided us in securing a deer. Well, that Deputy read the account and at once looked me up. So you see our game overseers attend strictly to business.—F. C. P.

"PARKER" NOT A GUIDE.—Montreal, Aug. 24.—"Ness-muk" is quite right. "Charles Parker" was no guide, his real name is Frank Cook. He was born in Sheldon, Vt., in 1846, or thereabout, and always bore a bad reputation. In 1870 he was arrested in Highgate, Vt., for adultery and taken to St. Albans jail, where he overpowered the Sheriff and locked him into a cell and escaped, but was soon after recaptured and sentenced to a year in the State prison. After his term was out he returned to Highgate, where he was once again engaged in drunken brawls and fights. In 1878 he was sent to jail for intoxication, but was pardoned out by the Governor and soon after left the State. His Adirondack escapade was fully in keeping with his reputation, where he was well known in his native and adjoining towns, and the feeling there is that at the hands of Constable Cole he has received his just punishment.—STANSTEAD.

WISCONSIN DUCKING GROUNDS—Rouen, France, Aug. 11. Editor Forest and Stream: Your issue of July 28 reached me here this morning. I notice that your correspondent J. W. B. wants to go duck shooting, and I can tell him of a good place. Let him go to Green Bay, Wisconsin. There are several professionals whom he can employ. I had a man named Welsh whom I can recommend. I paid him two dollars per day and gave him the birds, which he sold. He furnished boat. Three years ago a friend and myself in five days' shooting killed over three hundred ducks, many of them canvas-backs and redheads. I got the information which led to my going to Green Bay from FOREST AND STREAM, and think I cannot do better than "pass it along."—DUCK.

WOODCOCK ON MAIN STREET—Lockport, N. Y., Aug. 26.—Last evening as I was driving from Niagara street on the bridge that crosses the canal to Main street, near the centre of the business part of the city, a woodcock flew by and came near flying against the rear of the buildings on Main street, but turned to the right and passed over Main street up Cottage street. Some three years ago a ruffed grouse flew against a house on Park place and was killed. A few days after another was killed by the broken air glass, directly on the opposite side of the same street; and after flying about and frightening the occupant of the room, passed out through the window seemingly unhurt; and yet if you wish to shoot grouse or woodcock you will have to go far beyond the city limits to find them.—J. L. DAYTON.

MISSISSIPPI GAME—Philadelphia, Miss., Aug. 19.—At the last meeting of our Legislature the game law was put into the hands of the boards of supervisors of the various counties and a provision made allowing parties to kill game for depre-dating upon crops. Some of the counties are trying to abolish the game law, and every "pot-hunter" claims that his farm is entirely over-run by the broken air glass, directly on the opposite side of the same street; and after flying about and frightening the occupant of the room, passed out through the window seemingly unhurt; and yet if you wish to shoot grouse or woodcock you will have to go far beyond the city limits to find them.—J. L. DAYTON.

PULASKI GUN CLUB—Pulaski, N. Y., Aug. 26.—A sporting club was organized at Pulaski, N. Y., August 13, under the name of the Pulaski Gun Club, its purpose being the better protection of game and fish. The following gentlemen were elected officers for the ensuing year: A. F. Betts, President; A. W. Dunn, Vice-President; M. D. Bumpus, Secretary; W. E. Pier, Treasurer. This club has leased the water land and marsh known as Deer Creek marsh, comprising over one thousand acres, for the term of five years, for their private hunting and fishing.

PENNSYLVANIA—Wyalusing, Pa., Aug. 26.—Woodcock have been scarce, the drought of about four weeks' duration raising havoc with them on our sandy flats. Quail are plenty—thanks to those who fed them during the heavy snows last winter. Ruffed grouse are about the same in abundance. Rabbits are plenty; squirrels in large numbers in the oak ridges. By the way, there are two associations in this coun-

ty, Bradford, for the protection of game and fish, yet the slaughter goes on out of season. I heard of one party killing fifteen gray and black squirrels two or three days ago.—ON THE WING.

QUAIL IN ALABAMA—Hayneville, Ala., Aug. 26.—Quail shooting in this country promises to be better than usual, as the dry spring and summer has been propitious for their propagation; and numbers of half fledged little ones are seen along the roadside and in the stubble. The almost unprecedented cold weather last winter destroyed thousands of doves, and in consequence the annual wheat field sport of this section has been considerably abridged. The sluggish waters of August and the industrious mosquito deter the most inveterate angler at this season.—A. E. C.

NEW JERSEY RAIL LAW—New York, Aug. 29.—I would like to call your attention to one of the great evils of our game laws. In New Jersey the law allows rail to be shot after Sept. 1st and reed birds after Aug. 20. The result is, that our marshes are infested with poachers, who are after reed birds, but by mistake kill rail. It is impossible, even with men on the river to watch to prevent it. Reed birds and rail should be allowed to be shot Sept. 1st and then there would be no excuse.—W. HOLBERTON.

HERBERT'S IMPRESSION ON A BOY—I know Herbert well, he having spent nearly a year in Kentucky with my grandfather. My impression of him, for I was a mere youth, was chiefly—let that be a crack shot; 2d, that he knew more Greek and Latin than I did; 3d, that he knew fine old whisky. Pence to his ashes. A gentleman, a scholar, a deep thinker. Requiescat in pace.—ST. CLAIR.

NEBRASKA PRAIRIE CHICKENS—For pinnated grouse shooting in Nebraska go to Lincoln; find some of the Sportsmen's Association members and get from them a tip as to the exact spot to go to. The birds are reported plenty all along the line of the Burlington and Missouri Railroad west of Lincoln.

AN AUGUST WOODCOCK IN MISSISSIPPI—Natchez, Miss., Aug. 23.—A young woodcock was captured here yesterday in the residence of one of our citizens, where it had flown through mistake. This is rather early for them down here.—S. W. M.

TO TOLEDO FOR DUCKS—A correspondent, who has moved from Cincinnati to Toledo, O., says: "Game is getting scarce around Cincinnati and hard to get at; cannot very well get along without it, so moved up here and expect to take it out of the ducks this fall."—E. M.

ONE YEAR AFTER—Woodford, Me., Aug. 24.—Editor Forest and Stream:—It is a little late, but allow me to thank you for the good work in the cause of humanity that you have done in exposing so thoroughly the Dittmar powder.—M. S.

The Chicago and Northwestern Railway has a most appealing bill of fare for its palace dining cars between Chicago and Council Bluffs.

REED BIRDS are reported plenty on the marshes about Philadelphia now, and the season promises to be a fair one.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.	
Grayling, <i>Thymallus tricolor</i> and <i>T. montanus</i> .	Yellow Perch, <i>Perca flavescens</i> , and <i>P. americana</i> .
Black Bass, <i>Nicrophorus salmoides</i> and <i>M. pallidus</i> .	White Bass, <i>Roccus chrysope</i> .
Muscalonge, <i>Esox nubilus</i> .	Rock Bass, <i>Ambloplites</i> . (Two species.)
Pickering, <i>Esox reticulatus</i> .	Walleye, <i>Channobrythys glauco</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Carp, <i>Pomoxys nigromaculatus</i> .
Pike-perch (wall-eyed pike), <i>Stizostedion americanum</i> , <i>S. gireum</i> , etc.	Bachelor, <i>Pomoxys annularis</i> .
	Chub, <i>Semotilus corporalis</i> .
SALT WATER.	
Sea Bass, <i>Centropristis atrarius</i> .	Weakfish or Squeteague, <i>Cynoscion regalis</i> .
Striped Bass or Rockfish, <i>Roccus flabellus</i> .	Spot, <i>Leiostomus xanthurus</i> .
Flounder, <i>Platichthys stellatus</i> .	Shad, <i>Alosa sapidissima</i> .
White Perch, <i>Morone americana</i> .	Channel Bass, Spot or Redfish, <i>Seriola lalandi</i> .
Bluefish or Taylor, <i>Pomatomus saltatrix</i> .	Sheepshead, <i>Archamia probatocephalus</i> .
Scup or Porgie, <i>Stenotomus argenteus</i> .	Kingfish or Barb, <i>Menticirrhus nebulosus</i> .
Follock, <i>Polydora carbonaria</i> .	
Tautog or Blackfish, <i>Tautoga onitis</i> .	
Spanish Mackerel, <i>Cybitum maculatum</i> .	

The bend of the rod, the gentle feeling with the finger as I checked the run of the line, told his weight almost as accurately as a spring scale. Don't imagine always that anglers have no authority for their figures when they tell of large fish that they have struck and lost. I know men who are accustomed to tell the weight of their fish before they have seen them above water, and who will hit it correctly within an ounce or two nine times out of ten; for the angler knows his rod and it grows to his hand like a part of it, so that he feels the fish on as if he were in his very grasp.—WILLIAM C. PRINCE.

"THE KING FISHER OF THE NORTHWEST."

BY REV. E. B. HAFFENSPERGER, PHILADELPHIA, PA.

SOME months ago I paid a visit to Toledo, Ohio, "the great city of the future," as it is fondly termed by its enterprising people. I found there a number of strange things that were unknown in those parts when I first made the acquaintance of the "raging Maumee," a score of years ago. Then the city at its mouth had only 12,000 inhabitants, now it boasts of a population four times as large. The improvements for the past decade are of the most substantial character. Massive stone blocks of buildings have been erected that are seldom excelled in any city. It really begins to look now as if the predictions of one of its ancient prophets were about to be fulfilled, and the proud designation quoted above may yet be accorded to Toledo by those living outside the city limits who have no real estate for sale!

Among the attractions of Toledo may be ranked the Ohio Fish Hatchery. This is situated in the southern part of the

city, only a few rods from the huge water stack. My old time friend, the Hon. Enos D. Potter, a former representative in Congress from the Toledo district, and now a judge in the Circuit Court, and subsequently a Custom House officer, occupies to it the relation of founder and superintendent. He is a shrewd officer of the State, but, unlike many another man who receives large pay and does little, the judge receives little and does much. I have ventured to term him the King Fisher, or *Aleco alecon*, of the Northwest. For a whole generation he has been the referee in matters pertaining to the finny brood by all the dwellers in that region.

Shortly after my settlement in Toledo I became acquainted with his weaknesses for fish and enjoyed his wonderful stories concerning them. Having had some experience in New England trout fishing, I was greatly interested in the accounts he made to give of the speckled beauties of the mountain streams. Little did I then think that these could live in the waters of Ohio. The Judge was a member of our Board of Trustees of the First Presbyterian Church, and we held our meetings in his office in the Custom House. While he took a deep interest in matters ecclesiastical, it must be confessed that he was as much interested in the fish as in the church. He had expected to catch in the Allegany Mountains, and about to make an annual visit to a favorite summer resort in his native Pennsylvania, and he spent all his leisure moments for several weeks in scraping and tempering his elegant trout rod. A man might learn more about the peculiarities of this splendid fish by conversing with the Judge for an hour than by attempting to fish for trout in the best stream in America for a day. While he was a member of Congress it is related that Daniel Webster that he frequently induced the Judge to leave the Capitol and accompany him on fishing excursions about the Potomac. An old Toledo tradition says that one time, while the Judge was absent in Washington, several fine specimens of the *Esox nobilis*, or muskallonge, were captured in Swan Creek above Toledo. This was regarded by the Judge as a most singular occurrence, and he reproved a part of his constituents for not sending for him to come home directly from Washington, because, he said, "the thing needed looking into at once!"

The State of Ohio could not have selected from its millions a man who is so well posted in fish matters, or so well qualified to take charge of the really beneficent institution now under his care. No wonder that other States, appreciating his worth in promoting this great industry, have offered the Judge five times as much as the Buckeye State pays him for superintending the hatchery of Toledo.

The attention of the people of this land is now directed to fish in a manner that portends good in the near future. Within the past fourteen years about twenty-five fish commissions have been organized. These belong to nearly as many States of the Union. Wonderful results have been attained, and we are just beginning to enjoy the benefits of these hatcheries. Seventeen years ago Judge Potter predicted that if no efforts were made to arrest the destruction of fish food the waters of Ohio would be destitute of fish in a few years. The State finally waked up and looked at the subject through his spectacles. The few thousand dollars expended on the hatchery are already coming back into the coffers of the fish dealers. One firm in the vicinity of Toledo said that in the year 1877 its catch was 48,797 lbs., while in 1878 it reached 104,813 lbs., and it attributes this success to the hatchery under the care of the Judge. His Honor called for me one day and invited me to go out and see the "infant department" as he termed it. A ride of several miles brought us to the establishment and the process of hatching was fully explained to me.

In the spawning season the fish are captured and brought to the place prepared for them. Here the good eggs are carefully separated from the bad ones and tenderly watched and protected until the little wrigglers, that look not unlike incipient mosquitoes, emerge from their shells. Their eyes are very large and in this respect alone do they differ from baby mosquitoes in appearance. In a less enlightened community if a man, whose reputation for veracity is not well established, would exhibit the millions of wrigglers that I saw in the tanks of Judge Potter he would be looked upon as a disturber of the peace. The people of Toledo regard the superintendent as a man of truth and fully believe that in three or four years these big-eyed wrigglers will be whitefish weighing two or three pounds apiece. There is capital of producing annually twenty millions of whitefish in the baby state. At the proper time these are consigned to the water and left in the care of Him who provideth food for all the inhabitants of earth.

None but an adept in fishculture could carry on successfully such an establishment. A slight mistake would result in the destruction of myriads of fish soon to be distributed in the waters of the State. I have seen human mothers who seemed to be less careful of their infants than is the good Judge of his wrigglers. Long have they lived to serve his generation in the trust intrusted to him. He has now attained his "three score and ten," but was able recently, while celebrating his birthday, to go out into Maumee Bay and kill fifteen ducks. He loves to recount his experiences on the water, and all who hear him are astonished at the wonderful facts that have come under his observation in respect to fishculture.

Those who have enjoyed the privilege of accompanying him in his fishing and hunting excursions tell marvellous stories about the adaptation of the Judge to the exigencies of the case. He is accomplished in the mysteries of the cuisine and can provide for the bodily sustenance of the party in ways that are absolutely incomprehensible. A friend, who is a great epicure and well acquainted with the best hotels of our land, told me that some years ago he formed one of a party who spent some days in the "wilderness of sin" near Toledo. The commissariat was under the direction of the Judge, and, like Moses of old, he also encountered difficulty in providing for the hungry herd under his care. He started out with an ample supply of store goods, but had eaten up almost everything and, having killed and caught nothing, they were in distress and actually clamored for something to eat. The Judge coolly told them that if they could put up with a pudding he could keep them from starving! They advised him to go ahead. He gathered up the fragments and, with the aid of a lot of corn-meal and several damp newspapers, instead of a pudding bag, he managed to prevent for the present the clamor of his companions pronounced equal to any ever prepared at Delmonico's!

The Judge informed me that his friend Dr. Theodorus Gerrick, of Cleveland, was the first man in the United States who experimented successfully in artificial fish hatching. He prepared a hatchery in Cleveland in the year 1853 and raised a large number of brook trout, *Salmo fontinalis*. Twenty years later John Hoyt, Esq., of Castalia, Ohio, hatched out 3,000 Eastern salmon (*Salmo salar*) and set them free. He

also introduced the brook trout into the stream at Castalia and, according to the estimate of Judge Potter, that is to-day the best-tocked trout stream in America. If this be so, then the Buckeye State will take the first premium for producing trout as well as Presidents. The stream at Castalia, with its precious contents, is owned by a party of wealthy and intelligent gentlemen in Cleveland. It will give the writer great pleasure some day to accompany one of them to Castalia just for the purpose of testing the truthfulness of the statement made by Judge Potter.

Experiments are now in progress at the Toledo hatchery for producing shad, California salmon, eels, black and white bass and other species. One can estimate the blessings yet in store for fishermen and the lovers of fish that had their origin in the brain and heart of the "King Fisher of the Northwest."

FISHING IN LAKE CHAMPLAIN.

SWANTON, Vt., Aug. 22.

I DO not recollect having seen any report of the fishing in this locality in your journal, and as your readers should be apprised of the excellent sport to be found here, a few lines may be welcome. Saturday last, a party of three took seventy pounds of black bass and rock bass in one day's fishing. To-day the same party took fifty pounds. The fish run about two pounds each, although Mr. George Snyder, one of your neighbors, caught one to-day weighing four pounds. Mr. Fred Newman also captured a large sized bass, so you see that your part of the city contains some good fishermen. Many larger fish were lost by the vigor of the game. Double-rod snells were snapped five times, and as the fish were nearly landed each time, it is no fisherman's exaggeration to say that these lost monsters (pickled) weighed from five to seven pounds. One big fellow carried off a large-sized salmon from his snout, and twice afterwards broke the water within a hundred feet of the boat, tossing his head with frantic efforts to get rid of his artificial ornament.

Large-sized perch, weighing from one to two pounds, are contemptuously tossed back into the lake, while very fine snuffish and rock bass are in like manner consigned to perdition. I have seen half a bushel of excellent panfish, which in Fulton Market I would gladly buy for a treat—no mean dish your golden "pupkin seed" makes—fed to the hogs. The bait now used is worms and grasshoppers, but minnows will insure your catching monsters from the "vasty deep." Trolling takes a few with the spoon. Strong tackle is required, large-sized hooks with four-tye rod snells and leaders, or perhaps a gimp snell and strong leaders. Of course, if you prefer a light outfit and wish to play your fish for a day or two, come rigged out with a colweb; but, after having your tackle smashed in pieces a few times, you will have a change come over the spirit of your dream.

A new hotel has just been opened here, the "Champlain," Mr. Boynton proprietor, and guests will be surprised with fishing, gas, electric bells, etc., fine bills of fare and good beds at eight dollars per week. The Central Vermont Railroad leaves you at the door of the house, or you can come via Albany, Lake George and Lake Champlain to Plattsburg and across by boat. J. H. H.

INDIANA AWAKENS!

THE lawlessness of Indiana poachers is a matter well known outside the State. Last spring a prominent gentleman of that State wrote us as follows:

"That you may comprehend the situation in Indiana, I will state that we have some feeble laws unexecuted for the protection and preservation of fish. We have for our population the children of the pioneers, whose ideas of freedom were limited by the right to fish when, where and how they please, and cut a 'coon' or bee tree on any man's land." To these add the heterogeneous mass of emigrants from every land with communistic thoughts fairly developed, and the whole mass thoroughly demoralized by catering politicians in a pivotal state."

Recently a Spartan band has arisen in Indianapolis, who declare that the use of dynamite must be stopped. They have formed an association, and the following has been circulated on postal cards:

"INDIANAPOLIS, Aug. 20, 1881.

"Dear Sir: You have probably seen by the newspapers that a society has been lately formed for the protection of fish. This is not an 'Angling Club,' but has for its object, 'Enforcing the law prohibiting the use of dynamite, etc., in the destruction of fish.' At the present rate of this warfare, but a few weeks will see the creeks and streams of Indiana entirely stripped of fish. We want the names of prominent men who will assist us in this fight, and therefore ask you to join this society. The initiation fee is only \$1. Please give or send in your name to any of the following persons: Alex. C. Jameson, President; Geo. F. McGinnis, Vice-President; W. C. Phillips, Secretary; F. T. Holliday, Treasurer; John A. French, Jos. A. Moore, W. H. Ross, Bryant Elliot, Ignatius Brown."

The new Association can count on FOREST AND STREAM as being on their side first, last and all the time. Success to them.

"ALBANY BEEF."

THE sturgeon was a favorite with the Dutch settlers of the State of New York, especially with those who made their homes on the upper Hudson. So common was it that it was known as "Albany beef." We have recently printed some notes on its being smoked and sold as halibut on the great lakes, and also a communication from an Albany claiming the sturgeon to be superior to the latter fish. In this connection we republish the following from the Hudson Register:

"The smoked flesh of the sturgeon is a favorite article of food in the towns along the Hudson River, and when it is well prepared and has not become stale, it is a very nutritious and palatable edible. In former years the catch of sturgeon in the Hudson River was amply sufficient to supply all demands for the beef at low prices. Within the past few years, however, the fish have become scarce and shy and have to be brought to Albany, where the principal smoking establishments are, from the Kennebec River, in Maine; from the St. John's, in Folsom, and from the great lakes. Albany the fish cost from five to eight cents a pound. It shrinks considerably before it is smoked and, therefore, the fish is wholesaled at fifteen cents per pound, at which price there is only a moderate profit made. The stores retail it at

about eighteen cents. The sales of one firm in Albany average over 1,000 pounds per week and have reached as high as 4,500 pounds one week this season. In this city Philip Kavanagh has an establishment for dressing and curing sturgeon. He is unable to meet the demand for the beef. Large numbers of sturgeon are received daily, coming principally from Hyde Park. The quantity of fish sold in this city alone is immense, the price being the same as at Albany. The trade is reported to be constantly on the increase in this city and along the upper Hudson, even at the prices named."

GRUBS IN BLACK BASS.—While camping (a year ago) on Brooklyn Point, Crooked Lake, near Petoskey, Michigan, I had the pleasure of taking a great many large black bass during my stay of two months in that delightful retreat. It was not until I had assisted largely in eating that excellent fish that I discovered I had more than I bargained for, as it afterward proved that a bass entirely free from grubs was a notable exception. Of course the inhabitants of that wild region, acting as guides for a living, have to furnish so many transient amateurs with fish for their friends at home that they never eat them themselves, and consequently "don't know nothin' 'bout grubs in bass" around there, whatever they may tell you about grubs in bass of other lakes.

By skinning the fish instead of scaling it the grubs are exposed in the thick semi-transparent flesh, like so many excisions of boiled rice stuck into farinella jelly. The process of skinning is very easy, by cutting down the back of the fish on each side of the dorsal fin. This harmless grub should not be confounded with the wriggling, wiry worm found in knots and large colonies in the intestines of other fish, such as for instance the sunfish, late in the summer in muddy lakes.

New York, August 27, 1881.

NOTES FROM MOOSEHEAD.—From a private letter from Mr. T. Sedgwick Steele we extract the following notes about Moosehead Lake. The date was Aug. 16.

"I have been much interested in Mr. Fay's article, 'Moosehead Lake to the Main St. John's River,' and an accompanying experiences with Mr. Fay. The fishing here has been very fine indeed, even up to the 15th of July, fifteen days beyond its usual time, but is in its usual poor state to-day and will not amount to much until Sept. 1. However, trout can be had with hard work and going off alone quickly with your guide to some inland lake or stream. I have landed some two and two-and-a-half pounders since I came, but in addition to my family there are six others to entertain, and these 'quiet knots' can not accommodate so large a party."

"The 'boiled shirts,' I regret to say, are more numerous at this hotel, the Mr. Kincaid here, this season than ever before, which makes us patrons of the flannel feel a little out of place, and before long we old sportsmen will have (like the darkey) to 'take to the woods.'"

"That trip of Mr. Fay's is very easy and accessible to even ladies. My brother-in-law, wife and two children went through it three years ago, and now there is a 'juniper' or alder on the Umbagogus and Mud Pond carries it requires little exertion."

A HUNGARY TURTLE.—Vicksburg, Miss.—Speaking of turtles, my brother said a company were fishing in a small creek, an adjoining county. They had stuck their poles into the bank, and were discussing a lunch a short distance off, when perceiving a bite on one of the lines F. approached and drew it up. A good-sized turtle came to the surface on the hook, and then letting go sank to the bottom. He soon took hold again, and was again drawn up. This time F. had a pistol in his hand, and sent a bullet through the turtles back, whereupon it let go the hook and sank, leaving stains of blood on the water. An hour or two later they were fishing near each other some two hundred yards further up the stream, when F. having a "bite" again drew a turtle to the surface, which, however, also let go, but in making off it caught one of its feet on the other hook some yards away, and was safely landed. To F.'s astonishment he found it to be the same turtle he had shot some two hours before and a couple of hundred yards down stream, the bullet having gone through its body, and its entrails were protruding through the hole in the lower shell. Yet it came back for more bait. That beats Douglass Jeroid, who cracked a joke on his death bed.—"MASONER."

A MENHADEN WAR THREATENED.—Barnegat, N. J., Aug. 28.—For the past two years our people, in Monmouth county, have complained that the menhaden fishers, with their purse nets, are ruining our fisheries by taking the menhaden in such quantities that few are left for our valuable food fishes to feed upon. When they sight a school of fish they follow it until they have caught the last one and our food fishes are decreasing, either starved or driven to seek food on some coast where the pestilent and persistent menhaden fisher, with his all-capturing pound net is unknown. Men who claim to know said that the loss to our people in food fish amounts to one million of dollars annually and petitions are now being circulated asking the State Legislature to pass a law prohibiting the wholesale catching of menhaden along our coast. Thousands of signatures have been obtained and the question will enter into politics in our fall campaign.—X.

UNWHOLESOME FISH AT BILLINGSBURY.—We learn from Land and Water that during the month of July the fishermen appointed by the Fishmongers' Company seized at Billingsbury, Mass., and on board boats bring off that place, 33 tons 15 cwt. of fish as unfit for human food. Of these 54 tons 18 cwt. came by land, and 38 tons 17 cwt. by water. Nineteen tons were shellfish. The single fish numbered 99,957, and include 8 catfish, 10 cod, 18 crayfish, 500 eels, 120 conger eels, 500 dabs, 81,560 haddock, 2,200 lobsters, 700 mackerel, 4,822 plaice, 680 skate, 73 pairs of sole, 1 sturgeon, 245 turbot and 8,450 whiting. There were also 10 barrels of crabs, and 12 of pickled herrings, 3 boxes of herrings, 108 bags of mussels, 4 cwt. of oysters, 100 pounds of eels and 106 of whelks, 2 kiln pickled herrings and 1 of prawns, 1,048 gallons of shrimps and 55 quarts of whitebait.

THE STARFISH AS A COMESTIBLE.—Editor Forest and Stream: I note the remarks under the above heading on my recipe for bisque of starfish in your issue of Aug. 18. No true Ichthyophagist should condemn the starfish until he has tasted a bisque made of it. In my opinion the starfish, properly cooked, far surpasses the crab or lobster in delicacy of flavor and should be called the king of shellfish. They may "smell to heaven" while being dissected,

but there is nothing disagreeable about them after blanching in hot water a few minutes.—THOS. J. MURRAY, Steward of Glen Island.

BASS LAKE, Vt.—Montreal, Quebec, Aug. 24.—Mr. W. L. Matzke, of this city; Mr. H. Cascan, of Sheldon, Vt., the writer and his son, spent several days last week camping at Bass Lake, Franklin, Vt. We made a fair catch of bass, the largest weighed 5 1/2 lbs. Master Barnaby used a 7oz. greenheart rod, and killed several bass that weighed over four pounds each. It gave us old fellows more pleasure to see him hitched to a large bass than to take it ourselves.—STANSTRAD.

BLACK BASS IN THE SUSQUEHANNA.—Wyalusing, Pa., Aug. 26.—In this part of Pennsylvania, living, as we do, on the banks of the Susquehanna, we have ample fishing grounds. The water being low on account of the drought, the size of the "catch" of black bass has increased and the quantity diminished. Some are caught weighing four pounds. Once in a while fishermen will catch white-eyed pike weighing from four to ten pounds.—ON THE WING.

HICKORY FOR RONS.—Flemington, N. J., Aug. 23.—I would like to know the proper time to cut hickory to make fish rods from—spring, summer or fall of the year? Do you want small saplings or from large timber, and what kind of hickory? There are several kinds, I believe. I have noticed in some book, speaking of brown hickory—what is meant by that? By answering the above questions you will greatly oblige—L. F.

My wife and daughter were made healthy by the use of Hop Bitters and I recommend them to my people.—Methodist Clergyman.

Fishculture.

THE MCCLLOUD RIVER HATCHERY.

U. S. FISHERY, BAINES, Shasta Co., Cal., Aug. 18.

Editor Forest and Stream:

I enclose herewith an extract from my next report on the McCloud River hatchery station, concerning the destruction of the stock of hatchlings by the water. The building near the hatchery is now nearly completed, and we expect to begin to take salmon eggs next week.—LIVINGSTON STONE.

Up to the 31st of December, 1880, the rain fall on the McCloud River, indeed, there and when the New Year opened the water was below the customary number of fair days until the 18th of December when it began to rain, and rained eleven days in succession, the river rising on the 25th eight feet and two inches above its summer level. This was nothing extraordinary, however, and no fears or even misgivings were entertained of any disaster from floods to the fishery buildings, they being built from eighteen to nineteen feet above the river.

There was a dense fog over the McCloud River the last two days of December, but no rain, and when the New Year opened the river had fallen back to within a foot and a half of its usual level.

The month of January, however, was attended by a rain fall wholly unprecedented in Northern California since its settlement by white men. Forty-seven inches of water fell at Shasta City during this month, and in the hatchery where salmon fishery is situated the fall must have been much greater. On the 27th of Jan., the McCloud rose twelve and one-half feet, but the water had been higher than that in previous years, and still no one supposed that the buildings were in danger. Again the river fell, but this time fell to a lower level than it had for many years. The water rose on this river before, either by white men or Indians now living.

During the first days of February the rain poured down in torrents. It is said by those who saw it that it did not fall as rain, rather as dense falls, but it fell as if thousands of tons of water were dropped in a body from the sky at once. Mr. J. B. Campbell, who lives on the McCloud, relates that near his house in a canyon, which is dry in summer, the water in not many minutes became thirty feet deep, and the violence of the current was so great that trees a hundred feet long were swept down, root, trunk and branches, into the river. On the 2d of February the McCloud River began to rise at the rate of a foot an hour. By nine o'clock in the evening it was sixteen feet and eight inches above its ordinary level. This was within four inches of the danger mark, the water rising above the fishery, Richard D. Hubbard and Oscar Fritz, made an attempt, at the risk of their lives, to save some of the most valuable movable property in the buildings. They waded through the fierce current in the blinding rain and pitchy darkness of the night, and, but for the fact that the water was so deep, was then up to their shoulders, and the unequal struggle could not be long maintained. These young men are entitled to great credit for succeeding in rescuing what they did from the flood on that frightful night.

The water was soon a foot above the danger mark, and the buildings began to rock and totter as if nearly ready to fall. There was now no hope of saving them or anything in them. At half past two in the morning of the 3d of February they toppled over with a great crash, and were seized by the reckless current and hurled down the river.

When the day dawned nothing whatever was to be seen of the main structures which composed the United States Salmon Breeding Station on the McCloud River. The mess-house, where the workmen lived and eaten and slept for also successive seasons and which contained the original cabin, twelve feet by fourteen feet, where the pioneers of the U. S. Fish Commission on this coast lived during the first season of 1872; the bathing house, which, with the tent that preceded it, had cost \$70,000; the water tank, the distribution of which had reached from New Zealand to St. Petersburg; the large dwelling-house, to which improvements and conveniences had been added each year for five years—these were all gone, every vestige of them, and nothing was to be seen in the direction where they stood, except the wreck of the water tank, which, through summer suns and winter rains has poured a hundred million gallons of water over the salmon eggs in the hatchery and which now lies dismantled and ruined upon the flat-bottoms which had supported it and which were kept from escaping by two wire cables made fast to the river bank.

The river continued to rise the next forenoon until it reached a maximum height of twenty-six feet and eight inches above its summer level. This, of course, is not a very extraordinary rise for a slow-moving river, but the fact is, however, that the water was at low water, a succession of cascades and rapids, having an average fall of forty feet to the mile, it will be seen at once what a vast volume of water must have been poured into this very rapid river in a very short time and with what velocity it must have come to have raised it twenty-six feet when its natural fall was sweeping it out of the canyon so swiftly.

Those who saw this mighty volume of water at its highest point rushing through its mountain canyon with such speed say that it was appalling, with the roar of the torrent, for just below the low water standing side by side on the bank could not hear each other when talking in an ordinary tone of voice.

It must be over two centuries since the McCloud River rose, if ever, as high as it did last winter. There is very good evidence of this in the very spot where the fishery was located, for just behind the mess-house, and exactly under where the fishery had floats with a good south breeze, is an Indian graveyard where the venerable chiefs of the McCloud tribe have been taken for burial for at least two hundred years, and there is no knowing how much

longer. One-third of this graveyard was swept away by the high water last winter and the ground below strewn with dead men's bones. Now the fact that the Indians have been in the habit of burying their dead in this spot for two centuries proves that the river has never risen to the height of last winter's rise within that time, for nothing could induce Indians to bury their fathers where they thought there was the least danger of the sacred bones being disturbed by flood.

When the water subsided it became apparent what a clean sweep the river had made. Here and there the stumps of a few posts, broken off and worn down nearly to the ground by the driftwood grinding over them, formed the only vestiges whereby to indicate that anything had ever existed there but the rocky bar that the falling waters had left.

The inventory showed that over \$1,000 worth of hatching apparatus, house furniture, tools and other articles were lost or destroyed by the flood, besides four buildings themselves. The whole loss could not have been less than \$15,000. LAYINGTON STONE.

A QUINNAT SALMON IN GREENWOOD LAKE.

WARWICK WOODLANDS, Greenwood Lake, N. Y.

Eliver Forest and Stream:

In November, 1876, a large number of California salmon, 9,000, I believe, were put in Greenwood Lake, lying partly in Orange County, N. Y., and Passaic County, N. J. They were obtained from Mr. Fred L. Fisher, of the New York Aquarium, on an order from Prof. S. F. Baird, through the instrumentality of Mr. W. O. McDowell, assisted by myself, and were placed at the mouth of the different streams. Mr. McDowell also procured from the New York Fish Commission a large lot of lake or salmon trout, which were also placed in the same place.

Since that time we have received no intelligence of any salmon having been caught, and it has been supposed that they had become extinct, but such is not the case, for on the afternoon of Aug. 25 Messrs. E. J. Peck and Irving Brown, of Haverstraw, N. Y., who for a while have been the guests of the great Mr. Jennings, at the Encampment Hotel, Warwick Woodlands, were engaged in still fishing for black bass, when the former took a very nice salmon with bluegrain bait.

This heavy-bodied fish, which looked was most peculiar and gave rise to the most extravagant conjectures as to its character. On being struck he darted with a good deal of vim about six feet and then remained almost stationary for four or five minutes, notwithstanding Mr. Peck with all the power he dared exert, being unable to get him. He was then taken to the shore, where, when at last he came up quite exhausted and was netted with ease. It was taken to the camp, where it was much admired for its beautiful marks and was the subject of much surprise and interest.

JAMES R. BOYD.

Most unfortunately it is fish was taken to the hotel and cooked, and therefore all chance of positively identifying it is lost. Mr. Boyd said in an interview that the fishermen are familiar with lake trout, and that this fish differed in shape and color from them. It was only about twelve to fifteen ounces in weight and, if it was really a quinnat salmon, it must have been a young one. We hope that if more should be caught in this lake, or any other, they will be kept in alcohol, or sent in ice to this office, when we will see that they are placed in alcohol and forwarded to Prof. Baird. This course will place the matter on record beyond all chance of a doubt as to the species caught.

NEW YORK LAW ON FISHWAYS.

CHAP. 620.—AN ACT to amend section one of chapter two hundred and fifty-two of the laws of eighteen hundred and eighty, entitled "An Act to provide for the construction of fishways in the State dams across the Oswego, Oneida and Seneca rivers." Passed July 8, 1881; three-fifths being present.

The People of the State of New York, represented in Senate and Assembly, do enact as follows: Section 1. Section two hundred and fifty-two of the laws of eighteen hundred and eighty, entitled "An Act to provide for the construction of fishways in the State dams across the Oswego, Oneida and Seneca rivers," is hereby amended so as to read as follows:

§ 1. It shall be the duty of the superintendent of public works of this State to cause fishways to be constructed and maintained in all the State dams across the Oswego, Oneida and Seneca rivers, to permit the passage of all fish endeavoring to migrate to the waters above said dams. The said superintendent of public works shall construct and maintain said fishways in such manner and according to such plans and specifications as the commissioners of fisheries may prescribe, provided the superintendent of public works shall determine that the construction and maintenance of said fishways in such manner and according to such plans and specifications will in no way interfere with the due and proper management and navigation of the canals or materially injure the said dams.

§ 2. This Act shall take effect immediately.

FISHCULTURAL NOTES.—Iowa has an additional hatchery in charge of assistant commissioner, A. A. Mosher, at Spirit Lake. From this house 2,000,000 lake trout, *S. namaycush* will be hatched for the northwestern portion of the State. The hatchery will handle brook trout, lake trout, rainbow trout and other species at the old hatchery in as large numbers as he can procure.

Some of the friends of Commissioner Sisty, of Colorado, advertise in his name for a dog, when he arrived at his office he thought by the number and quality of the canine assemblage that his next neighbor was about to start a sausage factory.

BLACK BASS WANTED.—A correspondent writes as follows: "Can you inform me as to the proper means of stocking the waters of this lake with black bass, or any other desirable fish, and whether in your judgment that is a good species for these waters. I am like to be the first person who will take the trouble to apply to, and about what it would cost, if you have the means of furnishing me with the information I ask for."

This is a sample of many letters that we receive and to all we reply that we do not know. There is a demand for live bass for stocking waters which some one should supply. If we wanted a hundred of them next week, we know of no other way to get them than to go fishing for them. Persons who can furnish them would do well to advertise in our columns.

LAND LOCKED SALMON IN LONG POND—Lincoln, Me., Aug. 25.—I am glad to report the success of our Fish Commission's plant of Soloway in Long Pond here five years ago. Several fine fish have been taken this season weighing from one and one-quarter to two pounds. One of the latter weight I succeeded in capturing with a fly yesterday. Verily, it was royal sport. We shall have mazelled lake salmon fishing here in another year or two. E. C. T.

THE COLORADO HATCHERY.—Fish Commissioner Sisty, of Colorado, has been looking for a place for a hatchery ever since June, and, having found a suitable location, it was generously presented to the State for the purpose mentioned by the owner, Mr. Wilson Waddingham. It is about six acres in extent, and is located eight or nine miles from Denver. A large spring rises on the property, and the climate is healthy. The hatchery is now under the management of Mr. Waddingham's generosity deserves hearty commendation.

TWO KINDS OF PARADISE-FISH.—Cincinnati, O.—In your editorial remarks on the Paradise-fish in your issue of August 11, you mention the *Macropodus chinensis*. This is a different kind from *M. opercularis*. I have both kinds, the manners of which are the same, the only difference is in the coloring, in *chinensis*

auratus the dark green takes the place of the blue and the deep yellow or gold the place of the crimson in *opercularis*.—Hiram Merritt.

AQUARIUM NOTE.—Dr. Soliditzky, of Salzburg, recommends the addition of four drops of a solution of one gram of salicylic acid in 500 grams of water to every 100 grams of water in the aquarium, and says this will keep the fish healthy without changing the water.

Malarial fever, Ague and Biliousness will leave every neighborhood as soon as Hop Bitters arrive.

MEASUREMENTS OF PRIZE WINNERS AT NEW YORK SHOW.

WE published in issues of May 19 and June 2 of FOREST AND STREAM the measurements of the pointers Bush, Rine, Rhoads, Princess, Water Lily and Rapp, and of the setters Spark, Petrel II, Chief, Dash, Lady Gordon and Spot. At that time we were unable to obtain from the owners measurement of the other prize winners, but since then we have secured the following, which we present to our readers:

LE GUY.

Mr. A. H. Moore's small pointer dog Le Guy, by Champion Bang out of Juno, color, dark liver and white. Winner in class for pointers, under 55 lbs. 21 entries in class. Whelped February, 1878. Weight, 49 lbs.; height at shoulder, 25 inches; length from nose to set on tail, 33 inches; length of tail, 14 inches; girth of chest, 24 inches; girth of loin, 21 inches; girth of head, 16 inches; girth of forearm, 13 inches; length of neck midway between head and shoulders, 17½ inches; girth of muzzle midway between eyes and tip of nose, 9 inches; length from corner of eye to end of nose, 4½ inches; length from elbow to tip of shoulder, 13 inches; ears, when extended (measurement taken across the head), 18 inches.

August, 1881.

LOO II.

Mr. A. H. Moore's champion Irish setter bitch Loo II, by Grouse out of Maybe. Color, red and white. Winner in class for pointers, under 55 lbs. 21 entries in class. Whelped February, 1878. Weight, 49 lbs.; height at shoulder, 25 inches; length from nose to set on tail, 33 inches; length of tail, 16 inches; girth of chest, 22 inches; girth of loin, 18 inches; girth of head, 16 inches; girth of forearm, 13 inches; length of neck midway between head and shoulders, 13 inches; girth of muzzle midway between eyes and tip of nose, 4½ inches; length from corner of eye to end of nose, 4½ inches; length from elbow to tip of shoulder, 13 inches; ears, when extended (measurement taken across the head), 17½ inches.

August, 1881.

BERKELEY.

Mr. A. H. Moore's champion Irish setter dog Berkeley, by Echo out of Loo II. Color, red. Whelped, July 1878. Winner in champion Irish setter dog class of seven entries. Weight, 58 lbs.; height at shoulder, 24 inches; length from nose to set on tail, 33 inches; length of tail, 16 inches; girth of chest, 24 inches; girth of loin, 27 inches; girth of head, 17 inches; girth of forearm, 13 inches; length of neck from occiput to tip of nose, 9 inches; girth of neck midway between head and shoulders, 23 inches; girth of muzzle midway between eyes and tip of nose, 9 inches; length from corner of eye to end of nose, 4½ inches; length from elbow to tip of shoulder, 13 inches; ears, when extended (measurement taken across the head), 19 inches.

August, 1881.

LEICESTER.

Mr. A. H. Moore's champion English setter dog Leicester, by Dan out of Lill II. Color, lemon and white. Whelped July 1879. Winner in champion English setter dog class of six entries. Weight, 61 pounds. Height at shoulder, 26 inches; length of nose to set on tail, 39 inches; length of tail, 20 inches; girth of chest, 28 inches; girth of loin, 25 inches; girth of head, 17½ inches; girth of forearm, 13 inches; length of neck from occiput to tip of nose, 10 inches; girth of neck midway between head and shoulders, 16 inches; girth of muzzle midway between eyes and tip of nose, 10½ inches; length from corner of eye to end of nose, 5 inches; length from elbow to tip of shoulder, 14 inches; ears, when extended, (measurement taken across the head) 19½ inches.

August, 1881.

BOB.

Mr. A. H. Moore's champion Gordon setter dog Bob, by Lang out of Floss. Whelped May, 1877. Winner in champion black and tan setter dog class of four entries. Weight, 70 pounds. Height at shoulders, 26 inches; length from nose to set on tail, 41 inches; length of tail, 17 inches; girth of chest, 22 inches; girth of loin, 26 inches; girth of head, 19 inches; girth of forearm, 13 inches; length of neck from occiput to tip of nose, 12 inches; girth of neck midway between head and shoulders, 19 inches; girth of muzzle midway between eyes and tip of nose, 10 inches; length from corner of eye to end of nose, 5 inches; length of elbow to tip of shoulder, 14 inches; ears when extended, (measurement taken across the head) 21 inches. August, 1881.

TRAMP.

Mr. E. Langdon Wilk's champion pointer dog Tramp, by Sensation out of Ferebe. Color, lemon and white. Age, 3½ years. Winner in champion pointer class for dogs over 55 pounds. Two entries present. Height at shoulder, 27½ inches; length from nose to set on tail, 42 inches; length of tail, 17 inches; girth of chest, 24 inches; girth of loin, 22 inches; girth of head, 20 inches; girth of forearm, 19 inches; girth of neck, 17½ inches; length of neck from occiput to tip of nose, 11½ inches; girth of muzzle midway between eyes and tip of nose, 11½ inches; girth of neck midway between head and shoulders, 18 inches; length from corner of eye to end of nose 6 inches; length from elbow to

top of shoulders, 14½ inches; length of ear from top to set on at skull, 6 inches. May 31, 1881.

DOMINA.

Mr. Charles Moran Jr.'s native English setter bitch Domina, by Charm out of Fanny. Color, orange and white; age, 4½ years; weight, 30 pounds; height at shoulder, 23½ inches; girth of chest, 24 inches; length of tail, 28½ inches; girth of chest, 28½ inches; girth of loin, 21 inches; girth of head, 15½ inches; girth of forearm above elbow, 9 inches; below joint, 6½ inches; length of neck from occiput to tip of nose, 9½ inches; girth of neck midway between head and shoulders, 14 inches; girth of neck midway between head and shoulders, 14 inches; length from corner of eye to end of nose, 4 inches; length from elbow to top of shoulders, 12½ inches; ears when extended (measurement taken across the head), 17½ inches. August 23, 1881.

A typographical error occurred in the publishing of the girth of muzzle midway between eyes and tip of nose, of Mr. J. C. Higgins' Petrel II. It should have read 9, 9½ inches. We wish also to correct several errors which occurred in the measurement table of Mr. C. H. Mason's pointer bitch Water Lily. Girth of loin, 23 not 13 inches; girth of muzzle midway between eyes and tip of nose, 9½ inches, not 26 inches as printed, and 26 inches for girth of neck.

THE CARE OF PUPPIES.

(From Yero Shaw's "Book of the Dog," Cassell, Petter, Galpin & Co., Broadway, New York. Courtesy of Author and Publishers.)

AT five weeks old the whelp may usually begin to be removed from their mother, and it is well to do this gradually, as they suffer less from the separation if this course is pursued; and by extending the intervals of the bitch's absence they can be almost entirely weaned without any of the trouble that is attendant on their dam. The best method is to begin by removing the bitch for an hour or two in the warmest part of the day, so that the chance of the puppies catching cold is diminished. The periods of her absence can then be prolonged until she is only returned to them on the coldest days.

It frequently occurs that the teats of a bitch have been wounded by the teeth of the puppies when they suckle her; and inflammation, from the influx of milk, often arises when they are removed. Considerable relief can be obtained by rubbing some of the milk of the next day on the sore teats, and this can be repeated night and morning for some days, a mild dose of physic being administered when the puppies are finally removed. In the event, however, of the milk that she has secreted still bothering her, and her teats being so tender that drawing some of the milk is impossible recourse may be had to an ordinary soda-water bottle, heated with hot water, the mouth of which can be pressed over the inflamed teat. This has the effect of drawing some of the milk out, and thereby relieving the bitch of a great deal of pain. Or an ordinary breast pump may be used.

On the removal of the whelps from their mother, a very considerable change for the worse immediately takes place in the appearance, which is due mainly to the alteration in their diet and general mode of life. Instead of drawing a certain amount of nutriment from their dam, they are now cast upon their own resources for a means of subsistence. The necessity of having to get up and hunt about for the dish which contains its food is a fact which it takes a puppy's mind a long time to master. Consequently the one-litter bitch often produces many weak puppies during the night, although their food within a few inches of their bed; and it is not until a happy thought strikes one of them that it might be a good plan if he got up and looked for something, that they all follow his example, and fall to as only hungry pups could do. The removal of the puppies from their mother should be taken to rid them of such torments. The presence of worms is certain when the stomachs of puppies swell and harden, but they frequently exist without developing such symptoms, and therefore the stomachs of puppies should be given doses of worm medicine all round, especial care being taken that their delicate mouths and throats are not injured in administering the remedy. The two best vermifuges are areca-nut and santaline. The latter, in its crystallized form, is an excellent remedy for worms, and should be given in the form of areca-nut lozenges, as a vermifuge for puppies of seven or eight weeks old, whose parents weigh from forty to sixty pounds weight. If too strong a dose is given, santaline has a tendency to affect the brain and cause fits, so caution should be exercised in its use. The chief difficulty in the administration of the use of areca-nut lies in getting it freshly grated, as if allowed to become stale it loses its virtue as an anthelmintic. To avoid this the nut should be grated on an ordinary nutmeg-grater, and given immediately in butter or lard. The ordinary dose for puppies of seven or eight weeks old is one or two drachms more than two drachms should never be given. Spratt's worm powders are also excellent remedies, if an owner has to clear his pets of these pests, and are easily procured of any chemist.

It is useless to resort to any remedy for worms in dogs unless the medicine is administered on an empty stomach. Small dogs should fast for at least twelve hours, and large powerful animals for twenty-four, before the medicine is administered. It is also desirable to prevent their drinking too much water, and especially to abstain from the habit of being to deprive the worms of all sorts of food, so that the anthelmintic may have a greater chance of success. Many persons give a dose of castor-oil the night before the vermifuge is given, and a second one two or three hours after the first has been taken. As long as the puppy is young, so fast the dog's system too powerfully, these precautions materially assist the operation of the medicine; but judgment and caution must, of course, be exercised, and it would be foolish to adopt such vigorous treatment with a weakly puppy.

Grated biscuits, oatmeal porridge and bread and gravy, with the addition of a little chopped meat and vegetables, are the best diet for puppies when first away from their mother, and the amount they can get through in the course of twenty-four hours is considerable. The greatest care must be taken to guard against the puppies' drinking too much water, in as far as possible, especially being given food which is *sour* or *decomposed*. A very fruitful and common cause of this is only lately come to our knowledge. We are indebted for the following information to Mr. J. Freeman, whose canine George, a pointer, has been a very considerable. The gentleman has proved by experience that food cooked in a copper or other boiler is very apt to turn sour as soon as cooked, if allowed to stand and cool in the vessel in which it has been prepared. Care should therefore be taken to remove it, as soon as the cooking operations are completed, and to put it in a clean receptacle, where it can remain until it is required for the dogs, or is returned to the boiler, to be added to other meals in course of preparation.

All draughts should be kept away from their kennel, which must be kept dry, and the puppies will not spread and grow as they should do; and a run in a dry yard is imperative, if the weather is not too cold or damp. By keeping his puppies clean and dry, an owner considerably lessens the risk of distemper ravaging his kennel, for the disease is far more apt to attack puppies who are in unclean surroundings, and except on very rare occasions, when its origin can usually be traced, is scarcely ever present in well-conducted establishments. In our own kennels we have never experienced a single case of distemper among puppies of our own breeding. It has been known to occur in some of the best kennels where for over three years an average of nearly fifty dogs have been kept in confined spaces. A strict attention to cleanliness, fresh air, fresh water, sound food, combined with proper grooming and exercise, renders the risk of distemper well-nigh impossible, and a breeder who attends to these matters has the misfortune to have it communicated to his stock (for distemper is contagious), he will find them the better able to resist its attacks if they have been previously well looked after.

It is a common remark that we have no cases of puppies we had bought (one or two of which sickened within the week)

Brace of Spaniels—The Burdette Kennel has sold to Mr. Lewis, Suspension Bridge, N. Y., one brace of liver-colored spaniels (names of sire and dam omitted).

BOSTON, Mass., Aug. 24.—The Victory long-range match was shot at Walnut Hill today, seven gentlemen entering. The conditions were

BOSTON, Mass., Aug. 24.—The Victory long-range match was shot at Walnut Hill to-day, seven riflemen entering. The conditions were excellent and, to the delight of the spectators, the long-range record was broken by W. C. Gregory, who made 224 out of a possible 225, and, by the rules of rifle shooting, takes precedence of Mr. William Gerish's hitherto unequalled score. Below is the record of the day's work:

The Newark Shooting Society will hold the fall meeting at the Shooting Park September 1. The events will be confined to the members of the society.

SQUARE-HEADER.—Reble, of Boston, is having McManus & Son cut her out a square-headed topsail, English fashion.

SOUTH BOSTON YACHT CLUB.—An open match is contemplated for the middle of September with some \$300 for prizes.

TREE-PLANTING PAYS in California. Four years ago an agriculturist, having thirty-two acres of rugged hill-top land unfit for cultivation, planted eucalyptus trees (880 to the acre) upon it. This tree grows nearly as fast as the willow and furnishes excellent wood for cabinet working. To-day the land is valued at \$200 per acre. This example has set other

agriculturists to thinking and they are now paying more attention to tree-planting than heretofore.

(St. Louis Post-Dispatch.)
WEATHER WISDOM.

Under the title of Old Probabilities, one of the most useful and valuable officers of the U. S. Government, is most widely known. But quite as well known is Prof. J. H. Tice, the meteorologist of the Mississippi Valley, whose contributions to his favorite study have given him an almost national reputation. On a recent lecture tour through the Northwest, the Professor had a narrow escape from the serious consequences of a sudden and very dangerous illness, the particulars

of which he thus refers to:

The day after concluding my course of lectures at Burlington, Iowa, on 21st December last, I was seized with a sudden attack of neuralgia in the chest, giving me excruciating pain and almost preventing breathing. My pulse, usually 80, fell to 35; intense nausea of the stomach succeeded, and a cold, clammy sweat covered my entire body. The attending physician could do nothing to relieve me; after suffering for three hours, I thought, as I had been using St. Jacobs oil with good effect for rheumatic pains, I would try it. I saturated a piece of handkerchief large enough to cover my chest, with the oil, and applied it. The relief was almost instantaneous. In one hour I was entirely free from pain, and would have taken the train to fill an appointment that night in a neighboring town had my friends not dissuaded me. As it was, I took the night train for my home, St. Louis, and have not been troubled since.

Any one can take

It is most agreeable to the taste. Some medicines are really offensive, and the stomach rejects them. This can be taken by children. It will purge gently; cure constitutional costiveness; eradicate affections of the liver; remove humors; the cause of rheumatism; brace up the nervous system without creating nausea or vomiting. In a word, this seltzer is Nature's remedy, prepared in the elements of the earth for the cure of man.

LEONARD'S
Split Bamboo Rods,
WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.

No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 26, 1879). This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.

No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 3, 1879). This split thoroughly strengthens where the ferrule is joined to the wood, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made.

No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

EVERY ROD WARRANTED.

ENOS JAMES & CO'S BREECH-LOADERS.

We now offer a complete line of these beautiful breech-loaders, all bearing their name, ranging from their plain but found and substantial guns of the lowest grade up to their superb Trap and Triumph Complete Guns, intended for Glass Ball and Pigeon Trap Shooting, where closeness and great penetration are required. What is the use of buying a worthless gun, which the maker is ashamed to put his name upon when you can get an Enos-James & Co. gun with their name and guaranty for the same price? Or what is the use of paying an absurd price for a gun made by some old maker when you can buy a gun made by Enos-James & Co. which is just as good or better for about half the price.

We are sole agents at New York for the Celebrated Cold Club guns, which are now the standard with all the leading clubs. We also have a small job lot of Webber Guns, of many styles, which we offer at great bargains, and a few of the Improved Parker Guns at special rates. Address: P. O. Box 4369. H. & D. FOLSOM, 39 Warren St., N. Y.

STRENGTH, BEAUTY, DURABILITY.

The Kennel.

TO COCKER BUYERS AND BREEDERS.—A. W. Langdale, of 5 Newmarch Terrace, Victoria Road, Leytonstone, England, late owner of Champions Lawyer, Batchelor, Ladybird, Ladylove, Lizzie, Louie, Leicester, Limebrick, Liona, Launce, Lena, Lydney, Bebb, Young Bebb, Bessie II, Baccous, and many more important winners at our best shows; also, contributor to Vero Shaw's new work on spaniels, will buy on commission spaniels of any breed, and has on his books a number of grand specimens; deposit system. Mar. 11.

NEMASKETT KENNEL, Richmond & Vaughan. Proprietors, Middleboro, Mass. Sporting dogs, boarded, broken and handled by men of experience. Setters, Pointers, Fox Hounds and Beagles trained for their respective work. Satisfaction guaranteed. Also, a number of well-trained setters and pointers for sale. Address: BOX 585, Middleboro, Mass. H. B. RICHMOND, N. H. VAUGHAN. June 11.

The Kennel.

GORDON SETTERS.—In order to reduce the G. Kennel will sell any of the brood bitches and young dogs belonging to the estate of the late Jas. R. Tilley, who, during his lifetime, had spared no pains or expense to bring this strain of dogs up to the very highest standard. They combine the blood of Copelan's imported Shot, Moores imported Grouse, Farrar's imported Rippers, Stoddard's imported Bucks. Parties familiar with Gervons will at once see that this blood can't be beat. Several bitches are now in whelp to Duke of Locust Valley, Mr. J. Moore's Grouse out of Dream. For full particulars refer to Col. Albert J. Sloan, Vincennes, Ind.; Mr. H. Melcom, Baltimore; Col. Jas. Gordon ("Hous-Jacques") Pontoon, Miss. Address for full pedigree, etc., GORDON KENNEL, Locust Valley, N. Y. Aug. 11.

ST. BERNARD PUPS FOR SALE.—For pedigrees and other particulars, address, with stamp, P. O. Box 94, Lancaster, Mass. July 28, 11.

The Kennel.

PINE LODGE KENNELS.—I am prepared to take a limited number of dogs, either setters or pointers, and train them thoroughly. I give my puppies seven months' work out of the twelve, and guarantee satisfaction. If the dog has all the natural instincts, I refer to the application. Prices, \$25 and \$75, according to length of time I keep the dog, with discount to parties at long distances. A. ZINTAR, Cairo, Thomas County, Georgia. Oct. 2, 11.

STONEHEDGE ON THE DOG.

Price \$3.50.

Hotels and Routes for Sportsmen

"THE FISHING LINE."
TAKE THE
Grand Rapids & Indiana R. R.
THE ONLY ROUTE TO THE
Front, Grayling & Black Bass Fisheries,
AND THE
FAMOUS SUMMER, HEALTH AND GAME RE-
SORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed, if
equalled, in the abundance and great variety of fish
contained.

BROOK TROUT abound in the streams, and the
famous AMERICAN GRAYLING is found only in
these waters.

The THOUT season begins May 1 and ends Sept. 1.
The GRAYLING season opens June 1 and ends
Nov. 1.

BLACK BASS, PIKE, PICKEREL and **MUSCA-
LONIE**, also abound in large numbers in the many
lakes and lakes of this territory. The sports-
man can readily send trophies of his skill to his
friends or "club" at home, as ice for packing fish
can be had nearly all the year.

TAKE YOUR FAMILY WITH YOU.
The scenery of the North Woods and Lakes is very
beautiful. The air is pure, dry and bracing. The
climate is peculiarly beneficial to those suffering
with
Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will
be largely increased in time for the season of 1891
by new buildings and additions.

During the season **ROUND TRIP EXCURSION**
TICKETS WILL BE SOLD AT LOW RATES, and
attractive train facilities offered to Tourists and
Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at
owners risk.

It is our aim to make sportsmen feel "at home"
on this route. For Tourists' Guide a handsomely
illustrated book of 160 pages sent free. Time Cards,
Folders and further information, address
A. B. LEET, Gen'l Pass't Agent,
Grand Rapids, Mich.

**Fishing Season at Rangeley
Lakes Again Open.**

Hotels and Routes for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,
Respectfully invite attention to the
SUPERIOR FACILITIES
afforded by their lines for reaching most of the
FISHING PARKS AND RESORTS in the
Middle States. These lines being CONTINUOUS
FROM ALL IMPORTANT PORTS, avoid the dif-
ficulties and dangers of reshipment, while the ex-
cellent cars which run over the smooth steel
tracks enable STOCK TO BE TRANSPORTED
without failure or injury.

THE LINES OF
Pennsylvania Railroad Company
also reach the best localities for
GUNNING AND FISHING
in Pennsylvania and New Jersey. EXCURSION
TICKETS are sold at the offices of the Company in
the principal cities to FANE HENRY A. DEB-
FORD, CRESSON, RALSTON, MINNEQUA, and
other well-known centers for
**Trout Fishing, Wing Shooting, and Salt
Hunting.**
Also, to
**TUCKERTON, BEACH HAVEN, CAPE MAY,
SQUAN, and points on the NEW JERSEY COAST**
resorts for **SALT WATER SPORTS, FISH-
ING AND FEATHER.**

GUNPOWDER!
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! Dupont's CREWMOOR MILLS, established in 1842, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs.

Dupont's Choice Bore.—Specially adapted for "Choice Bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 5, No. 1 being the coarsest. Packed in 6 1/2 lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6 1/2 lb. kegs.

Dupont's Rifle P. G.—A shooting. P. G. and P. F. G. for long-range rifle shooting, the P. F. G. for general use, burning strong and moist. Packed in 1 lb., 1 lb. and 5 lb. canisters, 6 1/2, 12 1/2 and 25 lb. kegs. P. G. coarse, P. F. G. fine.

Dupont's Sporting, Mining, Snapper and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Chisel and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

ANSWERS TO CORRESPONDENTS.....	117

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C., London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, September 8.

The Index of Volume XVI. is published with this issue.

LAST WINTER it was the cold, and now it is the drought. Between the two the game birds are having a hard time. Sportsmen naturally think of the effect of the drought and the forest fires upon the birds, but the prolonged dry season has a much more serious aspect than this; the crops in many parts of the country have suffered severely, and the area of crops thus damaged is an unusually extended one.

THE DAILY PRESS devotes a large share of space to reporting the sport of the day. "Sport" means horse racing, athletic games, base ball, lawn tennis, polo, yachting, target shooting, cock fighting, dog fights, rowing contests, boxing, polo, and the various kinds of diversions of the time. The daily papers can give more space to these different events than is afforded by some of the special weeklies. Thus the Brooklyn Eagle devotes a column of small type to a description of a pigeon shooting match, while the FOREST AND STREAM, in order to find room for all its matter, is compelled to condense its report of the same match into ten lines. There can be no question, either, but that the ten-line report is enough. Our daily press has a way of spinning things out which is of profit only to the reporter, who is paid by the column. Our aim, on the contrary, is to give as much as possible in the space at our command.

RAIL SHOOTING.

THE first of this month was the opening day for rail shooting on the Delaware, but as the tides did not suit, the bags were not large. The morning high tides are always considered poor except when it is cloudy and hazy, but the afternoon tides are those when the large bags are made. Should the wind blow from the eastward, either north or south, the water is driven in the mouth of the Capes and large tides are the results. Northwest winds are bad, as the low water prevents the boats from being pushed over the flats. As yet, the reeds have not been broken down, and the mysterious little fowls have too many hiding-places to be easily flushed. Should a northeast storm prevail, one that will last a day or two, we advise our friends to leave in the storm, and they will be sure of splendid sport when it clears, as birds this season are exceedingly numerous. The 15th of this month is considered to be generally the height of the season, but we have had fine sport on Oldman's Island, below Chester, Pa., during the last of the month.

The shooting is conducted out of boats, which enter the marshes about an hour and a half before high water. The gun stands on the bow, and the skiff is propelled by a pusher who uses a long pole of about fifteen feet in length, with a pronged foot, which prevents the pole from being driven deep in the mud. Light charges of powder are used. One hundred and fifty cartridges should be always taken out, and number twelve-shot is the thing. For a number ten-gauge gun, the charge is three and one-half drachms of powder, one ounce of shot, and for a twelve-gauge, three drachms of powder, and the same quantity of shot. To keep one's perpendicular is not an easy matter at first, but by putting the left foot forward, if a right hand man, the motion of the boat is soon acquired. All the sportsman need wear is an old pair of trousers, a flannel shirt and broad-brimmed hat. A couple of thick pairs of worsted stockings on the feet will be less difficult to stand in than shoes, the soles of which are apt to become slippery. When muzzle-loaders were in vogue, the exploded caps which were dropped in the boat prevented the use of stockings. The changing of the clothes can be done in one of the private rooms of the hotel along the river edge.

Once fairly in the reeds, the rail spring before the bow of the skiff, and are easily dropped. The sportsman need not heed their whereabouts, as it is the pusher's business to mark the birds and retrieve them. This he does with wonderful accuracy and rapidity, considering the sameness of the reedy growth and its matted nature. Often a large flock of reed-birds will swoop down, and cluster within easy reach, on the tops of the wild rice.

Occasionally a passing flock of yellow legs will be called down in shot, by an imitation of their shrill, tremulous whistle. At times an English snipe will spring from off a raft of floating reeds; and during the top of the tide, large flocks of teal disturbed by the incessant popping of the guns skim over the flats, darting here and there with their whistling wings, running the gauntlet of innumerable guns, and leaving brothers and sisters behind as trophies of the correctness of the sportsman's aim, and as dead as a duck (et) dead.

Two of the best places on the Delaware to make a start from are Miller's Hotel at Lazaretto, one mile distant from Moore's Station, on the P. W. and B. R. R. and Goff's Steamboat Hotel at Chester, Delaware County, Pa. Both places are equally famous as headquarters for rail-shooters. In olden times the boats made from each place were immense, and that in the days before the muzzle-loader, loading rail and rail box had to give way to the breech-loader and its trimly-turned cartridge. The rail box, by the way, was an ingeniously contrived magazine, which was constructed of tin and divided up into different parts, one to hold wads and caps at either end, while the powder and shot were contained in the two centre divisions, between which a lid was hinged, so that when the powder was being dipped out by the two little tin chargers, which were soldered together, the shot was covered, and when the shot was being handled the lid covered the powder and prevented to some extent the burning wadding from igniting it.

Miller's Hotel can be reached by the following trains, which leave Broad street and Washington avenues, Philadelphia, daily (except Sundays) for Moore's Station, at 6:45

and 10:35 A. M.; 1:30, 12:30, 2:30, 3:15, 4:45, 5:30, 6:20, 6:40, 8:00, 10:00, 11:00 and 11:30 P. M.

Although there are generally a large number of pushers and their boats it is always well to telegraph to the hotel proprietors several days in advance and engage one of the first-class men. At Lazaretto John McCollum has the reputation of being one of the best men on the river, but any of the Wood boys, Dick, Bill or Mill, George Morris, John Brown, Lem Gilbert, Ben Badger are good ones, and the e is hardly any choice among them. We print elsewhere the high-water table at Lazaretto during the season that our friends may from afar calculate their trips and save much time.

Mr. John Goff is proprietor of Goff's Hotel at Chester, a grand stamping ground. It is really historic in its way and many redoubtable shots have enjoyed its hospitality and pushed out from it to have a day's sport in the reeds. It was here that Herbert, Col. De Pyster, Porter, Andrew Staley and many other gentlemen sportsmen used to rendezvous and spend a week or more every season in shooting and fishing.

There are no better pushers on the river than those which hail from Goff's place, the principal being Isaac Rothwell, Dick Brown, Sam Brown, Perry Allen, Ben Harris, Sam Preston, Bill Rump, Charles Goff, Ben D iskett, Jacob Miller and a great many others, but not considered first class. Those named can be relied upon and are hard to beat.

GREAT SOUTH BAY.

THE sea fisheries of Long Island bring in a great amount of money to the inhabitants, especially of the South side, both directly and indirectly. A great number of people go there for pleasure fishing who spend five times as much money as the fish are worth commercially. To this class of people the Long Islanders, if they are wise, will cater. They come, hire boats, buy bait, pay hotel bills and other expenses, which brings in a revenue to the South Siders, the loss of which would be seriously felt. And yet they permit a few men to fill the Great South Bay with nets, to the detriment of the line fishing, when even the owners of the nets would be benefited in the end by keeping them out of the water, in the increase of visitors, some of whom say all summer.

Instead of general assertions on this subject let us look at the figures. At Fire Island there are from fifteen to twenty boats sent out each day for ninety days, containing three to five persons each, who pay for boats and hotel. There are twenty-one places on the Great South Bay which send out from three to twenty boats each day. From information received we can calculate twelve places sending out from three to twenty boats a day for 100 days, or about 4,500 boats, which, with three persons to a boat, would be 13,500 people during the season. The boats are mostly "cat boats" of two to five tons and, with a man to sail them, cost \$4 per day, making \$18 00 per season, for the boats.

Board averages a dollar and a half a day, by the week; refreshments and extras, 50 cents; railroad fares, \$2; making \$7 for a three-days' trip for each individual of the 12,000 people estimated to visit the Great South Bay in a season; equalling \$94,500 for the season, which, added to the boat hire, amounts to \$112,500. This amount might easily be doubled if the dozen nets which do not bring in \$600 each to their owners, and are a nuisance to all orhets who must sail around them, were kept out.

For the \$7 which the visitor pays for his three-days' trip he is perfectly satisfied if he catches what would be worth \$2 or \$3 in market, and he usually gives to his boatman. Looking at the fisheries of the South Bay as a common property of the citizens living on it, they cannot do better with it, in a pecuniary sense, than to prohibit all netting within its waters.

If the bay were free from nets the fish would spawn there more freely, for the angler seldom takes the spawning fish, and in a few years the fame of the fishing on the South Side would be so great that the summer rush of anglers, who now straggle all over our coast from Maine to Florida, would be increased ten fold, and the hotel men and the Bay men would be busy and wax fat, figuratively speaking. At present it is financial suicide for them to allow a few men to fill the bay with nets.

We take an active interest in this question because the South Bay is a convenient fishing-ground for New Yorkers, and we have advised many people to go there. Every day *FOREST AND STREAM* is asked many times, either personally or by letter, how the fishing is there, and if it is better to go there or to Barreget Bay, or elsewhere. If this state of things continue, we will be under the necessity of advising our readers to go anywhere for good fishing, rather than to the Great South Bay.

W. C. COUP.—Our old friend Coup, formerly of the New York Aquarium, has been lost to the sight of New Yorkers for the past two years, but he has not been idle. Mr. Coup is a restless man, who is never satisfied with playing second fiddle in anything he undertakes, and is always planning, regardless of the cost, to astonish the world with something which it has not seen. He first appeared in New York as the business manager of P. T. Barnum and built the Hippodrome, where his "Congress of Nations" is remembered by New Yorkers as the most dazzling pageant ever beheld here. He soon after left this concern and built the Aquarium. Now, after two years' search of the old and new worlds, he turns up at the old place with an exhibition which eclipses everything in the way of circus, menagerie or museum that has ever appeared here.

It is the custom of circus owners to advertise "The Greatest Show on Earth," but Coup's undoubtedly is the largest, handsomest and costliest. It contains three rings and a hippodrome track forty feet wide around them all, beside the menagerie and museum, with simultaneous performances in all. The trained broncho horses are indeed wonderful, one of them distinguishing colors and bringing a flag of any color ordered from among several different ones, walking on stilts, etc.

Who does not love the glory of the circus!—its glimpse of fairyland to the youngsters and its exciting "hoop-la." And how necessary it is for all of Johnny's uncles to attend it, "just to see him enjoy it." We hope never to get too old for the circus and its feats of darning, and intend to study Coup's animals often before he starts again for the road. Perhaps after he leaves town we will give our readers a hint to how menageries are made. He only came in for a two weeks' season, beginning on the 5th, and, knowing him to be an honest, large-hearted and enterprising man, we wish him full measure of success.

THE GREENWOOD LAKE SALMON.—In our last issue we published a letter from Mr. James R. Boyd, of the Encampment Hotel, at Greenwood Lake, N. Y., in which he reported the capture of a strange fish, which was supposed to be one of the California salmon placed in the lake some years ago. As the fish was cooked all hope of identifying it was lost, but Mr. Boyd promised to take good care of any other specimens which might be found. Yesterday we received a letter from him dated September 5, saying that another one was caught and was held there alive. We immediately telegraphed to have it rolled in muslin, to keep it from bruising, and packed in fine ice and sent to our office for identification. It came, and alas! proved to be a fine twelve inch specimen of *Simotilus bullatus*, called in different localities "fall fish," "dace," "chub," "trout," etc. It grows to eighteen inches in length, and is a game fish, rising to the fly. We are under obligations to Mr. Boyd in enabling us to identify this fish, and are exceedingly sorry that it did not turn out to be a salmon.

THE AMATORY CLAM.—The "loves of an oyster," and "an oyster crossed in love" have been so often mentioned as to be familiar phrases. It has, however, devolved upon Mr. Langman, of the New York *World*, to show how clams can love. We publish his poem, "Molluscus and Bivalvula," in another place wherein he tells in tuneful verse how the loves of clam-kind do not always run smooth. The argument is that Molluscus, a noble young clam longs to see the world and perhaps conquer it, and declines to be detained at home by the tears of fond Mollusca, whose siphons overflow at the thought of the dangers her hero may encounter. We have been permitted to publish this entire, for the first time, by favor of the fair Secretary of the "Pot-Luck Club," and henceforth we will eat our "Little Necks" with circumspection, lest our molars may crush a tearful "Bivalvula" just parted from her "Molluscus."

"BET GIVE ME," said the Postman to us the other day, "a young woodchuck. Fellers talk about game birds, but I take a woodchuck every time." The Postman is not alone in his taste. A correspondent of Mrs. Lewis's *Food and Health* says that since the woodchuck lives on clover and other "clean" food, it ought to be good eating. He has actually tested its edible qualities by having some woodchuck dishes served at a New York restaurant, and he, together with his friends, who were not aware what they were eating, pronounced it a delicious dish. Clearly there is yet a line of food experiments which are out of the scope of the Ichthyophagous Club. Can we not, following the example of those gentlemen, extend the list of the edible inhabitants of the earth and air? We might take a hint or two from the Digger Indians.

HAWK DESTRUCTION.—The new Ohio hawk law is working well. One county in the State has already paid \$94 in bounties on 183 hawks. Let the good work go on.

WHO DESERVES THE CREDIT?—A correspondent asks who first imported English sparrows into America. If we are not mistaken several claimants for the honor have appeared. In the year 1846 Thomas Woodcock, President of the Natural History Society of Brooklyn, N. Y., brought over from England several specimens of the field birds of that country. Among them were some English sparrows, although it is not on record that they bred. Eight years later, in 1854, Col. W. Rhodes, now of Quebec, Canada, imported some sparrows into Portland, Maine, and subsequently into Quebec. In the year 1858 the Messrs. Chas. Reiche & Bro., bird dealers, of this city, imported a number of the birds into this city, and from these and subsequent importations the present birds are descended. We have no precise data to give our correspondent.

WE are deeply pained to chronicle the death of Alexander Moseley, for many years senior editor of the *Richmond, Va., Whip*, at his residence in New Kent County, Virginia, August 30. A more fitting notice of the life and character of our friend will be given next week.

It is said that large numbers of orioles are being killed in Maryland to be used in advertising the coming oriole festival in Baltimore. This is a very foolish piece of business, and the bird-killers should be punished according to the law.

POT-LUCK POETRY.

WE have before recorded how Mrs. Marion T. Fortescue, the Secretary of the Pot-Luck Club, gave a piazza picnic and banquet on August 7, at her villa at Rockville Centre, Long Island, in honor of the fifty-second birthday of Hon. Robert B. Roosevelt, the president of the club. In our brief mention of the jolly occasion where the wit flowed, rippled and bubbled over among the assembled *literati*, we only hinted at the poetry, two specimens of which we have been fortunate enough to secure for publication. First comes one on the president's family or familiar nickname:

"BOB."

BY JOHN HARBERTON.

When man was boy in days long past
And compliment seemed fame,
How swayed his heart when first he heard
"Mister" before his name.

But when the years with cruel hand
Had scrawled his features o'er,
Frown changed to smile if some one spoke
His boyish name once more.

Lucky the man we greet to-day,
Though time may meanly rob
His store of years, it cannot steal
His youthful nickname, "Bob."

Long be it days among us all,
And, knowing him, may you
Search out the way to be addressed
As boys at fifty-two.

A clever journalist who could not be present to help slaughter the clams sent the following account of their loves:

MOLLUSCUS AND BIVALVULA.

BY G. T. LANGMAN.

In a far beach, remote from human view,
From youth to claustral bold Molluscus grew;
Of all the clams were in his sandy space
None so valued him in beauty, vigor, grace;
Was none more sweetly burrowed in the mud,
Was none whose siphon sucked an ampler food,
Was none that sought to thwart him in his suit
For fair Bivalvula's hand—I should say foot.

Fair was Bivalvula, a fay might well
Envy the foot thrust coyly from her shell.
Plump and plumpant, old Ocean ne'er a more
Dewy creature had seen upon his shore
Since lovely Venus in the shell of the
Tritonæ gigas rose from the sea.
Suits had she by scores, from all apart
She kept, with vigorous reserve, her heart.
The clam you in the restaurant behold
Upon the ice-block could not be more cold!
Valvally their love the suitors strove to tell;
Told the mud she divined and closed her shell;
Contentiously silent as—I am
At loss for simile—as—a clam!

But when his tale of love Molluscus told
Through all her tube a throbbing current rolled,
And b'ushling to her shell, the maiden coy
Confessed her passion and revealed her joy,
And in the sand they nestled side by side
Happy as clams at a propitious tide.
Blest was their wooing, yet Bivalvula
From time to time with secret anguish saw
Within Molluscus' love-passions swell
That fairly seemed to corrugate his shell.
The wild desire for a wider life,
The tumult, the mastery and the strife.
Once as they sat, nor feared the fisher's toe,
(The moon had risen and the tide was low)
Canto Bivalvula, whose siphons eche
Her pensive shells betrayed, Molluscus spake:
"Valvally, adored!—clams, you'll regret to see,
Have such diminutives as well as we—
"Valvally, adored, there is a world without
This fluted beach, we nothing know about;
I long to quit this narrow life and time,
And make myself a fortune and a name—
Spout not that positive tale! All will go well,
I will return and coo to you as to my shell,
And cheer our happy life until the last
With talos of all the stegies I have passed."
Then she: "Molluscus, mine's a timid heart,
And from my tube the unbidden tear will start,
I know thee good and brave, but oh! I fear

Perils that await thee in another sphere.
Peruse the annals of our house and race,
What clam has risen or to power or place?
Stay, my Molluscus, stay at home and test,
Homesteading bears are ever happier;
Health, for true, love breeds last but not got,
The patios of glory lead but to the pot!"

But he replied: "Bivalvula, my dear,
Trust thy Molluscus (and have no fear:
The face of men we long have to read and hated
Have been, I fancy, much calumniated;
They recognize our virtues in their speech,
Our qualities for imitation teach;
In gladdened hours a man exits, I am
As happy as a—man? no; as a clam."
To claims they come when they would mark their scud
Of the surprising worth of reticence.
Did not ANNE BOLLYN at the fatal block
Of "LITTLE NECKS" unto the head-man talk?
"Among Austrian peers none hold their heads so high
As our friends the Clam-Gallias family.
In our own land important parts we've played
In politics, society and trade.
Lo, the poor Indian, whose untutored mind
Our cast-off shell (for currency designed;
Behold the Pilgrim Father in despair,
As Mother Hubbard's is the cupboard bare,
Shall not their work in famine drip, and tears?"
No! Liberty is saved—the clam appears.
Scud's clam's cabinet—my love, be calm!
As well as Fish, we long have to read and hated
Is there one board, the poorest to the best,
At which the clam is not a welcome guest?
Nay, when our hardy fishers go abroad
Pursuing or the haddock or the cod,
The clam goes with them as an honored freight
In the unexplained capacity of bait.
I do not know what "bait" is, but across
My mind comes a suspicion it means "boss."
Still shed Bivalvula the peaty tear:
"Cucina not thy Molluscus, Valvally, dear:
"Thyest shall with him fare, then too shall we;
To-morrow, morning, thou shalt come with me.
"You have not been invited?" True, but still come:
I know that any friend of mine is welcome.
The feast is in our honor—claims to eat
(Eat! means to worship) do the convives meet,
And we our choice shall take of the menu—
Rice, roast, soup, chowder, y'e fry, broil or stew,
For us the cook collects, and proud surveys
The tasselled treasures of the golden hue;
For us the onion, white and red, thy tear
With tears of rapture from its earthly fair;
For us a host of dishes rare thy grace,
Made of Pot-luckments I cannot name;
All tidings await us, Valvally, shall we not
Take pot-luck too? Forbid thy unclingly thought
That treachery is meant! In that case, then!
We'd be consoled to disagree with them,
And in the silent watches of the night
Laid indignation wait on appetite.
No! Let the virtues of our hosts fair
Be our strong succor—we'll to the feast repair."

He spoke; Bivalvula wiped her tearful eyes.

Where ignorance is bliss 'tis folly to be wise!
They came! The young, the beautiful; O! where
Are brave Molluscus and Bivalvula the fair?
O, may the god that on the lovers waits
Ordain they were not served on different plates;
And may the guests who met them here to-day
Enjoy a pleasant Pot-luck with they.

L'ENVOI.

Precious, accept these verses, written down
On a hot morning in the dusty town.
And when you read them may it pleasant be
By the cool waters of the sounding sea,
May you not find them stupid, harsh and hard;
And eat a clam unto your absent bard!

Mrs. Fortescue then read a poem of greeting, of which we only possess the following verses:

From mountains green and mountains white,
From gray old Castles' rugged height,
From distant seas where the amorous breeze
Lays down its life in golden ease,
From brimstone springs that flow by night,
Where dawdling the day out hour by hour,
Fair maidens bide the broad I lustre,
In straggling cluster of liquid lustre,
On the dusky æsthetic kitchen duster,
With shodded wheels in a shady cover;
From Spanish hill and Alpine rock
Our scattered herd, and faithful flock,
Send word of go home to the fold,
"God bless our Prince of Pot-luck bold,
For whom e'en Time turns back his clock."

From "Savage's Ride," by Mrs. Sprague, descriptive of the adventures of Dr. John Savage in search of "Marion's Rest" on a former occasion, we take this:

"My heart," said the bard, "is blithe and gay;
Queen Marion holds her court to-day;
A court marine beside the sea,
(Its lady chief-justice, not Shen, but she)
And the clerk of that court I'll surely be;
And oh! the rolicking time to-day
At Marion's, twenty miles away."

THE TRAJECTORY studies of our correspondent, "P.," which were published in our last issue, are supplemented to-day by a paper on the subject from the able pen of Major H. W. Merrill. Both gentlemen have a thoroughly practical as well as theoretical knowledge of rifle-shooting, and both are sportsmen of long experience. The two articles are valuable contributions to the literature of the subject of projectiles. Major Merrill explodes the "dead on" fallacy in which many shooters still persist,

The Sportsman Tourist.

MARK COCK:

BY PAUL PASINOR.

AUGUST'S fiery rays and sad dry days, like opposite levers crying away incessantly at old earth, have loosened to the intense summery vigor of her frame, her glossy locks begin to fade, her limbs droop with the burden of the harvest, her maternal cloak of green grows dim and rusty in places, and her mother's mother has passed on to other seasons' print, and is hushing toward her annual decay.

But what cares the ardent sportsman for the sentiment of the seas? 'Tis all summer long, while nature was in her bloom, while all things were fresh and rank in field and wood, and birds cheerily vowed the holiday of the year, he has been languishing, whether at to play, whether chained to the urban desk or stretched at length beneath the shade of some pleasured grove, languishing and pining for the sound of his beloved brood-land, and the indescribable arm of a cloud of gun smoke. Here he waits, and here he still to solace himself with the little conciliatory pastimes and diversions allotted to the summer months. He has cast and trailed the various seductive baits of the fisherman with passable success, and occasional zest, but then, as he very sensibly remarks, fishing would be a somewhat better apology for sport if the two ends of the pole could be a little more equitably balanced. He has fished, and read, and slept, and eaten. But his principal enjoyment has been to dream—dream of the time coming, when the heat and the law would fall off together, like a seamless garment, and he would be free to enter the forbidden land—

"The realm of sweet desire."

And now at last the first of September has come; the catlike, sneaking suits that infest the covert, in hopes of "bagging" an unwary and impatient sportsman, have folded their tennis like the Arabs, and as silently stolen away. Nothing prevents it is a charming, crisp-aired day—shall we not pay our respects to that prince of the covert, the woodcock? Yes! yes, by all means! Our breech-loader is in the best of trim, and fairly aching for a duel at dialogue with dame Echo: our shells are freshly loaded with keen little No. 3, our luncheon is set out, our team stands ready, and the sun is shining, as the redoubt has doubtless been suspected, we have been getting ready this week past for the first day of September. We have been meditating a grand initiatory descent upon the little brown prince of the wood. The hour has come, our heart bounds with expectation—we are off!

We rattle briskly through the town, and stop at the house of that best friend and fellow sportsman with whom a day at gunning would seem almost tame. He is in readiness and waiting. Beautiful liver-colored "Quand," the queen of feathered spaniels, looks nervous at his side. "Charlie," like a bronze statue she is frozen to the earth. My friend mounts up and takes his seat beside me. We commence to move away. There lies Quand pitifully staunch, but with bright, pathetic eyes pleading as no tongue can plead. See how the beautiful creature trembles in every limb! A moment more of trial, and then the word is given. "Come!" And she comes!—like a cross-bolt out of a bow; like an arrow drawn to the head. A few minutes' ecstatic scamper, and then we take her into the team, for Charlie and she are not anxious for the number of these humane sportsmen whose hearts suffer them to lie on a blow, panting and dust-choked dog in a suitly cover.

We agree, as we ride along, to make the very most of the day. We must visit all our favorite coverts and keep the upper hand of our nerves—no pottering shots to-day.

First in order is the river-bottom. We must take that in the cool of the day, for it is so hemmed in with hills that by noon the pools will fairly steam. We leave our team in a cool glade above the interval and plunge down the bank as excitedly as the sunbeams. Here we are, right in the thick of it. We must go carefully now and Quand must be encouraged to work close, for it will be like shooting stars between two flying clouds to hit the brown whistlers here. We move on, about two rods apart, and Quand quatters back and forth in front of us. Steady now! That bog looks fairly prolific. Quand is gingerly working around the edge. See! the spell is upon her—the witching spell of the scent. She's all alert; her little docked tail vibrates excitedly; she bays and she jumps the creek. Place your sportsman—your cunning shot—in an emergency and note his lightning-like decision, his quick, clean action, his splendid self-possession. Here is where he learned it, and here he needs it all, and needs it now. A third of a second to will, a third of a second to do—two-thirds of a second and it is all over. Time is never quite so valuable and so significant as just after the whistle of a flushing cock.

We are comparatively in the open and that saves our credit. The two reports are almost instantaneous. The cock turns in the air and drifts sideways down, deluged by the force of the shot. "Dead bird, Quand! bring it!" Quand, who has been charging faithfully since the cock flushed, now follows the finger of her master and her own sharp nose, and soon emerges from the thick ferns bearing her prize as tenderly as if it were a lady's glove. The bird is pretty badly torn with shot, so we unobtrusively conclude that we both hit it and thus enjoy the luxury of being generous and selfish at the same time.

Fun now has fairly commenced. Quand has snatched blood, and we have snatched powder. The thicket opens a little, and we drift farther apart, whistling occasionally when the leaves hide us from each other's sight. Pretty soon I catch sight of Quand on a dead point! Her little body is stiff and motionless, her tail stands out straight, one of her forefeet is slightly raised, and she is drinking in the electric aroma of the game. At first I am inclined to call Charlie, that he too may wonder at the beautiful and unusual manœuvre; but slight signs—perhaps I should rather call them premonitions—of a break on Quand's part causes me to change my intention. I throw myself and gun into an attitude of readiness, now too soon. Quand makes a lightning-like dash, and, scarce three feet in front of her, flushes a magnificent cock. Bang! bang! Nothing but leaves, I declare! Not even a feather flows down. Just then Charlie's gun cracks, out to the left and a little in advance, and presently I hear him calling, "Here, Quand! dead bird! dead bird!" Quand is "up and away" in an instant and I know that her mouth is watering over my lost bird. Charlie and I exchange halloos and then move on again. Ere long the stillness is broken by my friend's quick, clear cry: "Mark cock!" I know he has flushed a bird, but for some reason or other been unable to get a shot at it. I keep my eyes and ears open, and am rewarded by hearing a bird whistle through the top of the undergrowth

and dive down a few rods in advance of me. Quand comes dashing after, but a cautionary signal puts her on her guard, and she charges to await further instructions. As soon as I can come abreast of the intelligent little creature, I induce her by a wave of my hand the course I wish her to pursue. She takes it all in at a glance, and when I give the word sails in. I am standing in a sort of glade comparatively open, but bounded on both sides by thick covert. On the side opposite from me the cock appears to have dropped. Somewhere in that thick brush he must be hiding. Quand goes through it like a mosquito through a window netting. She glides through thorny apertures, which would hardly admit the nose of a pointer or a setter. She works as if she were made of rubber and steel. No plunging or crashing, no changing of her course to avoid disagreeable situations. Silently, swiftly, faithfully she canvasses the covert, and puts me up the cock right where I want him. Her blood is now up, and as with the previous bird, she flies after him through the air in a succession of glorious leaps—herself a veritable witch of the wood, her feathered caravanserai, her bright eyes glistening like stars. For a moment I watch her. The sight is too lovely to disregard; it is fairly fascinating. Then, fearing to shoot lest I may down the wrong bird, I cry out sharply: "Charge!" She drops as if I had shot her! Ah, here is a creature that is fearfully and wonderfully true! I raised the cock, but I gain a spectacle that is worth a half lot of them.

But time and space fly. I cannot stop to tell you in detail how we finished the river bottom, and how I retrieved my reputation by bagging half a dozen birds in six straight shots, for I have no more right to trespass on the choice preserves of the FOREST AND STREAM outlying the proper bounds of this article than I have to snatch the first shooting in my neighbor's "posted" ground. But I must tell you in conclusion how we crowned our day's sport.

It was drawing toward sunset, and, hot and tired, Charlie and I and Quand were weary, and we way back to the team across a wide meadow. We had just been all the way round Half-Moon Cove, and were discouraged at not having flushed a single bird in that remarkably promising cover. A large patch of corn lay right in our path, and at one corner of the corn was a small 6 by 9 birch covert—as you might describe it. Into this we sent Quand as a last resort, and before she came out we wished we had resorted to her earlier. Cock after cock came whistling out over the corn so fast that we couldn't possibly get a shot at all of them. The winged sun shone in on our faces, and we were somewhat tired and nervous with the day's work, and, all in all, I suppose we could have done better. As it was, however, we bagged nine cock out of that little birch covert! Although they were all shots in the open, the birds flew with compensating swiftness. I have never seen cocks so active on the wing. Imagine yourself facing a blaze of western glory, your eyes still further blinded with boiling perspiration, and somebody of strong arm flinging good-sized potatoes across the sunlight with all his strength, and you will have some idea how those woodcocks flew. And the difficulty of cutting them down in good shape. I say we got nine. I do not know how many flushed out of the covert—I should judge about fifteen. All the feathered population of Half-Moon Cove seemed to have adjourned to that little grove for a caucus or a picnic, or something else of equal interest.

When we reached home our combined bag yielded up twenty-three of the brown beauties, so I do not think we disgraced ourselves.

My parting advice to the amateur woodcock shooter (and such I count myself) is this: Go buy there a first-class cocker spaniel, and that right quicky.

"PODGER'S" PUTS A MOTION.

DOWN EAST, August 25.

SINCE writing you last, wherein I gave my "experience" on the snake question, I have carefully perused the last number of the FOREST AND STREAM, and have found additional evidence on snake gymnastics, and I see that the general weight of testimony is that snakes do climb, and that they go straight up. I stated that those I had seen climbing had ascended with a spiral movement. I should have qualified the statement by saying that I had only seen them ascending small trees, and before some one sails into me and proves firstly, that I never saw a boy; secondly, never "got cocked," and thirdly, never saw a snake, I want to concede that snakes do climb, and that they go straight up. The method it is their business, not mine, and I hasten to admit that they go straight up before foremost or tail foremost, or any other way that suits them best—they can take their choice. This concession to the general verdict I trust will save me from being "sat upon" by some hypercritical correspondent disposed to prove that I don't know anything about snakes. You evidently have a large number of readers who have snake on the brain, in their boots and everywhere else. Can't we pass the snake dispute, and take up crows and their peculiarities to feed on fish? We have exhausted "possum, skunk bites, and woodchucks and snakes; now crows have the floor. I move that crows have a chance, or let us go back to dog stories, a much more interesting subject. I bar the previous question on the above subjects including that of whether trout flip the fly into their mouths with their tails. Strikes me you will have to limit the latitude of discussion on any subject, for the varied experiences of your numerous readers on every known topic or query that arises is wonderful, and shows how extensively the FOREST AND STREAM is read.

I so by your last number that has seen to be troubled with worms. It must necessarily be the angle worms. I want to suggest that your correspondents give their statistical experience as to how many squirms and contortions to the square inch can be got out of a stale Boston lobster. After all have banded in their evidence I want a show, and when I have given my experience if I can be out-squirmed I am ready to go to jail.

I may not be quite as sound as some of your correspondents on snake feed, oh, Jerusalem! what an experience I have got in my mind—the result of misplaced confidence in a Boston restaurant's bill of fare. Give me a show when the time comes.

Speaking of the readers of the FOREST AND STREAM I must tell you what a time I had in Boston to get a copy of your last issue. I went to every news-stand I could hear of, to every place where papers were sold (this was on Monday, and blazing hot at that), and in every instance the answer was, "No one here." I could not find a copy in the town. At last I espied one familiar face projecting from under a pile of papers at a hotel stand kept by a Frenchman, and when I asked it out, to his view after he had denied having a copy, he remarked, "By Shorge! I did not know nuthings about dot one. I could have sold him six times ago." All of

which goes to show the popularity of, and great demand for the paper. But don't get excited or put on any airs; it is your correspondence that is doing it, and it is not a bad idea to have an interchange of views and ideas even on skunks and woodchucks. We fellows will write up your paper for you every week if we are let loose, and the observations of a sportsman are often instructive as well as interesting, bringing to light as it does many peculiarities of game animals and birds, and a copy of the FOREST AND STREAM is about as interesting reading as you can find in a day's journey.

I observe that your nautical editor has got to have his comb cut a little. He has been let alone so long that he fancies he has things all his own way, and the way he is sailing in on deep water models renders it very necessary that we flat-bottomed fellows should come to the rescue; and now that this English cutter "Mudge" has come over, there's no living with him. I won't admit that he has got us under, and we must stand up as our models do, and take the life of the conceit out of him. I, for one, am not a dog to be "sat on," on this question either. Eight tons of lead on the keel of a little craft of thirty-eight feet, forsooth! He can't prove that we want any such craft in our shallow bays by me. Not being amphibious, I prefer staying on top of the water. If I have time I will go over for his next week, and give my experience of a little cruise I had down East recently in a deep boat, by jingo! It is all very well to call our craft "tubs," but a tub possesses the merit of being able to stand on its bottom when the tide goes out. Fun is fun, but I don't see any in a mud bath. There is a "pint" beyond which, etc. Lastly, as the long-winded preachers say, and should say everlastingly. I want to make a suggestion to my brother sportsmen, and that is to show up in all communications the impositions by "Gouge and Smith" (don't print Gouge and Smith, but Gouge and Smith, and the way they are going to be). Whenever a sportsman is gouged by swindle and swindled by gouge, show him up. When railroad officials are impertinent and unaccommodating, give examples. I propose that we, the great body of sportsmen, do form ourselves into society for the general reformation of all people whom we, the sportsmen, are, by virtue of our pursuits, thrown in contact with. We will go for the man that kicks our dog (pretty likely to do that on the spot) and the baggage snatcher that snags our guns and things around, and the fellow that puts up rates for his nob next week, and give him no more than he is worth. Let us not forget either to give credit and praise where due. Who seconds this motion? PONGERS.

A REMINISCENCE OF THE WAR.

READING, some time since, a reminiscence of the late war, put me in the notion of giving to your readers some recollections of my adventures and escapades. I am quite sure that a portion of our unwarlike sportsmen find pleasure in making love to a pretty girl, almost as much as standing behind a brace of thoroughly broken dogs ready for the flush. The troubles and pleasures I am about to speak of came to me through my love for a regular old-fashioned Virginia pointer and his mistress. It was a clear case of love at first sight and "if you love me, love my dog." It was a truism in this case. I was young then, so young and yet felt so old. She stood framed in the doorway of her father's house as I rode up, and when I had dismounted she came with hesitating steps and inquiring eyes, and I knew what I wished. Off came my forage cap, and as I caught the light of her blue eyes, the deed was done and I was a prisoner.

The Harris Light Cavalry, of which I was a member, was encamped near Catlett Station, and at the opening of my story we were about to break camp and march with other forces on Fredericksburg, some twenty-five miles south. I had not been around the country much during our stay at Catlett's, and it was only some three or four days before the departure of the regiment that I made the acquaintance of the blue-eyed and brown-haired girl. So on this beautiful April morning, 1862, riding some three miles from camp, I came across the comfortable residence of Mr. Joslin; met his youngest daughter, fell in love with her, was introduced to the family, Mrs. Joslin and three daughters—Mary, Lucy, and the young set (she of the blue eyes), Abigail or "Mab." I overstepped the bounds of propriety, I fear, for I stayed fully two hours, and left with many regrets and a most cordial invitation to come again. As I was mounting I saw coming toward me the gate Miss M., followed by a fine pointer. I inquired if the dog was his. Miss M. answered that it was and that his name was Bob. "Did I shoot?" Was I a sportsman? If so I should shoot over her dog and she would go with me, only we could not go until October. Oh, my, what a beastly game law not to allow shooting in April.

I rode back to camp in a meditative mood—that is, meditating how I should arrange to make another visit to this hospitable roof. I arranged it a couple of days after, and had a charming visit; and how I did pet Bob, and how he and his mistress appreciated it. Arriving in camp late in the afternoon, I found we were under marching orders for Friday, the next day but one.

I stayed in camp until after dinner Thursday, then rode out to bid my good friends adieu, possibly never to see them again, for we were not going to Richmond, and so on south? The future was full of possibilities—one was promotion, the other death; and it was possible that I might find death destroy us. And so it fell out that as the twilight was coming on I stood in the midst of that family group and bade them farewell. I had mounted and was about to turn away, when Miss Lucy banded me a picnic case. I opened it and saw the face of a handsome young man in full uniform of gray. Said she, "Mr. Dick, that is James Davis; he is serving with Gen. J. E. B. Stuart. Should he ever fall into your hands, be kind to him. Should you ever fall into his hands, he will do all he can for you." I at once drew my own conclusions as to the relation James Davis sustained to the speaker. I took a good look at the picture, then returned it, and, putting spurs to my horse, I galloped away with a heavy heart in one respect and a light one in the other.

"Boots and saddles" sounded at five o'clock next morning. Twenty minutes later the Harris Light Cavalry were well on the march, the objective points being Falmouth and Fredericksburg. That day was to see the first engagement with the enemy. The battle of Falmouth Heights, the first battle of Fredericksburg, and the occupation of Fredericksburg followed.

During the summer the cavalry was kept busy doing picket duty and raiding in the enemy's country. I had managed, however, to make two visits to the front. I had seen the positions I ran great danger of capture, but with my usual good fortune escaped by showing a clean pair of heels. In July Gen. McDowell was ordered to join Gen. Banks in the Val

ley of Virginia and while the army was marching North and in proximity to Catle's Station, I embraced the apparently good opportunity of making a third visit. Striking off from the main column, I rode for an hour, when I sighted the house and soon thereafter was riding through the gateway. I was met at the door by Mr. Joslin. The family were about to sit down to dinner as we entered the dining-room. I did not notice anything unusual in the bearing or behavior of any host, hostess or the young ladies, but it all came to me afterwards—their rather strained conversation, Miss Lucy's pale face and agitated manner, and I remembered so well afterwards of Miss Mabel sitting so close to me at table. I sat facing a staircase, the mount of which was quite steep. I noticed then that Miss Lucy excused herself twice and ascended the stairs, quickly returning each time. Dinner being over, Miss Mabel, "Rob" and I went to the front of the house and there, in the shade, sat for nearly an hour. Mabel remained close to me the whole time. I afterwards remembered her agitated manner and how careful she was to keep the dog near and that she would not let me go to the barn to get hay for my horse, but called a negro, who fed the animal. At 8 o'clock I prepared to go, bidding good-bye to the family. I was soon on my way. Taking the road back of the house, I followed it to the woods, then taking bearings, I struck through the forest the nearest way known to myself, by which I would probably reach the main column. I had ridden possibly two hundred yards when from the side of the path the negro Tom appeared, out of breath and the perspiration streaming down his black face.

"Mars Dick, don't take de ole road to de creek; take de road what you knows to Kelley Ford; an' go, for de Lor' sakes, as fas' as yer hoss kin make it; de danger in de air. Miss Mabe say dis, and may de Lor' stan' by yer."

"But, Tom, what on earth is wrong? What have you seen?"

"Mars Dick, 't's seen lots an' heard lots. Go, go, go." Now thoroughly aware that a great danger hovered near and somehow feeling Miss Mabel knew it, I instantly followed Tom's advice and direction. Changing my course from north-west to a little north of west I urged my horse forward at a rapid rate, keeping my pistol ready and a sharp lookout. A few minutes past four I left the woods and found myself on the track leading to the ford and probably four hundred yards from it. At this moment I heard hoof-strikes behind me. Turning in the saddle, I saw two horsemen approaching at an easy trot. I did not wait for further investigation; I felt a near danger. Striking my horse sharply with the spurs I fled down the road. At the same instant "zip, zip," came two rifle shots in close proximity. Glancing back I saw a little cloud of blue smoke over the horsemen and they were flying in pursuit. It was now a question of horse flesh. The fine animal I rode had never yet failed me. Could I reach the ford and get safely over all might yet be well. The river lay in sight. Faster and faster flew the horse that carries my life and my liberty. A minute more and I am in the swift current of the Rappahannock, the horse making tremendous plunges under the spurs. "Halt!" Three horsemen in blue appear on the river bank. I point back. Instantly three carbines are raised and three balls speed over my head. I look back—the pursuing Confederates are wheeling about; they fly up the hill and are soon "lost to sight—to memory dear."

Lieutenant P. said that night in camp: "Dick, that's another one of your close calls. You'll be picked up yet. You can't combine love-making with war in the enemy's country. Some of these girls will betray you."

Lieutenant P. did not know the guiding faith in my heart for at least one of those girls. She had saved me that day.

Fall, winter and spring passed away and, although I had been a regular scout all that time, I had never been able to visit the Joslins. It was three days after the battle of Chancellorsville. I was alone on the road from Fredericksburg leading to Beaton. I had left Falmouth the evening previous and, encountering Federal pickets ten miles north of town, started with the officer of the picket all night. Four A. M. found me in the saddle. I knew that the road was dangerous, being well patrolled by Confederate cavalry, but, trusting to my knowledge of the country and ability to keep from beaten paths, I pushed on.

By 9 A. M. I reached Morrisville, some miles from Beaton. Here I met as prearranged another scout. He struck for the river, going west; I passed on north. After getting away from Morrisville a mile and a quarter I was walking my horse through a hollow in the road musing and thinking of things far away when, out of the thick dark pines on my left sprang three men in patterned, thick clothing with their carbines. "Fire!" I said. "Halt!" Second, "Get off that horse!" Third, "Down with that pistol or your head man!" My horse was quickly seized, I dismounted, and was hurried into the woods, and in a trice was quickly disarmed.

The man who took my belt was James Davis. "Mr. Swiviller this is the third time I spotted you, and followed you, and now I've got you." The big, handsome fellow smiled grimly, and shook me warmly by the hand. I was completely crestfallen and bewildered and felt about as mean as a man feels after anything in this world.

Davis then recounted the following: He said that the day I took dinner at Mr. Joslin's he was in the house, and while we were at dinner he was in the room immediately over the dining-room, and through a small knot hole in the floor (there being no plaster) he watched me. He was then anxious to effect the capture, but he was deterred partly by the position I occupied facing the stairs which would give me a chance of seeing him about as quick as he could get his pistol on me, and partly by the fact that he was afraid to step quickly and a horse's step in common with the rest of their family had for serious results that might attend the attempt. He pursued me as soon as I left, being joined by a companion Miss Mabel divining their intentions sent Tom to warn me not to go the way I came. They missed me at the creek crossing, so must have crossed my trail a couple of miles back in trying to intercept me at the upper ford. Had they changed their course five minutes earlier there would have been trouble for me; as it was I saved myself by superior speed.

Going back in the woods to a place well screened from the river by a thick growth of locusts, hickories, and oaks, I sat down. We dined, and the rest of the day was spent in talks of the war, and telling sportsmen's yarns for all were fond of dog and gun. Davis and his companions had not learned of the death of Stonewall Jackson until so informed by me. They had been inside the Federal lines almost a week previous to my capture. I will not here describe how I was conducted beyond this line at night, and of the magnificent ride across the Blue Ridge, and the splendid trout I caught from mountain streams. Four days after my capture I was

delivered at Gen. Fitzhugh Lee's headquarters, was introduced to that officer, and most agreeably entertained. My parole and exchange occurred six weeks later.

October found my brigade fighting Gen. Stuart at different places along the Rappahannock. At the close of a day's skirmishing we bivouacked in the woods. My horse was through to doing, I was preparing to wrap up in my blanket, when it suddenly occurred to me that I was but ten or twelve miles from Joslin's house. Could I make a visit? But then a portion of the enemy must be nearer to Calletts than our forces. However we wanted information as to the enemies whereabouts, and particularly if they were amassing near Catle's Station, and I had already been ordered to ascertain this fact if possible. I therefore determined to combine pleasure with duty, get what information I could of the enemy, and visit my friends in the bargain. I at once communicated my plans to Geo. Kenner, one of the best scouts on our staff; he fell in with them at once. My idea was to visit Joslin's that night, leave there before day, and scout the country back.

Eight o'clock found us in the saddle and away. After a ride of a short distance Kenner stopped as if struck. "It will be strange if James Davis is not at this moment making himself comfortable in the very house we propose visiting," said Gen. Stuart's command must be nearer there than we, since he. The whole thing flashed on me in a moment, of course I would be there. Could we not capture him, if such was the case? We would try. So it was arranged to approach the house with caution, and find out if his horse was in the barn, if so that would tell of his presence.

We pushed on as rapidly as the course we were taking would admit. Ten o'clock found us in the woods two hundred yards back of the Joslin House. We stayed there until midnight. Leaving Kenner, I made my way to the barn, being careful to keep out of sight of the house, not being willing to take any chance of being discovered. The barn string was out and I opened the small door by the rear of the barn and entered. Taking a match from my case I struck it and slowly made my way along the stalls. There were three cows and two mules. The light went out. The second match blazed up. The family horse. Ha! With hands trembling with excitement I cautiously struck the third match, and, looking right at me, was David's bay mare. Two more matches and I found his saddle. There would be no mistake now.

I quickly and silently made my way out of the barn and joined Kenner. It was arranged for one of us to go to the rear and the other to the front of the barn and rouse the folks. Kenner was to do the talking, his voice being stronger. We hoped by this that Davis would think it some of his own men.

We started for the house, and when within fifty yards of the barn, his! what's that? We distinctly hear a horse walking quickly through the barn yard. A moment of intense suspense and there breaks on the stillness of the night the clatter of a horse's hoofs on the road.

Telling Kenner to wait, I go into the barn; as quickly as possible I made my way by sense of touch to near the stall that contained the bay mare and struck a match.

The bay mare had vanished! Danger was in the air. We left the place, mounted and rode away. It was some days before we joined the command, but I made that visit before returning and had the mystery solved.

DICK SWIVILLER.

CONSULDED IN OUR NEXT.

THE PREVIOUS 'POSSUM QUESTION.

TUCSON, Arizona, August 20.

Editor Forest and Stream: The courtesy which you have extended to the 'possum question, so innocently raised last spring, emboldens me to ask the usual parliamentary favor of closing the debate.

The mass of literature, which has been so cheerfully given to the public through your columns has perhaps refreshed the lagging senses of many a gouty planter and revived memories harmless and pleasing.

The 'possum is now ready to enter in the summer, and only matures with the falling of per-missions in the autumn, when the frost crisps the pro-and.

Americans are fond of imagining that no other country produces the 'possum, but in No. ten China I have seen a 'persimmon orchard set in rows expressly for the purpose of feeding 'possums, which are esteemed a great luxury among the Chinese, who are exceedingly fond of fat things such as pig and 'possum, and invariably eat them hot.

One of your correspondents suggests hunting 'possums with a gun. In England, where you would know, a man who would shoot a fox is banished from polite society forever, and a man who is so lost to sportsmanship as to hunt a 'possum with a gun in the night should be condemned to eat him cold and afterward to undergo a nightmare.

Any negro in the Southern States can catch a 'possum. He may climb out on the limb of a pap-paw tree ever so far and twist his tail around a limb; but a hickory pole in the hands of an expert darkey or ten year old boy will fetch him to the ground; and then you place the pole across his neck with your feet on each end and give a jerk with the hind legs and his neck is broken.

The controversy did not originate about catching 'possums, but cooking them, and the pre-ponderance of evidence is in favor of baking with sweet potatoes in an oven or skillet, or in the ground surrounded by stones, "tatama" fashion, and seasoning with sage and red pepper.

In the coming autumn no doubt the voluminous intelligence you have spread abroad will revive a taste for 'possum sport and 'possum supper.

The time may come when the American people will plant persimmon orchards like the Chinese and give the 'possum his due as an epicurean gratification. The question is settled by the majority in favor of baking with sweet potatoes and eating while hot.

With many thanks for the polite consideration the subject has received I call the "previous question."

CHARLEY D. POSTON.

TOADS FOR GARDENS.—According to a French paper a market for the sale of toads to gardeners is held regularly every week in Paris. Dealers bring their "goods" in well-ventilated casks, in which the toads are packed in lots of a hundred, in damp moss. A lot of a hundred good individuals will bring fifteen to seventeen dollars. The gardeners use them to keep down the destructive insects that annoy them. A Dutch gardener, M. Krelage, of Haarlem, recommends the use of the toad in greenhouses, as furnishing an excellent means for destroying the millipeds that infest the plants.

Why be sick and ailing when Hop Bitters will surely cure you?

Natural History.

HABITS OF SNAKES.

AS OBSERVED AT THE PHILADELPHIA ZOOLOGICAL GARDENS.
Editor Forest and Stream:

In your number of September 1 you ask for further information on the habits of the rattlesnake, as stated in an interesting letter on that subject from a writer in North Carolina. While considerable observation has evidently been made by your correspondent, some of his conclusions are not altogether correct, and you will perhaps be struck a few facts, which are reasonably well ascertained to be such.

1. No serpent covers its food with slime before swallowing it. There is no organ provided for such a purpose, and it would be about as easy to paint in water colors with a sharpened slate pencil as to smear a "slimy fluid" over the hair or feather of an animal with the slender pointed tongue of a snake. Deglutition usually begins at once without any preliminaries when the prey is secured, and the secretion of the salivary gland serves merely to facilitate its passage down the esophagus and into the stomach.

2. As to the supposed powers of fascination in snakes. In general, animals placed in a cave to serve as food are perfectly indifferent to the presence of the snake until the latter becomes aggressive when they naturally show much fear, but under no circumstance have I ever been able to find any trace of a power to charm on the part of the snake. It is reasonably safe to strike out the *intentional* element implied by the common belief, and to attribute the behavior of the victim to trance or nervous exhaustion. It is well ascertained that this curious mental state often known as "Braidism" or "Hypnotism" can be induced by fear, and also by having the attention strongly attracted on one object in a fixed manner, for even a short space of time. Without going into a long discussion it will be apparent to all who are at all familiar with the experiments which have been made on this subject that the slow approach, and the fixed, glittering eye of the snake might be a frequent cause of this condition in the prey which it was about to seize, under the circumstances so long as no external force was exerted, as in the case of a snake being given a shock to the nervous system of the animal affected, there would appear to be a complete paralysis of the motor nerves and an incapacity to effect any voluntary motion to escape from the spot. It is almost needless to say that these conditions not infrequently exist with human beings in the face of sudden danger, which may often be of such a nature that the most firm believer in the supernatural could hardly suppose it to be gifted with a voluntary power of fascination.

3. When a snake is quiet for a few hours after feeding, it can hardly be supposed that it desires so to allow digestion to take place, as this process in most if not in all snakes requires several weeks instead of from two to nine hours. The muscular force exerted by the snake in drawing food down its throat is considerable and long continued. Furthermore, the arrangement of the two bones composing the lower jaw and of some of those entering into the base of the skull is such that they are movable on each other, and can be dislocated at will, and the throat is thus able to give passage to the food. After this is swallowed they are drawn back into position by contraction of the elastic ligaments which hold them together. When the operation is completed a greater or less time must be allowed for these overstrained muscles and ligaments to recover their tone and contract. During this time it is reasonable to suppose that the snake would—just as in ordinary cases of fatigue—be disposed to be still, and to some extent, probably be incapable of exertion.

4. The usual number of young produced at a birth by the rattlesnake is very probably six or six to twelve as stated, but it has been known to be as high as fifteen on one occasion in the Philadelphia Zoological Garden.

5. The generalization that all harmless snakes lay eggs, and all poisonous ones do not is unsound. The young of the rattlesnake, as stated by your correspondent, and probably all of the North American venomous serpents are produced alive, but so also are the young of many of our harmless species, as in the familiar cases of the eastern snakes and conular snakes. The young of the latter are produced on oviparous or viviparous principles really does not seem to be a matter of vital importance in the economy of the animal, as it can frequently be influenced to some extent by artificial conditions.

6. The reason given for the quietude of snakes at night in this latitude is probably incorrect—viz., the chill of the night air and the dew on the ground, but in this quietude reptiles—if indeed it is general among them—differ from most animals instead of agreeing with them. The great proportion of the animals which are nocturnal in habit, notably all those, both birds and animals, of a carnivorous and therefore predaceous nature.

7. The development of the rattles differs somewhat from the manner stated. The snake is born with a small knob at the end of the tail, which becomes the button of the forthcoming rattle. At the end of about six weeks—depending much upon the time when the first food is taken—the young snake sheds its skin and one rattle is then added, and subsequently, as a general rule, through life, one new rattle is formed whenever the skin is shed, but this is exceedingly irregular; the snake some times sheds three or four times in the course of a year; sometimes two or three rattles are produced at once, and occasionally none at all, also rattles are frequently lost by accident from the end of the tail—the new growth of the rattle—which are never reproduced, as the new growth is the base. It is thus readily seen, that while under normal conditions there is a general relation between the number of rattles and the age of the snake, it is much too uncertain to afford any correct indication of the latter.

What a nest of strange notions is that part of the human brain which may be supposed to be devoted to snakes. All men are prone to misrepresentation and superstition in their regard. Everywhere their graceful, gliding motions and their colors—often as striking and brilliant as Nature can paint—are looked on with aversion and fear. Hardly a religion of ancient or modern times, be it classed as mythology or theology, in which the serpent is not recognized either as an object to be feared and therefore to be propitiated by worship, or to be feared and therefore hated as the incarnation of evil. Probably few readers of FOREST AND STREAM has ever had their attention drawn to the fact that in all thebrite creation, the monkey alone—"that rough sketch of man"—shows his sentiments in this respect, and that universally in the animals of that order, so far as inarticulate sounds and the language of gesture can make plain, horror, aversion and fear mingled with an invincible curiosity are found, just as the same feelings are displayed under the highest development of all Nature's forms.

necessity for the term point-blank, as I have defined it in my article. Then why speak of "the exact distance from the muzzle of the piece at which the bullet ceases to travel in a straight line." There is no such distance in rifle shooting. He further says: "The scientific point-blank adopted by the British artillery means the exact spot where a ball fired with out elevation, *i. e.*, with the axis of the barrel set quite horizontally, will first graze the equally horizontal earth."

Just so! and all British artillerymen and authorities will say, that the ball, as Hans Bask states it, falls in a curved path from beginning to end. In this assertion I but vindicate the intelligence of the British officers and nation. This definition, like the American and French, recognizes in practice and theory that the axis of the bore points *above* the object when the piece is discharged, and both alike make a point-blank with a *falling* ball—the American by falling to the line of sight, the British by falling to the ground. Both point-blanks are made separate and distinct from the line of fire—that is, point-blank shots can never be made along this line or the axis of the bore continued, and why? Let Hans Bask truly answer: he says, "If the axis of the piece be directed upon an object, the bullet will never hit it, but will always pass below it." This is just what my article taught. Then why present the delusive idea of straight shooting? It can only be done, strictly speaking, for the length of one barley-corn. I admit that some persons, but not authorities disagree, as to what constitutes true point-blank. He further says: "The time occupied in reaching this exact spot (on the ground) is exactly the same as that during which the same ball would have fallen to the ground from the muzzle of the fire-arm."

Ex-*ex* *su*. The horizontal velocity imparted to a rifle-ball, however great it be, does not prevent the bullet from falling, just as it had no velocity. Philosophical experiments and ordinary rifle practice, as well as theory, all establish this fact, which we will call Fact No. 1.

Fact No. 2 is that we know the law governing the fall of a bullet as well as we know the alphabet. Fact No. 3 is the law itself, *viz.*, "The spaces passed over by a falling body are proportional to the squares of the times occupied in falling."

Fact No. 4 under this law is that if the rifle-ball falls through a space, which we will represent by 1, in one time, it will fall through a space represented by 4 (the square of 2) in two times, and by 9 in three times, and by 16 in four times, and so on, the times being regarded as equal and the fall in a vacuum (no air).

Fact No. 5 is that these falls, 1, 4, 9, 16 and so on, correctly indicate the effects of gravity on the ball after it leaves the muzzle and when considered as lines of fall, they locate the bullet and thus establish four points in the curve or trajectory.

up. He goes on: "The point-blank of our artillerymen is not accepted by those of other countries, as with them it is the extreme horizontal distance reached by the bullet before it falls under (or cuts the second time) the line of sight."

The parentheses are ours. He here evidently refers to the French and American point-blank, though not quite clearly. I will now insert this definition as I gave it in my article, which he copied. For a full explanation of it see the article itself.

"By POINT-BLANK is meant the SECOND point, where the trajectory or curved path of the ball cuts the line of sight."

"This second intersection of the line of sight by the ball is made in its descending flight, after having first cut it near the piece in ascending." (Figure 1.)

With the present article I further contribute a very important drawing, clearly illustrating this definition and the principles of rifle shooting.

He continues: "This principle (the French and American system) Dougall in his treatise on the art of shooting, considers a better definition than the British, although it is open to the grave objection that it *mistakes* by not admitting that there may have been a curve in the flight of the ball before cutting the level of the sight (or line of sight)."

Now, I have never seen the treatise of Mr. Dougall, a prominent gunmaker in England, and, I believe, of Express repute, but I will assume that his meaning is correctly represented above, if not quoted exactly, and will reply accordingly.

I am unable to see that the definition is open to any "grave objection" whatever. It is simply the announcement of one plain fact, which every point-blank shot verifies. It does not profess to define the nature of the path of the ball in any part of its flight. This evidently was not its original object, but only to fix a mathematical point from which, as an element, in combination with others, the trajectory could be mathematically determined and plotted. This fixed point and the one at the centre of the bore determine the length or base of the curve. From these points and the base we can reason, and so solve the problem, but without them we are helpless. Point-blank is also made a very useful term of reference in works on gunnery as well as in ordinary practice. Whether any part of the trajectory is straight or not is left for scientists and practical men to say, but certainly the definition, in the general application of which Mr. Dougall sees "grave objections," repudiates the idea of the trajectory being anything but a curved line throughout its course.

As we have before illustrated, the law of gravity settles the nature of the trajectory, and this fact sets aside the complaint made by Mr. Dougall. It has no bottom to it.

A New Definition.—The editor continues: "The true and

FIGURE 1.

AT is the line of sight. B is the target. CD is the line of fire, or axis of the bore prolonged; the barrel always points above the target. K is the first and B the second intersection of the line of sight by the trajectory. B is the true point-blank. K is the near point-blank. The same shot will centre both at K and B and nowhere else.

Construction.—Now draw a horizontal line, A, B, from left to right to represent the axis of piece and the "line of fire," which is but the continuation of the axis of the gun. Draw it, say 10 inches long, then divide it into 10 equal parts, each part to represent one yard and one equal time—the whole line thus representing 10 yards and 10 equal times. From "A," considered as the muzzle, the path of the trajectory commences and you wish to represent it further. To do so from the divisions 1, 2, 3, 4, and numbered from the muzzle, let fall four vertical lines, whose lengths shall be to each other as 1, 4, 9, 16, etc.—1-10, 4-10, 9-10, 16-10 in. will be found satisfactory and easy to plot.

Now draw a curved line from the muzzle through the lower ends of these lines and you will have a curved trajectory for the first ten yards of the range, though greatly distorted, and the values of the falls are unknown. It is the principle that I am illustrating. The point of all this is that,

honest point-blank range he [Dougall] holds, and we (the editor) agree with him, is the extreme range attained without sensible curve or trajectory, so that up to that range the shooter has to make no calculations or allowance in firing, but to aim "dead on" to the exact point he wishes to hit."

The above is very easily said. Now, let us see if it can be done, and notice the sad results of such shooting.

But first in order. Why use the words "true and honest" before point-blank range? This "side-hit" calls for the definition of point-blank range, and is taken from my article.

"By Point-BLANK RANGE is meant the straight line or shortest distance from the piece to the point-blank, or in practice, to the target whose centre is struck at this point."

—CB Diagram No. 1.

Now, in both the English and American point-blank

FIGURE 2.

AD, horizontal axis of the bore. BC, line of sight. The axis is at C for two shots. First, the horizontal shot, of which the curve 1 shows the fall of the ball from AD according to the table of figures; and second, the oblique shot, of which the curve 2 shows the height run above AD (AD'). AD' represents the oblique line of the under oil in elevation. OB and OC are each equal to .003 in., the drop for 10 yds. AD and BC are parallel. 75 is the distance from the centre of the bore to the line of sight.

with these facts before him, no one can deny that the first ten yards of the trajectory is a curved line (as will be proven hereafter), or assert that it is a straight one for an inch. I remember that call and time both begin at the instant of discharge. We specially invite the attention of Mr. Van Dyke, "The Still Hunter," to this point. The difference of the fall of the bullet *in vacuo* or in air is inappreciable for ten yards, also any change in the velocity of the ball, and thus the times are virtually equal for each ten yards of the range. The same law of gravity governs a trajectory for one yard and for one inch as it does for ten yards.

Then why, with the law of gravity staring them in the face and demanding a curved trajectory throughout, do some persons argue or rather write to the contrary? I do not mean the editor of the *Land and Water*, but rather those who have an axe to grind, or some particular rifle to erect

ranges the distances are measured in practice. There is, then, no want of "truth and honesty" in this. So also are the two given points defined as point-blank. There is, then, no want of "truth or honesty" in either of these. Thus, both definitions define only plain, positive facts, and facts necessary to be known, in order to nail the trajectory just where the facts in the case place it.

Query—May it not be possible that these stern facts serve to nail it too exactly in its true place? I confess I sometimes think so, and that some persons, having a hobby, would like to escape the true awards of the definitions, that is, measure for measure, without regard to this or that kind of rifle. Thus the definitions, both American and British, are "truthful and honest." One might infer from Mr. Dougall's remarks that they are not.

Mr. Dougall is silent, as it appears, on the subject of a

point-blank. I regret this, for I do not understand whether he completely ignores such a fixed point or not. Be this as it may, his definition does not allow of any change of elevation or variation in the mode of sighting for his ideal range, and thus he will hold him to it.

To my mind, however, it appears as if he wishes to have it understood by the public that certain rifles (his express, perhaps) shoot so nearly straight at long hunting distances that no elevation is required, nor judging of distances necessary, nor varying the aim, but that the shooter has only to draw sight up and "to aim dead on the exact point he wishes to hit" in order to hit it.

For Mr. Dougall to claim the right (he may not) of any elevation for his ideal range I think is inconsistent with his loose definition, but I will allow him a point-blank elevation for each range and so treat the subject.

As he failed to commit himself in regard to the length of his range, or of any range, we are obliged to hunt for it, as best we can. This may be done by asking questions in regard to the range and then applying the approximate results of rifle shooting to answer them. In the future we hope to learn from Mr. Dougall himself his approximate results in rifle shooting—mean genuine results, not guess work. The public want facts.

"Sensible curve or trajectory," as will be seen, appears to be the ruling fact in determining the length of Mr. Dougall's undefined range—hence I put these questions to him:

First—What amount of curvature in the trajectory constitutes "sensible curve or trajectory?"

Second—At about what distance from the muzzle will this amount be found?

Third—Under his definition for "point-blank range" is a point-blank recognized?

Fourth—If so, what determines it, and where is it found?

Fifth—Is the definition for "point-blank range" in his ideal range general in its application, or only applicable to this or that rifle?

Sixth—Can his definition or definitions be used in science to calculate the trajectory and to plot it?

Seventh—What advantages have they over the British and American definitions that he should prefer them?

Explicit answers to these questions, especially to the first and second, will throw much light on this subject. Facts only must settle the doubtful questions.

To proceed in the inquiry for the ideal range, I will first assume the rifle or rifles to have a point-blank elevation for 200 yards and 100 grains of "FG" American powder for loads.

Q. 1. Can the range be 200 yards?

No, unless we wish to shoot about 7 to 10 inches over a turkey's head at 110 yards, when "aiming dead on" on the exact spot we wish "to hit."

Most surely such wild shooting as this will never bag the turkeys in the United States or Canada, nor will it in hunting kill any but large deer, though it may frighten the smaller ones away with their white flags a-flying.

This 7 to 10 inches gradually diminishes to nothing at first and second intersections of the line of sight by the bullet, as fully explained in my previous article.

In the next case I assume the rifle's point-blank to be 150 yards.

Q. 2. Can the range be 150 yards?

No, unless we wish to shoot about 2½ to 5½ inches over at 75 and 80 yards, "aiming dead on the exact point we wish to hit." Such shooting would be very apt to miss a deer's head or a turkey, while all small game along mid-range "aimed dead on" would escape. This will never do.

This 2½ to 5½ inches gradually diminishes to nothing, as remarked above.

Thus "aiming dead on" is again a failure, especially in the case of all small game shot at along the range, between about 30 and 135 yards.

I next assume the point-blank to be 100 yards.

Q. 3. Can the range be 100 yards?

No, unless we wish to shoot about 1½ to 2½ inches, "aiming dead on the exact point we wish to hit," at 40, 50, 60 and 70 yards.

This "sensible curve or trajectory" will never answer to give us the best results, as, for instance, where the object is to knock off a squirrel's head along mid-range. Not you will shoot right over four times in five by aiming "dead on" the centre. Every person who has used the rifle much knows this to be so; then why set forth absurdities or issue lessons pointing to them? But in hunting large game—deer, antelope, bear, wolves, geese, turkey, etc.—aiming "dead on" will usually answer. Thus "aiming dead on" the exact point we wish to hit is a failure in shooting along the 100 yard range for the rifle will certainly shoot over all small game along mid-range. To this rule there is no exception, no matter who makes the rifle or what is its name. This error of 1½ to 2½ inches (too high) at or near mid-range, diminishes gradually both ways to nothing, as before described.

I next suppose the rifle to have a point-blank for 50 yards.

Q. 4. Can the range be 50 yards?

Yes, for all hunting purposes, though the rifle will shoot "aiming dead on" to one-half inch at 33 yards. But over about one-quarter to three-quarters of the range, unless the rifle has the proper point-blank or the aim is a little changed on the face of the target. Strictly speaking, aiming "dead on" can never win, for the ball falls below the object aimed at.

NO ELEVATION.

I have now presented the sad results of aiming "dead on" (in accordance with Mr. Dougall's theory) under the most favorable circumstances, by allowing the rifle to have four different elevations. I will next recast the case of no elevation, or point-blank, which I think tallies with his definition or views.

First.—If the rifle has no elevation of sight, then it will always shoot too low and can never make a point-blank, or centre shot, at any distance. The instant the bullet leaves the muzzle it is nearer the centre of the target, considered vertically, than it will ever be again throughout the range.

Second.—If "aimed dead on" the centre, the bullet will miss a pigeon or a 3-inch circle at 50 yards, a large turkey or a 12-inch circle at 110 yards, a large buck or a 24-inch circle at 150 yards, and the largest elk or a 48-inch circle at 200 yards. Here I stop, for the animals are becoming too small in proportion to the distance to be hit in the "dead level sights," "aiming right on the centre."

We therefore see that aiming "dead on" with "dead level sights" and making good shooting is preposterous. I am ready to prove that point-blank shooting, which is always made under an elevation of the rear sight, is at least 500 yds. ahead superior to "aiming dead on" (so called), which is represented to be always made without any elevation of the rear sight, the rifle being even held "dead on" the exact

her present cargo in London and go to the Nor'h Sea fishing grounds (if the prospects were good), and run a cargo thence to Billingsgate safely in the hottest weather."

—BOW-BELLS.

REMINISCENCES OF FORTY YEARS.

I.—LOON LAKE IN 1856.

IN your issue of to-day one of your correspondents recommends Loon Lake, Franklin county, N. Y., for fishing. I can fully endorse his recommendation, having been one of a party who visited this delightful wild country, made delight full from its sports of flood and field, or rather, I may say, forest and lake. This magnificent sheet of water, if I remember correctly, is about one and one-half miles wide and three or four miles long. Picked out an enormous size are there in any quantity, together with trout of great weight. A party of half-a-dozen from Saratoga in September, 1856, visited this wilderness. After steaming up Lake Champlain we hired a team, and in climbing the thumps and bumps experienced in the rocky hills. From noon until about midnight we journeyed, inquiring from persons we met, "How far is it to Smith's Hotel?" "Oh, about six miles." After journeying an hour or two the next inquiry, "How far to Smith's place?" "Up this place and down there, then straight on about two miles." We kept on expending and bumping along for another hour, when we expected to see the hotel in the short distance. However we struck a cabin, by the roadside, and, lo! long out to the denizens, asked, "How far to Smith's Hotel?" "Oh, I guess about six or seven miles." We still went on, inquiring as we went, and found all our answers varied in distance from fifty to one hundred per cent. one with another. At last we reached the much-desired spot, were ushered into a nice comfortable tavern or hotel, and mine host Smith, seemed (as Le Prov'd.) a good fellow, fond of his mountain sports and a good hotel man in every respect, providing all comforts necessary for man or beast.

Our first morning, after an early breakfast, we start'd for a deer hunt. According to the custom there the dogs drive the deer in these ponds or lakes, as a boat was in readiness to put out after the dog's order, either to knock him in the head while swimming or to shoot him. I protest, of, however, against such butchery and would only shoot him on the run. The drivers and butman accordingly agreed to give me a bounding shot by driving the deer direct to my standing place, which is done more easily than I imagined by paddling behind the swimming deer, then to the left or right as may be to turn him in a bee line to the spot (they knew where we was stationed). I waited the first day one, two, three or four hours. No sign of dogs or deer, although soon after the start I heard the dogs give tongue some two miles across the lake, but the deer took over the hills to another point, where he made good his escape, and the dogs could not be got together that day in time for another drive.

As I was standing there, my brains working at nothing, my attention was suddenly attracted up the lake, some two miles probably, to a flight of birds skimming and hugging the shore in flocks and gradually approaching me. In a few moments I discovered them to be ducks, as they came within 200 yards of the mound on which I was stationed, when they settled down in a cove, which was probably 100 yards in circumference, edged all round with tall reeds from four to five feet high.

"Hello, my boy!" says I to myself, "here's a chance," and luckily I had carried with me about half-a-dozen charges of No. 7 shot from Saratoga, having shot a fifty double pigeon mark the week before, killing 95 wild birds out of 100; traps 5 feet apart, 21 yard-rise, 100 yards fall. Lots of old residents of Saratoga at the present season greeted me and gave me a hearty shake of the hand, especially the woe by host of the Adelphi Hotel—at that time Mack's the American.

But to the flights of ducks. I accordingly drew out of my barrel the wads, then the twenty buck shot and put in place one and one-half ounces of No. 7s. I went on hands and knees, some times flat, crawling around through the tall rushes in order to get within shot at the edge of the curve where the ducks were. This took me probably half an hour, the distance around to avoid sight of my game in quest being several hundred yards. At length I made my journey, and, peering up, beheld a wonderful sight. A dead log, a tree without limbs, was hanging across this cove, some twenty yards in length, on which the ducks were sitting, some jumping off, fluttering and splashing the water, the next moment on the tree shaking their feathers.

I never saw such a shot for a raker, and as I had waited some hours for the deer and got nothing I made up my mind this once for a broadside. I accordingly crept in a line with the log. The ducks had no apparent danger for some were feeding themselves on berries with their beaks under the wing. I took a level sweep and, being ready in the rushes, the gun in position, I gave a whistle; they all raised their heads for a look—twenty-one ducks—the first, a right barrel, heched forth fire and smoke, and the roar reverberated all around.

Two ducks arose; one of these fell to my left barrel. And the flashing and fluttering on each side of the log I will not easily forget; the water red with blood, all being shot through the head.

Nineteen shell-drakes at one shot out of twenty-one, of the other two, shooting off, one full to the left barrel, bagging twenty out of twenty-one. I did not then know the shell-drake, never having shot any, but from the head knew it was a fish duck. The boat came now for me and my bag, and the wonder was great at the prodigious sweep, but you could not miss them if you held right for the first duck, lowering sufficiently to take in the lot.

The next day I shot my deer, being driven two miles to my stand as before described, but let her bound (a large doe) and gave her a shot for her life, showing myself as bolding just as she jumped on land. It seemed more like murder in the first degree, or shooting down a calf, the poor thing being only some twelve or fifteen years from me, but she gave a tremendous frightened leap on hearing and seeing me, that a second or third leap would have carried her from harm of the gun, behind a bluff. Therefore I had to do or not to do, a dozen buckshot going through neck and shoulder. Our friend Smith at the hotel had three ducks or shell-drakes cooked for dinner on our arrival the next day's deer hunt, and as you have lately had much discussion on cooking 'possum I will tell you how these ducks were served up, and the process used for taking away any fishy taste. I gave Smith the idea. All seemed young, large birds, legs like a mallard's, and fully as heavy as a plump mallard.

Just skin the ducks, as the skin generally contains the oily, fishy taste. Clean them, wrap them in wet cloths; dig a hole in ground, and bury them over night; take them up in morning and wash them well, and soak an hour in salt water. We came home hungry enough from our hunt, and with appetites sharp. But I never sat down to a stew with onion, that surpassed these tender, juicy, sweet, deliciously, served-up shell-drakes.

Our worthy host, then of the hotel Loon Lake, has since left that locality. If this should meet his eye will I please address me in care of the FOREST AND STREAM? I will be very happy to find his whereabouts, and probably pay him a visit.

We saw the day we left Loon Lake an immense wolf caught in a trap there. Deer in those days in that mighty wilderness were as plenty as sheep on the plains. How they are now I do not know, but the lake, for the forest fishing in the world of its kind, I think cannot be surpassed.

Now, as I have made a commencement with you I will continue giving you only some remarkable and strange shots made during forty years' handling the double-barrel. I will give my experience of shots I made myself at different times and different parts of the United States. WM. KING.

HORNELLVILLE.—There was a slight mistake in the letter about Loon Lake in your issue of Aug. 23. It should read (15) fifteen miles from Hornellsville not 95 as printed. The lake was stocked some years ago with trout, but none were ever caught, until last week when Seth Green went there, and caught a fine lot greatly to the surprise of the local fishermen.

—J. O. F.

THE WHITE PANTHER.

BY XIL YORRIS.

THE days passed pleasantly away with boating on the river and angling in the mountain streams for trout. The evening were spent in the library with Mr. St. Clair, who was actively engaged in collecting and describing the ferns and mosses in which the Alleghenies are so rich. One evening he remarked that Randolph, a young hunter living in the wild recesses of the mountains, had paid him a visit that day and that he had noticed in his cap a very rare and beautiful fern, but the fronds were so withered and broken that he was unable to identify it. The hunter could not remember positively where he had gathered it; he was in the habit of placing beautiful plants and flowers in his cap and thinking no more about them. He was under the impression, however, that he had found it growing near the Panther Pond, a small lake situated near a wild gorge among the mountains.

"Let us hunt the fern to-morrow, Vivian," said Karl, as they retired that night. "I was just going to propose it," replied his friend; "let us be up early and away."

At dawn they took the boat and rowed across the river. Vivian carried a repeating rifle and wore a long hunting-knife in his belt. Karl was armed with a well-ried gun.

"To the lover of nature," said Vivian, "the wild mountains have peculiar and unfeeling charms. In summer, deep carpeted with moss and glaucous with the bloom of rhododendron and azalea, there is about them a mysterious beauty found nowhere else. In winter color and pine are columns of silver and the pillared rocks are turned to marble monuments of austere, perfect, beside the graves of the red hunter who has vanished long ago. Hunting the wild deer all through the autumn evenings—

"Till many a night I saw the pleads, rising through the mellow shade, glitter like a swarm of fireflies tangled in a silver braid."

"I could understand why the Swiss live in love with the Alps and the Gael with the Highlands." Returning, after a long day's hunt on the mountains to his lonely camp by the waters, the hunter may hear the scream of the cougar in the laurel and the mocking laugh of the owl in the pine. Yet, wrapped in his blanket before his blazing camp-fire, his slumbers are none the less sweet, though he knows that the king of the mountains is abroad in the storm.

"Your hunter is a naturalist, too, in his way; knowing little of books, he studies living nature in the wild world where he is not familiar with the habits of the animals around him his labors would bring him no returns. He knows that during the month of September the bucks will be found quiet and alone on the highest mountain peaks, drying their antlers in the sunbeams and rubbing off the velvet against rock and pine."

"Yes," replied Karl, "the hunter, though surrounded by danger, learns to forget fear. His mind is filled with the love of the forest and he can find his way anywhere by the moss on the trees—don't you see that it is so abundant on the side toward the north? Then one feels so different here from what he does in the crowded city, there he is lost in the march of the busy multitude, a drop of water is when mingled with the ocean; here he walks the earth like a god—"

"In the olden, golden glories
Of the golden, olden times."

"Those were happy days, Vivian, in the morning of the world, when forest and stream, lake and river, vale and mountain were peopled with strange, wild forms. But the beautiful fairy no longer dances to the sound of elfin music among the golden flowers of summer, when the moonbeams are painting ghastly pictures everywhere. The treasure caves of the dwarfs are all closed and the gnomes and genies are hidden away far in the secret mountain folds. The merry eyes of the Basileus are harmless now and the Hippogriff no longer bears away knight or paladin on rapid wings to deeds of arms or fields of chivalry."

"True," replied his companion; "when the sun of civilization shone brighter and clearer over the earth the creatures of the world of fairy faded and passed in the light of its splendor. They retired to lonely caves in lonely lands and are now seen only by the dwellers in mist-wrapped mountains, far away from the gaze of man and the reach of the engine. These forests here, it is said, there roams a phantom creature, fierce and terrible—a snow-white cougar, but I suppose that it is only a hunter's dream, though many claim to have seen it."

"But here is a beautiful spring, clear as crystal and cold as ice, bubbling up from among the rocks and perfumed by the bloom of the red rhododendron. Let us sit down on this mossy stone and rest. You must be hungry," he continued, drawing from his pockets great lumps of cheese, butter, rolls and roasted venison and spreading them out before him on the moss—"The rapid walk and mountain air gives one an appetite. Yes, the Alleghenies are grand and picturesque, but the mountains of the torrid zone are more beautiful by far. They are like wonderful gardens, rising terrace above terrace, until their snowy summits are lost among the clouds."

Tempera ure, you know, is the principal agent governing the geographical distribution of plants, hence we find growing at their base in a sunny Eden the palm, the arborescent fern, the aloe, the pineapple and the banana. Higher up the slopes the orange, the olive tree and the laurel; above these again the magnolia, the live oak, the cypress and the cedar. Ascending yet higher we find the forest of our native country, the birch, the beech, the elm and the willow. Among the eternal snows on their summits we find the plants of Spitzbergen and Lapland—the mosses and lichens of the far North growing under the equator!"

"Botany has always been my favorite study," replied the other, "and plants are quite as wonderful as animals. Indeed, so closely are they blended in their lowest forms, that we are quite unable to distinguish the one from the other. Like animals, they move, eat, drink, sleep, breathe, perspire, have circulation due to vital causes, and are male and female. They have sensibility, too, similar to animals. Poison will destroy some as quickly as it would a bird, and opium throws others into a profound sleep. Many are carnivorous, feeding upon the blood and flesh of animals, like the lynx and the cougar."

"Yes, and the vegetable, like the animal edifice, is built up from the cell. Every seed contains an embryonic plant—the trunk, the branches, the roots, the leaves, all are there, like the bird in the egg, only waiting to be buried in the earth, to push their way above to kiss them into flower and fruit. The roots and the branches of trees are identically the same, and the one may be made to become the other; the flowers are only transformed leaves. But I think the Panther Pond is there between those mountains. Let us hurry on."

A rapid walk of half an hour up the slopes brought them to the summit, where a wide and beautiful prospect was spread out before them. Far as eye could reach there were piled upon them the peaks and pinacles of the Alleghenies, clothed everywhere, except on the castellated rocks in the green of rhododendron and pine and here and there between the peaks they caught a glimpse of the crystal river gleaming in the sunbeams far away.

"There's the pond," said Karl; "don't you see it there shut up in the hollow of the mountains and surrounded by the dark fir trees?"

"Yes, and I saw its look gloomy and dark, as though a sunbeam had never kissed its bosom. Let us try to go down and climb them the peaks and pinacles of the Alleghenies, clothed everywhere, except on the castellated rocks in the green of rhododendron and pine and here and there between the peaks they caught a glimpse of the crystal river gleaming in the sunbeams far away."

"There's the pond," said Karl; "don't you see it there shut up in the hollow of the mountains and surrounded by the dark fir trees?"

moss-covered rocks, and immediately cried, "It is the walking fern. I thought it must be. We have surely walked far enough to find it. This is certainly the very plant that Mr. St. Clair is so anxious to obtain, and it is quite different from all the others on the mountain." Vivian collected some of the finest specimens of the fern for his father's conservatory, wrapping them carefully in moss, and sprinkling them with water from the pond.

"It is time that we were off," said the hunter, "the mountain paths are rough, and we have far to go. It will be nightfall before you can reach your home. I will accompany you to the river, and guide you the nearest way through the forest."

"Do you never lose your way in the dark pine woods?" asked Karl.

"No," replied Randolph, "I have always lived among the mountains, and I know each path."

"Why is it, Randolph, that your language is so different from that used by the other hunters?" asked Vivian with a smile.

"Were you ever at school?"

"I am a graduate," replied the hunter, "of the Normal Institute at St. George. The others and I were formerly very abundant among the All-ganies, and I was a very successful trapper. I sold my furs and purchased books, studying late every night by the light of the blazing pine knots. I was at last able to open a large book lying dead by a mountain spring. 'Sh! through the he re!' said Vivian, thrusting his finger into the wound. 'Yes!' replied the hunter. 'I can shoot.' Bending down a young birch tree they tied the hunters to its top with a cord, and then releasing the tree it immediately regained an upright position lifting the deer far above the reach of the prowling wolf. 'It will be safe there,' said Randolph, 'until I come for it in the morning.'"

"The laws of inheritance," he continued, "apply to all the lower animals as well as to us. They are gaining knowledge, and among wild species those individuals possessing the most perfect faculties—keenness of scent, of sight and of hearing, the greatest courage, strength and fleetness, the longest teeth and sharpest claws, combined with the highest development of the reasoning powers, survive and perpetuate their race—the others perish. Thus the cougar succeeds in capturing only those deer that are deficient in some of these characteristics, as hearing for example. The wise old buck with perfect faculties rears the forest until age impairs them; the weak and foolish die in youth. There are deer on these mountains that have never been in reach of cougar's claws or hunter's rifle. Others have great curiosity and little caution. They must stop to investigate any unknown object and listen to every unusual sound; it was this peculiarity that caused the buck I killed a few months ago to lose his life. Those having the most caution and the least curiosity live to the greatest age."

"Yes," replied the student, "the laws of heredity have been in force upon the earth since the first appearance of life, and it is the same, and apply to the vegetable kingdom as well as to the animal. Man, by taking advantage of these laws of nature, improves everything that comes under his dominion. Among domestic animals it seems as though an artist had taken the rough sketch and covered it all the rude outlines with beauty. He waves his magic wand over a poor and bitter fruit and changes its juices into the sweetness of the orange and its color into the glory of the lilies."

"Here is the river and there is the light in the windows of your house," said Randolph, emerging from the laurel and passing on the shore just as the moonbeams were gleaming over the mountain summits and throwing their lines of silver across the crystal waters. "Good night, young gentlemen; I have far to go," he said, throwing the snowy cougar skin into the boat and disappearing under the arches of the pines. The two young friends rowed rapidly over the stream and were met on the opposite shore by Prof. St. Clair, who, becoming alarmed at their prolonged absence, was eagerly awaiting their return.

"What is this?" he exclaimed, as Vivian tossed the cougar carcass over his shoulder and started up the gravel walk toward the villa.

"The robe of the White Cougar, the mountain king," replied Karl with a laugh. "Yes, Randolph, the hunter told me that he had often seen this remarkable creature near the Panther Pond, but I thought he must be mistaken. So he has killed it at last and sent me the pelt." "Randolph did not kill him," said Vivian, stopping to pluck a roach; "we invited ourselves to his banquet at the house of the wise man over his wine, and his good friend should be, we organized a 'gunpowder plot' for the purpose of delecting him." "You do not mean to say that you killed him?" exclaimed the Professor excitedly, turning to Karl. "Certainly," replied the latter; "after we had defied his power which else could we do but imitate the example of Cromwell, and put the king to death."

"If," said Vivian, "you draw your sword against your prince, you must throw away the scabbard."

"What I must do," said the Professor, "is that you have exhibited wonderful courage I still think that you were reckless and foolish and your conduct merits the severest censure."

"But here is the father, father," said Vivian, drawing it from under his coat as they entered the library.

"So it is, my son!" cried the delighted Professor, forgetful of everything else in his admiration of the beautiful fronds of the walking fern!

When Vivian and Karl returned to college at the close of the winter vacation, Randolph, the hunter, went with them and remained until he graduated with the honors of his class. He is now the most distinguished physician in the city where his father failed, and comes every summer to the mountain villa.

RAIL SHOOTING SCORES.

Following are some of the scores made this season: From Golt's Hotel, Sept. 1.—Isaac Rothwell pushed James Rhoads, of Spring Hill, and boated 44 rail and 10 roed birds. Benj. Hanks pushed F. Engle, of New York, and boated 35 rail; Dick Brown pushed John Goff, of Chester, and boated 27 rail; P.erry Allen pushed Frank Weaver, and boated 36 rail; Chas. Goff pushed Thos. Butler, of West Chester, and boated 38 rail; Sam. Preston pushed D. Johnson, of Philadelphia, and boated 22 rail; B. n. Driskett pushed T. S. Dands, of Philadelphia, and boated 23 rail; Jacob Miller pushed Harry Black, of Chester, and boated 19.

Sept. 2.—Isaac Rothwell shot 21; Bill Rump, 18; J. Miller, 22; Sept. 3.—S. Brown, 30; Rothwell, 23; Bill Rump, 18; Benj. Harris, 20. We will be pleased to furnish to all inquiring friends information concerning the cost of the shooting.

On the Hackensack meadows there was a large representation of gunners last Thursday, so many, in fact, that some of the men took the shot intended for the birds. Seven men were "shot marked." Constable Earle receiving eleven shot as his share. Among the gentlemen whose records are considered good, John Ryan leads the list with 48 birds one tide and 36 another. Lawry, of Griggs, of Paterson, had a string of 41; Julian Wood, of this city, 61 in two tides; G. C. Van Houten, of Paterson, 38; F. B. Spencer, Brooklyn, 38; Shepherd Knapp, this city, 31; C. Terwilliger, 32; Ed. Ackerman, Hackensack, 35; George Ricardo, 31; Chris. Huber, Paterson, 29; Charles Knapp, 25; S. F. Spencer, Elizabeth, 24. A New York correspondent writes, under date of Sept. 3: On the opening day I again went to Hackensack to try my hand at rail birds. We started out on Thursday about noon, but soon found that the tide was not yet high enough to get in the meadows. So we pulled ar and in the creek, putting up a bird now and then. At one o'clock the tide was high enough, and then the fun began. There was a continual popping on all sides for about two hours. There were not so many birds as last year, but still enough to keep us at it quite lively. There was in all about fifteen boats, out of which I came in "high boat," with a score of 44 birds; other boats came in with the scores of 41, 40 and 39. I can safely say I had one of the best pushes out that day, and I would advise any one going here to inquire for Mr. Henry Terwilliger, who can always be found in the Franklin House, and he can give them as good a day's sport as any one could wish.—G. E. J.

Boats' score from Riverside Hotel, Lazaretto, Delaware Co., Pa., Thursday, Sept. 1, 1881. Giltart Griffin, 47; E. McCready, 76; Jos. Thorn, 121; Arthur Goudin, 44; Jos. M. Lin, 58; Mr. Purves, 57; E. C. Pease, 16; F. B. Rogers, 40; C. L. Wormley, 39; Wm. Stroud, 62; Frank Sartori, 57; W. Andron, 34; Geo. Martin, 10; A. J. Morton, 17; Mr. Grant, 55; Mr. Paterson, 10; Ed. S. Townsend, 21; Ed. Maher, 41; M. Bailey, 37; Samuel Adams, 11; Mr. Hon. C. J. Jacob Albright, 30; Mr. John P. Cole, 24; A. J. Guyer, 15; Mr. Clew, 20; Mr. Shronk, 23; Tot. 1,955.

Friday, September 2. Elwood James, 35; E. C. Pease, 7; T. B. Rogers, 23; Frank Sartori, 18; Geo. Martin, 16; C. L. Wormley, 61; G. E. McCready, 20; Louis Good, 20; B. Ogden, 22; Chas. Johnson, 37; G. J. Jas. Thorn, 35; E. Harrison, 38; Thos. Waddington, 16; Arthur Goudin, 26; W. Crawford, 10; Geo. Smith, 51. Tot. 4,381.

Saturday, Sept. 3. Mr. W. Gardner, 30; John F. Pole, 45; M. Andrews, 25; C. M. W. Armley, 26; Louis Good, 18; Chas. Richter, 11; H. Mingle, 12; Jas. Kirk, 29; Geo. Smith, 62; Thos. Thompson, 40; Isaac Worrell, 13; W. H. Harris, 8; Stacy Springer, 16; Mr. Mansfield, 6; Henry Shultz, 26; H. Houbt, 12; W. Anderson, 10; John Richardson, 14. Tot. 403.

Mr. William Miller is the proprietor of the Riverside Hotel. If advised by mail to Ridleyville, Pa., or by Telegram (Philadelphia and Reading Railroad telegraph lines) to Lazaretto, Pa., conveyance will be furnished to meet any train from Philadelphia on its arrival at Moore's Station, P. W. & B. R. R.

THE SCARCITY OF BAY SNIFE.

Editor Forest and Stream:

I would like to hear from your readers as to their observations on the growing scarcity of bay snipe and plover. My own experience, confined to Long Island, is that they had fair at the present rate, in a few years to afford no remuneration to the market gunner and no sport to the sportsman. I spent four days on the Rockaway marshes last spring and had been once on a week since July 11, without one day's fair sport; and some of the days have been in every way favorable. The season, in fact, has been a failure there—so it has been at Shinnecock Bay—as I learn from gentlemen, who have been there two weeks at a time (not the hotel keepers).

One theory is that the birds have changed their course and now fly down the Mississippi Valley. The following from a recent letter from Cobb's Island, Va., indicates that they have been recently making their purchases and going down the Atlantic Coast. "The bay between the island and the mainland surrounds hundreds of acres of salt marshes. From May until October these marshes are the home of thousands of bay birds—snipe, curlew, willet and plover. May is the great shooting month on the island. The birds stop on their way to the breeding grounds and they are killed by thousands. In fact so many of them are killed at this season that there has been a marked diminution in the fall flight during the past two or three years. It is estimated that the number of one thousand birds were killed each day during the month of May last."

Is not this the solution of the matter? Are not breech-loaders and spring shooting, especially the latter, the cause of the decrease of bay birds?—L. New York Sept. 5.

SEVERAL POSSIBLE EXPLANATIONS.—Indianapolis, Ind., Aug. 31.—Editor Forest and Stream: Inclosed I send this clipping from the Indianapolis Journal of Aug. 31: "Nimrod Returns d.—Rev. Myron Reed and Prof. Ora Pearson, who have been re-licensing in the Brule River region, Michigan, returned to the city yesterday morning after a two-day tour. They report having enjoyed a delightful time, the only regret being that they could not remain longer. Fish and game were plentiful, five deer having been bagged a short time previous to their return." I would like to know what right the parties mentioned therein have to kill deer in Michigan before the expiration of the close season? If I understood the game laws, I believe deer shooting opens in the above State on Oct. 1.—BUCK.

[Several possible explanations suggest themselves. Newspaper items like the above are not always reliable; but, granting that the report is correct, (1) it is not stated that the Indianapolis gentlemen bagged the deer, but simply the fact of the deer having been bagged. Some one else may have done it. Again, the reporter may have misunderstood and (2) instead of "bagged" the tourists may have said "seen" or, (3) the deer may have been simply an invention of the reporter, who did not know anything about game laws and who is thus guilty of a base libel on the Indianapolis sportsmen. Any one of these three suppositions, or of a dozen others, which might be named, is more plausible than the story the Mr. Reed and Pearson killed five deer in Michigan in the month of August, 1881.]

CALIFORNIA QUAIL IN MISSOURI.—Of the importation of California quail into Missouri, a Jefferson City, Mo., correspondent writes: "I have never yet seen any of the birds myself since they were liberated, but have had repeated information, that is, from reliable sources, that they are doing as well as this spring. I am satisfied they will do several birds last summer, and I have heard of their being seen this summer but have not yet heard of any young ones. Some were seen last winter in Pulaski county, at least seventy-five miles from here; and last summer they were seen repeatedly on my farm six miles below this city. Then this spring Dr. Glover reported seeing some in his neighborhood, and Judge Clarenbach saw them in two different places near here. I believe their acclimation and increase here will be a success. As to the Missouri or Indiana quail I am not so sure. They were liberated in four different places; in Callaway, eight miles west, eight miles southeast at Mr. Wards, and six miles east on my farm. I have not this summer received definite information, except from two places. In Callaway none have been seen this summer. On my farm I have information that two or three have been seen this summer, but my informant may have been mistaken in the bird, yet I believe they were seen. From the other two places I have no information. I hope we will succeed in stocking the country with each kind.—H. E.

WHY THERE ARE NO WILD PIGEONS.—GOSHEN, N. Y., Aug. 15.—Editor Forest and Stream:—A friend and myself desire to take a little hunt, and would especially like to have a wild pigeon hunt for a few days. Only a few very years since pigeons would be about this region in September, about the time acorns began to shell, upon wheat fields recently sown. No great bugs could be got, but enough to satisfy a reasonable man. Do you know of any local fly, not too far from New York City, where we might go and have a few days of such hunting? I have tried to describe? For some unexplained reason pigeons do not come about as formerly, but I cannot but believe that there are sections they still visit for a few weeks in early fall. W. H. N.

[The only sure plan for getting some shots at wild pigeons is to join an "association for the protection of fish and game." Then you will be sure of an opportunity to shoot ten or fifteen, or fifty half-fledged squabs fired out of a trap and unable to fly. No reasonable man could ask for pigeons in the field and pigeons in the trap too; and if our correspondent is a "true sportsman," he will doubtless be willing to forego his favorite sport for the sake of the cause of "game protection."]

GAME BIRDS WANTED.—Rushville, Ill., Aug. 20.—Editor Forest and Stream: Can you refer me to any party in the East who has live black ducks, seaonant brant or other kinds of water-fowl which are not common in the West, who would be likely to exchange for our woodcock? We are trying to get a collection of our native game water-fowl, and have several pairs of woodcocks that we could spare, which we would like to exchange for good specimens of the above mentioned birds, which are very rare and difficult to obtain in the West. Any information you can give me that will put me in communication with persons likely to exchange will be thankfully received. J. P. LEACON.

Several years ago, 1870 to 1875, we had a collection of live fowl, including mallards, wood ducks, black ducks, Canada geese, blue geese, white-fronted geese and brant. A change of business necessitated their sale. During this time we bought, sold or exchanged with the following persons: Lewis Homan, Patchogue, L. I.; W. A. Conklin, Central Park, New York City; Zoological Gardens, Philadelphia; John B. Eicher, Oakwood Cemetery, Troy, N. Y.; G. H. Boardman, Weston, Vt.; Gree E. Smith, Petrorho, N. Y. (now dead); Dr. J. N. Bates, Worcester, Mass.; N. Guilbert, Goodhue, Pa.; Geo. Irvin, Mysville, Cattaraugus Co., N. Y.; J. Y. Bicknell, Westmoreland, N. Y.

Explosions of various kinds have been numerous within a fortnight past. The list is headed by the explosion of a great quantity of fulminate gun caps, which imbedded themselves in the body of a workman with fatal effects. (2.) This was followed by an explosion of fifteen pounds of powder in a Connecticut armory, nine persons being injured. (3.) The premature explosion of a torpedo, at the Newport torpedo station, killed two of our country's best experts. (4.) An explosion at a factory in New York wrecked a building and killed two men. (5.) A bomb-shell, thought to be unloaded, was thrown into a Brooklyn foundry furnace, but did not stay there very long; it went out through the windows. No one was hurt. (6.) And there was the usual accident whereby the "thought-it-wasn't-loaded" victim was killed by the discharge of a gun. (7.) The seventh did not explode. Some workmen in a foundry were about to pour the molten iron into the molds, when a slight explosion occurred, which attracted attention and it was opened. The cavity was full of gunpowder. One drop of the molten metal would have caused an awful explosion, probably killing everybody in the building. That the strikers were guilty of the plot was shown by the fact that, instead of crowding about the doors and windows to jeer at the new men, as they

had done on previous days, they remained at a considerable distance. A detective claims to have discovered that the powder was deposited by a committee of three men, to whom the task of wreaking vengeance had been given by their comrades.

"LEFT-EYED SHOOTING."—*Editor Forest and Stream:* I am an abominably bad shot; and have lately seen what appears to be a plausible explanation of my trouble. It is this, that I am "left-eyed." Forming a ring with my thumb and first finger, and holding my hand a short distance before my face, I "focus" the ring, so that I can see a small object, such as a duck, through it with both eyes open. Now, holding my hand perfectly still and shutting my left eye, I am unable to see the object through the ring with my right eye, but shutting my right eye, I can see it with my left. Hence, I am told, I am "left-eyed," and in order to shoot accurately I must learn to shoot from the left shoulder. Do you think that this is so? And will it pay me to try to learn to shoot left-handed? I should like your opinion.—**INVIDIUS.**

[Our opinion is that the philosopher who was seen peering to see about left-eyedness was a fool. If you can shoot from your right shoulder you certainly cannot from your left. What the experiment you mention has to do with sighting along a gun barrel is more than we can understand, or you either.]

MAINE LARGE GAME.—I have been on a hunt lately in the neighborhood of Bangor, Me., and met many tourists on their way to the Rangeley and Moosehead Lakes. At Portland I learned from undoubted authority that a yearling bull moose had been killed this summer at either Rangeley or Moosehead. I forgot which of the lakes. This was contrary to law, and the rare animal was shot from behind a jack. My informant tells me the slayer was a native of Portland and one that should have known better. I could have been taken to the skin and seen it drying. What is more shameful, I heard of a caribou having been shot at Moosehead this summer a few days, by a tourist, before I left Bangor, Me. I trust these lines may meet the eye of both the worthy gentlemen who participated in this rare illegal sport. The names of the men are only withheld from me on the promise I made to my informants. You may rely on it is true. Moose and caribou are too rare now-days in Maine to be slaughtered out of season as soon as they put their noses into the State. Deer are becoming very plenty in Maine. More have been seen this summer than for twenty years past, notwithstanding "tailing and jack hunting."—**HOMO.**

ANOTHER ANCIENT FIREARM.—Richmond, Va., Aug. 31.—*Editor Forest and Stream:* Your correspondent's story of the long gun he found in a Virginia country store reminds me of a famous old rifle I once saw up in Highland County, of this same State. It is a mistake to suppose that we can shoot any better with our "old fash" arms than our fathers shot before us. The arms may be better, but we certainly do not use them to better purpose. The rifle to which I refer is the property of Mr. William Lockridge, a man well advanced in life. His home is on the Bull Pasture River, in Highland County. The rifle is a flint-lock muzzle-loader and must be over 100 years old. Its present owner has had it more than fifty years. The game which he has killed with it counts up 1,200 deer, besides numbers of wolves, bears, foxes, wild cats and squirrels and *infinitesimally*. The old gaiters' eye is still bright and his arm steady.—**ALBERT.**

SCUMPER, South Carolina, August 24.—Quails, or partridges as they are universally called, are quite plentiful about here. I knew of about fifteen or twenty coveys within two or three miles of our house last season. Some of them, however, were "swamp birds" and would be lost after the first flush. Numbers of them are annually destroyed by the darkies and poor whites with their traps and pens, by one of which a whole covey is sometimes taken at a time. Coons, possums, squirrels and foxes abound in the swamps and woods. Wild cats are sometimes seen. Doves are very plentiful. The nearest good fishing place is the Wateree swamp, about ten miles off. This swamp is about four or five miles wide and is interspersed with bayous or lakes, as they are called. The red water of these lakes abounds in fish of a lighter color and better flavor than those caught in the black water streams.—**R. B. F.**

AN INDIANA GAME CENTER.—Clovefield, Putnam Co., Ind., is reached from Indianapolis, via the Vandalia Railroad, to Greencastle, thence south ten miles, via the L. N. & C. R. R., time four hours from Indianapolis. Hotel Central House, J. J. Lewis, proprietor; rates \$3.50 per week, open the year round. Ducks are hunted in the fall and spring, most plentiful in spring, mostly of the small kinds. A few English snipe in the spring; quail very plentiful in season from Oct. 1 Jan. 1. Permits to shoot will have to be obtained in some localities. Rabbits are very numerous, and are killed during the whole of the winter season. Bass are plentiful in Fall River and Deer Creek. Fishing with the fly is entirely unknown. Squirrels are also plenty. In this region of country modern breech-loaders are entirely unknown.—**J. B. B.**

VIRGINIA SHOOTING GROUNDS.—BOSTON, Mass.—*Editor Forest and Stream:* I have heard from various sources of the good shooting to be had in Virginia, and as I shall spend a week or so in that State the last of September, I would be obliged if any of your correspondents or subscribers who are acquainted with the country would give me any information concerning it.—**HOWARD.**

[Our correspondent will find excellent quail shooting, we presume, in the vicinity of Bellefonte, Northway county, where game there being deer and turkeys. He is striking out from Norfolk in almost any direction good quail shooting may be had. Excellent shooting is to be had along the Rappahannock River bottoms. Warrenton Springs, Farquhar county, is recommended, as is also Littleton, in Sussex county.]

THE DUCKY DECK FRAMES, made by Mr. F. A. Allen, of Mountmouth, Ill., are by all odds the most effective decoys yet invented. They are ingeniously constructed to support in a life-like position upon the water the dead bird, and every one knows that nothing looks more like a duck alive than a duck dead. The ducks themselves think so, for with the Allen decoys the fowl can be brought within gunshot when all other decoys have failed. Mr. Davis, team and duck shooter and keeper the ways of the ducks, has made and sold 50,000 of the frames and has sold 8,000 of his duck decoys.

CAZENOVIA, N. Y., Sept. 2.—Dr. E. C. Bass won the Wendell gold badge at the regular weekly shoot of the Cazenovia Gun Club, held at their grounds Sept. 2, 1891. He is in favor of a third term, and says it is never too late to win. Will Thomas went grouse shooting Sept. 1, and remarks that it is his first and last appearance in the woods. Grouse season opened here yesterday, and the following bags were made: Morse and Dwyer, three grouse; Card and Conn, nine grouse and one woodcock; Brown, Atwell and Webber, eight grouse and one woodcock; Smith and Cruttenberg, seven grouse and five woodcock. Never saw it as dry as now and birds are scarce.—**HAMMILLERS.**

THAT STEAM LAUNCH.—Vicksburg, Miss.—You published some time ago a story of "A Duck Hunt in a Steam Launch." The launch was put in first-rate order and we made several very successful hunts in her. On one such occasion I bagged with my own gun alone twenty-one mallards and four geese, besides other birds which escaped with broken wings.—**ONE OF THE MARQUERS.**

TWO NEW HAMPSHIRE QUERRIES.—BOSTON, Sept. 5.—Will some of your New Hampshire correspondents please inform me through the columns of your excellent paper in what part of New Hampshire good white rabbit shooting can be had, so if the law in that State in regard to sheep compels the owner of a dog to pay damages (if the dog should kill any sheep) provided that the dog is licensed?—**H. P. U.**

THE ANNUAL MEETING OF THE Long Island Forester Club was held at Brooklyn, Thursday evening, September 6. The following officers were elected: Henry Thorpe, President; Chas. M. Edwards, Vice-President; C. W. Field, Secretary, and R. T. Sabu, Treasurer. Messrs. Thorpe, Field and Sabu were appointed as a committee to investigate the credentials of proposed members.

A LARGE WOODCOCK.—Georgetown, Del., Sept. 2.—On Thursday morning Mr. P. B. Hillen was called into the yard of Judge Layton to shoot a woodcock, which was feeding there. Mr. H., it is said, at first thought it was a spring chicken, but his quick eye soon detected the mistake and he "pulled," bringing down the bird, which, when placed upon the scales, was found to weigh twenty-four ounces.—**M. A. M.**

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.
Grayling, *Thymallus tricolor* and *T. montanus*.
Black Bass, *Micropterus salmoides* and *M. pallidus*.
Muscalunge, *Esox nubilus*.
Perch, *Perca flavescens*.
Pike or Pickerel, *Esox lucius*.
Pike-perch (wall-eyed pike) *Silurus americanus*, *S. glanis*, etc.

SALT WATER.
Sea Bass, *Centropristis striata*.
Striped Bass or Rockfish, *Morone saxatilis*.
White Perch, *Morone americana*.
Bluefish or Taylor, *Pomatomus saltatrix*.
Scup or Porgie, *Stenotomus argenteus*.
Pollock, *Polachius carbonarius*.
Tanner or Blackfish, *Tautoga onitis*.
Spanish Mackerel, *Scomber maculatus*.

All fish should be killed the moment they are taken out of the water, not only on account of the inhumanity of allowing them to linger in an agonizing condition, but also because they are liable to die by slow degrees rendering them less valuable, nourishing and conducive to health as food. E. Jesse, Esq., in his work, "Anglers' Rambles," says he always has a large knife with a hammer at the end to kill fish as soon as they are taken. He was so polite, at my request, as to refer me to the cutter who made it; but the knife was large, consequently heavy, and the price high. I had one used very neat and lighter, at less than a quarter the price, and the blow of the hammer on the skull of the fish kills it instantly.—**W. WRIGHT.**

ANGLING IN THE BAY OF QUINTE.

DESEROFOTO, August 20.
SEEING that you oftentimes request communications from your readers, I write to describe this part of the country where I have been enjoying the fresh air and sport for a few days, and trust if any of your numerous readers should come this way that they will enjoy themselves as much as I have.

This place is generally known as Mill Point, is situated at the head of the long reach on the Bay of Quinte (an inlet of Lake Ontario) and about thirty miles from Kingston. The place has two large saw-mills, machine-shop, and a blind factory, flour-mill, shipyard and other industries all in active operation. It is easy of access as boats run from Kingston, Belleville, Napanee, etc., and in the near neighborhood are Hay Bay, Carnahua Bay and the Lake on the Mountain. The two former are well-known as good shooting and fishing resorts in this season; while the latter is a natural wonder, being a lake of about 300 acres in extent situated on the top of a hill some 400 feet above the level of the bay, and without any visible inlet. From the top of the mountain hill, a magnificent view may be had, Lake Ontario, Hay Bay, Carnahua Bay, a large portion of the Bay of Quinte, and the surrounding country being at once in view.

There are numerous good places for camping both up and down the Bay from this place, within easy reach of which may be had excellent fishing at this season. Black bass, pickerel, muskellunge and perch are caught. Last evening your correspondent and I went out with our rods and took six tilt dark, catching ten fish, weighing twenty and a half pounds, the largest four and a half pounds. The evening before two young men caught eighteen weighing fifty-four pounds. Just now the fly, or trolling with either fly or spoon, takes well.

As a place easy of access where good shooting, fishing and camping may be had, the Bay of Quinte takes the lead.

GARNHEART'S LAKE, LOUISIANA.

WOODLAND PLANTATION, WE T. FELICI N. PAI CHI, LA.
LIVING IN New Orleans as I do, I hardly realized there could be within a distance of one hundred and sixty miles a region so rolling as in this parish. Really it is astonishing, the skill that is required by driver and animals to engineer a vehicle up and down the hills in safety. To look up, it seems impossible to make it, and to look back it seems a great achievement. The most interesting of all the rides is to the "Bluff" to see the sunset. One rises so gradually in the course of the ride that it is hard to realize the height one has attained. Suddenly you find your self on the brink of what might have been an inland sea, the margin reaching as far as the eye can range. It is filled with a forest of immense cedar trees covered with moss. In fact, it is what is called, "The Cedar Forest." Below is the swamp land and famous for fishing. Imagine the sensation of overlooking these immense trees, and then a distance above them as great as their height. The view of a sunset at this spot beggars description and we could hardly realize there was any access to the life and forest houses.

Our host, a most sociable and thoughtful bachelor, arranged a fishing party and "fish fry" for us. The morning arrived, and at the darkest hour we were aroused, to be in complete readiness to move by the early light. It was clear and lovely, and the morning star shone brilliantly and was a stranger to most of us. Now the idea was to provide all the breakfast to be made complete by the catching and frying of the fish. "The gentleman of color," who officiated as cook, combined the art of fishing to while away the time before the morning meal. After alighting from the wagon, we descended to the lake by a winding path down the edge of the hill, and it seemed to be the very bottom of a bowl, as we could only see up through the dense foliage to the sky above us. Overhung with trees, quiet, except the noises of birds and insects, the morning hour before the rays of the sun were perceptible, it seemed an enchanted spot indeed. The party scattered to different points. Some went out in dugouts, others took a stand on an old raft in the middle of the lake. On the first morning of the visit Lord Egremont asked Turner what he should like to do, and the great painter replied he would go fishing. The next morning at breakfast Lord E. inquired again what it would please Mr. Turner to do and he replied that, having enjoyed himself so much yesterday, he would go fishing again. On the third morning Lord Egremont thought he would wait for Turner to announce his own plans and was greatly amused when he quietly said he was again going fishing. On the fourth morning Lord E., unable to conceal his anxiety, said: "Well, Mr. Turner, I am only too glad for you to enjoy yourself, but you are talking of going away to-morrow and I felt anxious about the pictures." "Come upstairs to my room," said Turner, "and set your mind at rest." Nothing could exceed the surprise and delight of Lord Egremont when Turner introduced him to two exquisite pictures, painted as he had desired. The great man had risen each morning with the sun, and before breakfast had, by a good day's work, earned his pleasure in fishing.

TURNER'S ANGLING.—Of Turner, the painter, an English writer gives this reminiscence: "Lord Egremont once invited Turner to stay a week at Petworth and paint two pictures for him of some favorite bits of scenery on the estate. On the first morning of his visit Lord Egremont asked Turner what he should like to do, and the great painter replied he would go fishing. The next morning at breakfast Lord E. inquired again what it would please Mr. Turner to do and he replied that, having enjoyed himself so much yesterday, he would go fishing again. On the third morning Lord Egremont thought he would wait for Turner to announce his own plans and was greatly amused when he quietly said he was again going fishing. On the fourth morning Lord E., unable to conceal his anxiety, said: 'Well, Mr. Turner, I am only too glad for you to enjoy yourself, but you are talking of going away to-morrow and I felt anxious about the pictures.' 'Come upstairs to my room,' said Turner, 'and set your mind at rest.' Nothing could exceed the surprise and delight of Lord Egremont when Turner introduced him to two exquisite pictures, painted as he had desired. The great man had risen each morning with the sun, and before breakfast had, by a good day's work, earned his pleasure in fishing."

A FEW TRUTHS.—The *Sunday Call*, of Newark, N. J., has a fisherman upon its staff who is an o'er-seen man, nay, and a philosopher. He formulates certain angling truths which have the merit of containing much that is beyond argument. He says: "All observing anglers will admit that among the most prominent of the natural laws governing fishing the following are incontrovertible: That the biggest always bites on the hook of the biggest duffer. That you have arrived just when the fish have's opped eating for the season. That there's a good place for fishing all the time further up the river. That when you go there you will have of a better place five miles further. That you could cross the continent on just such information if your money held out. That the guides will convince you that you have neglected to provide appropriate tackle, and that they have got just what you need, to sell at a fabulous price. That it will rain and blow, and be too dry, and too warm, and that the water will be too high, and too low, and too muddy, and too clear, everywhere you go. That the largest fish will be the one you lose just at the top of the water. The fishing ain't what it used to be. That you won't go again. That in spite of your resolutions you will be at it again within a week."

CONSERVATION NOTES.—PUTNAM, Aug. 27.—Up here in Windham county, we have our sport just now with the black bass, one fisherman taking 214 in three days' fishing, ranging in weight from one-half to four and a half pounds. They were taken at Webster Pond, a few miles east of this place, by Mr. Jesse Herendeen. Others have taken large strings of bass recently. Messrs. Eric Johnson, Hiram Fenn and John Sharpe, of this place further up the river, from a month's trip to the Rangeley Lakes. They report a fall in the fair fishing, and a gain of about ten pounds each in good solid fishes. A few of the old campers expect to go up to the lakes the last of next month. If so, look out for some of those six-pound trout, for they always bring some home with them, and of which *FOREST AND STREAM* readers will know more about in due time.—**E. T. W.**

FISHWAYS FOR NEW YORK.—OSWEGO, N. Y., Aug. 30.—Leuth-erstocking Club, of this city, had their annual meeting this afternoon to petition the Commissioners of Fisheries to make the specifications for the construction of fishways in the waters of Onondaga and Oswego rivers, and submit them to the Superintendent of Public Works, according to the provisions of an Act passed last winter appropriating \$5,000 for the purpose. The following officers were elected: Dr. G. D. McManus, President; O. L. Osterhout, Vice-President; G. P. Matson, Secretary; Hon. N. W. Nutting, Treasurer; H. C. Tanner, Attorney; C. W. Tanner, G. W. Lyman, W. H. Hall, Oswego; A. E. Ewerick, Fulton; and A. F. Blair, Pulaski. Board of Managers, Hon. F. W. Colligan was elected as honorary member.—**Y. TRIBUNE.**

Subscription Match—200 yards.

At the conclusion of the Winchester match one of the popular subscription matches was opened at 200 yards. It is true off-hand shooting, or "free-handed," as the German riflemen say. The match was won by Captain William E. Fitch with the best 24 possible out of the 25 points. The scores were as follows:

Subsc

William E. Fitch, Bal S.	4	5	5	5	5-24
James I. Mlie, S. M.	4	5	5	6	4-23
William J. Miles, R. S.	4	6	5	5	4-23
C. E. Wendell, S. M.	5	5	4	5	4-23
R. J. White, Bal S.	5	6	4	4	4-23
W. E. Webster, Bal S.	4	4	5	5	4-23
G. H. Chadwick, Bal S.	5	4	5	5	4-22
Charles Croissant, Bal S.	4	4	4	4	4-20
James B. Schuyler, Bal S.	3	5	4	3	5-20
Peter Smith, R. S.	3	4	4	3	4-15

Forty duplicate scores were made.

At the conclusion of the match Capt. Fitch shot a score for a record

At the conclusion of the match Capt. Fitch shot a score for a record and made 48 out of the possible 50, the score standing 5 5 4 4 5 5 5 5 5 5—48, and being the best score of ten shots at 200 yards ever made on the range. Great preparations are being made by the small-bore men for their visit to Creedmoor at the fall meeting, which commences on the 12th inst.

NEW JER-EY.—The 20th instant will be given up at Brinton Range to an all day military prize meeting. The programme includes the following matches:

1. State Prize for Military Teams: Open to teams of twelve from any regiment, battalion or battery of the National Guard of New Jersey. 200 and 500 yards; position, standing at 200, any with head to the target at 500 yards. 5 rounds at each distance; weapon, the rifle arm. First prize a silk flag, to be held by the winning team; second prize a silver cup, to be held by the winning officer; the prize money to be divided equally among the members of the organization whose team shall win it three times, not necessarily in succession. Won in 1879 by team from Ninth Regiment; won in 1880 by team from Seventh Regiment.

RANGE AND GALLERY

11. Headquarters National Guard Watch; Open to any member of the National Guard of New Jersey in uniform; any military title; 200 and 500 yards; 5 at each distance; 1430; 1 gold badge.

and 300 yards; 1st and 3rd at each distance. Prize—A gold watch, called the "Mott Badge." To be won three times, must necessarily be consecutive, before becoming the property of the winner. Won in 1878 and 1880 by Capt. T. W. Griffith; won in 1889 by Col. J. M. Dart. 11th. Match for the Sterling Badge. Open to any member of the National Guard of New Jersey in uniform; any military rifle; 500 and 500 yards; rounds, 5 at each distance. Prize—A gold badge, presented by Gen Wm. H. Sterling, of N. J., and to be won three times, must necessarily be consecutive, before becoming the property of the winner. Won in 1818 and 1879 by Capt. T. W. Griffith; won in 1880 by Col. J. M. Dart.

IV. Champion Badge, First Brigade, N. G. N. J.: Competition open to all members of the First Brigade of the National Guard of New Jersey; weapon, the military rifle furnished by the State; 20 and 500 yards; rounds, 5 at each distance. First Prize A gold badge presented by Col. I. J. Wardell, N. J., to be won three times, not necessarily consecutive, before becoming the property of the winner. Won in 1878 by Lieut. W. P. Wood; won in 1879 and 1890 by Capt. T. W. Griffith.

by Gen. George A. McClellan, of N. J., will be awarded to the individual making the highest score in the Military Team Match for the State prize, the Headquarters N. G. Match or the match for the "Sterling Badge." This badge to remain in the possession of the winner until the next fall prize meeting of this Association, when it will be placed in competition as may be then directed. Won in 875 by Lieut. W. P. Wood; won in 1876 by Capt. T. W. Griffith; won in 1880 by Pvt. F. M. Ahlre.

BRIXTON, N. J.—The September programme of the New Jersey State Rifle Association embraces the following matches: Sept. 1, 8, 15, 22 and 29, Champion Marksman's Badge of 150, open to all members of the National Guard of New Jersey or members of N. J. S. R. A.; 200 and 500 yards; rounds, five at each distance; gay military rifle;

position, standing at 200 yds., with head towards the target, at 500 yards. A gold badge, value, \$ 5 will be awarded to the competitor who, at the close of the season, shall have won it the greatest number of times. In case of a tie, the highest aggregate score of all the competitions participated in up to that time to decide.

National Guard of New Jersey or members of the N. J. State Rifle Association; 200 yards; position, standing; ten rounds, any military rifle, with out cleaning; twenty entries to constitute a match; entrance fee, \$1; re-entries permitted; three prizes, value, \$5. At the end of ten competitions, or at the close of the season, the prizes will

be awarded to the three competitors who have won the most competitions. Ties to be settled by the greatest aggregate scores made in all competitions, counting one score in each competition.

Regular Prize.—To the highest score in each competition a military rifle (Borchardt pattern); value, \$22.50. Only one military rifle can be won by one person and for this prize final winners of first prize in

Sept. 8, 10, 17 and 24. Whitney Match, for a Whitney ride; value,

530; offered by the Whitney Arms Company; open to all comers; 20 yards; position, standing; ten rounds; any rifle; entrance fee, 50 cents. To be won three times, not necessarily consecutive, before becoming the property of the person winning the same. One-fourth of the entrance money to go to second score, one-sixth to third score and one-twelfth to fourth score.

GREKDMOOR, Sept. 3.—The only match completed to-day was that for the Gen. Hiram Buryea prizes for skinnin'-her furring. It was the second competition and was open to all comers; ride, any except repeaters; 500 to 200 yards; shots not to exceed 20. Competitors assembled at two o'clock, in a large room, the day appointed for the event. A

At the command of the officer the competitor in each squad whose number is called advances to the firing points, halts and loads. At the signal he (together with the rest of the squad) advances in double time until the signal "Halt," when he assumes any position, fires and continues loading and firing in his discretion until the "Forward."

which will be sounded twenty seconds after the signal "Halt," when he again advances in double time. When the competitors arrive at about 200 yards the lifts on each target are signalled by the markers, after which "In retreat" is sounded, when they face about and return, bring as before (carrying their rifles on the right shoulder). Five bullets are expended on each target, the first being a head shot, the second a body shot, and the third a head shot.

points are made advancing and he is retreating. Competitors fire as they please, not to exceed 20 shots in all, but must fire at least one shot at each halt. On their arriving at the 500 yards firing point the firing ceases and the remaining hits on each target are signalled. Five points will be deducted from a competitor's score (1) for each failure to fire at least one shot at each halt, (2) for each shot made after the

Signal "Forward," (3) for each shot found on his target over 20. A competitor firing upon a wrong target will be at once debarred from further competition. Entrance fee, 50 cents for each entry; entries unlimited. The score stood:

	Advance.	Retreat.	Total.

----------------	-----	-----------------	-----

himself of a very severe attack of the gout in New York just before his last voyage by the use of the same remedy. I at once left my young friend and went below to find the steward. I not only found him off duty, but discovered that he had a bottle of the oil in his locker, which he had carried across the ocean in case of another attack. He readily parted with it on my representation, and, hurrying up again, I soon persuaded the young man to allow me to take him to his berth and apply the remedy. After noting so I covered him up snugly in bed and requested him not to get up until I should see him again. That evening I returned to his stateroom and found him sleeping peacefully and breathing gently. I roused him and inquired how he felt. "Like a new man," he answered, with a grateful smile. "I feel no pain and am able to stretch my limbs without difficulty. I fancy I'll get up." "No, don't get up to-night," I said, "but let me rub you again with the oil, and in the morning you will be much better able to go above." "All right," he said, laughing. I then applied the

oil again, rubbing his knees, ankles and arms thoroughly, until he said he felt as if he had a mustard poultice all over his body. I then left him. The next morning when I went up on deck for a breezy promenade, according to my custom, I found my patient waiting for me with a smiling face, and without his crutches, although he limped in his movements, but without pain. I don't think I ever felt so happy in my life. To make a long story short, I attended him closely during the rest of our voyage—some four days—applying the oil every night, and guarding him against too much exposure to the fresh and damp spring breeze, and on landing at New York he was able, without assistance, to mount the hotel omnibus and go to the Astor House. I called on him two days later, and found him actually engaged in packing his trunk, preparatory to starting West for his home, that evening. With a bright and grateful smile he welcomed me, and pointing to a little box, carefully done up in thick brown paper, which stood upon the table, he said: "My good friend, can you

guess what that is?" "A present for your sweetheart," I answered. "No," he laughed—"that is a dozen bottles of St. Jacobs Oil, which I have just purchased from Hudnut, the druggist across the way, and I am taking them home to show my good mother, which has saved her son's life and restored him to her in health. And with it, I would like to carry you along also, to show her the face of him, without whom, I should probably never have tried it. If you should ever visit the little village of Sedalia, in Missouri, Canfield Townsend and his mother will welcome you to their little home, with hearts full of gratitude, and they will show you a bottle of St. Jacobs Oil unshaken in its silver and gold cases, which will serve as a parlor ornament as well as a memento of our meeting on the Canada steamer."

"We parted, after an hour's pleasant chat, with mutual good-will and esteem, and a few days after I received a letter from him telling me he was in perfect health and containing many grateful expressions of his affectionate regards."

STONEHEDGE ON THE DOG.

Price \$3 50.
For sale by Forest and Stream Publishing Co.

LEONARD'S Split Bamboo Rods, WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.

No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 24, 1878).
This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.

No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 3, 1878).
This split thoroughly strengthens where the ferrule is joined to the wood, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made.

No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

EVERY ROD WARRANTED.

**SOLE AGENTS,
WILLIAM MILLS & SON,

THE COLT CLUB GUN.

It should be remembered that while we are the chief distributors of the regular Colt Guns, we are also agents in New York for the Colt Club Guns. The complete supremacy of the guns in pig on and glass ball trap shooting is so well known that no word of commendation is necessary.
Every genuine Colt Club Gun has the rubber heel plate, with the words,

THE CLUB GUN

around a circle, within which appears the rampant Colt beautifully embossed. We are also agents for the celebrated guns of Enos James & Co., Birmingham, and Forchard & Wadsworth's Great Single Breach-Loader. Besides these we offer a small job lot of Wadley Guns and some choice Parker Guns on special terms.

Address **H. & D. FOLSOM, 30 Warren Street, New York.**
P. O. BOX 4,309.

The Kennel.

TO COCKER BUYERS AND BREEDERS.—A W Langdale, of 5 Newmarket Terrace, Victoria Road, Leytonstone, England, late owner of Champions Lawyer, Batchelor, Ladybird, Ladylove, Lizzie, Louie, Leicester, Limerick, Liba, Lounston, Lena, Lydney, Bobb, Young Bobb, Bessie H., Banness, and many more important winners at our best shows; also, contributor to Vero Shaw's new work on spaniels, will buy on commission spaniels of any breed, and has on his books a number of grand specimens; deposit system. Mar. 1, 1881

FOR SALE, four prize-bred Irish terrier pups, whelped July 1, 1881, out of imported Norah, by Home Ruler. For price, etc., apply to DR. NIVEN, London, Ont.

The Kennel.

GORDON SETTERS.—In order to reduce the Kennel will sell any of the blood bitches and young dogs belonging to the estate of the late Jas. R. Thiley, who, during his lifetime, had spared no pains or expense to bring this strain of dogs up to the very highest standard. They combine the blood of Copelan's imported shot, Moore's imported Grouse, Burrar's imported Ruppert, Stoddard's imported Duke. Parties familiar with Gordons will at once see that this blood can't be beat. Several bitches are now in whelp to Duke of Louisa Valley, by Mr. Moore's Grouse out of Duke. For full quality refer to Col. Albert J. Sloc, Vincennes, Ind.; Mr. H. Malcolm, Baltimore; Col. Jas. Gordon (of Pious Secus?) Pontoon, Miss. Address for full pedigree, etc., GORDON KENNEL, Locust Valley, L. I. Aug. 13, 1881

Hotels and Routes for Sportsmen.

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE
Trout, Grayling & Black Bass Fisheries,
AND THE
FAMOUS SUMMER, HEALTH AND GAME RE-
SORTS OF THE NORTHWEST.

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed. If
equaled, in the abundance and great variety of fish
contained.
The TROUT abound in the streams, and the
famous AMERICAN GRAYLING is found only in
these waters.

The TROUT season begins May 1 and ends Sept. 1.
The GRAYLING season opens June 1 and ends
Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCA-
LONGE, also abound in large numbers in the many
lakes and lakets of this territory. The Sportsman
can readily send trophies of his skill to his
friends or "club" at home as ice for packing fish
can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The
scenery of the North Woods and Lakes is very
beautiful. The air is pure, dry and bracing. The
climate is peculiarly beneficial to those suffering
with

Hay Fever and Asthma Affections.
The hotel accommodations are excellent, and will
be largely increased in time for the season of 1891
by new buildings and additions.

During the season ROUND TRIP EXCURSION
TICKETS WILL BE SOLD AT LOW RATES, and
attractive train facilities offered to Tourists and
Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at
our rates.
It is our aim to make sportsmen feel "at home"
on this route. For Tourists' Guide a handsomely
illustrated book of 16 pages sent free. Ticket Cards,
Folders and further information, address

GUNPOWDER!

Dupont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
Dupont's Gunpowder Mills, established in 1802,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse)
to 4 (fine) unequalled in strength, quickness and
cleanliness; adapted for glass-ball and pigeon
shooting. Packed in 1 lb. cans.

Dupont's Eagle Ducking.—Nos. 1 (coarse)
to 3 (fine); burns slowly, strong and very clean;
great penetration, with a close pattern; adapted
for glass-ball, pigeon, duck and other shooting,
with either muzzle or breech loaders. Packed in 1
lb. and 5 lb. cans. Nos. 4 and 5, 7 and 8, 9, 10,
11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23,
24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37,
38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50,
51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63,
64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76,
77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89,
90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100.

Dupont's Choke Bore.—Specially adapted
for "choke bore" guns, and particularly for prairie
and upland shooting. Burns slowly, strong and
moist; does not cake or burn on the barrels; gives
both a good penetration and a close pattern; will
be found well adapted for glass-ball and pigeon
shooting. Made of two sizes, only No. 7 and No. 8,
No. 7 being the coarsest. Packed in 6 1/2 lb. kegs and
1 lb. cans.

Dupont's Eagle Rifle.—A quick, strong and
clean powder, of very fine grain, for pistol shooting.
Packed in 1 lb. cans and 5 lb. kegs.

Dupont's Rifle P. G. & S. Shooting.—
P. G. and P. F. G. for long-range rifle shooting;
the P. F. G. and P. F. G. for general use, burning
strong and moist. Packed in 5 lb. 1 lb. and 6 lb.
cans, 6 1/2 lb. kegs and 25 lb. kegs. P. G. coarse, P. F. G.
fine.

Dupont's Sporting, Mining, Snappers and Blasting
Powders of all sizes and descriptions. **Special**
Grades for Export. Also Rifle, Cartridge, A. S. S.,
Cannon, Mortar, Mammot, Hexagonal, Cubic,
Cannon and Pellet Powder, U. S. Government Standard.
Powder manufactured to order of any required
grain or proof.

Agencies in all the cities and principal towns
throughout the United States. Represented by
F. L. KNEELAND, 87 Beaver St., N. Y.
N. B.—Use more than DUPONT'S P. G. or P. F. G.
for long-range rifle shooting.

The Hazard Powder Co., MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."
Nos. 1 (fine) to 4 (coarse). Unsurpassed in point
of strength and cleanliness. Packed in square cans
of one pound only.

Hazard's "American Sporting."
Nos. 1 (fine) to 4 (coarse). In 1 lb. cans and
5 1/2 lb. kegs. A fine grain, quick and clean, for up-
land prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 4 (coarse). In 1 and 5 lb. cans and
5 1/2 lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest or water shooting it
ranks any other brand and it is equally serviceable
for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG and "See Shooting." FG in kegs of
25, 45 and 60 lbs. and cans of 2 lbs. FFG is also
packed in 1 and 5 lb. cans. Burns strong and
moist. The FFG and FFG are favorite brands for
ordinary sporting and the "See Shooting" FG is the
standard rifle powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON AND MUSKET POW-
DER; also, SPECIAL GRADES FOR EXPORT OF
ANY REQUIRED GRAIN OR PROOF MANU-
FACTURED TO ORDER.

ANSWERS TO CORRESPONDENTS	137

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newscasters throughout the United States and Canada; and is on sale in Europe by The American Exchange, 449 Strand, W. C., London, Eng.; and by Em. Torquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six, and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, September 15.

Specimen copies of the FOREST AND STREAM sent free upon application.

SUPERSTITION LINGERS.—A man in Massachusetts the other day was bitten by a dog and dressed the wound with the hair of the brute that bit him. It did not cure him. A week's argument would not convince some people that the flesh of the snake applied to the wound is not a sure antidote for rattlesnake bite.

THE CREEDMOOR MEETING.—The prospects are that, despite the niggardly holding aloof on the part of the State authorities, the fall meeting now in progress at Creedmoor will record a fair success. Walnut Hill has sent her best shots to make matters lively for the small bore home guard, while the "woodchuck hunters" from the edge of the Adirondack wilderness have come down to see if they can pick up a prize or so from their metropolitan fellows in arms, and if not, at any rate get a point or two on rifle practice. Pennsylvania sends a team for that State prize, and this only makes the absence of New Jersey and Connecticut the more conspicuous. With a promise of fine weather, there is every indication of top scores, and next week the facts of the meeting will be fully set forth in cold type and figures that cannot lie in our columns.

CHIEF among the employments congenial to old age, Cicero cites the tilling of the soil and the pruning of the vine. The peaceful pursuit of agriculture and the quiet of rural surroundings have ever been counted a solace of declining years. Many a man who has striven amid the toilsome scenes of life has, Sir Lancelot-like, found contentment at last in his garden.

Our cities, the bone and sinew of them, are replenished from the country; and deep in the heart of the country-born man ever flows the fond love for the scenes of his boyhood. Its current may seem to lie buried and dormant, but when some mighty convulsion comes it is revealed strong and full. King David, sorely wounded, cried out for a drink from the springs of Bethlehem, his childhood's home; and one of the most pathetic incidents in the long and weary struggle in that darkened room at the White House was when the other day the President begged to be taken back to Mentor, and forgetting the concerns of office and political life, talked of caring for the old farm.

Fortunate are they whose life is so ordered that they may retire to rural life; and thrice happy they who having realized their dream of peaceful years are content!

The telegraph brought to us the other day tidings of the death of a friend whose life of busy toil and commanding influence had been thus rounded with a period of retirement in a Virginia country home where, with the light cares of his estate, the visits of old friends, and the pursuit of his favorite pastime of angling, the days passed into weeks and the weeks into months and years, until the years were merged at length into that which is beyond. Here then was a man who, retired from the world, had gratified his longing for a quiet country life, and whose best eulogy is, that unlike an anchorite, he had wrought well, had done his part, and in his retirement from active duties neither forgot the world nor was forgotten by it.

Alexander Moseley was born in 1809, and had therefore at the time of his death, August 30, 1881, more than filled the three score years and ten allotted to man. For many years the senior editor of the *Richmond Whig*, he had been for more than half a century a leader of public thought and a moulder of public opinion. Withdrawing at two separate intervals from the active duties of his chosen profession, he was led in each instance by the vicissitudes of fortune to resume his work, until some eight years ago, health and strength beginning to fail, he again yielded to his longing for quiet and seclusion and removed to a country farm, with humorous conceit dubbing his abode "The Shanty." One reason which influenced to the selection of this farm in Kent County, was its nearness to fishing ponds and angling streams. Mr. Moseley was much devoted to the pursuit of angling, and made many excursions among the streams in the vicinity. He was deeply and intelligently interested in fishculture, having served with success as one of the first Fish Commissioners of his State; and his fondness for angling increased with his years and with the opportunities for gratifying the taste. His last years were spent in this quiet way at "The Shanty," caring for his farm, writing letters and carving curious pipes for his many friends. Last winter there came from him to the FOREST AND STREAM office, with an article which was published at the time, a box of these fantastic creations of his leisure hours, and one of them lies before us on our table as we write. We shall cherish it with his letters as a reminder of the kindly heart and friendship of Alexander Moseley.

GENERAL BURNSIDE.—The death of General Ambrose E. Burnside on Tuesday morning last at his residence in Bristol, R. I., recalls the fact that he was the first President of the National Rifle Association. He held the post but a short time, other duties so engrossing his attention that he could not devote the care to the subject of rifle shooting which he considered should be paid to it. He appreciated earlier perhaps than any other officer of the army the general lack of efficiency in the art of marksmanship among the rank and file of the regular army, and took every occasion to urge a more thorough system of drill and practice in that direction.

MANUFACTURERS AND DEALERS will oblige us by sending their descriptive catalogues and price lists to this office.

THE State of Tennessee has a fish commission composed of good men who have the interests of the State at heart and have done some work at their own personal expense. But they are now powerless because of the lack of funds at their disposal. Why the Legislature ever created a board of commissioners and then gave them nothing to work with is a comundrum which we cannot answer. The fact of their giving the Governor power to appoint the board shows that they realized that something of the kind was needed, but perhaps they thought that somehow their mere appointment would cause the fish food of the State to increase in some manner, without further action.

Writing at this distance, we are not certain that it is the Legislature which is to blame for this state of affairs; but that the blame rests somewhere is apparent. It cannot be possible that the law-makers of this State want the benefits of fishculture argued before them at this late day, a course which appears as unnecessary to us as it would be to circulate tracts among the farmers on the benefits of cultivating their lands. Certainly the State has public waters which at one time supplied the people with a portion of their food and which can be made to do so again, if properly stocked and protected from destructive modes of fishing and during spawning seasons. But we need not enter into argument on this question—the day for that has passed. The battle has been fought and won, and those who ridiculed fishculture a dozen years ago are silent now in sight of its triumphs.

We have been moved to write this on account of the destruction of the carp in some parts of Tennessee by drought, when a small outlay could have saved them, if the Fish Commissioners had possessed the means. These carp were reared in the National carp ponds and sent to Tennessee at the expense of the Government. The Tennessee Commissioners were at some personal expense—not to speak of their time—in distributing the fish, which have since grown rapidly. In one pond in Sumner County there are several thousand of these imported fish dying from the extreme drought, which is drying the pond. There are certain mottoes, such as "saving at the spigot and wasting at the bung," and the one relating to pence and pounds, which might profitably be placed before the eyes of the law-makers of Tennessee.

THE OLD RED ROOSTER.

BEFORE the days when the rage for Asiatic fowls filled the land with great coarse specimens of domestic fowls which do not mature under two years old and then are stringy and tasteless, there existed the old-fashioned red rooster. A cheerful fowl was he, combining the qualities of gallantry, domesticity, beauty and excellence for the table. He is gone! Not a specimen is extant in any of our museums. He has disappeared before a desire for improvement, which, so far from being a real benefit, has displaced a good fowl by Mougolian hybrids until not a barnyard has been spared the pollution.

In place of the gallant fellow whose not distant kinship to the sprightly and toothsome game fowl gave him a brightness of eye and feather and a hardness of wing, we have awkward, fluffy mongrels whose hoarse attempt to crow is a burlesque on the clarion challenge of the old red. These big-footed interlopers are fibrous when brought to pot and stingy on the platter, and as for fat, you might as well try to fatten a threshing machine by running oats through it. The young generation of Americans do not even know the bird of which we write, but those of our readers who have left forty or more milestones on the road of life behind them can call him up well.

The old red rooster never was guilty of the gross ill manners of the Asiatic fowl. He never found a worm and ate it himself after calling his harem to first look at it; but he ever summoned the nearest pullet to the feast and chuckled to see her enjoy it. When a strange dog entered the yard he never fled ignominiously to save his carcass, leaving the females of his family to their fate, as the Cuchins and Brahms do, but presented a bold front to the enemy and fought for them.

Alas! poor fellow, you have gone before the imported hordes of chanticleers, as our song birds are destined to disappear before the European sparrow, and your place is filled

by an ignoble bird. It has been long since your red hackle and graceful tail, with its curled green feathers, has greeted our optics, but, as we journey through unfrequented routes, we hope to come upon some settler's cabin where we may yet behold one of your unpolished descendants mount the rail fence and announce his challenge to the world.

Adieu! The only place we find your picture is where it heads a column in a country newspaper announcing a political victory. There you will be handed down to posterity to be wondered at as a *mura aris*, for your clumsy follower will surely never appeal to an artist's eye as the symbol of victory.

EASTERN FIELD TRIALS CLUB.—This organization will hold a special meeting to-day for the purpose of selecting the judges for the trials. It is full time that the names of those who are to judge were made known, and, as the entries close on October 1, the public will receive the information through the sporting press only eight days before that date. This is not time enough. No one should enter a dog either at a bench show or for a field trial without first knowing the names of all the judges.

DOG ASYLUMS.—Paris is to have a dog shelter, and Boston will follow suit. Some time ago we published the details of the Philadelphia institution of this character, and the Boston asylum will be conducted on the same plan. The Massachusetts Society for the Prevention of Cruelty to Animals has recently been empowered by the State Legislature to establish such a home. We understand that Mr. Nathan Appleton is the promoter of the enterprise. He will receive subscriptions at No. 96 Tremont street, Boston.

"HOPELESS CASES."—A note from the Adirondacks, referring to the many deaths of tourists in the Saranac region this year, says that in almost every instance these were hopeless cases. The invalids had deferred seeking the Adirondack air until it was too late for them to receive any benefit from it. This sad story is repeated in scores and scores of melancholy instances.

THE PORTABLE BOAT AND CANOE INDUSTRY is assuming important proportions. Our advertising pages show that the manufacturers are wide-awake to the increasing demands for the craft. Great perfection of construction has been attained and the advance of the small-boat trade is a notable one. It is in a large measure also an instructive example of the wisdom of advertising a good thing in the *FOREST AND STREAM*.

INDIAN JOURNALISM is yet in its infancy. The specimens which find their way to our table are edited and published by the Indian pupils at Carlisle. The editorials and communications have a healthy tone, despite their mixed English, and are a pleasing evidence that the Carlisle school is doing a good work so far as it goes.

FOREST FIRES have devastated the counties of Huron and Sanilac, in Michigan, nearly ten thousand acres of land having been burned over. Three hundred lives have been lost and fifteen thousand people are left homeless. The country, with ready sympathy and prompt liberality, is responding with funds to aid the sufferers.

SARATOGA HOTEL PROPRIETORS have been interviewed by one of the game protectors of the State, and we understand that one man settled up, as the law provides, to the tune of \$500. Expensive birds out of season.

MR. GEORGE LIGOWSKY, of clay-pigeon fame, was on the staff of Carl Schurz in the war. Mr. Ligowsky is a Pole. The name is one which seems destined to become familiar to sportsmen, as the clay-pigeon is being well received.

A WORD TO EXCHANGERS.—The *FOREST AND STREAM* always gives credit to its exchanges when copying from their columns. Is it too much to ask that a similar courtesy be shown to us by our friends?

EVERY DOG HAS HIS DAY; and every dog swindle his day, too. The Modoc rascal has come to the end of his rope.

MONETTA, Georgia, Sept. 4, 1881.

Editor Forest and Stream:

I was glad to see the republication of your article on "The Forester's School of Baiting."

To Herbert, as one of the earliest writers on American field sports, we are indebted, no doubt.

His writings, particularly those on fishing, contained many errors, however; and his style was not the "straight-forward English" of later times.

Is the much-worn phrase, "speck'd beauties," to be traced to Herbert? He was too well-read a man to be responsible for that vulgar one, so often seen of late, "Sir Isaac Walton."

I have a constant delight and surprise at the variety and excellence of your correspondence, and it seems to improve regularly till *FOREST AND STREAM* now is a treasury of sporting literature, natural history and scientific research.

The capture of a thirty-five pound muscogelon in Intermediate Lake on a seven and a half ounce bait, reported in your paper of August 25, seems to me a great angling feat, nearly equal to that of a tarpon weighing 140 pounds on a bass rod in the Indian River, Florida, by Mr. Jones, of Philadelphia, in 1880. This I had from an eye witness of the performance, or, knowing well the immense strength and activity of the fish, I could hardly have credited the story. Very truly yours,

S. C. CLARK.

The Sportsman Tourist.

NOTES FROM LAKE GEORGE.

WHAT do you think of hunting a bear with a steamboat? And yet this was the way one was hunted up here a few days ago. It happened in this way. The little beauty "Horicon" was near Anthony's Nose when the pilot saw something which, on closer examination, proved to be a bear swimming directly across the lake. As the boat neared the object all doubt was dissipated. There, sure enough, was a big black bear making "quick time." A couple of adventurous fellows had already started out from the steamboat in a small boat armed with an axe only, intending to intercept the animal. But warned by the shouts of the pilot not to tackle brain with such a slight weapon they turned back. The boat was then headed directly for the brute with the intention of running him down. As this became manifest to the sagacious animal he turned and put back. The two men who had returned to the steamboat again started out to attack him despite the advice not to do so, and were soon up with him. Bear now adopted different measures. Facing his enemies he swam directly for the boat, and tried to climb in. But as no more passengers were wanted, the over-crowding statute was rigidly enforced, and the boat was saluted with the axe, only a splash would be inflicted, however. It was enough to infuriate him, and again he renewed his attack with flashing eyes and foam-dropping mouth. As he seized the side of the boat with his powerful paws another blow of the axe disabled one of them, and now unable to climb in with one paw he turned his efforts to capsize the boat! The hunters now became the hunted. It was deemed prudent to beat a retreat, and with some difficulty the thoroughly frightened pair got back to the steamboat. The bear pursued them, and was "in and out." Now he began to roar, then the rowers. At last when they climbed back into the steamboat the bear tried to follow. But one of the boat hands, prepared for this, had a rope arranged with a running noose all ready, and with the first throw he cleverly slipped it over the brute's head, and quickly drew it tight. The game was up, and bruin was drawn to the stern of the boat, lashing and tearing the water. Full speed was put on and he was drowned. But to prevent any humberg on the bear's part he was promptly kept in the water until the boat reached the dock. If anybody wants to hunt bears in this fashion I refer him to Mr. F. A. Johnson, of Glen's Falls, who witnessed the hunt, and who can supply particulars as to outfit, etc.

So, you see, there is a spice of adventure left here notwithstanding the conventionalities of society. A party of us ascended Black Mountain one afternoon, taking hammocks, water and provisions for an all-night stay. After a four-mile walk in the ascent of the 2,000 feet, we gained the summit, lighted a camp-fire, supped on eggs *a la hard*, and with a *la moutarde*, but cooked *sans sale*, and imagined ourselves at Delmonico's with real French names for our bill of fare. Night passed joyously, Mentor savagely insisting on sleep for all hands in order to be fresh for the sunrise and the descent in the morning. But, given a girl in a hammock, sleeping out doors in the night on a mountain top, clouds scudding over the moon, stars glowing almost in her face, so near did they seem, and you get but little sleep. *Q. E. D.*

Mentor burnt up fifteen good-sized trees keeping the fire going, furnished hay at half-price intervals, and roused us all for sleep chained its victims at last in the first gleams of sunrise. The glory of the scene, of course, repaid all the labor.

A few nights after two of the gentlemen essayed another peak. But the results were not so satisfactory. The summit was reached at dusk, no time was left to gather wood for a fire, and the shelter of a ravine was sought from the furious winds. The resort proved to be the shelter also of something else, for while the twain were making earnest efforts to light a fire, another Frenchman, sent by the guide, followed by another, before one's wits could be well gathered. The wriggling by of a large snake completed the discomfiture and the rocky top of the mountain became the only safe spot. Morning enabled the chilled pair to find a path down, and mountain climbing suddenly fell below par. One of our best pianists took his hands so badly in this venture that for a while Orpheus politely declined all invitations to play. But he is all right again, and the noble fellow is none the worse for the trip. This adventure very agreeably breaks into the monotony of "cake walks," "romans," "commerce parties," "chops" and the inevitable rut of young society men, and while these last are kept under by the rugged nature yet left around the lake there is more variety to be found here in the way of holiday amusement than in any place in the State. Of course the fishing cannot amount to much where there is a man for every minnow, but nevertheless from fifteen to thirty pounds of black bass, pickerel, yellow perch, etc., can be taken by a good angler in half a day, and this is enough for anybody.

September is the most charming month in the year for a visit to this place, and the summer boarders leave so rapidly that landlords reduce their prices to seven dollars per week. There is nothing to complain of in regard to the price of board at any reason. Good fare and comfortable rooms can be had at from eight to twelve dollars per week, and at these rates all are well satisfied; the guests are merry and the landlords make a nice profit. But, where you are charged more than this, you get less in proportion, and are unfairly dealt with. And the lake is the best place to visit, and the cheapest place, and is charged at three times the price.

The day is rapidly coming when the lake will be one vast boarding house—more is the pity! Now, you can go to the table with an ordinary flannel shirt, but as your snobby New Yorker begins to flock here, with or without his snobbish wife, the old set fade away. The men and women make a brave stand at some of the houses for the old-fashioned plain style, but shoddy will have her full dress volantes, and the "lah-dah-dah!" days generally triumph. Thus, prices go up and comfort goes down, the flannel shirt succumbs to the "romans," and Mrs. Phingor gives way to Mr. and Mrs. Flasher. There is one remedy; get the State to sell the islands which, at present, are occupied mainly by squatters in utter disregard of the people's rights, and settle upon them in your own way of living. Run a railroad from Glen's Falls to the lake, supplanting the present stage monopoly, which is a fantastic burlesque on comfort and convenience and about one hundred years behind the age, and the lake will hold its own, otherwise newer and less conventional resorts will be sought year after year, and the birds of fishing, get tired of this place, Lake George will have had its day. I want any items as to fishing-

grounds, etc., up here, let me know and I will give you ranges and "points," so that you might fish in the dark. Lake George, Sept. 1. ONE HUNDRED ISLANDS.

ADIRONDACK NOTES.

Editor Forest and Stream:

Allow me a word from the Adirondacks. I am pleased to know that the Adirondack guides have received a good word through your columns within the past three weeks, and justly thus. In connection with Parker as a guide, they may have suffered somewhat from outside influences, but no further, for all, who are conversant with and know the Adirondack guides, cannot recognize him as a lick. Parker was never recognized as a guide, speaking in a professional manner and was only required under urgent circumstances. A mysterious enshrouds the entire trouble, and there allow it to rest.

The Saranac guides suffer the opprobrium as Adirondack guides in connection with the transaction, and in their behalf one word. I have known them intimately for many, very many years. Their character for honesty and faithfulness in every respect, is without reproach. I would trust them anywhere, and with any amount. And I add for reference, Dr. J. H. Roney, of Keeseville, N. Y., who has employed them for thirty years; Col. T. J. Hoyt, of New York, for twenty years; Mr. J. M. Wiman, of Bergen Point, N. J., for nine years, and many others; but the above gentlemen, well known, I take the liberty to refer to.

The Adirondacks for the past season have been overcrowded. No such rush was anticipated, or preparation would have been made. Another year and every house will be prepared to meet every emergency and every demand made for satisfaction, in every respect.

In regard to the great number of deaths in the Saranac region, I would add that in nearly every case they were hopeless ones, and it was a last resort, and it proved thus; and, as it was anticipated in every case before they left home, therefore no blame can be attached to Doctors Trudo, Roney, Loomis and others to whom advice was applied for.

S. S. N.

SEYMOUR'S ISLAND.

I SAW in your columns inquiries as to the best way to reach the fishing grounds in this part of the world. From Saratoga go to North Creek, thence to Blue Mt. Lake, where you will put up at John Holland's. A more genial, kind and accommodating landlord is not known in the Adirondack Mountains. Mr. Frost, his head clerk, is composed of kindness, and that in no small quantity, for he weighs 250 avoirdupois, and many a tourist, tired and hungry after a ride of thirty miles over a rough road from North Creek, has been comforted by his cheerful smile and hearty welcome, and afterwards a supper as good as to be found there and the refreshing sleep one enjoys in the mountains he will be prepared to enjoy a ride on the lake, and comment on its surroundings.

About half a mile from Holland's is Thatcher's Island occupied by Mr. Boyd and family. A little further down and to the right is Col. Seymour's Island, occupied this season by Mr. Hawk (proprietor of the Windsor Hotel, New York,) and his family, and there let us stop and look around us. The island is one of nature's choicest productions, with its bold front to the south and sloping gradually down to the water's edge on the north. It is heavily timbered with balsam spruce, hemlock, pine and cedar, also white maple, birch and mountain ash in abundance, with foliage so dense you are protected from the rays of the sun at mid-day. Down the centre of this island is a row of tents fitted with every convenience for comfort and health, even to windows of rope cordage opposite every sleeping apartment, through which steal the zephyrs of morning, that freighted with the perfume of the *Nymphs odorata*, mingled with the odor of the balsam, and aided by the ozone of the surrounding mountains, brighten the glow of health on the cheeks of the unconscious sleepers. At the landing is a natural flower garden, where the cardinal flower and the wild rose grow in profusion on the shore, while the arrowweed grows at the margin of the water, and the white water lily pillows its snowy head on the heaving waters of the lake, whence they are daintily plucked by the ladies of the island and transferred to vases, and bloom for days in all their loveliness owing to the gentleness with which they were handled.

But those tents are not closed as early as they lie, neither do the inmates rise with the lark, but are sure to be singing with the nightingale in the evening. An amusing event occurred on the last evening in July, when all were gathered around the camp and song was at its best. Miss Davis was just finishing one of her choicest selections, with bell-like clearness, or as when a tiny silver cord is touched by the hand of some unseen fairy, the sweet melody dying away into far-off dream-land. The spell was broken by noise in the lake and, looking through the trees, we saw three boats from the new Prospect House. This house is filled with guests, some of whom were out with their guides for an evening boat ride and were attracted to Seymour's Island by the full, rich strains of music floating from it on the evening air. When they neared the island and saw so many tents and heard so many voices they concluded they had come upon an island camp-meeting. One old gentleman, who sat with solemn face and uncovered head, not knowing whether the music was human or divine, was soon undeceived by Wm. Penn, who never could keep still for any length of time, striking in and singing, in his clear, full voice, "I love my love, I care not what the world may say." The transformation was sudden in the old man's countenance, which quickly changed from devotion to disappointment, and the last we saw or heard of that party they were turning the point of Thatcher's Island and singing at the top of their voices—

"Pull for the shore, sailor,
Pull for the shore."

The choir broke up for the night, but not before they had planned to ascend old Blue Mountain in the morning.

The morning was cold and rainy, but the ladies and ladies of decision and the gentlemen could not say no, so taking an early breakfast, they started at half-past six in the morning, prepared for the ascent, having for guides James McClelland, Jr., and Bert Proctor.

No accident occurred and all went merry as a marriage bell, but, as they neared the top of the mountain, they were met by parties who were on their way back to Holland's, perfectly discomfited by the rain. The party with whom we saw clouds and rain. A gentleman of the party was long in telling his story, as the rain was dripping from his

garments and his teeth chattering while he talked, and he had much the appearance of a chicken just rescued from a pail of water, with drooping plumage and downcast air.

After passing the descending pedestrians the Hawk party were soon on the summit of the mountain. Though somewhat fatigued, they were well repaid for all their trouble, for at that moment the rain ceased, the clouds cleared away and a more beautiful view was never seen from the top of old Blue Mountain.

Standing on its lofty summit they could overlook a terrific storm in all its majestic grandeur, and hear the crashing sound of the heavenly artillery and watch the lightning which, in its zigzag course, seemed like some fiery monster writhing in the last agonies of death. But as the storm passed off to the east the party were aroused from their reverie by the irrepressible William Prentiss singing in a well-modulated tone:

"Now up, now down, now lurch, now low,
We plodded through the rain,
A brighter or a happier time
May never come again."

The party said they could count fifteen bodies of water from the top of the mountain besides all that had soaked into their garments. After a lunch and two hours' sunshine they started for camp, which they reached in high spirits.

With daily excursions and many adventures to relate in the evening, time passed pleasantly until the 15th of July, when other duties claimed the attention of some of the party so they were forced to leave the scenes where they had passed so many pleasant hours. The vacuum has since been filled by Mr. Samuel Hawk, who presides at the head of his bountiful table, and it appears that all that will come may come and partake of his hospitality. He remains in camp until the last of August, when he leaves for the city, when Wm. S. Hawk will do the honors of the camp. He expects to be joined by other friends. Late in September the party will break camp and start for Saranac Lake by the way of Little Tupper Lake. I will by and by give you an account of their trip.

SARANAC GUIDE.

Blue Mountain Lake, Aug. 20.

(Concluded from Page 104.)

A REMINISCENCE OF THE WAR.

NOT waiting for further examination of Mr. Joslin's bare head, I took the opportunity to ask him the missing mare, Kenner and I had ridden rapidly southeast for five miles, hardly exchanging a word; I did not feel at all like talking. I was deeply chagrined at our failure to make the capture and busy with my own thoughts as to how it all came about. James Davis' mare was certainly in the barn and so was his saddle, but was it he who took her away? Was it possible that we had been discovered? Had he, while in the house, even at that late hour, received an intimation of the close proximity of an enemy and in desperate haste fled? Had it all happened so? Had he intended to go at that hour and done so unconscious of his danger? And so, the more I thought of it the more determined I became to fathom the whole thing at an early day.

We found a place to camp away back in the deep woods. Having unsaddled and fed our horses, we talked freely of the night's work and matured plans for the morrow. In the silence of the black woods we talked, ate our hard tack and pork, not daring to build a fire, for we did not know but some scouting parties might be lurking near. However, we were not without our comforts. Rolling up in our saddle blankets, with a saddle for a pillow, we were soon lost to all sound and sense.

The sun was an hour high when we awoke.

It was arranged we should part company there, Kenner to go south and west and work north to Catlett's, but to keep out of that place, gain all the information possible, then return to the command and report; I to strike the vicinity of Bristo Station and thence work toward the Rappahannock, cross as best I could and reach the command, that is if it had again crossed to the south side, which was hardly possible. I kept steadily northeast, keeping sheltered by the woods, traveling, as I had often done before, by compass.

That night I discovered the enemy in considerable force at Bristo Station, showing he had fallen back from near Catlett's and was possibly alarmed that he might be surrounded and captured. Resting my horse and self until about 2 o'clock A. M., I started to find our command; rode cautiously until daylight, then pushed rapidly on to cross the railroad a couple of miles to the south of Catlett's. The position of the enemy's cavalry at Bristo caused me to take, to a certain degree, my back trail. I felt sure the Confederates had left the vicinity of Catlett's, and if so Kenner would know this and then if such were the case, which was highly probable, why could I not make a visit, if even a short one, and thus combine pleasure with duty and at the same time know what I was burning to know—why I had not captured the man who rode James Davis' mare?

Hiding along the edge of the woods back of Mr. Joslin's house, I met the black man, Tom. I questioned him closely, knowing I would get the truth. He had not seen James Davis; "fo' de Lawd Mars James hadn't done bin dar sence de battle at Bristo." It was enough.

I went directly to the house; I entered and was greeted warmly by all. The clock struck two; I felt safe. I determined to spend the remainder of the afternoon and travel that night toward the command. Yes, James had been there, so Miss Lucy said; had told them all about capturing me, etc. "saw" said Lucy, "he left here suddenly at about 1 o'clock night before last. He and I were sitting here by this window talking. Suddenly he went to the door, quietly opened it and looked over toward the barn. Telling me to wait a moment, he disappeared in the direction of the barn. I could not imagine why he went to the barn unless it was to look after his mare. I sat looking out toward the barn for possibly ten minutes, when I heard the barn-yard gate open and James crossed the road, leading 'Corn' and saying he must go on once. He rode away as lively pace up the road." I held my peace. I did not tell them anything I knew, still it was only a partial explanation. He came in the night quietly and left in the night suddenly. Tom had not seen him at all.

And now I come to that part of these adventures, if so I may call them, wherein the ending was as near as it could have been without being a bloody tragedy.

It had struck three. Mrs. Joslin and Lucy were in the spring house, Mabel and I sat in the parlor. I was on a stool at the rear of the dining-room (the dining-room) and at the end of the piano. Mabel sat on the piano-stool, facing me almost, and slightly between me and the door. Suddenly a man's step sounded on the dining-room floor, and—James

Davis stood in the doorway. The recognition was instantaneous, mutual. Revolvers leaped in the air, accompanied by an ominous clicking, and we covered each other almost at the same time.

"You are my prisoner," I cried.

Mabel gave one frightened look and jumped between the leveled pistols, crying, "Don't shoot; for God's sake don't kill each other. Are you real men?—are you gentlemen?—that you would dishonor with blood the house that has welcomed you and sheltered you?" It was all done in so few seconds—pistols were slowly lowered; shame came upon us.

"Have you friends with you?" I asked of him.

"No, sir."

"Quits. I am alone also."

Mabel seized my arm and Lucy, rushing in, seized Davis. "Well, Mr. Dick," said he, "I reckon we are both captured."

We shook hands. Like myself, Davis could not resist the temptation of making a call at the Joslins'. Conversation became general; Davis and I declared a truce for twelve hours and sat amicably at tea. And then he explained the mystery. He saw the uncertain light in the barn, thought at first that the barn was on fire and went to examine. He opened the small door almost in the rear of his horse, when he distinctly heard some one leave the barn, or else come in. He waited and listened a long time and, hearing nothing, determined to go in and get his horse; said he did not feel right about the situation and concluded to leave any way. So mutual explanations occurred on both sides. We parted that night with mutual good wishes and a warm grasp of the hand. He took his way, I mine.

Although I scouted through that country much after these events, I never met him again. We both, by mutual consent—a tacit agreement—did not visit Joslin's unless, indeed, the forces of either were near in goodly numbers. But I never forgot those good people and I lived to see the day when I shot quail over "Rab" and enjoyed the hospitalities of the house untrammelled by a war cloud. After the surrender and when gentle peace had come, I spent many happy days at their guest.

James Davis lived to marry Miss Lucy. The last I knew of them they were in West Virginia, doing well. But as for myself—well, that tale cannot be told. "All's well that ends well." It ended well and therefore must be well.

DICK SWIVELLER.

FLORIDA AS A SUMMER RESORT.—San Mateo, Fla., Sept. 9.—*Editor Forest and Stream:* Our weather in Florida since September came is very beautiful—mercury rarely above 90 degrees, and seldom up to that point; pleasant, bright days with plenty of air stirring, splendid moonlight nights, cool and delightful. Never think of Florida as "proportionately hot" when you are "roasting." A letter received in early summer from Central New York said, "Mercury nearly at 100 degrees. What must it be with you?" That same day it was about 85 degrees with us.

Natural History.

CLOGGED FEET OF YOUNG PARTRIDGE.

THE annexed weird and uncanny-looking engraving is an exact representation, natural size, of the remains of a young partridge found a short time since by a correspondent. The bird was obviously destroyed by its inability to drag about the mass of clay which had adhered to the left foot. It is difficult to imagine the manner in which so immature a bird could have existed so long as it did with such an incumbrance attached to it and impeding its progress. These balls on the feet commence on the claws, which become separately incrustated, and they increase by what a botanist would term an exogenous mode of growth, layer after layer being deposited until the mass attains a considerable size. In the present instance the weight of the clay in the dry state is almost exactly an ounce. This weight would have been considerably increased by the amount of moisture present when the bird was alive.

Were such a weight attached suddenly to so small a bird it would be quite incapacitated from active locomotion; but the gradual and slow increase day by day enabled the

animal to become habituated to the incumbrance, and to survive, though obviously with great discomfort, until it had attained the size depicted.

The right wing conceals the skeleton of the animal, which was intact, the flesh having been removed by the maggots of the blow-fly—whose universal and useful scavengers of exposed animal remains.

In poultry-yards and pigeon-houses similar instances to the one represented above not unfrequently occur; but the case is so interesting an illustration of the struggle for life under unfavorable conditions that I have thought it worthy of being illustrated by an engraving; and I beg to return my thanks to the gentleman who kindly forwarded it.—W. B. TROSTEL, in *London Field*.

HABITS OF THE ALLIGATOR.

TO the student of natural history, or those of inquiring turn of mind, it is interesting to note the character and habits of the American crocodile.

Perchance the reader will question whether the huge and ugly reptile really has a character.

We will not debate that question now while the weather is so warm. Perhaps he has no morals even; but having been among them rather more than less for five years, I venture the assertion that he at least has habits of a most positive nature, and think my position on that point is invulnerable. I propose to defend it, at least, and if vanquished, will gracefully retire.

The brain or nerve center of a twelve foot alligator, is hardly as large as a man's thumb; still he does sharp things sometimes and the hunter may steal a march on the timid, watchful deer or wild turkey as easily as he can approach this scaly monster-looking reptile without being observed. It does not follow, though, that he is as dilatory to capture, for often when lying on the bank your boat may glide up within a few feet before he makes the plunge for deep water, or they may remain quiet while you pass near enough to touch them with an oar. The expression of his eye, however, and a very slight motion of his head, reveals to a close observer that he is not quite *sans froid*, and any sudden demonstration about the boat is liable to start him; and then, having decided to go, nothing less than a well directed bullet will check the impetuous charge, though he may come in contact with and nearly capsize the craft in his headlong rush for the bottom of the river. Where they are often disturbed by passing boats, they become very wild and one must be a crack shot with the rifle to have much success with them. They are confirmed cannibals, and as a measure of self-preservation, the young are compelled to avoid the company of those that are grown.

The alligator is fond of fresh fish, and the black bass, (called trout in the South) seems to be his favorite. In dark water he is really skilful if not artistic in taking them. One method is to remain slow and wait a few feet from the bank, stopping in favorable locations to open his jaws above the water and bring his tail around slowly toward his head on the same nearest shore. The frequent result of this maneuver is that the fish, when it feels the commotion in the water caused by the moving tail, takes alarm, and leaps from its native element to escape the unseen foe, but sometimes only to become a victim of the terrible jaws which close on it like a steel trap.

People who have noticed the habits of the black bass in Florida are aware that when feeding they often operate in large numbers together and make short work of any unfortunate school of minnows or small fish that come in their way. Alligators, where numerous, often adopt a similar plan of operation, and then the bass must suffer in his turn: the alligators swimming about among them and each individual taking what he can get as the fish leap from the water to escape the supposed danger from the long moving tails of the reptiles. This jumping habit of the bass, by the way, often puts the canoeist in possession of fresh fish, *ad hoc* *causes*, for the bass, alarmed by the dip of the oar, they, in making the leap, had plunged into the boat. In that way I have secured as fine fish as I ever caught with the fly or spoon.

When collected in large numbers the alligators are very bold, and show more curiosity at the presence of a boat. On one occasion I rolled seventeen very large ones as fast as I could shoot, and left nearly twice that number that were of no use to me.

To suppose that "a large alligator is never killed at the first shot" is a mistake. One big properly directed bullet will answer. If a party of hunters boast that they required nine balls to quiet their game it indicates a lack of marksmanship, or else that their arms were inferior.

Of all the appetites that of the alligator is probably the most indiscriminate. They will catch turtles, and the immense strength in their jaws enable them to crush the shells before swallowing them. They are excessively fond of dogs, but the average Florida canine seems well aware of that fact, and is constantly on the alert when his duties require him to swim or pass through low grounds, where dogs are so often object of his lurking, yet many of them are caught, and the old Floridian is frequently heard lamenting the loss of "the best hog-dog in Floridy." Many hogs are also destroyed in newly settled regions, and young cattle are sometimes victimized; even grown cows have been attacked by the largest of these vicious reptiles, and severely injured if not killed outright. I found in the stomach of one alligator the hoofs of a nearly half-grown bovine, a number of the indigestible bones or shields from the heads of black bass, the bones and complete set of ten rattles of the diamond rattlesnake, several abraded pieces of wood, sections of cypress limbs, etc. But why do they swallow chunks of wood? Is it for the same purpose that the hen takes gravel? I never knew them to indulge in any other kind of vegetable diet. Inherent in their habits they explore lagoons, make long journeys, sometimes overland from one river or lake to another. The walk of a muscovy duck is graceful when compared with the pedestrian efforts of an alligator.

His travels are slow, and his gait is awkward, but we cannot say the same of his evolutions when in the water.

The way he snatches a boat through the water when harpooned or snared suggests the idea of a mule race at the other end of the line. Probably before he is overpowered or dispatched he will make things lively on board by reeling the line upon his body, and unless well handled may pile himself aboard or turn the craft over. A light, frail boat will be in danger, too, from his powerful jaws. Repeatedly they have splinters as large as my fingers from the head of my yellow pine skiff. Good nerve and promptness on the part of the hunter will usually avert disaster, though taking them by this method is somewhat dangerous, and the best employed ought to be a good strong one. Other requisites are a half-inch line, ten to fifteen yards long. Once end fastened to bow of the boat, and the other to a fifteen-inch harpoon, which is used by means of a staff similar to the ordinary spear or gig pole, said staff to be detached the instant after the alligator is stuck or, of course, it would be broken in the *melee* that follows. The secret may be in the harpoon or in the staff, or in the use of destructive weapons, as guns, pistols, axes and hatchets completes the outfit.

In the spring of the year fierce battles often occur between the males, in which they get severely punished. "Catch as catch can" embodies the rules of the fight, and, having latched, a lively flouncing, whirling and twisting, with savage blows from the powerful tails, makes things interesting for all concerned, and the water is lashed to a foam.

made a good start for a full bag. About a mile from camp we came to a high hill, with open woods on every side. Concealing ourselves in a fallen tree-top, at a point from which we could see two hundred yards in every direction, I felt sure we would bring up a gobbler before sundown, especially since I knew this hill to be a favorite range in the spring time.

A slight rain while without any response. Then I tried gobbling. (Success!) One of the few men in this State who can gobble successfully. My first effort was successful, for some three hundred yards off two turkeys gobbled their loudest. In a few moments we saw them coming toward us in a full trot, the front one holding his wings down in a sort of half strut. I whispered to F. to cock both barrels and wait until I fired, then to try them both on the remaining turkey, if necessary. F. was a good wing shot, and I felt sure he would bag his game. On they came, one of them fully thirty feet in advance of the other. Waiting until the front one came within twenty-five yards of us, I whistled and brought both to a full stop. I fired at the one furthest off, and dropped him in his tracks. F. let drive the first barrel at the other one. He staggered and fluttered, I think, with a fatal shot; but he didn't die fast enough for F., so he fired into him again and settled him forever. I don't think I ever saw a finer turkey but once, and I am sure I never saw a prouder man than my friend.

Concluding that we had had enough glory for one day, and now being quite late, we return to camp.

A farmer, a farmer, living a mile away, came down to chat with us a while. During his stay, he told us that he heard turkeys gobbling that evening back of his field, and that whenever he heard them at two or three evenings he always heard them near the mornings following; so he felt sure the ones he heard in the evening roosted near his field. He was quite certain that they usually roosted in some large oak trees which grew on a steep hill side, a place very easily found, as a path ran near by.

Waking up about two hours before day the next morning F. and I started for the place in the hope of finding the turkeys by moonlight. Arriving at the place designated by the farmer we got down and commenced hatching our horses; during which the owls in the creek bottom half a mile off began one of their pandemoniac concerts, and to our amazement a turkey gobbled near them. Once before I had heard a turkey gobble on a moonlight night, but that was where they were very plentiful and but seldom hunted. This did not cause us to change our programme, but we went right on and looked for the timber on the hill side. It was surely a fine place for turkeys, but they were not there. Meanwhile the owls kept hooting and the turkey in the bottom kept gobbling. At my suggestion we concluded to "go for him." Leaving our horses at the edge of the bottom we walked in. When about a hundred yards from the turkey we came to the creek, which was too wide to jump across, but a small log was near by. On proposing to cross on this I was astonished to hear F. say that he could not walk a log in day time much less at night. The only thing then we had to do was to take a shot gun and go after the turkey. This I did in a few minutes, and with "many a flutter" he came to the ground.

We concluded to separate, F. going back to the place which he had hunted to wait until day, feeling assured that the turkeys could not be far off, and he was not disappointed. I went down the creek a mile, then struck out into the hills. Before I had gone as far as I wished I heard the red birds begin to whistle, and I knew day was breaking. Going a little further I happened to scare out of a tree, and almost right over me, a heavy turkey, dropping quickly. I listened for him to light. Soon I heard him strike in a tree a good distance off. Riding in that direction as far as I deemed it prudent I dismounted and hunted for him. He was soon discovered perched in the very top of a small oak tree. It was quite dark yet, but I didn't want to wait, and I knew I had killed many a turkey with my rifle when I had no more light than now, so I fired. Away he flew, but he made an awful fuss. I knew he was badly shot, so I listened, and in a moment heard him strike the ground. It was no trouble to me, as he did not fly more than a hundred and fifty yards.

By this time I heard turkeys gobbling in several directions, but none seemed nearer than a mile. On arriving near two I saw it was too light to get a shot on the roost, so I resorted to the best plan any man ever tried for killing a turkey in gobbling time. I went out on the very crest of the hill in which the turkeys roosted. Concealing myself, I gave a low, soft yelp or two. The gobblers both rattled loudly. I knew right away that I had fixed my man. In a moment I heard one fly, and then I saw him light within thirty yards of me. On comes the other one, but he dropped down further off. It was too dark yet to shoot at heads, so I fired at the body of the one near me, and down he came.

Loading quickly, I slipped around and headed off the other gobbler four hundred yards from where I shot. I yelled; he strutted but would not gobble. After waiting some time he came in sight but would not come close. He was promptly killed at one hundred and twenty-seven yards. I stepped it. From here I returned to camp to find that F. had killed a young gobbler and had fired at a large one, but didn't hurt him. We concluded to go home, feeling well satisfied with our trip, having killed a deer and nine turkeys, two of which were the first F. had ever bagged.

I am very fond of a "breach-loader" for all small game; but when I go after turkeys or deer, I prefer the old rifle, a muzzle-loader, with which I have killed hundreds of deer and turkeys.

TEXAS.

ROASTED WOODCHUCK.—The Postman, in your issue of Sept. 8, is not the only one who knows the flavor of woodchuck when well roasted. The first one I ever cooked was about eight years ago, during a trip with team and camping outfit through the State of New Hampshire. We had stopped for the night at a place about five miles west of Deerfield. One hundred and thirty miles from the place we had been, I was hungry, and I had a good idea of what a woodchuck was. I was dressed, stuffed and cooked him, using an open tin baker set before a hot fire of hard wood coals (by the way we could bake biscuit in that same baker in ten minutes.) We baked well with salt pork cut in three slices, and did wait till our game was done brown; but with the savory roast-pig-like odor, it was a big strain on the patience. One fall before that while camped near the head waters of Passadunkong Stream in Maine, we had a fine rabbit boiled ten minutes with onion and turned a lesson. But our woodchuck was well roasted. Was it good? I only wish that the Postman could have been there. The meat was rich, juicy and delicious. It was just like every other woodchuck we have roasted since, and we always eat them while in camp; and we go on our regular fall hunt every year.—H. L. M.

WILD TURKEY CALLS.

MILLSBORO, PA., Sept. 6.

"Keouk" in the last number of the *FOREST AND STREAM* asks about turkey calls. Having had some experience in the matter, we may perhaps impart some information, but it is doubtful if "Keouk" or any one else will ever learn a certain method to call up a wild turkey. The instrument adopted by us is the little horn with a stem three or four inches in length. We have used the turkey bone to good advantage, but found it too severe on the lips; and the hand should be used to cover the end of the bone in order to give the note that far-off sound so necessary when the birds are wary. We have used scrapers of many patterns, but have found them wanting in one or more particulars, and have discarded them. A common clay pipe scraped on a piece of slate makes as good a sound as any scraper, if properly handled. The best caller we ever met called with his mouth only; he somehow twisted his head to the right and downward, twisted his mouth to one side of his face, and, placing one finger to the side of his nose, pushed it over to the other side and gave forth the call of a turkey. As the occasion might require, he could do the old hen or the old gobbler up to nature, or imitate the young birds to perfection. That boy would be worth five dollars a day to any one wanting a day among the turkeys.

We use the horn; all things considered, it is the best when an instrument must be used. As to the style, tone and number of yelps, we invariably leave that for the birds to decide. We do as they do; if they make three or four yelps we do the same; if they make one yelp, we come down to their figure; if they call cautiously and shy, we do likewise; in fact, we imitate their call. In case that we suspect that turkeys are about and are too shy to call, which often occurs late in the season, we come the old hen on them, and most likely the bird will come, unless it be the old hen herself; as to that we cannot say. The mother turkey's call will generally bring the answer, and is the best to start a stray youngster to yelping, or will even make the father of the flock come to bag. We would advise "Keouk," or any one else so inclined, to visit the turkey hen and learn. She may now be found surrounded by her numerous family. Scatter that family well and listen to her plaintive note. If a wild brood is not at hand, go to her tame sisters and cousins and aunts, and have your farmer friend scare the flock badly, and you will hear the mother's note. She knows how to do it as well as her timid relative of the woods. It is made up of two or three long, fine, plaintive whistles, finished up with two or more coarser notes. Turkeys do not, however, always call alike, and there is as great a difference in their voices as in the voices of many. Sometimes the sound is cracked and grating, sometimes it has a bold, metallic ring, and sometimes it is quite subdued. We have heard them give from one to a great many yelps. Times, circumstances, flocks and individuals differ widely, and the hunter must, if he wants to bag the bird, come down to his whims.

Sometimes a flock can be walked into and the birds do not seem surprised very much—they even appear in no hurry to get away, but they do get away pretty quick, anyhow. A flock of turkeys, knowing that they are pursued by either dog or man, will generally run the distance, and not unless forced to do so, and if they do fly they will nearly all take the same or nearly the same course, and no calling, however good, will bring them back. If one bird should get astray, that one may be called in; if a flock is surprised and quickly scattered in all directions, they may be called back; in fact, some of the birds will come back without being called at all. It is next to impossible to call up a turkey after he has seen the hunter; therefore the hunter should be well hidden and not move until he is sure he has the bird near enough to kill him. We hunt turkeys with a "yaller dog." Our dog gives no tongue until she gets into the midst of the flock. She leaves none upon the ground, and usually, when she is done with them, they are well scattered, and some of them can be called in and bagged. Sometimes a number of birds will take to the trees; we would prefer that they would not, as they are hard to approach, and will certainly see us, which lessens our chance of making a good bag. Sometimes one or more of the treeing birds will see the hunter make his bid, and flutters, and when a "yaller dog" made this bird will sing out, "Pee, pee, pee," very low and somewhat long drawn, and as long as that bird is there none of the rest will move or utter a sound in reply to the hunter's call; and even after the fellow has been driven off or shot the chances for bagging a turkey out of that flock, for the dog being, as slim. When a flock is scattered we secure the dog and hide ourselves and dog where the dog struck the birds as near as we can tell. When everything is quieted down we try to hear the call very carefully; by an "eye" again, until we either get a reply or are convinced that none are coming. In the latter case we get the dog to stir them up again, if possible. If not found we try the next best new ground and new flocks.

We have failed many a time, and always promised to do better next time; we have, however, brought to bag four or five at one sitting and out of one flock, and we think that glory enough for one day—and turkey enough, too.

Noise does not seem to affect turkeys, but the sight of man or dog will generally scare them. A black smoke screen, their suspicion, and they can see a black coat or hat quicker than any other garment worn by man. They can carry off more shot than most men would imagine possible, and unless the head or neck is riddled they will get away with a handful of shot. We use No. 4 shot, and find it to answer the purpose well. We hunt turkeys on high ground, not on the tops of the mountains, but just below the tops. We seldom meet them upon flat or low ground. They do sometimes come down to the fields to feed, but they come with their eyes open, and seldom lose any of their number. They are a wary bird.

We think turkey hunting fine sport, and have never seen any one who was not well pleased after a day among the turkeys, when things were done according to instructions and no blunders made. We have never baited turkeys with the purpose of killing them. We have never hunted them in spring, when all good turkeys should be hunting a mate and housekeeping, and all good sportsmen should let them alone. No game should be hunted between January 1 and September 1.

C. X.

SARAS, Miss., Sept. 4.—I notice "Keouk" in this week's issue asks how to call turkeys. From his letter it is my opinion that he gets little excited and calls too fast and loud, which was for a long time my fault. I have often been squirrel hunting in the creek-bottoms of Carroll and Benton counties, Tennessee, where I would flush a fine dove of turkeys. After waiting a reasonable length of time I would

build me a blind of old chunks of logs and brush, and with caller I began to fool the poor creatures, but the fooling would not last long because at about the second or third answer my excitement would be at such a pitch that I would strain myself to bring them just a little faster, and consequently would "yelp" too long and frequently, and scare the turkeys off. But I have found that a turkey is not at all easily deceived—at least such has been my experience.

My way now is when I scatter or flush a drove, first to get them well separated, then to build my blind not far from where I flushed them, to wait about forty-five minutes or an hour, and then call slow and low, and with not more than three or four "yelps." When I get an "answer" I keep perfectly composed, and am fully ready for an emergency. The next time I call I am careful not to make the note too loud or frequent. A turkey has a splendid car.

When the turkey gets within 200 or 300 yards he gradually stops calling, and reconnoiters for danger, especially if he is an old gobbler, and he is just as apt to put in an appearance on the opposite side from that expected as otherwise. Then is the time to hold your piece of horn or bone away from your mouth, and not try to call, for if you do, nine times in ten you lose your chance for baked turkey. Now is the critical moment, but if you are bound to call or die from impatience, call just twice and loud enough to be heard about forty yards, but it is much the most sure to keep silent. If the turkey is not assured that it is one of his companions he will come up through curiosity to see what you are. I have had old gobblers in the spring come within 100 yards of me, and get behind a log or large tree, and there strut and gobble for half or three-quarters of an hour, but I had "been there before," and it was only a question of time as to who could hold out the longest, I or he, and every time the turkey comes to ruin. In the winter and fall you don't have to be near so cautious, as most of the turkeys are young and do not understand the "ropes" as their long-headed forefathers do.

I think if "Keouk" will try my plan he will have better success. I will, if he wishes, explain how to make a "call" for every person with a little practice can fool the smartest old gobbler in the woods with.

W. H. C.

A BADLY SCARED MAN.

CAPTAINS—now of Canada, late of H. M. Service, who is the most orthodox and conventional of British sportsmen, is in the habit of coming South every year for the quail shooting and is fond of relating his first day's experience in Virginia.

The Captain's host, being particularly anxious to insure him sport of the best, with warnings that he was going to take him into a back country where some of the social amenities would have to be sacrificed for the sake of unusually excellent shooting, landed him on a bright November morning in—County, and had a goodly muster of local sportsmen well, if somewhat rudely, armed assembled to do the sporting honors of the neighborhood.

The Captain, though an excellent sportsman, was of that strictly conventional order so often found in the mother-country that like to follow the sports of the field under certain conditions fixed in his own mind, or not at all. His boots must be of a certain description, or they must be worn in a certain way, and he must be in a certain mood. His party must be either two or four—"any other number is absurd." He must be on a particular side of the line, or he cannot shoot. If a companion, who does not know any better or from a spirit of mischief, cuts down a bird in front of him, he is deeply shocked and scandalized—a heinous crime that can never be forgiven. So, when he found himself bestirring a Mexican saddle on top of a mule and going along at a shuffling canter, with six other sportsmen kicking up the dust with all sorts of gait and upon all sorts of quadrupeds, the rustiest and most (to him) unsportsmanlike-looking garments, with powder-horns and shot flasks that he never recollected to have seen before out of old armories and curiosity shops, he felt and looked a miserable man, and could not for the life of him reconcile such crude surroundings with "true sport." Everybody did his best to make him feel at home, as Virginians of all classes always do; but the Captain, having been in a quiet infantry regiment and a non-hunting man, was in agonies upon such a saddle and such a horse.

Some of the sportsmen, who had met together to do honor to the stranger's visit, did not handle their rusty old muzzle-loaders for two or three years. Others were not professed sportsmen at all, or, at best, turkey and squirrel men, and brought, in all good faith and in the highest spirits, the most awful blunderbusses to the fray, with a vague intention of having a frolic and a good time generally. The dogs, too, though each individually excellent—far more excellent, in fact, than they looked to the orthodox sportsmen—were out, in response to their owner's order, to demoralize and endeavor to transform themselves at a moment's notice into hounds or "possum dogs, when they thought that the occasion demanded independence of action.

This was nothing, however, according to the Captain, to the shooting. He declares that at no time during the day at Inkerman and the Alma, in both of which engagements he conducted himself gallantly, was he in one-half the danger that he was upon this memorable occasion. He says his horse, or rather his mule, was a good one, and he was under no special day—or shot from under him would perhaps be the correct term—for the noble charger left the Captain up in the ground, as I made for home with the deliberation and accuracy that only a mule, charged with a load of "pure cussedness" and half an ounce of No. 6 shot, can do.

The roar of musketry that followed the closing up of the column on a devoted covey resounded in his ears for three weeks after the day was over.

By two o'clock two dogs had fallen, one bull and the other a slightly wounded, and a negro boy had been shot twice—both times, fortunately, in the head. The Captain so far had not fired off his gun, as there was no such thing as outside and inside the line, and he had been so engrossingly occupied with ducking and dodging the leaden hail, which he declares fairly filled the air, that so far out of the forty birds (for there were some really good shots out) that had found their way into the bag he could claim none.

He thought he was getting used to it, and would soon be able to walk to get on a bird, when a stray wren got up behind him, was fired at by his next neighbor, who wheeled around for the purpose to utter disregard of sportsman number six, who, with his back to the gun but in a straight line with the bird, was tying his shoe against a fence about fifty yards off. A violent rubbing of the back of the head and a torrent of unparliamentary language from the said number six, was the only result of the shot. The shooter in the meantime, with his hand over his eyes, still marking the

sending bird, quietly observed: "All right, old fellow; I saw you had your back turned toward me when I fired!" The complete unconcern of Indian custom appeared to the Captain to be here distinctly indicated, and put a finishing touch to his already agitated nerves. "The rest of the day he devoted to keeping as near out of shot as common decency would allow, and in the morning was seized with a sudden indisposition that compelled a return to his host's house."

"The Capt'n's a right good fellow," observed one of that famous party to a friend of mine, who was himself hunting in the neighborhood the following year; "but, dorrnmed, if you can get him within a hundred yards of the dogs to save your life."

KINWOOD.

FOREST AND STREAM GAME TABLE.

OPEN SEASONS.

The seasons, in which it is lawful to shoot game in the several States and Territories, open as designated in the following table:

States.	Deer.	Woodcock.	Quail.	Ruffed Grouse.	Pinn. Grouse (Partridge).	Wild. Grouse.	Wild Turkey.
Ala.	Oct. 20.	Sept. 15.	Sept. 15.	Oct. 1.	Oct. 20.	Oct. 1.	Oct. 20.
Cal.	July 1.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.	Sept. 15.
Col.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Conn.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Del.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
D. C.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Fla.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Ill.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Ind.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Iowa.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Kan.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
La.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Mass.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Mich.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Minn.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Miss.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Mo.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Neb.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Nev.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
N. H.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
N. J.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
N. Mex.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
N. Y.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Ohio.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Pa.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
R. I.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
S. C.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Texas.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Vt.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
W. Va.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Wis.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.
Wy.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.	Sept. 1.

Antelope—Col. Sept. 1; Idaho, Aug. 1; Neb. Oct. 1; Nev., Aug. 1; N. Mex., Sept. 1; Utah, Aug. 1; Wyo., Aug. 1.

Caribou—Col. Sept. 1; Idaho, Aug. 1; Neb. Oct. 1; Nev., Aug. 1; N. Mex., Sept. 1; Utah, Aug. 1; Wyo., Aug. 1.

Mountain Sheep—Col. Sept. 1; Idaho, Aug. 1; Neb. Oct. 1; Nev., Aug. 1; N. Mex., Sept. 1; Utah, Aug. 1; Wyo., Aug. 1.

Pronghorn—Col. Sept. 1; Idaho, Aug. 1; Neb. Oct. 1; Nev., Aug. 1; N. Mex., Sept. 1; Utah, Aug. 1; Wyo., Aug. 1.

Reindeer—Col. Sept. 1; Idaho, Aug. 1; Neb. Oct. 1; Nev., Aug. 1; N. Mex., Sept. 1; Utah, Aug. 1; Wyo., Aug. 1.

Squirrel—Col. Sept. 1; Idaho, Aug. 1; Neb. Oct. 1; Nev., Aug. 1; N. Mex., Sept. 1; Utah, Aug. 1; Wyo., Aug. 1.

* In these States there are special county laws. a The deer law applies to sale or possession. b Wildfowl not protected on the coast. c In Upper Peninsula deer season opens Aug. 15. d California quail prohibited to hunt. e In California deer season opens Aug. 1. f Moose and Caribou, Sept. 1. g First open woodcock season begins July 1; will close Aug. 1. h Quail shooting prohibited to Nov. 1, 1882, in counties of Montgomery, Schuylkill, Berks and Albany. i Wildfowl season in Long Island waters opens Oct. 1. h Deer law relates to female deer only.

ARE THEY MONOPOLIES?

BRIDGEPORT, Conn., Sept. 10.

Editor Forest and Stream:

The question at issue seems to be conveniently pushed aside by the spokesmen of the opposition, and they rave about railroads, potatoes, etc., etc., as if they had something or other to do with shooting ducks. I simply mentioned railroads in connection with the general tendency of mankind toward monopoly and oppression, but they have no part nor lot in this discussion.

So far, not a solid argument has been used by them; but that modest little organization, the seventy-mile club, has not been heard from yet. Perhaps they will think of something that will utterly convert your humble servant into "anathematised." I am sure that the opening of this "on-pneumatized" that they had the legal right to deprive their brother sportsmen of any share in the pleasures of the field—if they had money enough to accomplish their purpose; but I also have the right to oppose them, and I will, but I mean to do it decently, and not get mad and throw potatoes and ugly epithets, for that would only prove that I had no arguments.

One wicked man calls me a communistic cuss, or words to that effect, and says: "Let everything be in common, and thus return at once to the worst state of barbarism and confusion." Now, that's good! But I'm afraid it was "wrote sarcastic," for that state of barbarism to which he wishes to return is just what we had till the monopolists began their work (though I never saw any "confusion"), and its just what we ought to return to with some modifications.

"X" of Cleveland, says: "There are hundreds of such clubs established all over the United States and Canada by the best of men and for the best of purposes—the protection and preservation of game, etc."

One game preserving club preserve it after it is dead; and if they protect it at all, they protect it from others so that they may have the exclusive privilege of killing it. All endeavors to suppress illegal shooting will meet a hearty response from every one, but not one of these men would raise a finger in that direction except in their own interests. Their motto is: "Protection and preservation of game for our exclusive benefit."

They have a game law in Connecticut, and it permits woodcock shooting from October 1, but in my travels through the State this summer, I was told that lawless

loafers had been shooting them all over the State since the 1st of July, and not a person cares or dares to stop them. It is much worse than no law, but it's the very thing these men advocate for it gives them all the birds. It is pretty well settled that no one but a paid game constable will arrest a man for illegal shooting, and these game clubs are no exception to this rule, except on their own domains.

My antipathy to game clubs is based on their selfishness. They are not content to buy up enough for their purposes, but they want to prevent all other sportsmen from ever having a day's shooting. There are never many members of any club on the grounds at a time, yet they claim jurisdiction over miles upon miles of shooting-ground. My hostility to market-shooters is as great as theirs, and if I had it in my power I would prevent any one from making a business of what ought to be an occasional pleasure. A market-shooter is usually too lazy to work, and is next thing to a vagrant. There is where the destruction of game comes in; and in looking after them, these clubs could find ample scope for their anxiety to preserve and protect game without owning the country for miles around them.

It is generally conceded that to be a Christian or a gentleman, it is necessary to believe in the Golden Rule. Are these advocates of monopoly ready to say the Golden Rule is all bosh? Some of the "best of men" are sportsmen, outside the clubs as well as in them, but the clubs have the money and can snap their fingers at them and ask, "What are you going to do about it?" I furnished them at the start with their only available argument: "We have the right to buy what we please and to do what we please with it."

DITMUS.

WILD RICE.

POUR LOVE, Ont., Sept. 10.

Editor Forest and Stream:

I see in your issue of September 1st an article by "Lutron," in which he speaks of my rice as being of the small kind. The rice of which I wrote in my letter of the 18th had not fully matured when I pulled it; it had but a very faint sign of a head, and would have grown two or more feet in length. Although the bed from which I pulled the stalk was growing in water six feet or more in depth, yet in the bays and some of the lake beds it grows in less than the same number of inches of water. All the rice in this lake grows from two to six feet above the surface. Night here allow me to state a fact: I never yet saw rice bear seed where the water had gone down to such an extent as to leave the roots dry; it would have a large and apparently well filled head, but upon feeling it you would find the seed vessel had never filled up, and that there was in fact no seed. I have seen places where the mud to the depth of three or more inches had from some cause risen to the surface, bringing the rice bodily and erect with it. In a case of this kind the seed would be good and the stalks large and strong.

Mr. W. F. Whitcher, Commissioner of Fisheries, wrote to me Sept. 5th of some seed—about fifty bushels—he got from me last fall. The following is an extract: "It (the rice) has since appeared very thick and high. I expect a fine crop if the water does not find the seed vessel had never filled up, and that there was in fact no seed. I have had some samples of Wisconsin, Minnesota and Michigan seed, yet none were to be compared to Rice Lake seed."

Most of those desiring rice wait until it is too late in the fall to sow it, and have to wait for spring. It will grow even if planted then, yet Mr. Whitcher and others besides myself have proved by experiments that it is not so sure a crop as it would be if fall planted. To give it a fair chance, at least several bushels should be planted. Wild ducks and geese, and where it comes to the surface and heads up, tame geese and blackbirds will feed upon it, and if only a small quantity has been planted they are almost sure to clean it out. If a larger amount has been sown it gets a chance to sow itself, and once it does that success is assured.

By to-day's mail I send you a sample of rice stalk pulled before it was matured, yet it is very large and has several stalks growing from one root. I also send you sample of new seed, some of which is full one inch in length and very plump.

CHAS. GILCHRIST, Fishery Inspector.

A WILD BUCK IN THE CITY OF VICKSBURG.

IN 1874 I was residing in the city of Vicksburg, Miss., not far from the business centre of the town. The rear of my premises looked out upon the shops of the V. & M. R. R., a couple of hundred yards distant, with an intervening canal and a pond.

One morning before breakfast, when in my back yard, I heard a hue and cry over toward the pond, and I went out, dozen workmen, with hammers, axes and other tools, in pursuit of something, which I supposed to be a fugitive thief or malefactor of some kind. I saw at the same moment a splash in the pond and then the antlers of a buck above the water. The deer swam through the pond and climbed the steep bank on my side, the men running around. I ran into the house and seized my gun, a muzzle-loader, which had been standing some time, loaded with No. 8 shot. When I came out the deer had gone over a spur, down into a small hollow and was making his way over a low wall, toward the Episcopal Rectory, on Cherry street, one of the principal thoroughfares of the town. The rector, Dr. Lord, was in his gallery, in his slippers, reading the morning paper, and was very much astonished at the spectacle. The deer, being very much exhausted, was cornered by his pursuers and I, taking up a close position, snapped both barrels behind his ear. I then took a pistol out of the hand of a negro and shot the buck in the forehead, but his nose being elevated the bullet glanced over without entering the skull. He was then struck on the head with an axe and tumbled over the wall.

The negro, a young man named the carcass, as he had run through their shop and they had found him. I claimed the horns, which I have yet—a very pretty pair.

It seems the deer had been run by hunters out of Big Black Swamp, some twelve miles distant, and got bewildered in the suburbs of the town in an exhausted condition, having been pursued all night by hounds.

MAROONER.

season the old birds are very careful to keep their young hidden in the long grass. A dog is necessary to insure successful sport, but the sportsman will need to be careful to look to the condition of the animal every night, as the "wild harrier" sticks to the coat and, unless removed, draws itself into the flesh and eventually leads to death. Ducks are plentiful wherever there is water. Every pond and little lake you passed swarmed with them, principally mallards and gray ducks. There were, too, black ducks and blue-winged teal of all ages and sizes, from the full-grown ones down to the flappers and the little fellows in their "yellow fluff" but a day or two out of the shell. We could quite understand what a settler would have said when he could not look at a duck in the face. Flocks of all kinds and "snipe also about in places, and in the autumn this must be the sportsman's paradise. A few moose are found in the Pembina Mountains, some of very large size. Elk are more plentiful. At Mountain City we saw the heads of two which were shot last winter within a mile of that place, the horns of one being nearly five feet long. At Pembina Crossing we were told of eighteen having been shot there last winter, and of three having crossed in sight of the stopping place on the morning of the day of our arrival. There were no deer, but we saw both wolves and foxes, one of the former on the banks of the Pembina, not three miles from Brandon. Geese, sand-bill cranes (of which we saw a couple of dozen), and pelicans make up the list of the game which came under our notice."

THE SATURDAY CLUB EATS VENISON.—Last December, Dr. Theophilus Parvin, of Indianapolis, who is an intimate friend of Dr. Oliver Wendell Holmes, sent to the latter a saddle of venison. The characteristic reply from the poet was as follows:

BOSTON, Dec. 28.

My Dear Dr. Parvin:

The venison arrived in perfect order. I suppose that Mrs. Holmes and myself could have feasted on it for a month and found ourselves in good condition at the end of it. But I felt a solemn responsibility in the disposition of such a monumental piece of game, and I thought the best thing I could do was to have it served up at the meeting of our "Saturday Club," which was held yesterday. The club, which included a number of members for more than twenty years, has included, and still includes, many whose names you know. In fact, it has counted so many distinguished persons that I am perhaps a little proud in mentioning the names of those whom we have met or still meet in the large club room at "Parker's" Agassiz, Longfellow, Hawthorne, Emerson, Lowell, Sumner, Gov. Andrew, Motley, Chief Justice Gray, Judge Hoar (formerly Attorney-General of the United States), Prof. Pierce (head of the Coast Survey, etc.), President Eliot, Alexander Agassiz, Francis Parkman (historian), Howells, William Hunt (painter), Asa Gray. Is not that a remarkable list? Some, as you know, are dead. Emerson is too old and forgetful to come; Lowell is Minister to England, and so on, but we had President Eliot, Francis Parkman, Judge Hoar, Alexander Agassiz, Prof. Norton, Gibbs and Gurnay, and other persons of name and note less widely known than some of these. I introduced the venison in a very brief speech, telling you sent it and where it came from. Very soon the blazers or blazes—I can't find the word in my dictionary—were adrift all round the table. Then ensued a remarkable silence, each diner being occupied with his volcano for a while, and then with the product of his culinary art. Well, the venison was voted more than excellent. I should say it was the best I ever tasted. The company drank your health with great enthusiasm and loud applause, and I felt that I could not have done better in the disposition of your most acceptable gift. For my own part, I beg you to accept my very sincere thanks, and to assure you of the great pleasure you have afforded me by your kindness which enabled me to extend to others. Believe me, my dear sir, very truly yours,

O. W. HOLMES.

WISCONSIN DEER SLAUGHTERED THE YEAR AROUND.—Chicago.—I have just returned from a two-months' trip through Wisconsin and Michigan, and I was greatly surprised to find that in some parts of the former State the game laws were entirely ignored and openly violated. The open season for deer commences Sept. 15 in Wisconsin, and the hunters take knowledge deer were slaughtered by the hundreds for the months of July and August of this year. Deer meat is kept on hand the year around at the butcher's shop in Peshtigo, Wis., and the citizens of the latter place are never happy except when they are butchering fawns and does out of season. Their plan of shooting is to go out in large parties, accompanied with a score of hounds, and set the dogs on a fresh deer trail. If they are lucky, and they generally are, they run the deer to the river, where pickets are established, and when the deer attempts to swim across he meets with a volley from the sharpshooters and musketeers of the "pickets" which is liable to end his days. In the vicinity of Marinette and Oconto the same state of affairs exists, and unless the game laws of Wisconsin are rigidly enforced the deer will soon be all exterminated.—C. V. T.

ILLINOIS GAME NOTES.—Quincy, Illinois, Sept. 4.—A few days ago, my friend H. S. and I went to Bay Island, a few miles above here, after woodcock; had only about three hours' shooting, and bagged seventeen woodcock, besides three blue wings. We had very high water the spring, and the old seeds were washed up the high, across the shores of the rivers, lakes, and swamps, and covered with a fine growth of grass. We had summer we had yards upon yards of paddy and to go over before we came to the water's edge. This made fine woodcock ground. The birds are plenty, but most of the shots are snap shots, as the birds have but a few yards to go before entering the tall weeds from ten to twelve feet high, resembling a real old-fashioned canebrake. The fall shooting near here will be unusually fine, consisting of quail, prairie chickens, ducks, geese, etc. We also look for good spring snipe shooting.

Over the outlook is even better, especially for fall shooting, including turkey. We are going over there chicken shooting as soon as business permits.—J. A. B.

RARE SCORES.—Chester, Pa., September 11.—Inclosed you will find a score of birds killed for the week ending September 11, 1881, which I think is good:—Sept. 4, B. Harris, 52; C. Goff, 45; Ike Rothwell, 43. Sept. 5, P. Allen, 45; C. Goff, 47; Harris, 34; Driskett, 23; D. Brown, 28; Sept. 6, B. Rump, 23; C. Goff, 47; B. Harris, 41; Rothwell, 38. Sept. 7, Allen, 33; Harris, 48; Rump, 35; S. Preston, 23; C. Goff, 36; D. Brown, 31. Sept. 8, B. Rump, 59; S. Preston, 63; P. Allen, 30; J. Rothwell, 51; B. Harris,

39; D. Brown, 27; J. Miller, 33; B. Drisket, 35; E. Rump, 31. Sept. 9. D. Brown, 35; S. Preston, 45; B. Rump, 31; S. Brown, 53; J. Rothwell, 38; C. Goff, 31; N. Rump, 52; J. Miller, 40; B. Harris, 44; J. Rhoads, 107. Sept. 10. J. Rothwell, 31; B. Harris, 44; Bartleson, 55; P. Brown, 35; S. Preston, 35; B. Rump, 40; C. Goff, 49; J. Preston, 35; N. Rump, 43; S. Brown, 49; J. Miller, 31.

ADDITION GUN CLUB.—The annual meeting of the Audubon Gun Club, for the election of officers for the ensuing year, was held last Monday evening at their club rooms, 31 West Street. The following officers were elected: President, Robert T. Sabin; Vice President, E. J. Schaffenberg; Secretary, Henry Beer; Treasurer, Frank N. Gehring. The club also held their twelfth monthly and final competitive contest for the club medal last Thursday, at Newtown, L. I. Twelve members participated in the match, which, toward the finish, grew quite exciting, from the fact that a tie shot took place between three members, of whom two, Messrs. P. Post and R. T. Sabin, had each won the medal three times during the year. Finally, after four ties had been shot off, Mr. Post won the medal. —LA GAZ.

THE SCARCITY OF BAY SNIPES.—Your correspondent "L," in issue, Sept. 8, wishes observations on the growing scarcity of bay snipe and plover. Each succeeding year for the past twenty-five years has shown a decrease, and the past ten years the decrease has been very rapid. Spring shooting and breech loaders are especially to blame, but eging at Coby's Island, "writing up" shooting resorts by hotel keepers and enthusiastic amateurs, who "give away" the places dear to sportsmen, establishing watering places along the coast and shooting by the coast. Life-saving crews are the principal causes of the diminished numbers of bay birds. Men and boys tramping about the meadows and sand-bars instead of shooting from ambush, also tend to frighten the birds from our shores. —CUTLER.

GENERAL SHERIDAN'S PARTY.—CHICAGO, Sept. 10.—General Phil Sheridan and party, consisting of General Strong, Colonel M. V. Sheridan, Colonel Gregory, Edwin B. Sheldon, and Inspector-General Sackett, of this city, returned last Tuesday from a big hunt and exploring expedition, which extended through Wyoming, Montana, and Idaho. The party's line of travel was through the Black Hills, then over the Snow Mountains, and then down to the Yellowstone National Park. The country traveled through was full of game, and the elk, which bears the small game was killed, that could make use of. General Sheridan reports that the streams well stocked with trout. Ducks and chickens are very numerous here at present. —"TEX BORG."

IN THE DAYS OF MUZZLE-LOADERS many ludicrous mistakes in loading were made when the abundance of game prompted to haste. Our correspondent "Dell" tells of such an experience: "In my frantic haste I got both loads of powder in one barrel and both loads of shot in the other. An old gunner now came directly on the opening day of the season, and I took careful aim, and the result was a winged goose, but he got away, minus nearly all his feathers. The next shot was a double, and, as will be imagined, I stood drawing the shot from my left barrel with a look of mortification on my face, for the larger one of the pair raised a short, startled "honk," and winked one eye at me as he soared but a few feet above my crazy head.

THE HACKENSACK RAIL SEASON.—New York, Sept. 8.—I notice in your correspondent's account of rail shooting on the Hackensack that he states that rail are not so plenty as last season. I have been out every first day for the last ten years and never saw rail so plenty as on the opening day of this season. We only pushed over a little bit of the ground and most of it had been shot over. I brought in forty-five birds that day and since then larger bags have been made. —W. HOLBERTON.

"LEFT-EYED SHOOTING."—Will you be kind enough to "Invidius" to inform him that, if he will try the experiment he has mentioned with his left hand, he will find himself "right-eyed" according to his theory. Evidently he used his right hand before, which made him "left-eyed." As he can thus prove himself to be both "right-eyed" and "left-eyed," he must blame the gun or the game for his bad shooting. I believe it is always safest to blame the gun or the charge. —D. (Girardville, Pa.)

DUCKS IN SULLIVAN COUNTY.—Wild ducks, such as wood ducks and black ducks, are here in great numbers. I have never known them so plenty before. Some good shooting can now be had, and here is the place—via Erie Railroad to Shohola Station. My house is six miles from Shohola, and I will meet all parties on appointment. Address J. M. Bradley, Eldred, Sullivan County, N. Y. I have boats, dogs and guides.

VERMONT WOODCOCK.—East Townshend, Vt.—A part of our grounds are well stocked with the woodcock, and I think I am the only one that knows what they are. Ruffed grouse are thick, and up to the present time are not wild and the flocks are not broken up any. Ducks are not plenty, but there is a flock now right in front of my window of fourteen redheads, and full grown. —H. T. E.

KENTUCKY GAME NOTES.—Mt. Sterling, Ky., Sept. 9.—Partidge are plenty. The first hatching full-grown birds strong, the second hatching still gray, but doing finely. There is a numerous second crop, it having been dry and nothing to prevent full broods. The hawk bounty has been a blessed success, so this fall every club offer a bounty, and we can have many more birds to put in bag. —VAN A.

WOODCOCK IN PENNSYLVANIA.—A Philadelphia correspondent reports that the spring swarms of Lehigh County, Pa., were taken possession of this year for housekeeping purposes by a greater number of woodcock than ever was known before. Just before cold weather will be the time to catch these fellows in that section of the country. Ruffed grouse may be come across on nearly the same grounds at the same time.

AMERICAN QUAIL IN ENGLAND.—Several "empts" have been made to introduce "Bob White" into England, several thousands of the birds having been at different times imported into that country. All of these importations were unsuccessful.

We have received from Mr. J. Page Fisher, 112 N. 12th street, Philadelphia, a copy of his "Pocket Edition of the Game Laws of New York, New Jersey, Pennsylvania, Delaware and Maryland."

NEWPORT NOTES.—Newport, R. I., Sept. 5.—Plover, rail and some snipe are shot on the marsh every morning. Black-fish, bass and bluefish are the principal fish sought for, and good catches are made every day from the piers, rocks and boats.

Ice water is rendered harmless and more refreshing with Hop Bitters in each drop.

For the names and descriptions of every description go to C. L. Kitzmann, 912 Broadway, New York.—Ad.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.
Crayfish, *Thymallus trieter* and *T. montana*.
Black Bass, *Micropterus salmoides* and *M. poliopterus*.
Muskellunge, *Esox nubilus*.
Pickering, *Esox reticulatus*.
Pike or Pickerel, *Esox lucius*.
Brook Trout, *Salvelinus (pike) gairdneri*.
Stizostedion, *Micropterus* (pike) *gracilis*, etc.

SALT WATER.
Sea Bass, *Centropristis striata*.
Striped Bass or Rockfish, *Morone saxatilis*.
White Perch, *Morone americana*.
Bluefish or Taylor, *Pomatomus saltatrix*.
Scup or Porbe, *Stenotomus argenteus*.
Pompano, *Trachurus carolinianus*.
Tautog or Blackfish, *Tautoga onitis*.
Spanish Mackerel, *Scomber maculatus*.

FRESH WATER.
Yellow Perch, *Perca flavescens*.
Striped Bass, *Roccus lineatus*.
White Bass, *Roccus chrysops*.
Rock Bass, *Ambloplites*. (Two species).
War-mouth, *Channobryttus gulosus*.
Crappie, *Pomoxys nigromaculatus*.
Buckeye, *Pomoxys annularis*.
Shub, *Seneciolella corporalis*.

SALT WATER.
Weakfish or Quetques, *Cynoscion regalis*.
La Fayette or Spot, *Leiostomus xanthurus*.
Clamper Bass, Spot or Redfish, *Microgobius ophiodon*.
Sheepshead, *Archosargus probatopterus*.
Kingfish or Barb, *Menticirrhus nebulosus*.

AN ANGLING DAY.
A LONG by the banks of a rushing river;
Alone, alone, with the birds and daisies;
The birds that sing,
And the daisies that smile,
That memories bring
The soul to beguile,
That such things may be forever,
Alone by the banks of a rushing river;
Alone, alone, with the past and future;
The sunbeams that gleam
From the mountain's wall,
And the shades that fall
In the day's advance,
Tell that such joys can't last forever.
W. H. HANBROCK.

AN ICHTHYOPHAGIST COMES TO GRIEF.

ONE of the most daring of the Ichthyophagists Mr. Thomas J. Murray, Steward of Glen Island. He dives into the water (this is a figure of speech, as A. Ward would say) and, if he does not pluck up drowned honor by the locks, he at least brings up things most strange to himself; for he is known, and not at all to his disgrace, that the accomplished caterer of this famous summer resort, with his great interest in the fish-eating club with the hard name, is no zoologist. We have embalmized in our columns how he has dared to experiment with the despised starfish, and pronounced them excellent in a lique of his own making. And now we record what we are glad has not turned out a tragedy, although every morning we are prepared to read in the daily papers that the Coroner's jury have decided that Mr. Murray came to his death by eating of some fendish and diabolical marine monster, whose name and habits are unknown to the said jury. The facts are these. Last week we received a letter as follows:

"STARR'S GLEN ISLAND, Sept. 10.
"To the Scientist of the Ichthyophagists Club:
"I am in trouble at last through my propensity to experiment with the unknown inhabitants of the vasty deep. I inclose you a shell or outer habiliment of the individual which made this trouble. I don't know the name of it, but presume that it is familiar to you. I made a stew of the mollusk who wore this stony overcoat, and I ate the stew. Then began the trouble alluded to. Shell-bearing mollusks, I need not tell you, are not wary of the swiftness of their movements in life, but the way that stew "traveled" was marvelous. What in thunder is it?
"T. J. MURRAY."

The shell in question is one commonly found on the outside of oysters, scallops and other shells. It is a univalve and is known to science as *Ureplida fornicata*, and the children who pick up the empty shells along shore call them "boat shells" and "lady's slippers," on account of the transverse partition in the middle. We are greatly pleased to know that the daring experimenter has met with nothing worse than what might be called "dissoving views" in his researches after the eatable among the neglected mollusks of our coast.

FISHING NEAR NEW ORLEANS.

A WRITER in the New Orleans Democrat says that the fall-fish are coming in now. That salt water fish come into Lake Pontchartrain freely because of the absence of Mississippi River water to freshen it, he says.

"Since the low water in the river and the cessation of the flow of water through Bonnet Carre Creek, the increase in the number of fish in Lake Pontchartrain has been tenfold. The water in the lake is once more assuming its transparency, and again the needle fish and mullet play around the wharf. Sheepshead have been caught off the old break-water outside Milneburg, and flounders on the flats near West End. This return of salt water fish is hailed with delight by all those living along the shore, and they are all united in hoping for the closure of the crevasse.

"One fisherman in speaking to the reporter said: 'You don't know, sir, how much the people of New Orleans would be benefited by having that crevasse closed up so that no river water could pass through. As it once was the fishing smacks could bring their red fish, red snappers, and other fish caught outside in deep water, alive and kicking right up to the city. Since river water has been running into the lake all the fish supply must come either by rail on ice or from Terre-aux-Bœufs in wagons, or from Bastarion. Fish transported in that manner cannot be good. With the crevasse stopped we can bring fish alive in the wells of our smacks right up to West End, and they will be alive on reaching market.'

"We have the best fish country (?) in the world, and it is a pity that on account of a little break in the river a whole city has to have its fish supply brought to it on ice. I don't believe it's healthy. Why, I can remember the time that sheepshead, croakers, red fish, flounders, sea trout and numerous other good eating fishes were most plentiful in the lake. Look what it is now or what it was a month ago. Nothing but cats. You'd bait your hooks out on the croaker banks, get a bite, and haul in a nasty little cat-fish. You just go around and ask the people living on the lakeshore about that crevasse. Ask the captains of schooners. They will tell you fish are driven away, the lake is shoaling, the oyster beds outside are being ruined, and all for the lack of a little money to shut that plaguey thing up. There ain't any use in looking to the government to do it. They don't care for Lake Pontchartrain, but we fishermen do, and the people of New Orleans ought to. You just tell some of them chaps with plenty of money, who like good eating, to help clear that crevasse up and they will have fish what is fish. The Democrat can close it up if it pushes it, for the people will when they see it in the right light, back up the paper with the stuff."

"The fisherman went on much in the same strain for some time as he tarried his seine."

GULF FISH AND HOW TO COOK THEM.

[From a Tract issued by the Pensacola Ice Company.]

RED SNAPPER.
This fish, varying in weight from three pounds to thirty, should be either boiled and dressed with drawn butter and egg or oyster sauce; baked, stuffed with oyster dressing or plain; broiled after slicing lengthwise, removing the back bone; fried, dip the slices in corn meal and cook in hot pork fat, Cape Cod style.

BLACK GROUPER.
This fish, with flesh similar to halibut, should be skinned, then cook same as snapper.

RED GROUPER.
This fish has a distinct lobster flavor. Skin and cook same as snapper; requires more cooking, as the flesh is harder; when well done, will suit the palate of any lover of good eating.

BLUE FISH.
Eat this fish broiled, fried or baked. Prepare for baking by stuffing, and score with a sharp knife to backbone, and insert thin slices of fat pickled pork. For broiling, split open down the back; clear fire and only one turn.

POMFAC.
Split down the back, clear through the head; dry with a cloth; broil over a clear fire; be careful not to burn; salt only after the side is cooked and turned up; dress with a little good butter and the fourth of a good lemon dropped on the flanks and centre; when hot it will permeate and develop its unsurpassed nutty flavor. Lives there a man with soul so dead, etc.

JAUREL (PROPOSED "WARRELL").
This fine fish is best adapted to the pan. Clean and score to the backbone with four cross cuts, fry in sweet pork fat or olive oil, and you will be able to emulate the secretaries of a certain corporation, who are five at one sitting on board one of our smacks and then quit only in consideration of the feelings of the fish. Baked similar to the bluefish it is rich and highly flavored.

SILVER WHITING.
This fish, equal to the speckled brook trout, treat in a similar manner. Sheepshead, spadefish, salt-water trout, bass and blackfish, ditto.

SPANISH MACKEREL.

Cook same as the pompano.
MEM.—In all cases a hot fire and clean dish. Of the forty varieties in use "from the depths of the sea," we commend all for varied qualities of nutritive and flavor.

Some of our friends in the interior who submit them to the trying ordeal of "frying in warm oil" over a slow fire, never will discover that they are other than "almost as good as cat" until they treat them with good cooking and common sense. By order of NEPTUNE'S "CHIEF COOK."

THE GREAT LAKES FISHERIES.—The fisheries of the great lakes lying within the United States are confined to eight States, and form an important industry. A forthcoming report from the U. S. Census Office for 1879, the business employed 1,676 vessels, of which 19 were steam tugs, and 5,650 fishermen. The annexed table gives the number of men and the amount of capital contributed by each State engaged in the fisheries and the value of the product which accrued to each:

	Fishermen.	Capital.	Product.
Minnesota	319,160	25,400	2,500,000
Wisconsin	800	2,225.00	234,000
Michigan	1,781	417,005	716,170
Illinois	390	43,000	81,000
Indiana	52	29,300	32,500
Ohio	1,010	475,000	515,420
Pennsylvania	1,010	475,000	515,420
New York	922	20,000	134,750
Total	8,950	\$1,315,015	\$1,745,000

The heaviest fisheries are on Lake Michigan and Lake Erie. The value of the products for the several lakes during the year are set down as follows: Lake Superior, \$105,535; Lake Michigan, \$612,410; Lakes Huron and St. Clair, \$349,365; Lake Erie, \$578,690; Lake Ontario, \$138,050; total, \$1,784,050. The products were marketed in the following conditions: Fresh fish, \$1,102,950; salt fish, \$402,670; frozen fish, \$123,100; smoked fish, \$109,970; caviar, \$34,310; sturgeon, \$6,705; oil, \$2,280; total, \$1,784,050.

The foregoing shows the value of the products, being in excess of 100 per cent. on capital invested.

A PENNSYLVANIA RESORT.

STRICKTON, Dauphin Co., Pa.

I desire to add my mite for the benefit of the disciples of the rod and gun. White House Station, on main line of Pennsylvania Railroad, seven miles east of Harrisburg, in this county, is an excellent place for bass and salmon fishing from June 1 until winter. The river is also full of the more common varieties of fish, such as carp, chub, cat fish, mullet, a few rock fish, and plenty of shad in season. There is also excellent duck shooting in the spring and fall. Hotel on river bank. Accommodations plain, but good and substantial. For particulars address, with stamp, E. M. Stoner, High Spire, Pa.; R. M. Neiman (prop'r hotel), High Spire, or the writer at Strickton, Pa. Boats plenty at low rates. Mr. Neiman was for a number of years a resident of the lumber regions of this State, and to persons wishing it could give all the necessary information in regard to the trout and bass streams of Northern and Central Pennsylvania. The hotel is a popular stopping place for lumbermen and raftsmen on their down river trips, and from them the sportsman could gain much valuable information in regard to choice trout streams and game regions known to scarcely any one else but these hardy backwoodsmen of the mountains and forests of Pennsylvania. All way passenger trains stop at White House.

JOHN H. HORTHOKE.

FISHING AT BEAUFORT.

NEW BERN, N. C.

FISHING at Beaufort and vicinity is now at its height, and all the species usually taken here are plenty, especially Spanish mackerel and bluefish. The harbor is alive with boats in charge of capable men and occupied by amateur fishermen who, with hook and line, catch in a short time such quantities of fish as newly arrived anglers could not obtain elsewhere. The result of active fishing. Postmaster Hubbs of this city, Internal Revenue Collector White and his chief clerk, Tinker, constituted a party in the Ives Sharpie Lucia, in charge of Captain Ben Piegott, and had admirable success in taking the members of the finny tribe. Although these gentlemen, leading as they do comparatively sedentary lives and lacking the experience that unlikes good fishermen, hauled in on this occasion seventy handsome Spanish mackerel and seventy-nine bluefish. One of the former, caught by Mr. White, measured thirty-seven inches in length and weighed nineteen pounds—the finest caught this season. In this connection one of this party assures us that whole schools of fish are disputing themselves, the big ones eating the little ones, and the whole hovered over by gulls, who dive down for their prey.

G. N. L.

SALMON FISHERIES OF SCOTLAND.—From the *Scottsman*, of Aug. 26, we learn that the net salmon fishings on the Dee and Don terminated on the 25th. The season has been a very successful one. At the outset the returns were comparatively poor, but as the season advanced the catches of fish largely increased, and at the close the yield from both rivers was considerably ahead of the last two years. In the latter end of July, and during the present month the netter Don has yielded between 300 and 400 fish per day. The fishing on the Dee all round was over an average, the greater portion of the fish having been got at the Pot and Fords. From the middle of June onward big hauls have daily been got, and it is estimated that not for twenty years have so many fish been got at these stations as there have been got this season. The returns at the Mill-ingham were also good. Since the beginning of the earlier season the fishing has been interrupted by disagreeable weather. The best catch of the season was got about the middle of July, when some 600 fish were landed in one day from the Pot and the Fords on the Dee. All through the season the quality of the fish has been good. Price for salmon in Aberdeen has varied during the season from 2s. 8d. to 10d. per pound, and grise from 1s. 6d. to 9d. per pound. Quantities of fish were retailed for the Aberdeen market at London prices, but the greater part of the fish went sent by train and steamer to the London Market.

STRIPED BASSING AT NEWPORT.—Wm. Rotch Wister, Esq., of Philadelphia, has recently returned from Newport, R. I., and is reported in the *Germaniston Telegraph* as saying that striped bass fishing was very successful there just before his departure. One angler succeeded in taking nine fish in one day, aggregating 450 pounds in weight. Angling there for this fish is quite as expensive as angling for salmon in Canada. It bites best when the ocean is rough. The angler rents one of the small rocks which abounds in the vicinity. The fish is prevented from being washed off it into the sea by an iron railing. He engages a man to bait the ground for days in advance of the time he intends to fish. He may remain there every day for a week without getting a single specimen. The tackle used by these anglers is the best which is made, a rod and reel not unfrequently costing \$200. Much skill is required in landing large fish, an hour or longer not unfrequently being spent in this exciting amusement.

UNWILDERFUL FISH AT BILLINGSBURY.—We learn from *Land and Water* that during the month of July the fishermen appointed by the Fishmongers' Company seized at Billingsbury Market, and on board boats lying off that place, 33 tons 15 cwt. of fish as unfit for human food. Of these 54 tons 18 cwt. came by land, and 38 tons 17 cwt. by water. Nineteen tons were shellfish. The single fish numbered 99,937, and included 8 catfish, 10 cod, 18 crabs, 50 eels, 250 conner eels, 500 dabs, 81,500 haddock, 2,300 lobsters, 750 mackerel, 4,822 plaice, 630 skate, 73 pairs of sole, 1 sturgeon, 245 turbot and 8 450 whiting. There were also 10 barrels of crabs and 12 of pickled herrings, 168 bags of mussels, 4 of oysters, 30 of periwinkle and 106 of whelks, 8 kits of pilchards and 1 of brans, 1,648 gallons of shrimps and 55 quarts of whitebait.

When an arm of the sea encircles a neck of land look out for fishing smacks.—*Yonkers Statesman*.

BASS IN SWARTSWOOD LAKE.—Newton, N. J., Sept. 8.—A party of three gentlemen from Newton caught forty-eight pounds of black bass in Swartswood Lake last Monday morning. The largest bass weighed four and one-half pounds, and the others weighed four pounds. The fish were brought to Newton to-day, and attracted much attention. Nearly all the lovers of the sport in the town have gone, or are about to go, to try their luck. The lake was stocked with bass a few years ago by the State Fishery Commission. Previous to this time few had been caught. Since Monday's excitement, however, the yield has been large and constant, affording the greatest gratification to the successful anglers. The bass are caught with the little black crickets as bait.

THE STREAMS DRY.—Pittsburg, Pa., Sept. 6.—We are having a severe drought in this part of the State, and in consequence the rivulets and mountain streams are dry and our rivers are lower than ever known but once before. The fish are reported all dying. A gentleman, just in my office, who came down Monongahela River this morning, reports seeing large numbers of dead bass and other fish along the river, on the rocks, and along the river bank. A few more days of such weather will certainly kill all the fish in our streams, except possibly those in deep holes.—L. R. S.

TROUT IN THE THAMES.—Mr. J. Harrington Keene, in the *London Fishing Gazette*, favors the extermination of pike in the Thames and the establishment of a large trout hatchery thereon. He thinks that a seven years close time for Thames trout, a yearly introduction of the true trout of the river, coupled with a persevering decimation of the eels and pike, would render the river the finest trout stream in the world. We know little of the local peculiarities of the river, but on general principles we agree with Mr. Keene.

HOW DOES A BLACK BASS TAKE A CRAWFISH?—Paris, Ky. One thing has been agitating our fishermen—viz., How does a black bass swallow a crawfish? Which end of crawfish ahead? The contest waxed warm, and they agreed to leave it to FOREST AND STREAM for decision.—CARPOT.

We have the impression that the black bass takes the crawfish by the tail, but as our observations have been limited we would like to hear from others on this subject.

TO A CLAM.

I LOVELY TANGENT of the sea,
Shell-bound doughnut dead to me,
Dear to me where ripples play,
On the beach at Rockaway,
Dear to me as porgie bait,
Dearest still upon a plate,
Dear as porgie to the wish,
You eclipse all other fish.

Far beneath the sizzling wave,
Leaving touch some coral cave,
How you waltz in happy glee,
Merrily make their golden bags,
How you close one eye and grin
At the clumsy terrapin—
While you watch the blue fish grab
At the nervous soldier crab.

Little saline dealgud,
Pisces in a peppy pod,
Lying on the ocean bar,
Thinking at the lappet star;
Humors, below the surface,
Cousin of the cod fish ball,
How you set my soul a-dream
With your aquatic steam.

Ever you lead a quiet life,
For you never get a wife;
Ever your earthly pain elude,
In your sandy solitude.
I would I were a clam like you,
With a seaweed outfitline
In mid ocean's deepest dives
Far from clashing oyster knives;

Far from Rockaway hotels,
For you never get a shell;
Far from Samuels's and Mott's
Patent liver chowder pots;
The fish market, which my chain
With a diabolo grin,
Vowing man should never scoop
Me in Coney Island soup.

Mr. M. T. Bailey has a clam, in *Snook's Sunday Times*.

Fishculture.

FOCUS IN THE HISTORY OF FISHERY.—The conclusion of Prof. Goode's "Epochs in the History of Fishiculture" is in type and will be given in our next issue, its publication being deferred to that time that the proofs may have the author's supervision.

FISHCULTURAL NOTES.

North Carolina has a shad hatchery at Avoca and a trout hatchery at Morgantown, both under the charge of Mr. S. G. Worth, the Acting Commissioner of Fisheries. The State Fishery Commission has at their hatchery at Red Wing, in charge of Mr. S. S. Watkins, brook trout, California salmon, rainbow trout, Atlantic salmon, lake trout, wall-eyed pike, yellow perch, and hybrids between the brook trout and quinnat salmon. The hatchery at Madison, Wis., in place of H. H. Welser, resigned.

Mr. William H. Forman, the veteran trout culturist of Maspeth, near Brooklyn, N. Y., has bought a place on the Nissequogue River, Long Island, and is making trout ponds there. He has a fine place near Smithtown.

The Maine Commissioners are stocking lakes with black bass. They have also stocked the Rangeley Lakes with whitefish.

CARP IN KENTUCKY.

PARIS, Ky., Sept. 10.

Fish Commissioner Dr. W. Van Antwerp, of the Ninth District, has been turning his attention to the carp which have been placed in the hands of private parties and can therefore be protected, for our public waters are depleted by the cured giant powder and seines, so the only fish that can be protected are those in private ponds. Our country is plentifully covered with artificial ponds for stock water, they average from three to ten feet deep, with muddy bottoms, and aquatic grasses furnish plenty of food with an occasional bunch of cabbage and lettuce from the garden, and they are happy and grow finely. From four inches I have measured and weighed them, and find their growth very even—one foot, one foot and fourteen inches, one and one-half feet. The leather carp being larger than the scaled variety, the farmers who have them are very enthusiastic concerning their culture, and I know if Prof. S.

F. Baird could hear the words of praise he gets for their introduction he would feel happy.

I learn from a friend that Dr. Van Antwerp has promised to get some pamphlets on the growth and culture of carp from Prof. Baird, and distribute them to the lake and pond, that the knowledge of the requisite of this valuable fish may be more widely known. A discussion as to the taste merits of the carp resulted in a practical test. A company of epicures dined of black bass and carp recently in Clark Co., Ky., and they say no difference exists as to flavor that they could discover.

CARPOT.

For the Holidays.—A Present which will be kept and remembered for years is a fine Graphoscope or stereoscope with some handsome Photographs of celebrities. The largest and finest assortment to be found at L. Ritzmann's, 913 Broadway, New York. Will send Photograph of any celebrity desired per mail.—Ad.

At the change of life nothing equals Hop Bitters to allay all troubles. Incident thereto.

For a good Razor go to C. L. Ritzmann, 943 Broadway, New York.

For a good Boy's Knife or Spring Back Knife go to C. L. Ritzmann, 943 Broadway, New York.—Ad.

The Kennel.

FIXTURES.

BENCH SHOWS.

September 21, 22 and 23, at Franklin, Pa., Franklin Sportsman's Club and Game Protective Society Bench Show. Entries close September 15. Thos. D. Adams, Superintendent; P. O. Box 61, Franklin, Pa.

September 27, 28, 29 and 30, at London, Ont., London Dog Show. Entries close September 12. Charles Lincoln, Superintendent, Tecumseh House, London, Ont.

December 14, 15 and 16, at Lowell, Mass. Lowell Dog Show. Entries close December 6. Has. A. Andrew, West Bedford, Mass., Superintendent.

FIELD TRIALS.

September 13 and 14, at Pittsburgh, Pa., Collie Trials, held under the auspices of the Pennsylvania State Agricultural Society. Entries close September 8. J. B. Leveley, Secretary, Pennsylvania State Agricultural Society, Harrisburg, Pa. September 22, at Franklin, Pa., Collie Trials, held under auspices of Franklin Sportsman's Club and Game Protective Society. J. B. Leveley, Secretary, Franklin Sportsman's Club, Franklin, Pa. October 1, at New York City, Collie Trials, held under auspices of Eastern Field Trials. Entries commence on Thanksgiving Day. Jacob Pentz, Secretary, P. O. Box 24, New York City.

October 19, 20, 21 and 22, at Masonville, Fayette Co., Pa., via boat from Pittsburgh. Pennsylvania Field Trials. First Annual Derby. Entries close at Pittsburgh, Pa., October 15. I. L. Clayton, Secretary, 201 North 10th St., Pittsburgh, Pa. November 3, at Gilroy, Cal., Collie Trials, held under auspices of Gilroy Club. Entries close November 1. E. Leveley, Secretary.

December 25, Louisiana State Field Trials. Entries close November 1. Edward Odell, Secretary, New Orleans, La.

November 5, at Grand Junction, Tenn., National American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

NEBRASKA FIELD TRIALS.

AT CAMP, TEN MILES N. W. OF NORFOLK.

THE second annual Field Trials of pointers and setters under the auspices of the State Sportsman's Association, of Nebraska, was held at this place some ten miles northwesterly of the thriving little town of Norfolk on the east side of the north fork of the Elk-Horn River, in Platte county. The encampment was located on a high point on the left bank of the river, a beautiful stream of clear, wholesome water, skirted by one of the handsomest and richest valleys in the State, and at this point about five miles wide, and studded with fine fields of corn and groves of forest trees—planted and nurtured by the deft hands of the farmers of the State. Here upon this big plateau of "smooth-slaven grass" stands four canvas tents. The largest one, a hospital tent, is assigned to the cuisine. The three smaller ones for the use of the attendants, competitors and the judges. No more fittingly expected of their ages, and when the last peg had been driven to hold the trusty tent cords in place we felt ourselves at home.

I must not omit to mention that this delightful location was suitably wet down with copious libations of cool, clear ice-water. In this regard score one for the Nebraska Sportsmen. Another fact men, who neither smoke nor chew tobacco at all, or moderately, so; we saw no whiskey on the ground during the whole time, except a single pint flask in the hands of one of the numerous medical gentlemen present who had taken it simply as a precaution against "snake bites." It was wonderful how many titled gentlemen congregated at such an encampment. Boys instantly become captains, colonels, generals, doctors, lawyers and judges, and seem to bear out their heavy titles with a song, and scarcely expected of their ages. And yet there were many really titled men present and several distinguished ladies with their children a portion of the time, which especially made the encampment more pleasant, and may sufficiently account for the orderly demeanor of the sportsmen, and the absence of whiskey from the program. The camp being settled we were summoned to dinner by our congenial restaurateur, Capt. Bigalow, whose rotund and stalwart form and genial good nature (except when some luckless dog invaded his apartment) made all feel at home.

The dinner being over, and there being no entries in the stakes for puppies under twelve months old, and as other parties were expected to arrive with dogs to run in the second stakes—for Nebraska dogs—it was arranged to hold the entries open until the following morning, and thus give all who desired a fair opportunity to take part in the trials. A sufficient number of tennis being at hand nearly the entire number of sportsmen rode out into the broad prairie outside the limits of the ground assigned for the trials to take place, with dogs and guns to pick up a few chickens for the use of the camp, and in the afternoon a very pleasant afternoon was spent, and about eighty birds were brought in as well as about the same number of wonderful things, and incidents of this dog and that dog, of this shot and that shot, from which one might easily conclude that every dog was not only a clipper in his way, but a natural winner.

Blue bloods, Natives, English, Irish and Germans, setters and pointers of high and low degree, pedigreed and unpedigreed, and all of them imported, or would have been able to lay claim to that distinction but for the fact that like the American setter, the Irishman who labored under the misfortune of not being born in his native country, they were all begotten, whelped and reared this side of the "Big Pond."

A pleasant evening was spent in recounting the afternoon's experiences, and at ten o'clock all turned in for the night anticipating the events and misadventures that awaited the scenes of the next day. Here it may be well to note who and whose dogs are here. In the list is Mr. C. B. Wiltman, with note-book and pencil; Hon. C. B. Mathewson, of Norfolk, late speaker of the House of Representatives of Nebraska, an ardent sportsman with his Irish setter dog Mack, by Livingston's Brian out of his Mon; Captain J. D. Brown, of Missouri Valley, Iowa, with his black and white Belton setter and his Irish setters whose names are "The Great White" and "The Great Black"; Dr. J. B. Leas, of Norfolk, late speaker of the House of Representatives, with his Irish setter dog "The Great White"; Mr. Ed. Johnston, of Omaha, with his white and black Belton Fleet II., and black Gordon dog Jet; Mr. W. J. Irwin, of Topeka, Kansas, with his famous lemon and white setter dog Major, liver and white pointer dog Rock, and several young dogs; Dr. J. B. Leas, of Norfolk, late speaker of the House of Representatives, with his Irish setter dog "The Great White"; Mr. W. H. Brooks, with a beautiful black Gordon, Jet; Mr. E. B. Kennedy, of Omaha, with his Irish setter dog "The Great White"; and his all liver pointer dog Dick, whose lineal ancestor

LIVADIA AGAIN.

HAD FOREST AND STREAM been gifted with prophetic vision no clearer verdict upon the Livadia could have been rendered than appeared in these columns. While that nondescript was yet untried, and while contemporaries were going into fantastic ecstasies about the great revolution the Livadia would create, FOREST AND STREAM stood alone in its warning and hesitated to believe that modern naval science could be driven from its throne by the haphazard hobby of a prince and his old sea dog or two. We decline to follow the wild craze for beam which set in for a while and condemned the principles, or rather want of principles, upon which Livadia was being built. We pronounced her slow, wasteful, unmanageable, a wicked boat in a sea, weak in structure and generally impracticable. That the mark was hit as squarely as when we condemned the Autarcic quackery can be gathered from the official report of experts who recently examined the Livadia in the interests of the Russian government. The report concludes that the Livadia "does not satisfactorily answer the requirements of a seagoing vessel, either in a nautical or mechanical sense, as she rolls too much, is too slow, too weakly built and the materials used in her construction are of inferior quality. It is, therefore, suggested to take the yacht to pieces and build a gun boat and three cruisers out of the materials and use the fittings and furniture for a new yacht to be built on the lines of the original Livadia." Almost the identical words were many months ago in FOREST AND STREAM! Exit the latest revolution. A little more naval science and a little less clumsy, primitive stumbling will hereafter be the rule in the Russian service. The work has not built ships in vain during the last half century and naval science, resting upon the experience and deductions of such a term, cannot be denied by stubborn ignorance without the risk of serious consequences. The Captain, the Livadia and the Autarcic are the most prominent illustrations of the folly of trusting to the overweening confidence and conceit of self-sufficient men bent upon creating sensations and dismissing the consideration due to well established fundamental maxims and to the diligent and persevering investigations of their betters.

THE OLD WANDERER.

FOREST AND STREAM goes everywhere. Not long ago a correspondent inquired about the old-time Wanderer built way back in the "fifties." The next week brought an answer from the far West with information about her model. This week, from another quarter, comes a full description of the famous schooner. It is safe to say that the knowledge sought could have been procured through no other sporting paper. Its prompt publication is more evidence of the unqualified circulation these columns enjoy.

Concerning the yacht Wanderer, I send you the following: She was launched in 1851 at Setauket from the shipyard of Joseph Rowland and was the largest yacht ever built on this side of the Atlantic at the time. She was modeled and built by Mr. Rowland under the immediate superintendence and direction of Capt. Thomas B. Hawkins, quarter, for Mr. John H. Jousseaume, the New York Yacht Club; and from her model, which appeared to be a happy combination of all the late improvements, gave promise of great speed combined with strength and beauty. Her length of keel was 95 ft.; breadth of beam, 25 ft.; depth of hold, 10 ft.; length over all, 114 ft.; tonnage, 250. Her sails were made by R. H. Wilson, of Port Jefferson, the maker of the sails of the yacht America on the occasion of her

visit to England. She was rigged by Messrs. Barker & Cochran, of Port Jefferson, and her cabin fitted by Messrs. Youngs and Cutler. The following were the dimensions of her spars taken from her sail plan now in my possession: Mainmast, 84 ft.; fore mast, 84 ft.; main boom, 58 ft.; main gaff, 34 ft.; fore gaff, 30 ft.; lug foresail, topmasts, 26 ft.; bowsprit outboard, 21 ft.; flying jibboom, 18 ft. The Wanderer fully met the expectations of her builders. Being very staunch and a good sea boat she made many voyages at sea, making the best time between New Orleans and New York ever made by a sailing vessel. The Wanderer was wrecked on the coast of Cuba in 1875 or 1876. Any one wishing to see the model or sail plan can do so by applying to T. B. Hawkins, or Wilson's sail loft, Port Jefferson, L. I. A. Wilson.

CATS ABROAD.—The Providence Daily Journal publishes an account written by an eye-witness of a race between Mr. Gower's boat Gleam, sent out from Providence, and two English built Unas, off Cowes, Aug. 13. One of these was sailed by the Prince of Wales, the other by Lord Leresford. Gleam did not enter, but went over the course, we should say, about two or three times to the other's once. In view of the failure of the George and Annie to do anything of the kind with the Clyde yacht, we are compelled to believe the story of the eye-witness is little fishy, or else the Prince of Wales and his competitor might be poor sailers of small boats. In logging the race in question the English sporting prints fail to record anything wonderful on the part of the Gleam. To suppose they refrained from mentioning the striking performance an "eye-witness" sends home, merely from prejudice as asserted, is proof enough that "eye-witness" himself has not yet shed his provincial shell. If Mr. Gower is honestly seeking races for his boat, he can be accommodated with plenty of private matches if open to fair terms. There is no necessity for relying upon the brag of a giddy head for his boat's reputation.

TORONTO CANOE CLUB.—Races, Sept. 10, included a combined paddling and sailing race, which was won by Hugh Neilson's Racine Shadow Telephone, beating S. Hicks in the Lapstreak Whisper; F. M. Nicholson's Racine Shadow Sable N.; W. R. Burrage's open lino Lake Scagull, and Wm. Black in the Fairy. The last two capized. In the 100 yards capizing race S. Hick won in his Rob Roy, with M. F. Johnston second in a Racine Rob Roy; W. Arnold third in the Fairy; H. W. Kent fourth in the Scagull. Johnston was the first to board his canoe after the upset, but he was passed under paddle by Hicks. The remaining races will probably take place Saturday.

IOIA.—Mr. Oswald Jackson's new sloop Ioia has arrived here from the builders at Mystic, and will soon go on an Eastern cruise. She is 48 ft. over all, 22 ft. w. l.; 15 ft. beam and 5 ft. 6 in. deep. W. H. Decker has been appointed skipper.

TORONTO YACHT CLUB.—The following gentlemen have been elected officers: Thos. McGaw, Commodore; Wm. Kyle, Vice-Commodore; G. H. Duggan, Captain, and H. F. Wyatt, Secretary and Treasurer.

SAILORS' HANDBOOK.—Attention is directed to the advertisement of Chas. Scribner's Sons, in another column. The Sailors' Handbook is invaluable to all seamen and yachtsmen.

IRON KEEL.—Tawley & Son, City Point, So. Boston, are to build a keel sloop, 33 ft. long, for Mr. C. Armstrong. Iron keel, hard wood finish.

NAUTILUS YACHT CLUB.—Wave Crest, E. B. Rogers, won the sixth race for the Challenge Cup, beating Peri and Comus in 37m. 18s.

FOR SALE.—In the "For Sale" column floating property is offered this week which may suit the wants of some readers.

Answers to Correspondents.

NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS. C. G., Pittsburg, Pa.—Rabbit season in your State opens Oct. 15. No provision in the law respecting doves.

A. R.—Get Mayhew's book, Management of Dogs; it will give the information you wish. We can furnish it.

F. L. N., West Gartner, Mass.—A misprint in our reply to you last week. Have applied for the desired information.

ELMIRA.—Do not know whether the sectional iron boats are still manufactured. Have not seen them in use of late.

H. W. K., New York City, need not try to find any shooting "just in the woods near by the city." There is none to be had.

B. R., Buffalo.—Would there be any difference between the recoil of a 30 cal. 35 grains, 20 grains lead and a 50 cal. 70 grains, 400 grains lead cartridge? Ans. The latter would have the greater recoil.

F. L., Boston, Mass.—A canvas shooting coat from continued exposure has become very stiff. Can you give me any information by which I can make it soft and pliable? Ans. Some coats have this peculiarity, and we know of no way of making them pliable except beating and "moulding" them.

B. B., Ellenville, N. Y.—The subject you refer to was fully discussed in this paper last winter. Turn to your files and you will find what you want. Any dog that has a nose, and will bark when the grouse flush, will cause the birds to tree. The best dog we ever saw was a foxey-looking "yellow dog." We do not consider the popping off of stirring grouse very high art, and you would find more sport in the hunting of these birds with either a setter or a pointer.

J. E. F., Huntsville, Ala.—1. Ducks, geese, sand-hill cranes, plovers, blue grouse, spruce hens and pintails and ruffed grouse are found in Wyoming. 2. The dusky grouse is found in the open and also in wooded country. They nest on the ground in thickets. 3. The importation of migratory (they should not be called Messias) quail into this country has been a success in some localities. It is too early as

yet to say whether we are to regard the importation as on the whole a success or a failure.

T. & H. Harrisburg, Pa.—The amended fish law of Pennsylvania, section 2, page 93 of P. Laws, 1881, declares that no bass, etc., shall be taken by scum or spear. Will you enlighten the readers of your journal in this community with a definition or explanation of the device called a scum? Ans. We never heard the word used in connection with fishing. If not a printer's error it must be some local name, probably for a spear which is in some parts called "grains," "cigs," and perhaps other names. Who knows what the name means and where it is used?

J. D. P. Patterson, Ont.—We always have pleasure in answering the queries of our readers. For the shooting such as you have at grouse and woodcock, would say, that a setter or pointer is the dog you want. We would advise you to get one already trained, first giving him a trial before putting him to work. The best book on training is "Hutchinson's Dog Training." We published this book last year that covered the ground; they applied to American shooting. Read them. The name of dog breeders in this country is legion. Write us exactly what you want, and we will mail a list of some of the setter and pointer men.

H. N. T., Chicago.—To blue a barrel is very nice work and requires great skill. We give the receipt as follows, though it is better to send the barrel to a gunsmith to be blued: Tinct. of muriate of iron one oz.; nitric ether, one oz.; sulphate of copper, four scruples; rain water, one pint. After thoroughly cleansing gun with soap and water, and having securely plugged up each end, cover it with sanded lime. When this coating is dry remove it with an iron scratch wire-brush. Then apply a coat of the above fluid with a rag, and let it remain 24 hours, when a rust will have appeared. Immerse barrels in boiling hot water, and scrub thoroughly with scratch brush. Repeat this immersion until the color suits, which will be after two or three applications. Let barrels remain in lime water a short time after operation is completed.

For Spratt Dog Biscuits go to C. L. Ritzmann, 943 Broadway, New York.

Keep the kidneys healthy and unobstructed with Hop Bitters and you need not fear sickness.

[Philadelphia Times.]

WE'LL NAIL ITS COLORS TO THE MAST.

"Hello! Denny, what is the trouble?"

"Oh! I'm 'broke up'" was the response to the inquiry of an old shipmate of William C. Denington, one of Farragut's war-veteran rais. well known in the southern section of this city, who came tripping into the "American" office yesterday.

"I thought I would go under the hatches this time," continued Denington. "I never suffered so much in my life. I had the rheumatic gout so bad that I could not get off the bed or put my foot to the floor, and would have been there yet if a friend had not recommended St. Jacobs Oil to me. I hesitated some time before getting a bottle, thinking it was only another one of those advertised nostrums; but was finally induced to give it a trial, and a lucky day it was for me. Why, bless my stars! after bathing the limb thoroughly with the Oil I felt relief and my faith was pinned to St. Jacobs and his Oil after that. I freely say that if it had not been for St. Jacobs Oil I should, in all probability, be still housed. My foot pains me but little and the swelling has entirely passed away. It beats anything of the kind I have ever heard of, and the person who doubts it send them to me at No. 1,924 South Tenth Street."

Don, and my Snapshot 3 by Champion Snapshot
winner. For further particulars, send for circular, both
parents being unsupassable for business, and
other good qualities. F. A. SINCLAIR, Mottville,
Onondaga Co., N. Y. Sept. 27

LEONARD'S
Split Bamboo Rods,
WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.

No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 24, 1879).
This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.
No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 3, 1879).
This splits the ferrule where the wood is joined to the rod, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. In rod making since rods have been made.
No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.
EVERY ROD WARRANTED.
SOLE AGENTS,
WILLIAM MILLS & SON,
7 WARREN STREET, NEW YORK.

ALLEN'S NICKEL-PLATED DUCK CALLER.

THE GREAT SINGLE BREECH-LOADER.
FOREHAND & WADSWORTH'S NEW BREECH-LOADER has so completely distanced all the others that it stands alone. There is no second. It is the only single gun worth having. As described in the above cut it is now complete, with rebounding lock, pistol grip, lever fore-end, nickel-plated frame, and is beautifully finished throughout. The barrels are either steel or twist. When steel they are bored out of a solid bar of steel, differing in this respect from all others, which are merely of milled barrels refinished. When twist they are the best imported barrels and of very fine grain. They are bored either cylinder for use in the field, or choked for very close shooting. When choked the targets will not suffer in comparison immediately. The cost of these guns is a mere trifle. We are sole agents of New York for Colt's Club Guns, and also for Enos James & Co., Birmingham.
We offer a small job lot of the celebrated Weibel Guns of all sorts at about half price.
P. O. BOX 4,309. H. & D. FOLSOM. 30 Warren St., New York.

The Kennel.

Hotels and Routes for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE

Trent, Grayling & Black Bass Fisheries,

FAMOUS SUMMER, HEALTH AND GAME RE-
SORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed,
if equaled, in the abundance and great variety of fish
contained.

BROOK TROUT abound in the streams, and the
famous AMERICAN GRAYLING is found only in
these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends
Nov. 1.

BLACK BASS, BLUE PERCH, MUSKELLONGE,
also abound in large numbers in the many
lakes and lakes of this territory. The Sports-
man can readily send trophies of his skill to his
friends or "club" at home, as ice for packing fish
can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The
scenery of the North Woods and Lakes is very
beautiful. The trip is pure, and the fishing.
The climate is peculiarly beneficial to those suffering
with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will
be largely increased in time for the sea on of 1881
by new buildings and additions.

During the season ROUND TRIP EXCURSION
TICKETS WILL BE SOLD AT LOW RATES, and
attractive train facilities offered to Tourists and
Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at
owner's risk.

It is our aim to make sportsmen feel "at home"
on this route. For Tourists' Guide a handsomely
illustrated book of 160 pages sent free. Time Cards,
Folders and further information, address

A. B. LEE, Gen'l Pass't Agent,
Grand Rapids, Mich.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6½ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 2, No. 1 being the coarsest. Packed in 6½ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6½ lb. kegs.

Dupont's Rifle Pk.—"Sea-Shooting."—FFG, and FFG. 7 lb. Fg. for long-range rifle shooting, the FFG. and FFG. 7 for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 6 lb. canisters, 6½, 12½ and 25 lb. kegs. Fg. coarse, FFG. fine.

Dupont's Sporting, Mining, Surprize and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle Cartridge, Muzzle Cannon, Muzzle, Minnie, Hexagonal, Cylindrical and Pellet Powder, U. S. Government Standard. Powder manufactured in order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. N. B.—See name list DUPONT'S Fg. or FFG. for long-range rifle and FFG.

Miscellaneous Advertisements.

The Parker Gun.

Again Victorious at the Late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Heroes Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 449 Strand, W. C., London, Eng.; and by E. M. Torquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

Specimen copies of the FOREST AND STREAM sent free upon application.

FOREST AND STREAM.

Thursday, September 22.

LAST Monday night the news was flashed forth to the world that James A. Garfield was dead. The ball of the assassin had done its work. The long agony was over. The well-spent life had ended. The Nation mourned.

A strong man, in the prime of life, having attained the height of political preferment, surrounded by his friends and just starting with bright anticipations to rejoin his family for a summer holiday, is suddenly and without warning struck down by the bullet of a contemptible assassin. Eighty days follow of intense physical suffering and dire distress, the victim, with heroic, determined, marvelous endurance, battling for life; eleven weeks of a death-bed struggle whose pathetic surroundings are without a parallel, while without the chamber, in mute and anxious suspense, the Nation watches the mortal anguish of the sufferer and marks the fluctuations of life and death—and then the pitiable ending! Such is the dismal tragedy which began in Washington on the morning of that eventful second of July and ended at Elberon, New Jersey, at thirty-five minutes past ten o'clock last Monday night.

It were needless now to dwell upon the painful details of these memorable months. The anger and indignation awakened ere the report of the wretched murderer's pistol had died away, the spontaneous outburst of grief and sympathy for the President, the resolute, undaunted determination of the wounded men to improve "the one chance," the tender, self-forgetful solicitude with which he thought and spoke of the absent wife, the succeeding scenes at the White House, the letter written by the President to his mother, his pathetic appeals to be taken back to his Mentor home, the historic journey to Long Branch; all the daily incidents of this protracted and hopeless struggle, as week was added to week; and then, after it all, the final yielding of the poor, wasted, pain-racked body, and the quenching at once of Garfield's life, and the Nation's anxious hope—all these have engaged the concern of the people and formed a part of their daily thought and life.

The circumstances attending the sick chamber at Washington were such as to arouse the sympathy of all classes, of men and women, of old and young. When that fatal shot was fired last July, it was not Garfield, the President and public man, alone, who fell; it was Garfield, a husband, a father, and a son. The connection of the political and domestic phases of his life had been so strong, and their association in his sickness and death were so intimately blended, as to appeal with a peculiar directness and tenderness to every family circle. And so in turn, when the telegraph sent its melancholy message over the land last Monday night, the intelligence was received by all with the pang which comes with the announcement of the death of a near and dear friend. The grief, which is symbolized to-day by the funeral drappings of black, is not the conventional mourning for the demise of a public functionary; it is the sorrow of the Nation and of the households which compose the Nation, a sorrow genuine and universal, akin to that of a family for one of its own.

If in this long watching at the bedside of James A. Garfield, and in this common grief at his untimely death, the Nation has forgotten and put away forever the harboring of sectional distrust, and the unseemly feuds of partisanship; if now, when the country is one in its grief, the threads of its union be knit into a closer and stronger woof, this will have been the one bright side of these eleven long weeks of national distress. If, because of his sufferings, the Union is to-day more a Union than it was before, then indeed not in vain nor without glorious reward has been the slow martyrdom of James A. Garfield.

A second name has been added to the list of the martyr Presidents of the United States. God grant that it may be the last!

IT IS A MISTAKE to infer from what has appeared in these columns respecting the would-be imitators of "Frank Forester," that we are lacking in appreciation of the eminent services which Herbert rendered to American sportsmanship. The influence of his writing has been much greater than can readily be estimated; and we would not attempt to detract from his merits and fame. We admire "Frank Forester's" writings; what we do not admire is the prating about "Our Frank," and the attempt to make demigods of Herbert and his sporting friends. To Herbert let due credit be given, but in giving it let us preserve our masculinity and talk and write as men.

It has been suggested that the President of the United States ought to be in future provided with a body-guard. No. Such a provision would be in vain, if the execration and loathing, which the nation has heaped upon the guilty wretch now awaiting the gallows for his terrible crime, shall not suffice to deter another from winning by a like deed a like reward of infamy.

"IN THE MASH."

"A H!" twenty years ago, then was the times. Then they were birds." So the old pushers have said to us many a time as we have been quietly rowing to or from the flats. And it is likely enough that with the rail, as with the other game birds, the olden days were days of plenty. Whether this be true or not, it is safe to say that in the time of muzzle-loaders the birds seemed more numerous than they now are. When one's gun was empty, and the birds were getting up by twos and threes about his boat, they seemed to multiply themselves wonderfully, and the impression left on a man's mind was that of tens where really there were only units. Rail shooting to our mind is capital sport, and the practice, coming as it does just at the opening of the season, is just what one needs to put him in shape for the later shooting, where the birds are harder to hit, and the work, from all points of view, more difficult. The chief objection to the sport is that there is not enough work about it. We have seen gentlemen, faultlessly attired and wearing diamond studs and kid gloves, shoveling over the grounds killing their birds in excellent shape, and at last stepping out of the boat at the landing without a speck or a stain upon their clothing, looking as fresh and neat as though they had just emerged from their dressing rooms. One of our friends even had an arm chair placed in the bow of his skiff, and used to shoot most of the time from that, only rising to his feet when the grass was too high for him to see over from his seat. Now, while the charms of keeping dry and clean are certainly very great, it is no small advantage for one to be so clad that if necessary he can jump overboard and help shove the boat off a bog, or over some little strip of dry land which may separate one good piece of shoving ground from another. One can often save fifteen or twenty minutes by such a manoeuvre as the last named, and if the birds are plenty the tide will seem all too short without any such loss of time.

The methods employed in rail shooting have already been alluded to and are well known. The birds are easily killed and furnish most delicate morsels for the table. They fly straight and slow, and are excellent birds for the beginner to practice on, although a too long extended course of rail shooting has, to our mind, a tendency to develop a pottering shot. Therefore let the tyro begin on rail September 1, and, after practicing at them for two or three weeks, look up the few English snipe that will by that time have made their appearance. The woodcock and ruffed grouse he can essay as soon as the law is off, and the quail will be about right in November. By commencing with the rail and snipe he has the advantage of shooting at first in the open, and thus learns, much more readily than he otherwise would, where to hold on his birds. An autumn's practice, thus begun, ought to enable him to get a pretty good idea of how to shoot in the proper way.

It is astonishing, when we consider how many of them are killed each season, how little is known of the habits of our rail. The old idea that they spent the winter lying torpid in the mud at the bottom of lakes and streams is no longer held, it is true, but still, very few people know much about the way in which they pass their lives. This results naturally enough from the places which they inhabit, which are never visited by the sportsman, excepting during the shooting season. Then, too, the rail do not like to fly if they can escape by running. They are swift of foot, and, where the grass is very thick, can run through it faster than a boat can be shoved. Often they will not fly until the boat is almost on them, and we have seen uninjured birds, too tame to fly, killed by a blow from the pusher's pole. All old rail shooters know how difficult it is to retrieve cripples. They will dive, swim under water, and cling to the bottom, but above all they will hide. When the grass is thick, the task of finding a wounded bird is almost a hopeless one. This fact often gives the pusher who has not carefully marked down his bird an excuse; and if, after searching for it for a while he cannot find it, he is likely to say, "You didn't kill that one—he was only wingbroken."

We have all of us been witnesses of the ambition which the pusher exhibits to have his man show the biggest count when the boats come in after the shooting is over. It is curious to see how soon the propelling power of the boat becomes weakened, if the man in the bow cannot hit his birds. The boat goes along slowly and listlessly, and the shover has

to be constantly urged to do his duty. The unfortunate shooter incurs the contempt of the pusher, who is now only anxious to have the tide over and to get ashore again.

Ten species of the family *Rallidae* are known as inhabitants of North America; and of these, the so-called scora or Carolina rail (*Porzana carolina*), is by far the most abundant. It is this species which furnishes ninety-nine one hundredths of the birds killed during the season. The salt water marsh hen, *Rallus longirostris*, is perhaps next in order of numbers, and is followed by the Virginia rail, *R. virginianus*. This species is much more abundant than is ordinarily supposed to be the case, but as it never flies when it can possibly escape by running, it is not often seen. The coot (*Fulica americana*) is not very abundant along our Middle Atlantic coast, but is very numerous inland, and on the Pacific coast. The gallinules (*Gallinula galeata* and *martinica*) are southern birds, but the former is frequently taken in the Middle States and even in Massachusetts. The yellow rail, and the black rail (*Porzana noveboracensis* and *P. jamaicensis*) are not often seen, but the former is common on some marshes in October. The latter is rare everywhere, we believe.

From the 15th to the 25th of September the rail shooting is at its height, and the next easterly storm that we have will, we think, bring a flight of birds, which should be in fine order. By the first of October the greater part of the birds have passed on, although the few that remain are fat and delicious. We have killed rail in November, but only as stragglers, for, as a rule, they disappear with the first sharp frosts.

In another column will be found a brief description of some of our North American *Rallidae*.

THE CREEDMOOR FALL MEETING.

THE full report which we present of the work at Creedmoor during the past week tells the story of a successful rifle gathering. The flock of outsiders was indeed wanting, but this was not a loss, for it must be some such extraneous inducements as the glamour of a foreign team or the presence of a pool box that will bring the ordinary idler to study the progress of a rifle contest.

In many other ways the recent meeting differed from previous assemblies of the sort on the Creedmoor range. The regular army was represented only by such entries as were made up among the Willett's Point Engineers. These men were among the earliest of the firm friends of the National Rifle Association. Not a meeting or a match of consequence has passed without the presence of competitors of the blue-coated rank and file of the Willett's Point garrison. They come as individuals, and not as representing the Army of the United States. The War Department took no steps to secure a showing of the progress which the regulars may have made during the past year. It is true that more attention is now paid to hall practice in the ranks of Uncle Sam's military force than at any previous period in the history of the army, but while reports of progress may be ever so flattering on paper, there will always be a margin of uncertainty and doubt unless the people are allowed to see the picked teams of the Army brought out in direct competition with other marksmen not of the Army cloth. Hence it should be looked upon as an expressed want of faith in their own powers or of a waning interest in rifle shooting, when the names of the several Army divisions do not figure on the list of entrants at this, the representative rifle gathering of the country. To be sure the regulars have made what may be termed a "ten strike" at Creedmoor. A year ago they made for themselves a record of which they may well be proud, but they will soon be placed in the ranks of the "have-beens" if they do not steadily maintain the fight for first place.

The meeting has had its local character somewhat relieved by the presence of the Pennsylvania and the New Jersey teams, but, though they did not figure as leaders in any of the matches, these teams did sufficiently well to encourage further visits. They are handicapped by the fact of shooting on a strange range, while the city teams are thoroughly at home. The "woodchuck hunters" of Watertown, N. Y., perhaps did not find warrant in their success to repeat their former triumphal entry into their native town, and the stuffed woodchuck will hibernate yet another year, but they did well considering that the assisting arm of the State was withdrawn from them. Too many good things have come out of this pleasant Northern city in the past not to lead us to look for desirable visitors in the future.

The Massachusetts representatives from Walnut Hill proved that they could do good and fine work away from their favorite all-the-year shooting ground; and deserve all the credit given them for their skill as close-hitting marksmen. The management of the meeting was very far from the best. When it takes the "juvenile asylum" in charge of the score tickets several days to arrange the figures of a single match, it is not strange that there are complaints from those whose duty it is to place on record the doings at the range, and that the newspapers present so many departures from a strict accuracy of report. Of course there are many points in the management which the contestants would criticize, and the fact that there are several protests to be considered does not speak well for the thoroughness of the management on the ground. However, fair weather enabled the meeting, with its comparatively few contestants and many days of shooting, to be carried out without, at times, such a seeming necessity as an executive officer; but the directors must not be surprised if sharp things are said of them when

they shuffle over their assumed duties in such a perfunctory style.

To the State authorities at Albany, with their beggarly neglect of the question of rifle-shooting, the meeting teaches the lesson that as obstructionists they can do very little, while as advocates of, and supporters of, a well-considered, and economically carried out, plan of practice, they can do much. In such a work, whatever scheme of drill may be adopted, it is necessary to excite the best endeavors of the men by emulation, and the fall meeting at Creedmoor is the goal to which the efforts of those who are confident of their ability naturally tend. To reduce the rifle practice of the State to the mere making up of so many schedules of figures to be pigeon-holed into the oblivion of the Adjutant General's office at Albany, is to kill the interest of the National Guard in the subject. We would hazard nothing in saying that the interest awakened by the making up of a regimental team for the Creedmoor competitions of the past week would be of more service in an organization than all the ordered drill at the butts which the sapient Attorney-General is likely to force upon men who don uniforms and shoulder rifles under the conditions which govern our militia.

BYE-WAYS OF THE NORTHWEST.

THIRD PAPER.

VICTORIA is a charming town of six or seven thousand inhabitants, situated on the extreme southeastern point of Van Couver Island. Previous to the gold excitement of 1858 it consisted merely of a Hudson's Bay fort, with the few dwellings occupied by the servants of that powerful company. The discovery of gold in small quantities on the Fraser River in 1857, and later on the Quesnelle and at Cariboo, wrought a great change in the prospects of the place. The story of the new "diggings" soon reached California, and caused a wild excitement among the mining population of that State, then ripe for a fresh move. The usual rush took place, and the drowsy old Hudson's Bay post, to which heretofore the only event of the year had been the arrival of the ship from England with the mail, was startled from its slumbers by the advent of twenty thousand miners, who pitched their tents about it and formed what is now Victoria. Buildings soon sprang up and trade flourished. Everything going to or coming from the mines passed through the town and paid it tribute. High hopes were entertained of its future greatness and, in 1862, one writer said: "Already it has become the emporium of commerce, the metropolis of the northwest coast of America." But, unfortunately for Victoria, the mines, which caused its existence as a town, ceased to pay, and its commerce fell off. It has not fulfilled the promise of its early youth and, until it can have some more speedy means of communication with the outer world than it at present possesses, its growth will be very slow. The completion of the Canadian Pacific Railroad, now in process of construction, will unquestionably be of the greatest benefit to the place as well as to the other towns in British Columbia, for it will give them a market for their products, and at present they have none. The duty which goods sent to the United States have to pay leaves little margin for profit, and the very heavy tariff on imports bears severely on the inhabitants of the Province. Although the work of constructing the railroad is going on, it is not progressing as rapidly as might be expected, and there is no immediate prospect of its completion. Labor is hard to obtain in British Columbia, much of it coming from the United States, and great dissatisfaction seems to exist among the hands employed by the railway contractors. To so great an extent is this the case that the men are continually leaving the work and fresh hands have to be obtained. Of the real merits of this case I, of course, have no knowledge. The fact seems well established, however, that the men employed on the road are leaving constantly and, as they say, on account of bad treatment.

The country about Victoria is extremely picturesque and attractive, and the roads are good. There are few places about which one can find so many pleasant drives, and several days devoted to an examination of the environs of the town will not be wasted. The George is within easy walking distance—about four miles—and at half-tide is a boiling torrent, flowing between high rocky banks. Cedar Hill is about six miles distant, and from its summit one may obtain a fine coup d'œil of the city, the Straits of Fuca, the Gulf of Georgia, with its hundreds of islands, and the main land rough with mountain peaks, among which, and rising far above them all, stands Mt. Baker, calm and white, a snow-robed monarch.

I should feel myself decidedly blameworthy were I to fail to mention that at Victoria there is one of the very best hotels that I know of. An experience of many years of travel in America and Europe gives me the confidence to believe that I am qualified to judge in a matter of this kind, and I have no hesitation in saying that I know of no place on this continent where one will fare more comfortably than at the Driard House. The rooms, it is true, are not furnished in a particularly luxurious style, but they are neat and comfortable. The table is perfection; the food of the very best quality and far more carefully and better cooked than is the case in many of the leading hotels of our largest cities. One of the proprietors does all the marketing and is the *chef de cuisine*, and he is certainly a jewel among cooks, a veritable artist. So long as the Driard remains under its present man-

agement, and maintains the reputation which it now has, no one need hesitate about which hotel to go to while in Victoria.

If I were to attempt to describe all the beautiful scenery that is passed in approaching Victoria, from whatever point, my letters would spin themselves out to an unreasonable length; whether one comes by way of the ocean, through the Straits of Fuca, or direct from the United States over the blue waters, and by the pine-clad hills of Puget Sound, or from the mainland of British Columbia, threading his way through any of the narrow passages that separate the many islands of the Gulf, now breasting the tideway of one channel, and again being hurried forward by the current of another—from whichever side he comes—the scene is one of great beauty. Few places have greater natural advantages than Victoria. Her harbor is, it is true, small and needs a good deal of improvement before it will be at all what is needed, but in that of Esquimalt, only three miles distant, she has one which will accommodate the largest vessels. The sportsmen of Victoria are fortunate in having shooting and fishing grounds close at hand. During the months of July and August, the salt waters of the straits and gulf abounds with salmon, which are readily taken by trolling, and when thus taken on a light rod afford fine sport. Most of the brooks of the island afford excellent trout-fishing, the Comox River being especially renowned for the size and the numbers of the fish in it.

About Victoria there are found two species of grouse, the dusky or blue, (*Canace obscura*) and the ruffed (*Bonasa umbellus* var. *sabinei*). The California quail (*Lophortyx californica*), has been introduced here, and seems from all reports to have done well, but is not in particularly high favor, owing to its habit of taking to the thick brush as soon as flushed, and its failure thereafter to lie satisfactorily to the dog. Whether these faults can be overcome by education is a question that time alone can answer. In the autumn, ducks and geese are found in favorable localities in great numbers, and judging from all the reports, the shooting must be very good.

Of large game there is considerable variety. The black tail deer (*Cervus columbianus*) is extremely abundant within a few miles of Victoria, and it is not an uncommon thing for parties to start out with a wagon in the evening and return the next night with several deer. Among the scrub oaks which grow here in certain localities still-hunting may be successfully practiced, but in most sections recourse must be had to hounds in order to obtain the game, as the timber is so thick, and the underbrush and ferns so dense and tangled, that it is impossible for one to travel through the brush without making a great deal of noise.

On the northern end of Vancouver Island, and in the interior as far south as the Comox River, elk are to be found, but I fancy, from the accounts which reached me, that they are by no means numerous. Bears and panthers are said to be abundant everywhere on the island. Sooke, distant from Victoria about twenty miles, is a great place for bears. By far the greater number of those killed are black or cinnamon, but I was shown the remains of a grizzly, said to have been killed at Sooke. The panthers are hunted and killed chiefly by those farmers who have flocks or herds to protect, and are not often seen by deer hunters. There are a few wolves, but they are not often seen except in winter.

My stay in Victoria on this occasion was not very long, and I hastened to the town of New Westminster, on the mainland, by the first steamer. Here I had the very great pleasure of meeting "Mowitch," whose graceful and instructive letters to *FOREST AND STREAM* have given to its readers so much information relative to the fauna of this far distant country, and to the methods employed in the capture of its game. Through his kindness I was enabled to see much that was new and interesting to me, and from the stores of his knowledge of British Columbia I drew many facts which afterward proved extremely useful.

While enjoying the kind hospitality of Mr. H. on the evening of my arrival at New Westminster, he proposed that we should make a little hunt together next morning, as he thought it likely that we might get a deer before breakfast. Accordingly the next day about four o'clock we started on foot for a little lake about four miles from town.

The day promised to be a perfect one; the sky was cloudless, and no fog obscured the view. The sun had not yet risen, but in the east, above the jagged and broken summits of the Pitt River Mountains, stars were beginning to disappear, and the sky to flush and glow, each instant becoming more and more bright. We were soon passing through the woods. The air was cool, fresh and exhilarating. A gentle breeze just moved the higher branches of the enormous trees, and brought from the recesses of the tangled forest the balsamic breath of the Douglas firs and the terebinthine fragrance of the cedars, mingled with the faint bad odor of decaying vegetation so characteristic of the timber in all climates. The vegetation was all new to me, and I admired the dark green of the firs, the paler foliage of the cedar, the maples with their large leaves, the tangle of underbrush, and, beneath all, the ferns from four to seven feet high. We were passing between high walls of foliage extending far before us on either side. Above was a narrow strip of sky, and before us the yellow road. Little bits of bright color were not wanting along the roadside. The *Eupatorium*, so universally distributed through the mountains, shone like a tongue of flame against its background of green; here and there, from the wet springy places, the foxglove nodded its

tall spike of red or white flowers; the feathery plumes of the *Spiraea* waved a greeting, the white blossoms of the Canada coral looked up from their nests of leaves, and the delicate pink caducous bells of the *Lilinet* fell in showers from their stems as we passed by. Then there were the berries in infinite variety and great profusion. The salmon berries, red or yellow; blackberries, green and red; blueberries of several kinds, the purple salal, the velvetberry, the scarlet, and as yet unripe, paucules of the elder, and the brilliant fruit of the umbrella plant were all here, and seemed to invite our inspection.

We had with us three hounds, Captain, Dinah and Wallace, and better dogs it would be hard, I think, to find. The two first named, so far as form and color went, exactly filled my eye. They were types of the hound, their points perfect throughout, black and tan in color, and with voices both musical and powerful. Old Captain especially had a tongue like that of a trumpeter, and I have never heard sweeter or more harmonious cry from any pack than from these three splendid dogs. Wallace did not present to the eye so complete a picture as did the others. His points were not nearly so good, but as a workman in the field he could scarcely be excelled and in the estimation of his owner he stands perhaps first favorite on the list of his hounds. Even to one who does not know him he conveys the impression of being a cunning old fellow and a worker. He has a knowing look on his face, and has so much more flesh on his bones than his kennel mates, that it is easy to see he understands running and in general takes good care of himself. This must not be interpreted as meaning that he saves himself at the expense of the other dogs, for that is not the case. On the contrary, Wallace, though not so fleet as Dinah, often leads the pack, and has in many cases caught a deer without any assistance. He is a terrible fighter, and the deer that he once puts his teeth into is lost. Mr. H. told me a very exciting story of a combat between Wallace and a deer, which took place on the face of a precipice on a narrow ledge of rock sixty feet above the water. From this shelf the two combatants fell into the stream below and the hunter, coming up in his canoe, put an end to the battle.

Our party consisted of Mr. H., a Douglas River Indian named Squawitch (the Sturgeon) and the writer. An hour's brisk walk brought us to the lake, and here the dogs were slipped, and sent off into the woods with Squawitch while the two white men seated themselves on a log, and, lighting their pipes, awaited the Indian's return. As we sat there admiring the beauty of the sheet of water spread out before us, my companion told me something about the lake. It appears that it is believed by the Indians of the surrounding country to be inhabited by a *Sellacium*; *Sellacium* being the Chinook word for anything supernatural. In this case the belief is that some terrible monster, who is aided and abetted by the evil spirit, lives at the bottom of the lake, and that when any one is rash enough to venture upon it this dreadful creature rises to the surface, overturns the canoe and gobbles up the unfortunate occupants. This belief is so firmly held by the Indians that they will by no means venture on the lake, nor will they approach its margin when gathering berries. They hold up their hands in horror at the daring which "Mowitch" shows in venturing so frequently on its placid waters, and prophesy for him some dreadful fate as a reward for his audacity. Once, when he was overturned near the middle of the lake and lost a valuable gun, the Indians told him that the *Sellacium* was giving him a warning now to escape and that he had better not neglect it. Squawitch is perhaps the only Indian in the region that ventures to enter a canoe on the lake, and he only does so when in company with my friend. Whether he regards "Cholley's" medicine as stronger than that of the *Sellacium*, or thinks that if "Cholley" can afford to risk being devoured, he can also, I do not know, but he was certainly here with us now, and had gone off to start the dogs in a most unconcerned manner, although he has just told Mr. H. that an Indian had seen the *Sellacium* here on the lake within the past two or three weeks.

We had been seated there but a few moments, when we heard the faint cry of a hound—the deep voice of Captain. A little later the shriller cry of Dinah made itself heard, and then both becoming fainter and fainter, passed out of our hearing. A moment later Squawitch parted the bushes near us, and, walking down a log toward the water, drew from the low brush a canoe and two paddles. Signifying to us to step into the canoe, he took his seat in the stern while Mr. H. took the bow paddle, and I seated myself amidships. Then with a stroke or two of the paddles we shot out of the little cove and on to the unruined surface of Mirror Lake. Yo.

New Westminster, B. C.

ISAAC McLELLAN'S POEMS.—We understand that those poems of Mr. Isaac McLellan, which relate to field sports, are to be collected and published in book form. Such a volume would be welcomed by the sporting fraternity. Mr. McLellan is one of our oldest American poets, he and Longfellow having begun to write and publish at the same time in *Bryan's United States Literary Gazette*, at that time printed in Boston, and subsequently in New York. Longfellow was at the time in his junior year at college, and McLellan in his sophomore year, both at Bowdoin College, Brunswick, Me. That was more than fifty years ago, a period longer than has been covered by the life of nine men out of ten who read these lines; a span of years, which in these progressive times,

veritably bridges over the old and the new. How rich in personal recollections of literary men must such a life be! Mr. McLellan's pen has not yet lost its grace. The first column on the first page of the initial number of the *FOREST AND STREAM* contained a poetical salutation from him, and our columns have since that time been frequently enriched by his verses. We have now in type a poem in which he tenderly alludes to his college days and his companionship with Longfellow at Brunswick.

POWDER MILLS ought to be, and usually are built, on sites remote from other buildings, so that in the event of an explosion the property of others need not be damaged, nor lives needlessly destroyed. This is certainly a wise rule and one which most powder manufacturers observe. It appears, however, that Mr. Carl Dittmar fails to recognize the necessity of "seeking some sequestered spot" for a blasting powder factory. After our discussion of this gentleman's so-called sporting powder, just one year ago to-day, he engaged in the manufacture of blasting powder at Binghamton, where his mill was blown up last April, as noticed in our columns at the time. If we may believe the newspaper reports, several deaths were immediately or indirectly the result of that explosion, and property in the neighborhood was damaged to the extent of \$20,000. Mr. Dittmar was perfectly willing to build again, and doubtless would have been equally willing to start a nitro-glycerine mill "in the heart of London town;" but the Binghamton residents righteously protested, the Grand Jury of Broome county have indicted the powder company, and it is sought to suppress the mill as a nuisance. Elsewhere will be found a letter on the subject from a Binghamton correspondent.

THE KITTY HAWK BAY CLUB.—The proposed organization of this club, which was referred to some three months ago in the columns of *FOREST AND STREAM*, has proceeded so far that there now seems every prospect that this will be one of the leading organizations of the kind in this country.

The charter memberships were sold at \$500 each, and the applications received by the committee were ten or twelve times in excess of the number of shares to be issued. The last two shares sold brought \$2,000 each. It is understood that their par value is to be fixed at \$2,500.

A committee of gentlemen belonging to the club are now in the South examining the property, and their report will be awaited with interest. It is thought that the club will not put up a house before next summer, as there are at present ample accommodations for the members convenient to the best shooting grounds.

YO'S LETTERS.—We print this week another letter from our correspondent Yo, who writes from British Columbia. He has for a long time been beyond the reach of the mail service, seeing strange sights and strange people. The letter now printed was sent in by an Indian, and traveled many miles in a northern canoe before reaching the post office whose stamp it bears.

THE CLAY PIGEON.—Mr. Harry M. Hills, of Cincinnati, Ohio, a prominent shot of the Wyoming Gun Club, is about to take the field in the interests of the Ligowsky Clay Pigeon Co. If any Club, which has not yet seen the invention will send a notice to the Company, 33 Vine street, Cincinnati, O., Mr. Hills will endeavor to arrange a match with the clay pigeon for that club in the course of his travels.

THE WORST OF IT ALL.—To smash one's leg is bad enough, but for a sportsman to be retired with a broken limb just at the height of the game season is an added woe. So thinks and writes an Ontario friend, whose plans for fall sport have been frustrated by an untimely accident.

VENNOR knows, or professes to know, a great deal about the weather; but he confesses himself unable to cope with the Washington mosquito. He says that in the Canadian wilderness he can manage the pest with smudge fires, but in a Washington hotel recourse to such an expedient is out of the question.

(For Forest and Stream.)
BEFORE AND AFTER.

YOU must wake and call me early; call me early, Jane, my dear! To-morrow 't'll be the happiest day of all the sporting year, Of all the sporting year, my Jane, the maddest, merriest day, For we're going to shoot the canvas-backs, the canvas-backs, I say! There are several small sneak boats, Jane, but none so small as mine; So small it is and narrow I—do you think the day 't'll be fine?— And such a lot I'll shoot, Jane, I'm sure to have such luck, And for weeks we'll dine on nothing, Jane, but dainty canvas duck!

I sleep so sound all night, Jane, that I shall never wake, If you do not call me early, when the day begins to break: For I must fix my tackle and must set out my decoys: To-morrow crows the total of all my earthly joys.

When you're rising, let me sleep, Jane, don't you wake me—do you hear?

"Where's my bag of ducks for dinner?" You're a precious fool, I fear! Wish you'd had the "ducks" that I did! Clothing dry is what I lack; Evil water-lily and demons! Don't you name a canvas-back!

Can't you leave a man in quiet? How much sport? you want to know!

If this day's work you call sport, your perception's pretty slow! You want to save a rumpus and not a gun, my dear, (And upon his side he turns, with a simulated snore.)—A. L. F. M. A.

The Sportsman Tourist.

FROM VERA CRUZ TO MANZANILLA.

THE distance from the City of Vera Cruz, on the Gulf of Mexico, to the nearest opposite point on the shores of the Pacific Ocean is but little more than 600 miles. While there are already two lines of railroad between the Atlantic and Pacific shores within the territory of the United States, although the distance is more than five times as great, the distant condition of our sister republic has thus far prevented the construction of one of its much-needed lines of internal communication. It is very easy to see by a glance at the map what advantages must accrue from the completion of such a work.

By the extension of a line of railroad to the Pacific sea-port of Manzanilla, and thence northward, a final junction with the Southern Pacific Railroad might easily be effected; while, on the other hand, even before its completion, the harbor of Manzanilla affords a convenient half-way freight depot for the steamer from Panama to Vera Cruz with the capital. This difficult pioneer work, which has thus far prevented the construction of one of its much-needed lines of internal communication. It is very easy to see by a glance at the map what advantages must accrue from the completion of such a work.

This difficult pioneer work, which has thus far prevented the construction of one of its much-needed lines of internal communication. It is very easy to see by a glance at the map what advantages must accrue from the completion of such a work.

Mr. Louis von Niendorf, formerly residing at Hornellsville, N. Y., has been appointed one of the assistants of this survey, and, as Mr. Niendorf is an indefatigable laborer as well in the field of natural history and an expert and practical anatomist and taxidermist, he will be able by means of his well-trained powers of observation to add much valuable knowledge of a part of our continent concerning which, by reason of perpetual civil wars, there is really less substantial information in existence than about the interior of Africa. As Mr. Niendorf has promised to condense an account of his experiences in the form of a few rough notes, detailing what he sees and the experiences he goes through, they may be of some value to the readers of *FOREST AND STREAM* by reason of their being a plain and unvarnished account of the country and the condition of its inhabitants. His notes date as far back as the departure of the steamer British Empire for Vera Cruz, and commend themselves by their interesting treatment. He writes:

MARAVATIO, MICHOACAN,
Mexican Republic, July 25, 1881.

I will try to introduce my notes by a brief account. We arrived at the City of Mexico on the 12th of July. The mail cart from Maravatio does not leave until Friday, and I will be able to send along by it, as well as a few of the insects I have collected here. We left New York in the steamer British Empire, of Alexander's Havana and Mexican S. S. Line. She is a large four-masted craft of great speed, and furnished with all possible appliances to insure safety and comfort for her passengers. The table is most excellent, and the large state rooms enhance the pleasant surroundings.

On Monday, July 4, we were abreast of the southern point of Florida, with a pleasant and strong breeze, which increased materially our comfort under the ship's awnings of some value to the readers of *FOREST AND STREAM* by reason of their being a plain and unvarnished account of the country and the condition of its inhabitants. His notes date as far back as the departure of the steamer British Empire for Vera Cruz, and commend themselves by their interesting treatment. He writes:

On Tuesday, July 5, at 5 A. M., we sighted Havana, steamed past the famous fortress of Moro Castle, and went without delay ashore, but only to return early, rather disgusted with our visit on a hot summer day to the capital of the Queen of the Antilles. The streets of this city are too narrow and dusty; the sea-breeze failed to make its appearance and an intolerable heat was produced, which only the traveler to the tropics in summer can fully realize. After discharging some of our cargo, we proceeded from Havana to Progreso, on the coast of Yucatan, favored during the day by the most beautiful weather, tempered by the strong northeast trade winds, while the firmament at night became more brilliant by the resplendent constellation of the Southern Cross, along with the interesting sight of the erratic comet.

We anchored, on account of the yellow fever, about three miles from shore, off Progreso, and discharged our cargo in lighters. While there the steamer was literally surrounded by countless sharks, which, however, knew too much and would not condescend to favor our carefully baited hooks with a call.

July 10 we arrived, after a short and fine run, at Vera Cruz, and bade good-bye to our comfortable quarters on board of the British Empire, with three rousing cheers for her captain and crew. On landing at that port we had to pass through the usual routine of custom-house inspection of luggage, which, by reason of the perfectly useless and unnecessary close scrutiny of purely personal effects, was doubly annoying, particularly when the fact is taken into consideration that our party was in some measure officially recognized as acting under orders and the assistance of the very government to which Vera Cruz belongs. Every possible restriction in conformity with established prohibitory rules was duly enforced including the small allowance of only 232

Porzana carolina (Linn.). Baird. Sora rail, Carolina rail, C. J. n.

Length 8-9 inches. Above olive brown, varied with black, and streaked and spotted with white. Flanks black, white banded. In adult birds the face and throat is black, and the sides of head and the breast slate blue; belly and under tail coverts fulvous. The young lack the black face and have the throat white, the breast being whitish or fulvous. This is the common rail on all our Atlantic coast, to which, however, it is by no means confined. It is distributed everywhere over the continent, and we have killed them on the alkaline lakes of the high central plateau of the Rocky Mountains, as well as on the low river bottoms of the Western States.

Porzana noveboracensis (Gmel.) Baird. Little yellow rail.

Smaller than the last, about 6 inches in length; above varied with black and tawny; young birds marked with white dots, which, however, the adults lack; below yellowish brown, paling on throat and whitening on the belly; flanks dark brown, white banded. Not an uncommon bird, but rarely killed save by chance. When flying it may be recognized by the white tips of the secondary quills, which are then conspicuous.

Porzana javanica (Gmel.) Baird. Little black rail. Smaller; length about 5 inches; blackish; head and under parts dark slaty, paler or whitening on the throat; above speckled with white, the cervix and upper back varied with dark chestnut; lower belly, c-issum, flanks and axillars white barred; quills with white spots. (Coves). A tropical species rarely seen in the United States. Sportsmen should be on the watch for this, and should see that any specimens killed are preserved and their occurrence reported.

The Gallinule are much like the genus *Porzana* in their general configuration, but the forehead bears a conspicuous horny plate, extending up from the bill, and the toes have a margin at membrane.

Totanus Martinica (Linn.). Reich. Purple Gallinule. Head, neck and underparts beautiful purple blue, blackening on the belly, the crissum white; above, oliveaceous green, the cervix and wing coverts tinted with blue; frontal shield blue; bill, red, tip of the lower mandible, legs yellow. Young, with head, neck and lower back brownish, the under parts mostly white, mixed with ochrey. (Coves)—Length 10 inches; a southern species; but stragglers have been taken as far north as New England.

Gallinula galeata (Licht) Fl. Florida gallinule. General color slate, darkest on head, and paler on belly, back olive, flanks and under tail coverts white-striped, legs and toes greenish; bill, frontal plate and a ring around tibia, red; length 12 to 15 inches. Rather southern in its distribution, but occurs regularly as far north as Massachusetts. A few are taken every year in the marshes of the Middle States.

Fulica americana—Gmel. Coot, Mud-hen—This sub-family differs from the preceding mainly in the character of its plumage, which is thick and duck-like; and in the feet, which are much better adapted for swimming than in any other members of the group. The feet are lobate, that is, they are furnished with semi-circular flaps for swimming, something like the feet of the grebes, but still more like those of the phalaropes. The coots spend much of their time in the water, and are excellent swimmers. In color the coot is dark slate, changing to black on the head and neck, and becoming paler on the belly. The under tail-coverts and tips of secondaries are white. Bill white, with a chocolate-colored spot near the end; frontal-plate chocolate-brown; length about 14 inches. The coot is exceedingly abundant in the interior as well as in the South and on the Pacific coast. In the New England and Middle States they are not particularly abundant, but they are seen in small numbers throughout the fall.

RABBITS AND FOXES AS SWIMMERS.—Sept. 14, 1881.—I have seen rabbits and foxes both take to water, in winter as well as summer. But the longest swim I ever knew a rabbit make was in the summer. I was out on a boat, standing on the shores of a creek, listening to hounds on the opposite side, when, much to our surprise, a rabbit ran out from the brush on the other side, plunged into the water and swam over to us; he landed safely, and made his way in peace. The place where he crossed was two hundred feet wide, and the hounds did not follow. I have several times known of a fox swimming across to escape when hunted, and once knew one to get a cold bath while on a hunt himself. This happened in the winter. There had been a light fall of snow on the evening previous, so several of us started in the morning to hunt white hares. On getting into the swampy bottom near Maple Springs, we ran where some hungry fox had taken a hare's track. His hareship made a bee-line for the brook and foxy followed. They reached the brook where it was sixteen or eighteen feet wide. The evidence on the other side showed that the hare must have cleared it at a bound; but not so with the fox. As he neared the brink it looked too wide, or else, as the banks were icy, he dared not try. His speed was such, however, that all efforts to stop him were vain. The ice which covered the lower part of the margin of the brook only made matters worse, and although he sat down, 'twas no use; in he went, and his ardor for hunting was suddenly cooled. A few yards down stream we could plainly see the prints which a wet fox left as he crawled out of an ice-cold trout brook.

EAST MILTON, MASS.—Speaking of rattlesnakes, there are one killed here ten years ago on a limb as high as a man's head, and one last week on the lower limbs of a pine tree about two feet from the ground. J. G. S.

The very great variety of rubber goods, useful and ornamental, now manufactured for the use of sportsmen, is well shown by the catalogue of Messrs. Hoggan & Co., which we have just received. Most of the things that one needs in the field seem to be provided, and are for sale at their two houses in this city. They are among the oldest of our advertisers.

"GOUGE AND SWINDLE"—Kingston, Sept. 12.—As a unit of the hearty and gentlemanly fraternity of sportsmen allow me, with all sincerity, to second the motion put by our good friend "Podgers" in regard to the firm of "Gouge and Swindle." Sportsmen seem to be the legitimate prey of all sorts of vultures. If a man be seen carrying a gun or rod the universal partners of the "Gouge and Swindle" firm are ever on the alert to take him in. Let us Boycott them. Why not reorganize our army and give dear old "Podgers" the command?—A. A.

Game Bag and Gun.

DEER HUNTING IN NORTHERN ONTARIO.

REV. MYRON W. REED says: "There are people who, failing to catch the whopping cough in childhood, are caught by it late in life. These have had it 'hard.' So it is with shooting. A man may lead a blameless existence until the white dust of the road of life is in his hair and then fall." Just so it was with the present writer. I had led the "blameless existence" for over half a century and the "white dust" had settled thickly, and then and not until then did I "fall."

Allured by the word "sport" I, who had never in my life fired a shot at a deer, was tempted to join a deer-hunting party. Probably the party itself had a share in the temptation, for a better lot one need not wish to fall in with than were the men, the Sheriff and the Lawyer.

The spot selected was among the lakes of Northern Ontario. Meeting at points on the road we reached together the rendezvous at the extreme limit of public conveyance. Here, after partaking of a supper of fried venison that whetted the appetite for more, we met and arranged with our guides, cook and teamsters, laid aside some of the garments of civilization, retaining only the necessary or useful, and prepared for a plunge into the woods.

That was indeed a beautiful October morning on which we wended our way toward camp. Delays appeared to be the order of the day, and the sun hung in his path "way" before we were fairly started. The Judge, Lawyer and Sheriff started ahead on foot with some of the dogs. Some time after the baggage wagon got under way, the Doctor and I occupying prominent, if not comfortable, positions upon it. Anon followed another wagon, bearing five large canoes, and the men, leading the rest of the dogs, brought up the rear. It was understood that on catching up with the leading pedestrians the Doctor and I were to give up our places to them, but fortunately for us, they took the wrong place, and we did not see them again until some time after reaching the end of our land journey. The road was simply shocking, and our driver was so very considerate (of his horses) that he made us get out and walk up every hill, little or big, on the road; and after all it did not appear that we had so much the advantage over those who walked all the way. It was not until late in the afternoon that all parties arrived. Wagons unpacked, dinner cooked and eaten, and canoes launched and loaded, we set out for a four-mile paddle to our ultimate destination—the east side of Long Lake. And by the time the trip was accomplished, tent pitched and furnished, supper attended to, and everything made snug and comfortable, all were quite ready and willing to retire for the night.

Our men were George Green, the leader of the hunt, his brother John, son William, and brother-in-law Story, all first-class bushmen and canoeists. I had fallen to my lot. A better paddler need not be wanted, but a temporary affliction of the lungs made him useless as to those organs for war chasing. William supposed to go with the Doctor and Story with the Judge, while the Sheriff and Lawyer were to go together, "paddling their own canoe." But these arrangements were by no means constant. I must not omit to mention the cook, who rejoiced in the name "Jim," and whose chief characteristics were a beautiful ignorance of everything pertaining to the art of cooking and enormous (that's the word) vocal powers, which he would persistently display just as I wanted to go to sleep. My piteous appeals to the others to choke or drown him were of no avail. The Doctor and the Judge did succeed in driving some ideas about cooking into his head, but nothing could quench his sonorous voice or the inclination to exercise it.

I tented with the Judge. The Sheriff and Lawyer were together in another tent. The Doctor had one to himself, and the men a larger one a short distance away. I was fortunate in my companion, for anything he does not know in the way of making himself comfortable on such occasions is hardly worth learning, and I had the benefit of his experience and forethought. The forethought in the tent added very materially to our comfort in wet and windy weather. Our tents were placed in a circle, with the openings to the center, where a fire was kept burning. We first camped, for convenience, on the bank of the lake, but after a very windy night I missed the Judge early in the morning. He had not been able to sleep on account of the storm, and went out to prospect for better quarters. The result was a transfer of the whole camp to a spot cleared for the purpose in the shelter of a grove of hemlocks. The bright flies, white tents and dark green surroundings were indeed a very pleasant picture.

Our hunting grounds were Long Lake, a very irregular body of water about six miles long. Round Lake, west of Long Lake, on the outlet, about three fourths of a mile in length; Spruce Lake, another irregular one about two miles long, east of Long Lake, with a half mile portage between, and an unnamed lake north of Long Lake, reached by a portage of about a mile. Except for the work of lumbermen, the whole of the surroundings were as nature had left them. To the south there was a settlement five or six miles away. In all other directions the miles were to be traversed before a farm or clearing could be found. We had a hunt almost daily, Sunday excepted. At first we tried it twice a day, but found it was too much for the drivers, the dogs and ourselves. Other hunting parties were in the neighborhood; and it was arranged all around that the deer should "follow the dogs." That is, if a dog started a deer, that deer, no matter who might shoot it, should go to the party owning the dog that started it. An honest old trapper proposed this to the Judge the night of our arrival, and he was so taken with the idea and the merit of the thing, that he went on with it only a few hours, as we shall see, to show him that the trapper was decidedly ahead in that arrangement.

Our first hunt was on Long and Spruce Lakes. The Judge and Sheriff had their canoes carried across to the latter lake. My watch was at a point nearly opposite the camp. The Lawyer, alone in a "bark," was more to the north, and still farther on, near the head of the lake, the Doctor had his position. Green went out with the dogs northward between the two lakes, and we all were in positions. I watched long and faithfully, watched stamplings, sawings, waddings, glances across the water in all directions until the eyes grew dim and weary, and fancy conjured up all kinds of visions in the mist that at first obscured and the dazzling sunshine that afterwards lighted up the water, watched until I was tired of watching, and still watched on and on and saw nothing, at least nothing that would pass for a deer. Tried to convince

myself that this was exhibitional sport, but could not succeed. Watched on until the other canoees came down the lake, and then went in to the camp and found the Doctor in possession of a fine doe. It had taken the water on the Lawyer's watch and got a good start across the lake before he saw it.

The wind was dead ahead blowing hard, and he could not get within shot. Finding it getting away from him he fired twice ineffectually and gave it up. The Doctor in the mean time had foreseen the result, and his canoe being double manned, he hastened to intercept the deer and succeeded in doing so before it reached the other shore. The deer made his appearance, looking anything but happy. He had bargained a noble buck, the best of the whole hunt, and was congratulating himself on his success, when the honest old trapper aforesaid, put in and established his claim to the deer, on the ground of his dogs having run it in. The Judge wanted to know where his, the trapper's watchers were, and found that he had none. He had made a splendid one-sided arrangement, by which we were to spend our time in hunting deer for his benefit, without any possibility of return. It is needless to say that the whole incident, in spite of the time and the bulk of the whole of the day to restore the Judge to his wonted good humor.

The next day we hunted the west side of Long Lake. This time the watch was not so tedious. I soon had an opportunity to distinguish myself, and succeeded admirably in doing so. We could, from our canoe, hear the dogs working up the lake, and paddled up slowly after them; finally, pausing a few hundred yards from the shore. Although John's eyes were of little use, his quick ear detected a deer taking to the water. He went toward it, but owing to the reflection of the trees, and not knowing what a deer in the water was like, I could not see it for some little time. At last I observed it swimming from point to point of a shallow bay. We tried, without avail, to cut it off from the shore, and then, by harrier paddling, to get within shot. By this I made my shot, for we got quite near enough; for any one else to hit it. Seeing it about to land, I blazed away with one barrel (huck-shot) and missed, of course. John heaved me to hold the other barrel until the deer struck the bank, when I would have a larger and equal chance. We waited quietly until "fader," ever listened to advice? Besides had I not my rifle ready as a final resort. So I fired again with the same result. The deer was then close to land, and as it sprang up the bank I took hurried aim with the rifle, but the thing would not go off. I had forgotten to cock it; and before that trifling preliminary could be attended to, the deer was out of sight. To say that I was crestfallen and disgusted, is putting it very mildly. The boys behaved very well over it though. Kept down their laughing as well as they could, and good naturedly created all sorts of excuses for what they were quick enough to term my "bad luck." The Sheriff secured a fine buck, and the Judge a doe, on this hunt, so the game began to count up, notwithstanding my blundering.

The Lawyer shot one at Spruce Lake soon after, and even I was not altogether "whitewashed." I was watching the upper end of Long Lake, had the canoe drawn up on the beach under some trees, and was sitting very comfortably on its bow, when I saw the head and then the ears of a deer pass a projecting point not a hundred yards away, and start across the lake. I was not equal to the task. I was not quick enough to turn round too far to return, and then started or it and of course got it. The poor thing had no chance, even with me. I had only to get near enough to make sure of hitting it without injury to carcass or skin, and then fire. Shall I confess that I did not like this much better than the tedious watching of the first day, or the miserable failure of the second?

A day or two of un-pleasant weather interfered somewhat with our hunting, and we had been out five days and only bagged as many deer. The two days more only remained to us, and something must be done. Green determined to take our ground and try southward between the lakes (Long and Spruce), watching on both. I went to the extreme south end of Long Lake, heard one shot but no dogs, and saw no deer. Waited until noon and then started for camp. Going up the lake we heard single shots from a deep bay and, turning aside to see what was up, met the Judge, who said the deer wanted us to help "bring in their bucks." They had secured three deer, and soon after our arrival in camp the party from the other lake came in with two more, making five for that day's hunt.

The next (and last) day we tried the same ground. It was proposed, as everybody was now in an agreeable humor, that I should take a watch that would give me a better chance of getting an her deer. But I declined. I had got one and that was all I wanted. Besides, John had to go and hunt up another team to take out the deer that had so suddenly increased on our hands. So I went again to the landing at South Bay, sent John out to the settlement, and remained on watch alone, for the first time. This bay is nearly square, about half a mile across, and is a very good place for the north. Around this point a short narrow leading to a second bay not so wide, and after crossing it a channel nearly half a mile long leads into the lake. I had no thought of seeing a deer, and paid but little attention to the watch, but habit of observation and quickness of perception had grown up in me even in one short week, and I was watching without knowing it. An unexplained ripple at the extreme northeast corner of the bay after a while developed a swimming deer making for the west side. I waited until it had got so far that it could not turn back to the point, and then I went to intercept it. But I was too hasty, and had hardly started when it turned and made for the point. I strained every nerve and muscle to reach it by head off, but without avail, and in desperation fired a parting shot, unsuccessful, of course. I waited a moment to see if it would again take the water on that side, and then paddled through the narrow. On emerging I saw it in the next bay, again making for the west side and headed it off to the next point on the east, not getting within shot. I then paddled through the channel as fast as I could, hoping to get it as it came to the point, but it intercepted it. But I was too hasty, and had hardly started when it turned and made for the point. I strained every nerve and muscle to reach it by head off, but without avail, and in desperation fired a parting shot, unsuccessful, of course. I waited a moment to see if it would again take the water on that side, and then paddled through the narrow. On emerging I saw it in the next bay, again making for the west side and headed it off to the next point on the east, not getting within shot. I strained every nerve and muscle to reach it by head off, but without avail, and in desperation fired a parting shot, unsuccessful, of course. I waited a moment to see if it would again take the water on that side, and then paddled through the narrow. On emerging I saw it in the next bay, again making for the west side and headed it off to the next point on the east, not getting within shot. I then paddled through the channel as fast as I could, hoping to get it as it came to the point, but it intercepted it. But I was too hasty, and had hardly started when it turned and made for the point. I strained every nerve and muscle to reach it by head off, but without avail, and in desperation fired a parting shot, unsuccessful, of course. I waited a moment to see if it would again take the water on that side, and then paddled through the narrow. On emerging I saw it in the next bay, again making for the west side and headed it off to the next point on the east, not getting within shot. I then paddled through the channel as fast as I could, hoping to get it as it came to the point, but it intercepted it. But I was too hasty, and had hardly started when it turned and made for the point. I strained every nerve and muscle to reach it by head off, but without avail, and in desperation fired a parting shot, unsuccessful, of course. I waited a moment to see if it would again take the water on that side, and then paddled through the narrow. On emerging I saw it in the next bay, again making for the west side and headed it off to the next point on the east, not getting within shot. I then paddled through the channel as fast as I could, hoping to get it as it came to the point, but it intercepted it. But I was too hasty, and had hardly started when it turned and made for the point. I strained every nerve and muscle to reach it by head off, but without avail, and in desperation fired a parting shot, unsuccessful, of course. I waited a moment to see if it would again take the water on that side, and then paddled through the narrow. On emerging I saw it in the next bay, again making for the west side and headed it off to the next point on the east, not getting within shot. I then paddled through the channel as fast as I could, hoping to get it as it came to the point, but it intercepted it. But I was too hasty, and had hardly started when it turned and made for the point. I strained every nerve and muscle to reach it by head off, but without avail, and in desperation fired a parting shot, unsuccessful, of course. I waited a moment to see if it would again take the water on that side, and then paddled through the narrow. On emerging I saw it in the next bay, again making for the west side and headed it off to the next point on the east, not getting within shot. I then paddled through the channel as fast as I could, hoping to get it as it came to the point, but it intercepted it. But I was too hasty, and had hardly started when it turned and made for the point. I strained every nerve and muscle to reach it by head off, but without avail, and in desperation fired a parting shot, unsuccessful, of course. I waited a moment to see if it would again take the water on that side, and then paddled through the narrow. On emerging I saw it in the next bay, again making for the west side and headed it off to the next point on the east, not getting within shot. On emerging I saw it in the next bay, again making for the west side and headed it off to the next point on the east, not getting within

among the brushwood something that was not brush, and soon distinguished the antlers of a buck which was crossing the second bay. Forgetting my resolution of a few minutes previous, we both did our best in making the old canoe spin through the water, and by a very narrow majority got within shot of the deer and added it to our stock of venison. On reaching camp we found the party in from the other lake was another deer.

This was our last day in camp. We had thirteen deer of various ages, but all in splendid condition, and a nice lot of venison it would be difficult to find. All had enough and to spare for numerous friends. Besides these our party killed three deer for other parties. One of these is said to have given an exciting chase. One of the other party was on watch near where the deer took the water. It nearly succeeded in getting across the bay, but he managed to head it off, and fired a couple of shots and missed. Loading again he followed the deer, fired both barrels and again missed. The deer in the meantime was rapidly nearing the shore where it had entered. Two of our men in a canoe at some distance hastened up, but did not get within fair shot, although firing twice. Story, who was in another direction, also hurried to the scene, but before he got near the deer was out of the water, and making for the woods. Two or three jumps more and he was safe. Story, at the last moment, stopped paddling, seized his rifle and dropped the deer. The distance was estimated at 120 yards, and the shot is spoken of by those who saw it as something almost marvellous under the circumstances.

Our sport was not confined to deer hunting. Partridges were plenty, and some of the party made considerable havoc among them. Ducks also there were, but not numerous or generally of good quality, being mostly of what are called the "fishy" kinds. Whitefish and mountain trout, both delicious, were taken with the troll, as many as we could use. A night's fishing by jack-light was very enjoyable, but did not add much to our larder. And the mere strolling on the fine autumn afternoons through the boundless woods, untouched by the hand of man, or paddling by the bright moonlight among the islands and bays, was quite enjoyment enough for one of the party.

Our evenings were spent very quietly. We rose, and were glad to retire, early. It was, in some respects, a model camp. There was no Sunday hunting, no guzzling of liquor, no ribaldry or profanity, and no bickering or jealousies. All went on smoothly and pleasantly, and the only regret was that a longer stay had not been arranged, and even this was removed before we reached home.

The morning of our departure was the finest of all. So fine was it that we had not been engaged to meet us on that day, we would have been tempted to remain a while longer. Fortunate it was that we had not done so, for that afternoon the snow fell heavily, and the next morning was thirteen inches and the following night two feet deep.

We were astir early. To breakfast, get everything packed up, carried down to the beach and loaded in canoes and punts, paddle to the landing and wait for and load up the wagons, took up considerably more than half the day, and the following march of thirteen miles, part of it through a piece of snow storm. To me, entirely unused to such walks, and not very sound of foot, it was a serious affair. By the time Story passed me, a couple of miles from the end of the walk, fresh as if just started, and relieved me of my gun, it had so increased in weight that seventy-five pounds would have been a moderate estimate. An excellent supper, a solid roof and a "real bed" were never more enjoyable.

So began and ended my first deer hunt. Shall it be the last? The Great Disposer of events only knows. I fear I have "fallen" irretrievably, and the lure and the temptation again come in my way, there would not be much resistance, health and business permitting. I would, however, like to make some stipulations—one, that less time be given to solid hunting and more to enjoyment of the scene and season; another, that the deer so conduct themselves as to make some considerable exertion necessary to get them, and not come right in the way, as my first one did. I should also like to be secured against very long watchings, and more particularly against any more disagreeable "muffs." And above all would I like an agreeable company to share in the sport.

NEMO.

DITTMAR INDICTED.

BINGHAMTON, N. Y., Sept. 19.

Editor Forest and Stream:

Your readers will remember the facts of the terrific explosion of Dittmar's blasting powder mill, which startled this city on the 21st day of last April. Despite Dittmar's endeavor to make it appear that it was somebody else's powder that caused all the damage, the residents of the city were aroused by the explosion to a sense of the peril to life and property ever imminent so long as the Dittmar blasting powder factory should be tolerated here. The powder mill is right in a position to do immense damage should it "go off" again, a little harder than it did the last time, and the people are alive to the importance of taking precautions before the arrival of the impending earthquake.

We are a law-abiding lot, however, and are proceeding to remove this nuisance according to legal forms. The feeling of the populace was shown at a recent meeting held to show this corporation that there were rights which even they may be compelled to respect. All signs are up in a state of protest against the further continuance in the midst of an institution having its only purpose in destruction. The meeting was largely attended and the unanimous vote of those present in favor of the following resolutions was but an expression of a popular determination to be rid of this nuisance and that too in a short space of time. The resolutions read:

"Whereas, An explosion at the Dittmar Powder Company's works, situated adjoining the city of Binghamton, in the town of Binghamton, in the State of New York, on the 21st day of April last, was the direct cause of badtimed death, the permanent loss of health in many cases, besides the damage done property to the extent of probably \$80,000; also causing the depreciation of the value of real estate in the vicinity of said powder works to an alarming extent; and,

"Whereas, The said Dittmar Powder Company have rebuilt and are from time to time making not only powder, but more dangerous explosives known as nitro-sugar, or dynamite, and various other high explosives; therefore, be it

Resolved, That we, the inhabitants, citizens of the city and town of Binghamton, do hereby determine to prohibit the further manufacture of powder or any other high explosive at or near the location of its present works by the said Dittmar Powder Company or any other person or persons or company, and be it further

"Resolved, That a committee, consisting of the chairman of this meeting and Messrs. William Wildey, Roswell Bump, Nevell W. Ackerman and Hiram Barnum, be appointed with full power to procure subscriptions for a fund to be applied to the purpose of preventing, by all proper means, the manufacture or storage of dangerous explosives, or the erection of buildings therefor within the vicinity of Binghamton, and to apply the moneys so obtained to the prosecution of the object of this meeting; the repression of the manufacture of explosives within limits dangerous to the safety of the lives and property of the citizens in this vicinity; and that such committee be and it is invested with full power to employ a collector to receive the funds on such subscription and pay him a reasonable compensation, also to employ such attorneys and counsel as it shall be advised.

"Resolved, That a copy of these resolutions be addressed to the Dittmar Powder Company, or their representatives, immediately."

The committee set to work at once and indictments have been found by the Grand Jury here against Carl Dittmar, Wm. Haldane and A. J. Parker. The matter is now progressing well in the courts under able counsel.

This united and public effort to rid Binghamton of this incubus is not the only one in progress. Many private suits have been opened, and after a test case has been made it is expected that they will be rapidly disposed of.

We mean business and that business just at present is to get Mr. Carl Dittmar out of our city for his manufacture of powder. We will not be content with a proffer of pamphlets to show that the stuff may, can, must and should not explode. We are willing to grant every one of the many good qualities he used to claim for his other deceptive-looking product: we will swallow his honeyed tale that the front of his shop in New York city was blown out by the slamming to of the back door; we will share his belief that the guns which burst here and there over the country with his white powder charges were rotten old blunderbusses in the hands of pol-hunters; we will sign his application to have the powder not packed given freely to the untrodden Loos on our Western frontier; we will do a great many things—but we ask in return only one favor, that Mr. Carl Dittmar will give us his room rather than his Company.

BING.

SPOTS IN GUN BARRELS.

Editor Forest and Stream: Boston, Sept. 15.

There is a vexed question that is worrying the souls of a number of sportsmen, and still remains unsolved. We wish you would air the subject in your columns.

What is the true cause of the spots that form in gun barrels? I have had three breech-loaders in succession afflicted with the "gun measles," all under such circumstances that I am puzzled to account for it. Dampness, of course, suggests itself at once, but this solution seems incorrect in face of facts. My guns and those of my friends, when in use, are always cleaned, dried and oiled every night and morning with great care, and therefore should not get into them and stay long enough to cause such awful holes as now present themselves. Further, on damp days the above cleaning process is performed half a dozen times and sometimes more.

Now for erosion, caused by chemicals in powder, or especially cheap moist powder. This assumption causes disagreement; some say it is possible and probable, and others say the reverse; the writer does not know.

When a man comes down to the marsh with a new gun, cleans it, etc., and takes extra pains with it, and it is mottled in two days by seeing the interior of his gun speckled and freckled, consequently he wishes to know what it did and what should be done to avoid it. It has been advanced that cheap powder is the trouble, but the writer has used the most expensive powder, and the old story has been repeated.

Let the vast talent at the command of the FOREST AND STREAM be exercised and commanded to explain these fearful mysteries, but do not, for heaven's sake, or rather men's sake, mention anything in the rust preventive line. All, all have been tried, and lost. I am at a stop.

We can account for the trouble referred to by the supposition that the cleaning was not thorough, although we presume that this will be resented by our correspondent. We have seen scores of guns marred by rust spots, and have always explained it satisfactorily to ourselves by the fact that without the most thorough care after the gun is cleaned fine particles of the residuum may still be left in the barrels, and it is from these that the rust spots start.]

ONTARIO SHOOTING NOTES.

BOWMANVILLE, Ont., Sept. 12.

OUR summer has come and gone again, and once more the season for using our guns has arrived, but so far the prospect is not very inviting. There are a few—a very few—grouse left, a stray pigeon or two, a frightened rabbit or so and plenty of rails. These constitute our bill of game at present. The ducks have not begun to come in yet, and we scarcely expect them before the heavy winds and rain storms of October drive them from the great lakes, and rain storms of the North. Our sole shooting now, that can be called shooting, is the sora rail. These little beggars are in all the marshes and rice beds here in innumerable numbers. A good shot would have no difficulty in getting 200 of them in a day. They are counted small game here, and no one seems to think them worth shooting. I and Will Piggett went to the marsh after them last week, and in two hours' shooting we secured three dozen, punting for each other in turn. It is not out of the way to say that there were thousands of them. Every shore of the canoe put them up in all directions, and I loaded and fired the muzzle-loader I was using faster, I think, than I ever did before in my life. Very few ever shoot them, and fewer eat them, as they do not count them worth the trouble of cleaning, but they give good sport for an hour or two, after that it is unnecessary cruelty and waste of life to shoot them, as enough can be secured in that time to feed a dozen sportsmen, and I never believe in fishing or shooting to make a count.

All sport for trout ended here on the 15th of this month. I and W. Piggett went out after them a month ago, driving about sixteen miles to a small creek. We fished for four hours, and succeeded in gathering in between six and seven dozen of as fine trout as any one would want to catch, my largest one measuring sixteen and one-half inches in length, and weighing eighteen ounces the morning after being caught. I had four more nearly the same size, while the rest ran from one-fourth to one-half pound. Both of us took our wives

with us, and my wife gained the honor of landing the second largest trout taken in the day's fishing.

By the way, I saw in the paper two or three numbers back some one asking what shooting can be had about Lindsay and the country about there. Lindsay is only about twenty-seven miles from us here, so I can speak with certainty of its sporting facilities. There are a few grouse in the fall, and only a few. There are plenty of ducks in the fall, but Rice and Secor, James are too near, and the birds keep to the open water, not coming into the rice until after night. From the first day the season opens they are unceasingly persecuted by gunners night and day, and the consequence is that in a week's shooting you can scarcely get a dozen ducks, and these are mostly blue-winged teal. There are no deer without going a long and toilsome journey north of Lindsay; then they are not plenty. There are no quail in any part of Ontario east of Toronto, and only very few between that place and the city of London. The fishing about Lindsay or any place on Lake Secor is only fair, but in Rice Lake the bass fishing is splendid, and the muskellonge fishing first-class in some seasons of the year.

AC SAVILE.

MISSISSIPPI GAME NOTES.—Sardis, Miss.—Editor Forest and Stream: Quail shooting was tolerably good here last winter, considering the poor opportunities the birds have in this part of Mississippi to "scratch" a subsistence out of the cotton and sedge fields. I have been living here nearly two years, and have never yet seen but one or two wheat or stubble fields of any consequence, and very few corn fields—only those that are so near the farmer's residence that the birds dare not come into them for fear of being "pol-hunted." Even some of our best sportsmen (?) take advantage of every opportunity to shoot them on the ground. I don't think a person is worthy the name of sportsman who will shoot birds on the ground, catch them in nets or traps, seine or trap fish. All such sport (as some call it) is not only a shame and disgrace to the perpetrator, but is really, in my opinion, cruel and barbarous, to say nothing of the disgust and contempt a true sportsman should feel for them. I learned, recently, that the deer, panther, bear and smaller game was hunted very little in the bottom around Pican and South lakes last season, on account of the frequent high waters, which prevented hunters from going into the cane around the lakes. Immediately surrounding these lakes the land is so high the water has to get unusually high to overflow it, and all kinds of game collect there for safety, and the hunter must take the chances of filling a "watery grave" in swimming his horse to them, which is the only way to get there, as a canoe cannot get through the cane where the water would not swim a horse. Some few, in past years, have ridden through the low bottom between the hills, but his land around the lakes, but one trip thoroughly satisfies all who attempt it. But we be unto the game (all kinds) that resort to the hills for safety from high water, for it is death from hounds to nearly all the game.—Davy.

REVOLVERS AND MUZZLE LOADERS.—Philadelphia, Pa., Sept. 15, '81.—An Arkansas correspondent, writing the other day in a sportsman's paper, denies that "revolvers" are older than (about) 1826. He says: "I guess those have been made (moulded) in recent years, like the spurious relics now sold on the field of Waterloo." He writes from Becker, Ark., and is referring to specimens in the Tower of London. He is very much in error: the earliest "revolver" was a flint-revolver chambered gun, made in 1500, is now in a museum in Nuremberg; and scores of specimens on this principle, made in the sixteenth and seventeenth centuries, are to-day in Continental museums. In like manner, in 1493, Leipzig had the germ of the rifle, and in 1520 Koster (or Kutter) of Nuremberg, was celebrated for his "star-grooved barrels," in which the grooves had a spiral form. I regret to see that the genial Major Merrill, earnestly and at length, sings the praises of the "m. l. rifle." But, *est honor*! I grant that it is a noble and most necessary to grip. But, really, this muzzle loading weapon, for war or the chase, has "now" no show at all for "coming to the front," it is at the rear, just where it deserves to be. The "breech" loading arm, all things considered, is abundantly the better weapon.

W. MCK. II.

THE SCARCITY OF BAY SNIPES.—Editor Forest and Stream: I notice in the last number of your paper a complaint by L. of the scarcity of bay snipes on Long Island, and asking if it is not all along our coast. I can say that my experience, from the middle of August up to last Monday, confirms this undoubtedly on Barnegat Bay. Many of the small sandpipers were seen and a few yellow legs; but the larger birds, like willets, curlew, tellards, plover, calico-backs, robin snipe and dowitchers, are extremely scarce. This can better be attributed to the long-continued drought, which has lasted for three weeks, than anything else, as it is well known they never come until after a good storm. On the 10th and 11th of this month a heavy rain brought a few, and there will be more in two or three days later. The rail shooting has not been spoiled very much by the hot weather around Philadelphia, but the reed birds are scarce and not in good condition.—COLAN.

PENNSYLVANIA NOTES.—Media, Sept. 15.—Squirrels have been shot in large numbers since I wrote you. Black bass fishing has been good. One gentleman, who takes your paper, went out with another person, and caught six black bass weighing eighteen pounds and three quarters. Another, a physician of Wyalsburg, caught one of four pounds and fourteen ounces weight. As I was passing up the street this evening I saw a woodcock right by a house, as though he was looking for a place to roost. The roomer living in this county had a pack of hounds, also horses for riding, and they hunt on the English style.

OS THE WING.

THE editor of the Greensburg, Pa., Press is a good shot. He writes that grouse and quail are plenty there this year.

THE KING'S LAKE CLUB.—Of the King's Lake Club, whose camp was described in our issue of Aug. 26, the author of that article writes: "The fall color was splendid, and the night I went out in snow was four inches deep, and next morning colder blue blazes." "Alice came" though, we went the regular rounds, two day's spoils being some 550 fish, and sundry dozen mallards, etc. The club are now preparing for this fall's campaign, and will be on time; to my regret, business will prevent my being with them but a few days, but those few I'll put in for all they're worth, and in so doing will remember the many ideas gathered from your columns.

OLD HICKORY.

FLORIDA PIONEER SPORTSMEN.—Point Pleasant, W. Va., Sept. 12.—Last winter with a party of five, brought together pretty through correspondence in your paper, I made the trip down the river Kissimmee in Florida, through Okechobee Lake, and thence into the head of the Caloosahatchie, and out to the Gulf at Punta Rassa. We were out seven weeks: had delightful weather; and found abundance of game and fish. We consulted "Al Fresco" before leaving Jacksonville, and he gave us the benefit of his experience in that region. Ours was the first sporting party to pass from Okechobee to the Gulf by water, though many have tried it.

Cazenovia, N. Y., Sept. 17.—Will Thomas changed his mind regarding a grouse outing. Went out with the "Donkey" Thursday night and killed his first grouse. Says Crittenden's dog Jersey is an ungrateful beast, for after feeding the dog a pound of crackers and coaxing him to the woods, he disappeared, and he did not see him again until his return to the store at night. Bye-the-bye, the dog will not hunt for any one but his master. Thomas also won the gold badge at the club shoot at their grounds, Friday, Sept. 16. Loomis and Lewis, the two veteran fishermen, report fishing in the Cazenovia Lake for the past eight days the best of the season. The dry weather continues, and grouse and woodcock are scarce.

LONG POINT CLUB.—A correspondent recently inquired about the Long Point Club rules, respecting outsiders shooting over their preserves. The rule is to allow no shooting by non-members, except by invitation of some of the club men or at least by their special permission.

THE LYMAN RIFLE SIGHT is said to be having a large sale this season, and the results yielded by the use of this invention are said to be excellent.

SQUIRRELS are reported abundant about Pittsburgh, Pa. The season in that State is now an open one for this game.

NEW YORK SCHUTZEN CORPS.

THE annual excursion of the New York Schutzen Corps to the Highlands of Navasack was held Wednesday and Thursday, Sept. 16 and 17. The corps left New York at 11 A. M. Wednesday for the boat for the Highlands, where they arrived at 12 o'clock. A procession then formed and they marched in to an elaborate dinner at Thompson's Pavilion. After dinner the shooting was in order, but it was not finished until the next morning. During the afternoon the ladies prize bowling contest took place, each lady bowling 10 balls. There was a prize for each contestant, and among them were gold and silver sets, toilet sets, picture frames, work boxes, satchels, a handsome eclogue box presented by Major Aery, album, etc. Following are the leading scorers:

Mrs. Webb	21	Mrs. Steffens	21	Mrs. Wrehrenberg	48	Mrs. Aery	46	Mrs. Meyer	45	Mrs. Hiner	44	Mrs. Mahknen	44	Mrs. Saanly	39	Miss Nita Hiner	39	Miss Annie E. Hiner	39	Mrs. Lemko	31	Mrs. Aery	31			
The shooting match was under the following conditions: Three shots at fifty yards, string measurement. Every man that hit the target won a prize. The prizes were displayed on a table, and each contestant in the order of his score was called up to make his selection. The prizes consisted of gold, orders for money, barrels of beer, cases of wine, silverware, pistols, badges, boxes of cigars, etc. Following are the men's names in inches of all that hit the target three times:																										
Ph. Klein	41-15	F. Wilm	5	7-16	Brummerhop	51-12	Major Aery	7	1-16	Capt. Klein	7	1-16	J. H. Richter	7	1-16	M. Mahknen	10	6-16	F. Brumle	11	3-16	P. Lange	11	6-16		
John Bolling	12	6-16	A. Steffens	12	13-16	Wm. Klein	13	5-16	J. H. Richter	13	6-16	Kund	11-16	Wm. Klein	13	5-16	Geo. Olt	13	14-16	H. Heffene	14	6-16	Fr. Hanson	14	6-16	
Thompson	15	14-16	M. Heffene	14	6-16	R. Kossmeck	14	15-16	M. Heffene	14	6-16	R. Kossmeck	14	15-16	M. Heffene	14	6-16	A. W. Lemke	17	13-16	A. Hinkow	19	4-16	J. H. Kler	21	3-16
J. H. Ficken	21	8-16	F. A. Wanne	21	8-16	C. Nagel	21	8-16	C. Nagel	21	8-16	C. Nagel	21	8-16	C. Nagel	21	8-16	C. Nagel	21	8-16	C. Nagel	21	8-16	C. Nagel	21	8-16

Major Aery also won the FOREST AND STREAM cup for the best bulge. In the Judges' Match the first prize, a handsome gold-headed cane, was won by Mr. Gerds, and the second, a silk umbrella, was won by Mr. Hoffman. On Wednesday evening the large dining room of the hotel was prepared for dancing, and the members and guests assembled and heartily enjoyed themselves up to a late hour. After the prizes had been presented Major Aery assembled his company and they danced the last of the New York Schutzen Corps. This time, this ending another one of the never-to-be-forgotten excursions of the New York Schutzen Corps.

For first-class Carvers and Table Knives go to C. L. Ritzmann, 931 Broadway—116.

Sea and River Fishing.

I recommend no sour, ascetic life. I believe not only in the thrush on the rosebush, but in the roses which the thrush defend. Asceticism is the child of sensuality and superstition. She is the secret mother of many a secret sin. God, when he made man's body, did not give us a fibre too much, nor a passion too many. I would steal no violet from a young maiden's bosom; rather would I fill her arms with more fragrant roses. But a life merely of pleasure, or chiefly of pleasure, is always a poor and worthless life, not worth the living; always unsatisfactory in its course, always miserable in its end.—Theodore Parker.

FISH AND GAME IN THE NORTHWEST.

FORT WALLA WALLA, W. T., Sept. 4. I have just returned from my usual summer's expedition in the interest of the National Museum at Washington, D. C. This time I was out after fossils. A number of copies of the paper remain to be read yet, and I have only got through a few of the latest ones. I see in the number of Aug. 13 mention is made of the "Wicked Fishing Wheel" taken from the San Francisco Krenning Bulletin. Every word of that article is true. I have seen the wheel myself this spring, and commented on it to a number of parties who stood by, and interested in the preservation of the salmon in the Columbia river, but I presume that such talk is perfectly useless. The only thing I will not vouch for is that the wheel is patented, as I don't know that positively. I cannot conceive how people can be so blind that when interests amounting to \$3,000,000 are at stake annually they will not use a little common sense. It is true that a law has been enacted by the Oregon Legislature providing that all nets must be taken up on Saturday evening and must remain up till Monday morning, but as the salmon have to run the gauntlet of nets, not to speak of fishing wheels and other devilish contrivances, for about 200 miles from the mouth of the river near Astoria to Celilo above the Dalles, Oregon, it can readily be seen that

those fish that pass the mouth of the river unobstructed between Saturday night and Monday morning run into the nets a short distance above on Tuesday and during the balance of the week.

Livingston Stone estimates that a salmon travels only two miles a day, twenty-four hours, in the Sacramento River, and three miles in the Columbia, via Jordan and Gilbert in American Naturalist, March, 1881. I think this is considerably under-estimated, as some of these fish travel over 900 miles from salt water to reach their spawning grounds in northeastern Idaho—namely, in the Lemhi River and the headwaters of the Salmon River near Atlanta, Idaho. The latter place is over 900 miles from salt water, to my certain knowledge, and travel over a good part of the distance on various occasions, and have access to some of our best and latest maps. Now, at Stone's rate of travel this would be 300 days. Salmon certainly don't commence to run before March 15, and on the 5th of August I have seen numbers of these fish at the extreme headwaters of the Salmon River, and previous to that in the Lemhi and other tributaries near Challis and Salmon City, Idaho. You see this does not tally at all.

There are more canneries established every year, and now there are a score between the Dalles and Celilo, Oregon, about 180 miles from the mouth of the river. There is a slough near one of these canneries between the Dalles and Celilo that is so crowded by these fish that a single Indian can keep the cannery supplied, I am told.

I think it is safe to estimate that not one fish in a 1,000 that starts up the river reaches its spawning grounds. Comparatively few run up the Columbia proper. The Clearwater and the Salmon rivers are the spawning grounds par excellence of the quinnat salmon. Unless an artificial hatchery like the one on McCloud River in charge of Livingston Stone is soon established on one of their favorite spawning grounds (and it seems to me that the vicinity of Challis or Salmon City, Idaho, would be a very proper place, particularly as either place is near the Utah Northern Railroad and easy of access) the salmon will soon be a thing of the past in the Columbia River and its various tributaries. The immense drain can only be kept up by artificial means, and it is strange that those persons most vitally interested in this matter don't take some steps to protect their own interests. I know there is a scheme of hatching and establishing on the Clakamas River, but this covers but a small portion of the territory, and I believe, has never been very successfully operated.

If a fishway was constructed at Oregon City at the Falls of the Willamette it would open a number of fine and eminently suitable streams to these fish, and the cost to construct such a fishway would be very trifling. I understand that a sum of money had been appropriated by the Oregon State Legislature, but the Bill was vetoed by the Governor. This may not be true, I only state what I heard; but I do know that there was no money there some three months ago, and you could see the fish jumping by the hundreds trying to get over the falls. So much for the salmon.

Our sharp tail grouse are rather scarce in the vicinity of Walla Walla, and it is a hard matter to get at the true cause of the scarcity. There are a number of theories. Squirrel poison, no doubt, has something to do with it, so have the pothunters, and snaring the birds in and out of season has its influence as well on the diminished supply. The fact is, they are getting scarcer and scarcer every year. Blue grouse, *Capra obscura*, are still reasonably plenty in suitable localities, and will remain so for some time to come. Oregon ruffed grouse, or *Sabine*, are also met with now and then, but they never have been plentiful about here. The upper John Day River country, where I spent the greater portion of the last two months, is still well stocked with all the three species, and is likely to remain so the birds are but little disturbed. The mule and white-tailed deer, elk and bear are also plenty in that region in suitable localities, and you can't go astray for trout. Fine specimens of *Salmo purpuratus* and *Salvelinus malin* can be caught in the John Day and all most any of its tributaries. The country is rather rough, but it is a perfect sportsman's paradise for any one that is not too fond of comfort.

I see that the snake-climbing controversy is being revived again, but I consider it pretty well settled. I supposed nearly every one knew that the constrictor family could and did climb, but it seems a good many consider even their climbing unusual; but I can assure you that if your non-climbing snake expert, who had the impudence to even discredit Audubon's statement that rattlesnakes were occasionally found in bushes, is not satisfied about their ability in climbing I can furnish him a few more instances of rattlesnakes being found in trees which have come to my knowledge since. These occurrences are not nearly as rare as I supposed. While out this summer I saw a rattlesnake lying on top of a boulder with almost perpendicular and smooth sides, which was at least five feet high. The snake was sunning itself, and any snake that could climb that boulder could get up a tree just as easily.

I was quite successful, and made a very interesting collection, comprising head, jaws and bones of extinct mammals, fishes, turtles, reptiles; leaves and plants of the Miocene and Pliocene period, which will be sent to the National Museum as soon as I can get them catalogued and repacked. I have not heard anything yet about the smaller species of fish sent on last year or the other things in that collection. I believe there is a new snake in the lot, however, and perhaps some other things. C. BENDIRE.

THE GAMY CATFISH.

REMINISCENCES.—BY OLD HICKORY.

IN my younger days, say fifteen or twenty years ago, I used to fish for catfish, and thought there wasn't much better sport than to have a light rod, a multiplying reel, and a sea grass line, say about size of No. 8 spool cotton, and then fish for them in swift water same as I would for bass. In fact, how I came to fish specially for cat this way was that I frequently struck a cat when I expected a bass, and not being like the old Virginia darkey who, "when he went catlin", went catlin, and threw everything else back. I always took all I could get.

Well, as I said, I thought it was fine sport, but in an evil hour I read in some Eastern book, descriptive of Western fishes, that the catfish was a slow, sluggish fish, easily caught by any one, with any kind of tackle or bait, generally only caught by negroes with night lines, and that there was neither sport nor honor in their capture. This gave me considerable of a set-back, but the same, my first impressions are retained, and I hold that the black-tail blue cat is worthy of being classed among the game fish, although of his half brothers, the yellow cat, mud cat, speckled cat, and all other

cats, I won't say anything. Yet these grow to much larger size. The heaviest blue cat I ever landed only weighed twenty-one pounds, and I took it with my tackle.

Many are the encounters I've had with these forked-tail fellows, and many times I've had to give up whipped, but we won't count them. Just now I recall a little speck with one, who had me at a foul, when I was fishing for minnows, using a very small fly hook, a yard of No. 29 cotton for a line, and a three-foot switch picked up on the bank for a rod, when "cluck" down went the viol cork which I had for a "bob," and when I wanted to pull up, the thing wouldn't come, but started off into deep water. How I kept the pressure on that fish, always keeping my pump in my hand as to describe a circle of six feet in diameter, until finally I made it turn belly up, and giving it a grip on the neck landed it, a fish of four pounds. Perhaps I couldn't hold a bass of same weight in that space, but I'd give him a powerful tussle.

Another time I was about thirty feet out on a leaning willow six inches through, fishing in the eddy of a milldam on Salt River in north Missouri, using a small-sized sea-grass line, a common spool reel, and one of those abominable walking stick combination rods, when I struck a fish too heavy for me to handle, and it made for the boils of the dam thirty yards away with race-horse speed. How I shinned back that little tree, holding my weakly rod high up to clear the tree top, my thumb on the spool, giving line foot by foot as I was forced to until, when I reached ground, but a few yards were left and the fish still going. Presently, though, the tension told on the fish, and leaving the boils it made a straight break down stream, in a current like a mill tail, for the river was up. A tree standing in the water twenty feet from the bank was in the way, and I quickly found there was no way left to go round it, which I did, my pump, and after a two hundred yard chase finally brought my game to the bank, where my companion, the veteran angler, "Bill" Lewis, from the Blue Grass region, stood ready with the gaff and brought it in. It measured three feet two inches, and weighed thirteen pounds. A yellow cat of same length would weigh sixty.

Of course this one didn't kick and make high jumps like the bass and pickerel that I've caught down among the Thous- and Islands, but you bet he made a good pull and satisfied me, for the deal of sport he gave me was worth the bait.

I have found out, too, that using light tackle I could find more catfish than others could who used ordinary lines and hooks.

One time I went into business on a heavy scale. Down on Main River, as we called it, the boys had been telling awful tales of how, when they had set out hooks, they had caught fish of five to ten pounds' weight and how other fish had swallowed these ten-pound baits, and sometimes they would find their lines broken up. Some of them had seen the heads of these monsters as wide across as a beer keg is long, but none had been captured. I resolved to give the matter a trial. So I went to our blacksmith shop and forged a hook from a file, making it about six inches long, two and a half in the bow and giving it the real Kirby side twist, which latter was a mistake, as the sequel will show. It was, though, a real good hook and in later years did good service as a gaff, but I finally lost it by loaning it to a comrade, who, poor fellow, went in his skiff too near the edge of a dam in high water and went over.

I took this hook, spliced it to a coil of twelve-thread manila rope that I had, and for bait took a soft-baked bread weighing three pounds, which I that day caught specially for the purpose. All things being ready, I drove down about night to the place where so many fish had been devoured and proceeded to "tie my dog loose," anchoring him to a swinging limb of a convenient elm tree. Next morning, on going back, I had the satisfaction of seeing my line hauled taut, while an occasional yank gave evidence that something was going on at the other end. It didn't take long to haul in forty or fifty yards of the line, but then there was a "kick" and a bob a splash, but I held on like grim death to a nigger—so to speak—but 'twas all n. g. A few plunges and the line fell slack and there was nothing to prevent my hauling in. I found my bait had been swallowed, but that confounded side bend had prevented the hook having the desired effect; reason being that while my calculation was that the bait would be swallowed head first operations were begun at the tail, thus turning the hook point down and burying it in the body of the bait, and when I pulled the rest of the line in, the mouth and bait had all come back the same way it went down. I went home wiser, but disgusted, and have not set a line since.

ANGLING IN NORTHERN SCOTLAND.

THE fact that the name of Mr. Archibald Young appears upon the title page of an angling guide to Sutherland is a guarantee of its reliability. Mr. Young is better known to the fishiculturists of America than to the anglers, from his long connection with the culture and protection of the salmon fisheries of his country.

The book will prove a handy pocket companion to any one wishing to try the salmon or the trout in the waters of northern Scotland. It contains a map of Sutherland, Caithness and parts of Cromarty and Ross. The additional matter in this second edition consists of a visit paid by the author to the singular and picturesque Island of Hants, near Scourie, on the west coast of Sutherland.

In the first chapter the reader is treated to a comparison between the county of Sutherland in the seventeenth and eighteenth centuries and in the present day, which is, to an American, a revelation. That any other land in what we call the "Old World," was in a semi-barbarous state two hundred years ago, if we except Africa and such portions as are still in that condition, is a surprise to those of us who are not familiar with the history of recent years in Great Britain. Our author quotes Frazer, a Cr-mwellian trooper, whose "Northern Memoirs" were written in 1658, to show that the inhabitants of this mountainous and beautiful country were then "almost as barbarous as cannibals," who, when they kill a beast, "boil him in his hide, make a caldron of his skin, broils of his bowels, drink of his blood and bread and meat of his carcase." Pennant described the same country as one which seemed to have been so torn and convulsed that the shock shook off all that vegetation.

Now, Mr. Young informs us, these authors would be sur-

*The Angler's & Sketcher's Guide to Sutherland, by Archibald Young, Advocate, & Commissioner of Scotch salmon fisheries, and author of the Salmon and Trout of Scotland, 1865; Salmon Fisheries, in Stanford's series of "British Islands," etc., etc. [Second Edition.] William Patterson, Edinburgh, 67 Princes Street. 1881. 12mo, pp. 150, with map.

prised at the change brought in the county thus unfavorably characterized; for more than five hundred miles of good roads and a railroad are within its borders and it is well fitted to charm the tourist, the sportsman and the artist, to whom it presents attractions not to be found elsewhere in Great Britain. The angler, especially one who is not rich enough to rent a salmon river, will find it quite a fisherman's paradise.

A chapter on flies and fishing tackle precedes a detailed description of the county and the island of Hlanda. There are some fishcultural notes in the book to which we will refer at another time.

CAN A FISHERMAN BE A CHRISTIAN?

THE above query runs through my mind as I sit and listen to the wonderful fish stories interchanged between two friends of mine—ardent lovers of sports piscatorial and who have just returned from the Michigan fishing grounds. The tendency with a fisherman is to exaggerate—the comparative minnow becomes a huge fish; the average bass swells into something less than a whale. Even those most scrupulous in the ordinary walks of life, when they capture a fish weighing six pounds and seven ounces, are apt to let their conscience stretch enough to cover the odd nine ounces and call the fish a ten-pounder. Let a fisherman meet with an ordinary run of "luck" and he forthwith relates marvellous tales of catches such as even that snake, which some one tells of in last week's *FOREST AND STREAM*, as having been caught with five young rabbits in its interior arrangements, would not be able to swallow.

Now, what is the reason of this almost universal prevalence of magnificence—to call it by a polite name—in the stories of fishermen, when it is so seldom that he met with it in the other branches of recreation affected by sportsmen? Who ever heard of a follower of Nimrod, on his return from a hunt, relating to his friends that he had killed three squirrels, each as large as the size of a church, or bagged a quail measuring eight feet from tip to tip of its wings? or who ever heard of a fanciest standing in the midst of an admiring and open-mouthed throng of neighbors swearing that he had paddled eighteen miles an hour up-stream and against a heavy head wind in a boat of the Nautilus pattern? And yet this is just what we have to read in the way of getting particulars from our fishermen, young and old. It is like an undisciplined covered picnic in h-u-k and lines and rods and reels and flies that leads their owner's tongue into ways that are dark? or does some peculiar odor invest the finny tribe, which, being absorbed by the fisherman, renders him for the time being oblivious to all considerations of truthfulness, so far as the number and weight of his fish are concerned? Scientists should examine into this matter and report for the benefit of a suffering people.

Just here one of my two friends fires across the desk at the other: "Say, don't you remember that 14 1/2 lb. bass which I caught that day at the upper end of Buzzard's Lake?" Then comes the answer: "Yes, that was a beauty; but I beat you with the 15-lb. pickerel which I hauled out of Jumpsion Weed River the day it rained so hard."

Which is why I hold my head and groan and inquire—Can a fisherman be a Christian?

ORANGE FRAZER.

[We answer that there is no reason why he cannot. Would you tie the soaring spirit of the angler, who sits upon a stump all day and never gets a bite, by the rules which govern Nimrod, whose active body heated by the chase depresses his imagination? Would you bring the fisherman's poetic soul down to the level of steel yards and tape measures?

The angler seems such materialistic things, as he does the mechanical measuring of his mountains and the estimating of the quantity of water which falls over his favorite cascade. What plain practical people prefer to consider prevarication, is to the angler merely a recognized poetical license; and his enthusiasm is too great to coldly calculate by tables of weights and measures, like groveling scientists and grocers after facts. He believes his stories thoroughly, and they do not harm his fellow man, who, not thoroughly imbued with his spirit, smiles at his enthusiasm. Angling is the only sport which does not pull upon a man as he grows older. It is one of which he never tires. The aged angler is more enthusiastic than the younger man, and his quiet soothing influences, interrupted by the sudden excitement of hooking a large fish, make him keenly alive to impressions which may, like a poetic vision, be magnified in its relating. The poet's eye, in a fine frenzy rolling, magnifies hills to mountains and a water-fall to a cataract, yet none complain of him. This is the only answer we can make to our correspondent.

We hear enlarged stories; and always allow for the personality of the catcher of great fishes. He is so entirely harmless and derives so much consolation from the narration of his exploits that it were a sin to compel him to carry weights and measures and then ask him to step up to a notary and certify to his statements.]

THE SALMON RIVER COUNTRY.

BOISE BARRACKS, Idaho Territory, Sept. 7.

I AM the only one at the Post who makes any pretension of fishing with flies, and the people in town usually take the cheaper and less amusing method of booking with grasshoppers. After the fishing line I had magnificent sport in July and August. In July I was up north in what is called "Little Salmon Meadows." The Little Salmon abouts with fine mountain trout, averaging about 2 1/2 pounds. It was no uncommon thing for me to have two and sometimes three on my line at a time. You can imagine my light six-jointed rod under such a strain. Fifty of those fellows was a fair day's fishing.

In August I went south from here and in a stream called Big Spring Creek I caught 150 in a day, but smaller than those in the north. About fifteen of the men went fishing with grasshoppers and in the afternoon returned with 1,100, more than enough for the command for two or three days.

The shooting was also good. Ducks, geese, plover, antelope, deer, etc., in abundance. If some of your Eastern people could take a trip into the Salmon River country and Payette Lakes during July, August and September they would have fine hunting and fishing.

W. R. P.

ADMIRAL COFFIN'S LONGEST BAIT.—Apropos of the diminishing size of lobsters, which is now engaging the attention of our New England fishcultivists, is the story which General James Grant Wilson writes to the Cape Ann Advertiser: "Sir Isaac Coffin, a British Admiral, and a member of the

family which held a famous reunion at Nantucket, August 16, was born at Boston and, when a child, lived for some years on Cape Cod. Sir Isaac caused the country some years after the war of 1812 and during the voyage, he stated to the officers of his flagship that when they reached Cape Cod he would show them lobsters that weighed ninety pounds! The rules of a quarterdeck do not permit you to flatly contradict an Admiral, but still some doubt and distrust was visible on the countenances of the Captain and Lieutenants who stood around. "Well," said Sir Isaac, "if you doubt it, I will make you a wager that when we reach Cape Cod, I will produce a lobster that weighs ninety pounds." The wager was made under the gracious permission of the Admiral, and when they arrived there Sir Isaac could produce a Cape, but he could not find any lobster that weighed ninety pounds. So he said: "Well, they don't happen to be here just now, but I will obtain the affidavits of the old fishermen to prove that there are such lobsters." And he produced a pile of affidavits showing that, when they were fishermen in early times, lobsters that weighed ninety pounds were as common as huckleberries on the Cape. Then it was left to an empire decide which had lost and which had won, and by him so concise a judgment was given that if not living, it would entitle him to the vacant judgeship in the Massachusetts Supreme Court if all his decisions were equally good. His decision was "affidavits are not lobsters."

HABITS OF LAKE TROUT.—Rochester, Sept. 16.—I am occasionally in receipt of letters from parties residing in the vicinity of lakes having been stocked with salmon trout, complaining that none or very few have ever been taken, and inquiring the reason why.

Salmon trout require the purest water and any fish that I have ever had any experience with, and they will do well in waters having a much less depth than one hundred feet, for the reason that they require a very uniform temperature of water, and as the surface warms up during the hot summer months, they must have access to the cool depths beyond the penetrating heat of the sun. If not, suffocation sets in and they are killed.

Another reason why they are not heard from more arises from the fact that they are in portions of the lake almost uninhabited by other fish, and there is not one chance in a hundred of coming ashore while fishing for other varieties. Even in waters where they are quite numerous they are difficult to catch, and it requires considerable experience and skill to induce them to take the bait and bring them to the landing net successfully.

SETH GREEN.

FISH IN MARKET.—Smelts, from Bathurst, Me., have appeared in limited quantities in Fulton Market this week, an extremely early date for them. Mr. Blackford also received a lot of grise, of 2 1/2 to 6 pounds, and some salmon, from the same place. They were not a good lot, however, and some of them were said to be black-dickled salmon. The minnow, *Paraphysus faber*, from Chesapeake Bay, in plenty and of large size and fine. Scallops are also coming in.

THE ONLY GOURAMI IN DEAR.—A few weeks ago we noticed the arrival in New York of a male gourami, consigned to Mr. E. G. Blackford by Mr. Caribonier of Paris. This was the first one of these fishes which ever reached our shores alive, its mate, which was shipped with it, having died just outside Sandy Hook. Mr. Blackford took excellent care of the stranger, but it was exceedingly poor and would not eat. He offered it cabbage, lettuce and other succulent vegetation, which it is said to eat in its native waters in India, but it declined them all and died.

WE ARE TOASTED.—Here is a neat toast from "Old Hickory." The old reliable, "FOREST AND STREAM"—May its shade never grow less nor its stream run dry.

*No hospital needed for patients that use Hop Bitters, as they cure so speedily at home.

For a good Razor go to C. L. Ritzmann, 944 Broadway, New York—Ad.

Fishculture.

EPOCHS IN THE HISTORY OF FISH CULTURE.*

BY PROF. G. BROWN GOODE.

LIX. 1871.—Establishment of the United States Fish Commission.—On the 9th of February, 1871, Congress passed a joint resolution which authorized the appointment of a Commission of Fish and Fisheries. The duties of the Commissioner were thus defined: "To cause investigations on the subject of the diminution of valuable fish with the view of ascertaining whether any and what diminution in the number of the food-fishes of the coast and the lakes of the United States has taken place; and, if so, to what causes the same is due; and also whether any and what protective, prohibitory or preservative measures should be adopted in the premises, and to report upon the same to Congress."

The resolution establishing the office of Commissioner of Fisheries required that the person to be appointed should be a civil officer of the Government, of proved scientific and practical acquaintance with the fishes of the coast, to serve without additional salary. The choice was thus practically limited to a single man for whom, in fact, the office had been created. Prof. Spencer F. Baird, at that time Assistant Secretary of the Smithsonian Institution, was appointed and entered at once upon his duties. Up to 1880, 847,620 fish had been introduced for the use of the Commission. (See G. BROWN GOODE, The First Decade of the U. S. Fish Commission; its plan of work and accomplished results, scientific and technical. *Proceedings of the American Association for the Advancement of Science*, XXIX, 1880, pp. 56-574. *Nature* (London), XXII, pp. 597-9. *Circular der Deutschen Fischerei Verein*, 1900, pp. 100-7. Report Smithsonian Institution, 1880, pp. 140-9.)

LX. 1871.—Introduction of Shad into the Great Lakes.—The introduction of shad into the Great Lakes was accomplished in 1871 by the New York Fish Commission, a quantity being placed in the Genesee River, a tributary to Lake Ontario. (Report U. S. F. C., II, p. xvi.)

LXI. 1871.—Introduction of Shad into the Mississippi.—In 1871 shad was introduced into the Mississippi of the Ohio and Mississippi Rivers by the U. S. Fish Commission, by the hands of Mr. Seth Green and Mr. William Chitt. (Report U. S. F. C., II, p. xvi.)

LXII. 1871.—Establishment of the Salmon Breeding Establishment at Orland, Me.—This was erected at the joint expense of the Commissioners of Massachusetts and Connecticut. (Report U. S. F. C., II, p. lvi.)

*A paper read before the American Fishcultural Association, and here reprinted from advanced sheets of the U. S. Fish Commission, Part VII.

LXIII. 1872.—Importation of *Rhine Salmon*.—A gift from the German Government, of 230,000 eggs and 500,000 ova, by package, brought to this country under the charge of Dr. Heasel, arriving late in the fall. The 4,000 or 5,000 which were sound were planted in a tributary of the Delaware. (Report U. S. F. C., part II, xli.)

LXIV. 1872.—Beginning of the Propagation of California Salmon.—This work, begun at the suggestion of Mr. R. B. Roosevelt, was accomplished in October, 1872, for the U. S. Fish Commission by Mr. Livingston Stone, (Report U. S. F. C., II, xlii.)

LXV. 1872.—Invention of the Green Trough.—This device, which was an improvement upon the former used by Cote and Atkins, was perfected in 1-72, in the progress of experiments on whitefish. (MILNER: Report U. S. F. C., II, p. 546-556.)

LXVI. 1872.—The Invention of the Holton Fish-Spawning Hatcher.

The Holton device, patented in 1872, by Marcus G. Holton, patented March 18, 1873, is of much importance in the hatching of whitefish eggs. (MILNER: Report U. S. F. C., II, p. 546, plate liv.)

LXVII. 1872.—The Work of Propagating Fish Undertaken by the U. S. Fish Commission. At the suggestion and through the influence of the American Fish Culturist's Association. (Report U. S. F. C., II, xvi.)

LXVIII. 1872.—Invention of N. W. Clark's Fish-Hatching Trough.—This important piece of apparatus was devised in 1873 and patented March 3, 1874. (MILNER: Report U. S. F. C., II, p. 546, pl. xv.)

LXIX. 1872.—Invention of the Clark Transporting Case.—This device was successfully used in transporting whitefish eggs to California. (Report U. S. F. C., II, p. 547.)

LXX. 1872.—Introduction of Whitefish into California.—In February, 1872, the U. S. Fish Commission shipped 216,000 whitefish eggs from Clarkson, Mich., to San Francisco. (Report U. S. F. C., II, p. 550.)

LXXI. 1872.—Establishment at the Salmon Breeding Establishment at Bucksport, Me.—In 1872 the extensive salmon breeding establishment at Bucksport, Me., was erected under the direction of Mr. C. G. Atkins, and at the joint expense of the Fish Commission of Maine, Massachusetts and Connecticut, and of the U. S. Fish Commission. It contributed largely to the supply of half the expense. This establishment in 1871, passed entirely under the control of the United States Commission. (Report U. S. F. C., II, p. xvi.)

LXXII. 1873.—First Propagation of the Striped Bass.—In May, 1873, Mr. G. H. Holton succeeded in propagating this species artificially at Weldon N. C. (Report U. S. F. C., Part II, p. 553-554.)

LXXIII. 1873.—The California Aquarium Co.—In 1873 Mr. Livingston Stone, under the auspices of the U. S. Fish Commission and that of California, fitted up an aquarium at San Francisco, and sent a quantity of fish to California. The car was captured, June 8, in the Fikhorn River, Nebraska. In 1874 the experiment was repeated in behalf of the California Commission. (Report U. S. F. C., II, xxi.)

LXXIV. 1873.—Establishment of the Ohio Fish Commission.—The Ohio Fish Commission was established in June, 1873, by the appointment as commissioners of John H. Kline, John Hussey and Dr. E. Sterling. By act of April 26, 1876, the commission in its present form was organized. Up to 1880 529,000 fish were noted for hatchery. (Report of Ohio State Fish Commission, L, 1874; I, (1875) 6; 1877; II, (1877) 1878; III, (1878) 1879; IV, (1879) 1880; V, (1880) 1881.)

LXXV. 1873.—Establishment of the Wisconsin Fish Commission.—In 1873 an appropriation was made by the legislature to establish the Wisconsin Fish Commission. The Commissioner of Fisheries, in 1874 William Welsh, A. Palmer and P. R. Hoy were elected commissioners. Up to 1880 538,960 had been noted for hatchery. (Reports: I, 1874; II, 1875; III, 1876; IV, 1877; V, 1878.)

LXXVI. 1873.—A CULTURE OF THE LAND-LOCKED SALMON.—Establishment of the Hatching Station of Grand Lake Stream.—Experiments were begun at Sebe Lake, in 1873, under the auspices of the Massachusetts, Connecticut and United States Fish Commissions, and a station was erected under the direction of Mr. Leonard. In 1874 this was transferred under the same auspices to Grand Lake Stream, and placed in charge of Mr. C. G. Atkins. (Report U. S. F. C., IV, p. 26.)

LXXVII. 1873.—Attempts to Transport Living Shad across the Atlantic.—The first trip was made with young shad by Messrs Fred Mather and A. Anderson, in August, 1874, who lost the fish ten days after going to sea; the second by Messrs. H. W. Welcher and Monroe A. Green, who attempted to carry the eggs, which were destroyed before they reached the steamer. (Report U. S. F. C., II, pp. 328, 330, 333-9.)

LXXVIII. 1874.—Successful Propagation of the Quagga Trout.—In October, 1874, the Maine Fish Commission obtained 300 eggs, 5,000 of which were sent to New York. (Macomber: Report of Boston Fish Hatchery and Fish Catching, p. 136.)

LXXIX. 1874.—First Attempts to Propagate Grayling.—In April, 1874, Mr. Fred Mather visited the Au Sable River, Mich., to experiment on the propagation of the grayling. From the lot to the 3d no ripe fish were found. He took 100 eggs of fish sent to his ponds at Hancock Falls, N. Y. (FOREST AND STREAM, Vol. II, p. 164.) On the 30th of April, 1874, Mr. Seth Green visited the river for the same purpose. Finding that the fish had finished spawning, he dug some fertilized eggs from the bottom of the river, which he placed in the hatchery. (MILNER and GREEN: Fish Hatching and Fish Catching, pp. 133-135.)

LXXX. 1874.—Propagation of the Sea Bass.—In September, 1874, the eggs of the Sea Bass, *Centropristis striata*, were successfully fertilized at the U. S. Fish Commission Station at NOAA, Connecticut. (Report U. S. F. C., II, p. 547.)

LXXXI. 1874.—Establishment of the Iowa Fish Commission.—The Iowa Fish Commission was established by act of the legislature, March 19, 1874. S. B. Evans, D. F. Shaw and C. A. Harris were appointed commissioners. Up to 1880 22,750 had been reported for hatchery. (Reports (biennial), I, (1874-5) 1876; II, (1875-6 and 1876-7) 1877; III, (1877-8 and 1878-9) 1880.)

LXXXII. 1875.—First Artificial Impregnation of Grayling Eggs.—In April, 1875, Mr. Fred Mather made a second attempt to propagate grayling at Hancock Falls, Mich. He found three ripe from the 6th to the 10th and 10,000 were impregnated and afterward hatched, by F. N. Clark at Northville, Mich., and himself at Hancock Falls, N. Y. (FOREST AND STREAM, Vol. IV, p. 214.)

LXXXIII. 1875.—Invention of the Mother Holding Cone.—The principle of suspending eggs in water by a stream, admitted at the bottom of a cone, and thereby hatching them in bulk instead of in layers, was discovered in 1875 by Mr. Fred Mather and his assistant, Charles Bell. (Report U. S. Fish Commission, Vol. VI, p. 18; Report U. S. F. C., II, p. 547-376, IV, p. 1012.)

LXXXIV. 1875.—Hatching of Surgeons.—In 1874 efforts were made by Seth Green in behalf of the New York Commission to hatch surgeons. In 1875 their efforts were renewed at Bucksport, Me. (Report U. S. Fish Commission, Vol. VI, p. 18; Report U. S. F. C., II, p. 547-376, IV, p. 1012.)

LXXXV. 1875.—Invention of Chase's Self-Picking Apparatus.—This ingenious device for the removal of dead eggs from hatching jars was invented by Oren M. Chase, of Detroit, Mich. (Report U. S. F. C., IV, p. 1012, p. 616.)

LXXXVI. 1875.—Establishment of the Minnesota Fish Commission.—This Commission was created in 1875, David D. M. D., Horace Austin and A. W. Latham being appointed commissioners. Up to 1880 222,500 had been appropriated for hatchery. (Reports: I, 1875; II, 1876; III, 1877; IV, 1878; V, 1879; VI, 1880.)

LXXXVII. 1875.—Establishment of the Virginia Fish Commission.—The Virginia Commission was organized in 1875, Hon. Alex. Mooney, Dr. W. B. Robertson and Dr. M. C. Ely were appointed Commissioners. (Reports: I, 1875; II, 1876; III, 1877; IV, 1878; V, 1879; VI, 1880.)

LXXXVIII. 1876.—77.—Restoration of Salmon to the Connecticut River.—In 1876 a single salmon was taken in the Connecticut

in 1877 several; in 1878 more than 600 individuals. These were the first seen in the river since the exclusion of the species from the river by the building of the Millers' River Dam in 1798. [Report U. S. F. C., V., p. 30; VI., p. 31.]

XXXXIX. 1876—Introduction of *Whitefish into New Zealand*.—At the request of the Government of New Zealand, the U. S. Fish Commission sent a lot of whitefish eggs to that country, a portion of which arrived in good condition. [Rep. U. S. F. C., IV., p. 27.] 1877.—Through the mediation of the U. S. Fish Commission arrangements were made between the Government of New Zealand and Mr. Frank N. Clark for the sending of whitefish eggs to New Zealand. The experiment was successful. [Rep. U. S. F. C., V., p. 30.]

XC. 1876—Establishment of the *Arkansas Fish Commission*.—The Arkansas Fish Commission was organized in 1876, N. H. Fish, J. R. Steelman and M. B. Pearce being appointed commissioners.

XCII. 1876—Establishment of the *Kentucky Fish Commission*.—By fish law of Kentucky, approved March 20, 1876, the Kentucky Commission was organized by the appointment of ten commissioners, one from each Congressional district. Mr. Pack Thomas was the active worker and was elected President of the Board. Up to 1880 \$11,060 had been appropriated for fish culture. [Reports: I., 1876; II., 1878; III. (second biennial), 1879.]

XCIII. 1877—Establishment of the *Kansas Fish Commission*.—The Kansas Fish Commission was organized in 1877, J. H. Fish, J. R. Steelman and M. B. Pearce being appointed commissioners. Up to 1880 \$2,000 had been appropriated for fish culture. [Reports (biennial), I., 1878; II., 1880.]

XCIII. 1877—Introduction of the *Madre Marana into the United States*.—By the courtesy of Mr. R. Eckhardt, of Lubbock, Germany, who presented 1,000 eggs of the *Madre Marana* (*Coregonus marana*) to the U. S. Fish Commission, this species was introduced into Gardner's Lake, Michigan. [Rep. U. S. F. C., IV., p. 16; V., p. 40.]

XCIV. 1877—Artificial Hatching of the *Herring and Discovery of a Method of Better Development*.—Experiments were successfully carried out by Dr. H. A. Meyer, of Kiel, Germany, in hatching and retarding the development of the eggs of cold, and in hatching them, by Vinsl N. Edwards, of the U. S. Fish Commission. [Rep. U. S. F. C., V., p. 29; VI., p. 62.]

XCV. 1877—Establishment of the *Glackamas Hatchery*.—A hatchery was established by the Union canners of the Columbia River, and carried on under the supervision of Mr. Livingston Stone. [Rep. U. S. F. C., V., pp. 22*, 31*.] This was continued, by the aid of the U. S. C., in 1878. [Rep. U. S. F. C., VI., p. 27.]

XCVI. 1877—Introduction of *Carps into the United States*.—On the 26th of May, 1877, J. W. Latham, acting for the U. S. Fish Commission, deposited 227 leather and mirror carp and 118 scale carp in the ponds of the Maryland State Hatchery at Baltimore. A few carp had some years previously been introduced by Mr. Poppe, of Sonoma, Cal., which were utilized for his own private purposes. [Rep. U. S. F. C., V., p. 43*.]

XCVII. 1877—Establishment of the *Government Carp Ponds*.—The Government carp ponds on the Monument Lot, Washington, were established by the passage of an appropriation by Congress. [Rep. U. S. F. C., V., p. 43*.]

XCVIII. 1877—Introduction of *California Salmon into Europe*.—On the 17th of October Mr. Fred Mather sailed for Europe with 800,000 eggs of the California salmon from the U. S. Fish Commission, consigned to England, France, Germany and Holland, all of which, except 25,000, which were perished in a refrigerating car of his own construction, perished. [Rep. U. S. F. C., V., p. 34*.]

On the 23d of October, 1878, Mr. Mather again arrived in Bremen having with 250,000 eggs for Germany, 100,000 for France, 15,000 for Great Britain, and 100,000 for the Netherlands. This venture was entirely successful. [Rep. U. S. F. C., VI., p. 23*.]

XCIX. 1877—Discovery of *Planted Salmon in the Delaware River and in the Susquehanna*.—In November, 1877, a mature female salmon was taken in the Delaware, at Trenton, supposed to have been planted, 1878 or 1879. In 1878 several hundreds were taken. [Rep. U. S. F. C., V., p. 30; VI., p. 30.]

May 11, 1878, a salmon 40½ inches large was captured in the Susquehanna at Havre de Grace. [Rep. U. S. F. C., VI., p. 23*.]

CI. 1877—Invention of the *Ferguson Plunging Buckets for Hatching Fish*.—In 1877, the system of plunging buckets, worked by steam, for hatching shad in tidal waters, then newly devised by Major T. B. Ferguson, was first tested at Havre de Grace by the joint efforts of the United States and the Maryland Fish Commission. In 1877 10,000 shad were hatched out with this apparatus by the U. S. Fish Commission. [Rep. U. S. F. C., V., p. 84; VI., p. 161, 611.]

CII. 1877—Establishment of the *Colorado Fish Commission*.—In 1877, Wilson E. Slety was chosen Commissioner for Colorado. Up to 1880 \$2,400 had been appropriated for fish culture. [Reports I. and II., 1879 (?); III. and IV., 1881.]

CIII. 1877—Establishment of the *Nebraska Fish Commission*.—A fish commission for Nebraska was created in 1877, and Hon. H. C. Parker was appointed commissioner. Up to 1880 \$5,000 had been appropriated for the use of the commission. [Reports (biennial), I., 1879.]

CIV. 1878—Invention of the *Written Bucket*.—This ingenious contrivance, a modification of the Chase jar, was invented in 1878 by W. T. Wooten. [Rep. U. S. F. C., VI., p. 616.]

CV. 1878—Introduction of *Soles into the United States*.—On the 6th of January, 1878, Mr. Mather, who had been sent to England by the U. S. Fish Commission for the purpose of procuring a supply of sole, deposited 100,000 eggs at the Fish Commission Bank in Cape Cod Bay. [Rep. U. S. F. C., V., p. 47, 86*.]

(TO BE CONTINUED.)

BOOKS ON AQUARIA.

A CORRESPONDENT writes to know what books have been published on the construction and management of aquaria. We send the following list of books on aquaria, published and kept by H. H. Bailliere, 290 Broadway, New York. (This name is not now in the city directory.)

Life Beneath the Water; or, the Aquarium in America. By Arthur N. Edwards. New York: H. H. Bailliere, 290 Broadway and 219 Regent street, London, 1855. 8vo, pp. 163. Fully illustrated.

Book of the Aquarium and Water Cabinet; or, Practical Instruction on the Formation, Stocking and Management, in All Species of Collections of Fresh Water and Marine Life. By J. Harp-r. London: 1855. Price, \$1.00.

Ocean and River Gardens: A History of Marine and Fresh Water Aquariums, with the Best Methods of Their Establishment by Artificial Gravitation. With Twenty Colored Plates from Life. By H. N. Humphrey.

The Aquarivarium, Fresh Water and Marine; Being an Account of the Principles and Objects Involved in the Domestic Culture of Water Plants and Animals. London: 1857. Price, 75 cents.

Hand-Book of Plain Instructions for the Construction and Management of Fresh Water Aquariums. By J. Bishop. London: 1853. Price, 30 cents.

The Aquarium: An Unveiling of the Wonders of the Deep Sea. By J. Gosse. Second Edition, Enlarged. With Chromographs and Wood Engravings. Price, \$5.00.

Hand-Book of the Marine Aquarium. By P. H. Gosse. Second Edition. Price, 75 cents.

The following books are also by various publishers: The Family Aquarium. By H. D. Butler. New York: Dick & Fitzgerald, 1855. 8vo, pp. 121. Price, 50 cents.

The Aquarium; its Inhabitants, Structure and Management.

Dr. J. E. Taylor. London: Hardwicke & Bogue, 192 Piccadilly W., 1875. 8vo, pp. 318.

Hints for the Formation of a Fresh Water Aquarium. (No author's name.) London: Printed for the Society for Promoting Christian Knowledge; sold at the depositories; Great Queen street, Lincoln's Inn Fields, etc., (No date.) 12mo, pp. 182.

Sportsmen's Wives should not fail to purchase their Scissors from C. L. Hutzmann, 943 Broadway, New York.—*Ad.*

The Kennel.

FIXTURES.

BENCH SHOWS.

September 21, 22 and 23, at Franklin, Pa., Franklin Sportsmen's Club and Game Protective Society Bench Show. Entries closed September 15. Thos. D. Adams, superintendent; P. O. Box 61, Franklin, Pa.

September 27, 28, 29 and 30, at London, Ont. London Dog Show. Entries closed September 12. Chas. Lincoln, Superintendent, Tecumseh House, London, Ont.

December 14, 15 and 16, at Lowell, Mass. Lowell Dog Show. Entries close December 6. Chas. A. Andrew, West. Joxford, Mass., Superintendent.

FIELD TRIALS.

September 13 and 14, at Pittsburgh, Pa. Collie Trials, held under the auspices of the Pennsylvania State Agricultural Society. Entries closed September 9. Elbridge McConkey, Secretary, Harrisburg, Pa.

September 22, at Franklin, Pa. Collie Trials, held under auspices of Franklin Sportsmen's Club and Game Protective Society. J. B. Nichols, Secretary; P. O. Box 61, Franklin, Pa.

October 1, at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Feintz, Secretary, P. O. Box 24, New York City.

October 25, 26, 27 and 28, at Masonstown, Fayette Co., Pa., via boat from Pittsburgh. Pennsylvania Field Trials. First Annual Derby. Entries close at Pittsburgh, Pa., October 15. R. S. Rayner, Secretary.

November 7, at Gilroy, Cal. Field Trials of the Gilroy Rod and Gun Club. Entries close November 1. E. Leveque, Secretary.

November 24, Louisiana State Field Trials. Entries close November 1. Edward Odell, Secretary, New Orleans, La.

December 5, at Grand Junction, Tenn., National American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

THE PENNSYLVANIA STATE COLLIE TRIALS.

THE annual sheep dog trials held under the management of the Pennsylvania State Agricultural Society, took place at the Pittsburgh show-grounds during the recent State Fair. The trials were advertised to commence on Tuesday, Sept. 13, but owing to the non-arrival of some of the competitors, they were postponed until the next day. Mr. Jefferson Shanon, of Westchester, Pa., one of the judges, was obliged to return home before the trial commenced, and Mr. Archer, of Washington County, was appointed as a substitute to act with Major Mark Downey and Mr. McDowell of the original Board. The following named dogs were competitors in the

ALL-AGED CLASS.

Dr. J. W. Downey, New Market, Md., Tweed.
Dr. J. W. Downey, New Market, Md., Scottish Maid.
Mr. T. A. Ralston, Elderton, Pa., Jim.
Mr. T. A. Ralston, Elderton, Pa., Waddie.
Mr. J. G. Streen, Washington, Pa., Carlo.
Mr. J. G. Streen, Washington, Pa., Rover.

Mr. Row's two entries were withdrawn. In the puppy class Dr. Downey's Prince was the only entry. Promptly at ten o'clock on Wednesday morning the contesting owners were called to the judge's stand and the rules governing the trials were read to them. Forty drove sheep were obtained from the State yard, and placed in the starting pen. Five were put in the starting pen for each dog in his turn, and he was required to take them over the drive indicated by the dotted line in the accompanying diagram, and pen them in the folding pen. The judges occupied the judge's stand where they could overlook the drive from the start to the finish.

A—Sheep pens. B—Starting pens. C—Quarter pole. D—Folding pen. E—Judges. H—Horse and cattle stalls. *—Race track. Dotted line indicates the course over which the sheep were driven.

The order of the running was fixed by drawing lots. The start fell to Dr. Downey's Tweed; and he was the first dog called. Five sheep were placed in the starting pen, and at the sound of the bell in the judge's stand the dog entered and drove them out on the track. Mr. Phelps, his handler, gave him the order to go slowly, and Tweed took them along leisurely. After proceeding a short distance they began to evince a disposition to buck and scatter, but this was nipped in the bud by the dog rapidly rounding and bunching them. Starting them on their way again they at once broke into a sharp run. Phelps called in order at a rounded and stopped them at the quarter pole. Starting on the way up the track a sheep made a break; the dog after a hot spin turned him, but in the meantime the other four broke into a different direction, Tweed was equal to the emergency and rounding them into a bunch again started on his journey going round the course. He showed great judgment and patience in handling his sheep, obeying promptly every word and gesture of his master. Arriving at the point in the drive when it turned from the course into the paddock he turned them in the style and proceeded across the open field to the folding pen. This was reached without further difficulty. At the pen gate they halted a moment; the dog crowding them up succeeded in getting two inside, the others ran round on the outside. Tweed, barked at the emergency and in leaping a ditch, fell on his humping, and was then across the ground, headed them and brought them back. In the meantime the others had come out and joined them. The dog's blood was now up, and he worked in a most determined manner. An old wether was particularly troublesome and made numerous essays to break away, but was thwarted in every attempt. Rounding them he stood at guard for a moment, then started them again for the pen, oscillating behind them from side to side, watchful and alert. He again reached the gate of the pen with them. Here they halted both to enter the paddock and to speak to them. Tweed gave a sharp bark, when the startled sheep sprang into the pen and the gate was closed. Rounds of cheers and clapping of hands from

the crowd on the grand stands greeted the interesting performance. Time, fourteen minutes and three seconds.

Mr. Ralston's Jim, a black and tan dog of the smooth type, was the next dog called. He was worked by his owner, and if judgment had been used he would have performed as well as his abilities were not brought out. At the top of the bell he took his flock from the pen, but his handler did not keep him up to his work promptly. The sheep got the start on him and ran down the track to the quarter-pole. Here he stopped them but turned them back to the paddock to the paddock and the exercise of the drive. After a vain attempt to get them on the course the sheep became thoroughly demoralized, and an old wether broke away running like a frightened deer; the dog followed in hot pursuit. Through the cattle pens, then among the farm machinery, and finally into the poultry yard, he performed at the expense of the grounds, the chase was urged. Here both dog, sheep and handler were lost to view. After a tedious delay and having much overrun the limit, time was called, and the dog was out of the contest, having failed to pen.

Mr. J. G. Streen's rough-coated dog Carlo, fawn and white, a very fair-looking animal and very well broken, was next. Carlo is a very deaf and it was an interesting sight to see the sagacious fellow stop and watch every gesture of his master in order to get his meaning. Mr. Streen handled him very judiciously, but by reason of the dog's infirmity, the drive was very slow. One or two slight breaks occurred after they turned into the paddock grounds on their way to the folding pen. Mr. Streen adopted a different style of tactics from the other trainers and whenever a break occurred he called out order Carlo to round up the sheep as quickly as possible, and then held perfectly quiet for several minutes at a time. Then, starting on slowly and keeping close up to his dog and sheep, he would work leisurely along until there were signs of any break, and then, at the same pace, he would be called in and was necessitated for the reason that the dog is as deaf as a door-post and has to have his master close to him in order to see his signals. Reaching the folding pen he worked more briskly and panned nicely, and in a workmanlike manner. The time was called, and he was slow to get for a dog with perfect facilities, but Mr. Carlo did well, and had the good wishes and sympathies of the crowd.

The next called was Mr. Streen's fawn-colored, rough-coated collie dog Rover. From the fact that he had been broken under the auspices of the Gilroy Rod and Gun Club, he had a good deal of the drive of Carlo, and the drive was slow and tedious. The sheep were a quiet lot, and he worked them along very smoothly until he entered the open ground in the paddock. Here he got into difficulties and had a world of trouble, his barking and his work being broken and circling around the folding pen, but refusing to enter. At length his handler, seeing that his chance of winning was very slim, assisted him in driving them into the pen. The time (which was outside the limit allowed by the judges) was 30m. 11s.

After the hour being over, the remaining competitors to be ready to recommence the trials at 1 o'clock, descended from the stand.

Sharp at the hour named the committee were on the stand, and Mr. Ralston's dog Waddie, eighteen months old, was called for his trial. Waddie is a very nice animal, rough-coated, and of the collie of high bench stock form, with excellent frill and ruff. His owner expressed some doubts as to the dog's ability to drive five sheep, as he had never attempted the task before. At the peal of the bell the flock was started from the pen; but, instead of taking them on the course, the dog allowed them to break on him once. Here followed a tedious circling around the pens and through the aisles of the stock stalls on the south side of the show grounds. It really seemed at one time as if it would be impossible to get them to the drive at all. At last, however, the dog was brought to the handler, they were forced on the course, but no attempt was made to follow the line of the drive as laid out. Instead of going down and turning at the quarter-pole, the sheep were driven round the turn, or rather they went around of their own will, but, instead of taking them on the course, the dog allowed them to break on him once. Here followed a tedious circling around the pens and through the aisles of the stock stalls on the south side of the show grounds. It really seemed at one time as if it would be impossible to get them to the drive at all. THE NEW EUTEBROOK HAMMER GUN.

I have recently invented a new hammer gun, both in single and double, which is acknowledged to be the best article in the market. All sportsmen agree that the Eutebrook guns for finish, workmanship and shooting qualities are equal to any in the market.

FOR SALE, a number of well bred and well broken pointers and setters, also dogs boarded and broken, satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. Sept 19, 1881.

—See Kennel Advertisements next page.

LEONARD'S Split Bamboo Rods, WITH PATENT WATERPROOF AND PATENT SPLIT FERRULES.

No. 1 SHOWS WATERPROOF CUP IN FERRULE (PATENTED OCTOBER 26, 1875). This prevents any moisture from reaching the wood, and the ferrule from becoming loose. The constant wetting and drying of the bamboo must rot the wood, and make other makes of rods less durable than Leonard's.

No. 2 SHOWS SPLIT FERRULE (PATENTED SEPTEMBER 3, 1875). This split thoroughly strengthens where the ferrule is joined to the wood, which is the weakest part of a rod, and where so many of other makes of rods (bamboo especially) break. Mr. Leonard has yet to hear of a single instance of breakage at this point since the PATENT SPLIT FERRULE has been applied. We consider this the GREATEST IMPROVEMENT that has been introduced in rod making since rods have been made.

No. 3 SHOWS SPLIT FERRULE WHIPPED WITH SILK AS IT APPEARS ON THE ROD.

EVERY ROD WARRANTED.

SOLE AGENTS,

ENOS JAMES & CO.'S HARD-HITTING GUNS.

This cut exactly represents JAMES & CO.'S GREAT GUN, called THE TRIUMPH. Every Triumph or Trap Gun is choke-bored and targeted.

We now offer a full line of ENOS JAMES & CO.'S Superb Breech-Loaders. What is the use of paying an absurd price for a gun made by some old maker when you can get a JAMES' GUN as good or better for half the money? Or what is the use of buying a gun bearing either a fictitious name or no name at all, when you can get one of ENOS JAMES & CO.'S guns with their name and guaranty for the same price?

We are sole agents at New York for the Colt Club Gun.

We offer a small JOB LOT of the famous Webley Guns of all sorts at about half price.

Also a few choice Parker guns of latest style at special rates. Address

H. & D. FOLSOM, P. O. Box 4,302, 20 WARREN ST., NEW YORK.

It has come to our knowledge that common guns are being sold in the States bearing our name. As we make only fine guns, genuine TOLLEY guns have been engraved on the rib, "J. & W. TOLLEY, Makers, St. Mary's Sq., Birmingham."

Sportsman's Goods.

5 Consecutive Shots, 50 feet, off-hand.

WILD HARRY, the Indian Scout, says that with
a Stevens' Rifle or Pistol, at 50 feet, off-hand, he
can knock the spots out of a playing card in this
way all day long. He is obliged to use these arms
to do the great feat performed daily in Barnum's
Circus and elsewhere. Hitting a ball every time
through a quarter-inch bullethead; cutting the ashes
from a cigar held in another person's mouth;
piercing a dime held between another's fingers, and
numerous other difficult and wonderful shots.
The only objection to these arms is that they shoot
so well, are so handy to take apart and carry about
in a trunk or bag, that everybody wants them, and
the makers have had to enlarge the factory and
work nights to supply the demand, and even in the
full season cannot get much stock ahead. Send
for illustrated price list to

New York, May 19, 1890.
I avail of this occasion to inform you that the
little pocket rifle that I bought from you six months
ago is a perfect gem. On my last trip I had occasion
to use it in the woods, and out of 100 shots I
killed 87 birds, the largest size being a wild pigeon at
a distance ranging from 100 to 300 feet. For accu-
racy and perfection I consider Stevens rifle un-
rivaled. Hoping this statement will give you pleas-
ure, I remain, dear sir,
Yours, very respectfully,
J. A. P. DONALD.

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE
Trout, Grayling & Black Bass Fisheries,

AND THE
FAMOUS SUMMER, HEALTH AND GAME RE-
SORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed, if
equaled, in the abundance and great variety of fish
contained.

BROOK TROUT abound in the streams, and the
famous AMERICAN GRAYLING is found only in
these waters.

The TROUT season begins May 1 and ends Sept. 1.
The GRAYLING season opens June 1 and ends
Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCA-
LONGE, also abound in large numbers in the many
lakes and creeks of this territory. The Sports-
man can readily send trophies of his skill to his
friends or "club" at home, as ice for packing fish
can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The
scenery of the North Woods and Lakes is very
beautiful. The air is pure, dry and bracing. The
climate is peculiarly beneficial to those suffering
with

Hay Fever and Asthma Affections.
The hotel accommodations are excellent, and will
be largely increased in time for the season of 1891
by new buildings and additions.

During the season ROUND TRIP EXCURSION
TICKETS WILL BE SOLD AT LOW RATES, and
attractive train facilities offered to Tourists and
Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at
owner's risk.

It is our aim to make sportsmen feel "at home"
on this route. For Tourists' Guide a handsomely
illustrated book of 160 pages sent free. Time Cards,
Folders and further information, address

GUN POWDER!

Dupont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
Dupont's Gunpowder Mills, established in 1829,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse)
to 4 (fine) unequalled in strength, quickness and
cleanliness; adapted for glass-ball and pigeon
shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse)
to 3 (fine); burns slowly, strong and very clean;
great penetration, with a close pattern; adapted
for glass-ball, pigeon, duck and other shooting,
with either muzzle or breech loaders. Packed in 1
lb. and 5 lb. canisters and 6½ and 12½ lb. kegs.

Dupont's Chocho Bore.—Specially adapted
for "Chocho Bore" guns, and particularly for prairie
and upland shooting. Burns slowly, strong and
moist; does not cake or burn on the barrels, gives
both a good penetration and a close pattern; will
be found well adapted for glass-ball and pigeon
shooting. Made of two sizes, only No. 1 and No. 2,
No. 1 being the coarsest. Packed in 6½ lb. kegs and
1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and
clean powder, of very fine grain, for pistol shooting.
Packed in 1 lb. canisters and 6½ lb. kegs.

Dupont's Rifle Fg.—"Sea-Shooting."—
FFG, and FFG. The Fg. for long-range rifle shoot-
ing, the FFG, and FFG. for general use, burning
strong and moist. Packed in ½ lb., 1 lb., and 5 lb.
canisters, 6½, 12½ and 25 lb. kegs. Fg. coarse, FFG,
fine.

Dupont's Sporting, Mining, Surprise and Blasting
Powders of all sizes and descriptions. **Special
Grades for Export.** Also Rifle, Cartridge, Mus-
ket, Cannon, Mortar, Mammoth, Hexagonal, Cubi-
cal and Pellet Powder, U. S. Government Standard.
Powder manufactured to order of any required
grain or proof.

Agencies in all the cities and principal towns
throughout the United States. Represented by

Miscellaneous Advertisements.

The Parker Gun.

Again Victorious at the Late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."
They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Eastern Field Trials Club Third Annual Running Meeting

COMMENCING ON THANKSGIVING DAY, 1881.

ROBIN'S ISLAND STAKES, OR EASTERN FIELD TRIALS DERBY.

Open to all puppies whelped on or after April 1, 1880. Prizes: First, \$150; second, \$100, and third, \$50. Forfeit, \$5; \$10 additional to nil. Nominations for this stake to close positively on Oct. 1, 1881.

Open to all setters or pointers. Prizes: First, \$200; second, \$150; third, \$50. Forfeit, \$5; with \$20 additional to nil. Nominations to close positively on Oct. 1, 1881. To this stake will be added by the club a special prize of \$100, or a silver cup of equal value, at option of the winner, for the best pointer competing in the stakes.

MEMBERS' STAKES.
Open only to members of the club, and each entry to be owned and handled by the member making the nomination. Prize to be a piece of plate of the value of \$100, and such prize to be known as the EASTERN FIELD TRIALS CUP OF 1881.

JACOB FENTZ, Secretary. P. O. Box 574, New York City.
Special prizes to follow others according to their value.

J. OTTO DONNER, President.

Ammunition, Etc.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."
Nos. 1 (fine) to 4 (coarse). Unsurpassed in point
of strength and cleanliness. Packed in square can-
isters of one pound only.

Hazard's "American Sporting."
Nos. 1 (fine) to 4 (coarse). In 1 lb. canisters and
6½ lb. kegs. A fine grain, quick and clean, for up-
land prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 4 (coarse). In 1 and 5 lb. canisters
and 6½ and 12½ lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest or water shooting it
ranks any other brand and it is equally serviceable
for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG and "Sea Shooting" FG in kegs of
25, 12½ and 6½ lbs. and cans of 5 lbs. FFG is also
packed in 1 and 5 lb. canisters. Burns strong and
moist. The FFG and FFG are favorite brands for
ordinary sporting and the "Sea Shooting" FG is the
standard Rifle Powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON AND MUSKET POW-
DER; also, SPECIAL GRADES FOR EXPORT OF
ANY REQUIRED GRAIN OR PROOF MANUFAC-
TURED TO ORDER.

The above can be had of dealers, or of the Com-
pany's Agents, in every prominent city, or whole-
sale at our office.

55 WALL STREET, NEW YORK.

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsmen throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C., London, Eng.; and by M. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for large, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, September 29.

BLACK BASIS FOR PONDS.—In a recent article we said that if we wanted black bass for stocking purposes we would not know how to get them by other means than to go and catch them. We were aware that Mr. Livingston Stone formerly advertised them, but had not heard of his doing so for some years past. We now take pleasure in calling attention to his advertisement, which will be found in this issue of our paper. Mr. Stone has just finished his season's work in the Pacific Coast Department of the United States Fish Commission, and is now on his way East to attend to his private business.

CLAY PIGEONS VS. GLASS BALLS.—It has been claimed by one that the new clay pigeons are hard to break. The fact is they are far more easily broken than glass balls, as can be testified by any one who will repeat the following experiment, made by Mr. H. M. Mills, of the Wyoming City Gun Club, at Cincinnati, Sept. 19. He first placed a clay pigeon and a Bogardus glass ball side by side, and fired ten shots at a range of sixty-five yards. Nine clay pigeons out of ten were broken, while the one glass ball was not broken at all. The ten shots fired at it, though there were seven distinct red marks upon it. A second experiment was made by firing ten glass balls side by side, and firing at them at forty-five yards range. Five only of them were thus broken. Ten clay pigeons were then similarly fired at, same range, eight clay pigeons being broken. The clay pigeons used were taken at random from a barrel of same. The glass balls were all sound.

ONE OF THE RESULTS OF FISH-CULTURE.

IN connection with the "Reply to a Benighted Man," on another page we would refer to the following from the Report of the Fish Commissioners, of California, for the year 1880:

Two millions of the quinnat salmon have been annually hatched and deposited in the tributaries of the Sacramento River and have produced their legitimate results. Salmon are now plenty in the river, although how many could be taken at present if fishculture had not been adopted cannot of course be known, but as the spawning beds have been destroyed by sediment brought down by mining operations the number would probably have been small, if the fish existed at all. It is the testimony of all the pioneers, at the beginning of the mining operations, that every tributary of the Sacramento was filled with this salmon at the spawning season, struggling to reach the sources. A few continued to enter the Feather, Yuba, Bear and American rivers until the floods of 1860-1 covered the gravel bottoms of those streams with mining sediment. In 1872 and 1873 the fish were nearly extinct in them and the minimum of production was reached. Previous to those years artificial culture was begun and the yield has increased.

The Commissioners have wisely kept a record of the catch of salmon in the Sacramento and therefore the effect of the yearly introduction of these 2,000,000 fry can be exhibited. Since 1874 they have obtained both the number and the weight of the salmon caught in the Sacramento and San Joaquin that have been sent to San Francisco, Sacramento and Stockton, and also of those put up in tins by the canning companies. The record is:

For season ending Aug. 1, 1875.....	5,098,781 pounds.
For season ending Aug. 1, 1876.....	5,311,423 pounds.
For season ending Aug. 1, 1877.....	6,493,563 pounds.
For season ending Aug. 1, 1878.....	6,520,768 pounds.
For season ending Aug. 1, 1879.....	4,433,250 pounds.
For season ending Aug. 1, 1880.....	10,837,400 pounds.

The apparent falling off in the season ending Aug. 1, 1879, was due to a disagreement between the fishermen and proprietors of the canneries, during which time no salmon were sent to market. Comment on this is unnecessary.

MADGE.—The brilliant victory scored by the deep and narrow Scotch cutter Madge over the fastest light-draft centre-board sloop we have in America will be discussed in all its bearings in our next issue. In the meantime we think unprejudiced readers will bear us out in the claim that our course in favor of yachts built upon the principles so successfully followed in the Madge has been as persistent and conscientious as our endeavors to lead yachtsmen into the higher realms of the sport—in short, to make ships out of machines and sailors out of dawdlers. The issue now terminating in our favor will, we hope, justify in their eyes our enjoying to the full the sweets of a victory earned after much hard work and ceaseless, as well as disinterested, advocacy of what we conceive to be the worthiest and healthiest aims of the grand art of sailing.

WHY "COMIC PRELUDE?"—Noting the arrival of Alfred Shaw's cricket team of English professionals at New York this week, one of the daily papers announces that they will play "a game of base-ball by way of comic prelude." And why "comic prelude," pray? A hundred thousand American base-ball players in this country will agree with us that base-ball is ten times the game that cricket is. There is nothing "comic" about it in comparison with cricket.

THE KANSAS TOURNAMENT.—The tournament of the Kansas State Sportsmen's Association, which had been appointed for October, has been postponed until next Spring, because the managers could not procure birds for the trap-shooting. The Secretary writes that this is a great disappointment as a large attendance had been anticipated.

PROF. ALORD AT HOME.—We are pleased to record the arrival of Prof. D. S. Jordan from his annual summer trip to Europe. He returns fresh and hearty and promises to issue a Synopsis of our fishes soon. This will have an index of popular names and will prove a valuable addition to our ichthyology.

BY-WAYS OF THE NORTHWEST.

FOURTH PAPER.

MIRROR LAKE, as I first saw it, well deserves its name. A lovely sheet of water, only a few hundred yards in width and less than a mile long, it is surrounded on all sides by a superb forest of gigantic conifers. All along its margin is a narrow border of grass or low willows, separating the water from the dark forest, and beyond this border is a fringe of lily pads, which float motionless upon the unruffled surface of the lake. The little strip of grass, the tall green trees and the blue sky above are so perfectly reflected in the clear waters that it is difficult to determine where the reflection ends and the vegetation begins. Shut in on all sides by the primeval forest, the lake lies there like a great eye, which gazes steadfastly and unwinkingly at the sky which it so perfectly mirrors.

The light breeze had fallen as the sun rose, and there was now not the slightest motion on the water. The branches of the trees had ceased to wave, and the stillness of the morning was at first unbroken. As we sat there listening for the cry of the hounds, there was time for us to admire to the full the quiet beauty of the scene, which, however, little by little became more animated. The various inhabitants of lake and forest began, one by one, to resume their wonted occupations, and unconsciously to reveal to us little glimpses into their life history. An old mother gold-n eye led her brood of half a dozen young out from among some low willows, whose drooping branches touched the water, and began to teach them how they could most easily procure food, calling to them occasionally in low lisping tones, to which the little ones responded with soft peepings. High up above us on the dead limb of an enormous Douglas fir a huge gray eagle (*Haliaeetus leucocephalus*) sat sleepily, apparently not yet quite awake, although the sun was now well up in the heavens. On the other side of the lake a little pine squirrel was making his breakfast from the green cones, which he cut from the tree as fast as he could eat them, making more noise with the dropping husks than a band of elk would have done had they been feeding there. Occasionally the cry of the hounds "from farther distance borne" would be faintly heard, only to die away again and leave but the voices of the forest to break the morning's stillness. A pair of superb white-headed eagles flew silently across the lake, the hindmost strenuously endeavoring to overtake the one in front. This he succeeded in doing, when the foremost bird, without closing his wings, swung over on his back, thrust out his talons menacingly toward his pursuer, and then resuming his normal position, passed onward and out of sight. It was almost with a shock that I heard the loud mournful cry of a loon, two of which settled down on the water not far from the canoe. And now for a little while there was no more silence. The birds swam backward and forward over the lake, screaming every five minutes, until Mr. H. in despair, said: "I wish that loon was dead." It was useless now to listen for the dogs; we could only watch. After half an hour of impatient waiting, the loons ceased their doleful screaming, took wing, and disappeared in the direction of Burnaby Lake. Now once more we gave all our attention to the cry of the hounds which was now heard again, though very faintly. Before long, however, it came nearer and nearer, passed the west end of the lake and again grew fainter, and then out of hearing. Mr. H. has just remarked, with an air of disappointment, that he feared the deer would take water in Burnaby Lake, when I heard the Indian speak in very emphatic, but suppressed, tones to my companion, and, following the direction of their eyes, saw something moving slowly through the water at the other end of the lake. The object, whatever it was, moved very slowly, and looked as much like a box two feet square floating on top of the water as anything else. I took it for granted that it was the deer, because I could not think of any other unrecognizable living thing that would be in that place at that time. It appeared, however, that there was one man in the canoe who by no means believed it to be a deer. I was much surprised to see the Indian so much excited at the appearance of the game. It seemed altogether out of character, and in all my experience of Indians, on the Plains, in the mountains and by the sea shore, I had never seen any

thing like this emotion at the sight of game. The dialogue which took place between Squawitch and Mr. H., as afterward detailed to me, was both earnest and excited.

Squawitch said: "What's that there in the water, Choley?" "Mowitch" (the deer), was the reply. "Wake mowitch, sellallium, delate sellallium" ('tis no deer, it is the monster; yes, it's a true monster). "We had better go to the shore at once or we'll all be killed," said Squawitch and he made a motion with his paddle as if to turn the canoe to shore. "Keep still," rejoined Mr. H., "I tell you it's the deer." And a moment later, the object having by this time turned well out into the lake, he added, "Manook" (pull), and the canoe shot toward the mysterious thing. The first few strokes pulled by Squawitch did very little toward helping the canoe forward, but, at least, if they were not strong, they were noiseless ones. No doubt he wished to avoid attracting the attention of the Selkiewm by making any sound, and so we advanced silently toward it. Before we had gone very far, however, the mystery explained itself in a very simple way, and the Indian's fears were quieted. We saw swimming slowly along a fine buck, about whose horns were twined two or three long sprays of fern, which overshadowed his head, and falling down behind trailed in the water. The reflection cast by this mass of green in the water, which rippled behind and on each side of the swimming animal, was rendered vague, and blurred that of the trees near the margin of the lake, so that the whole thing had a misty and indistinct appearance, which might well cause doubt as to what it was to arise in the mind of one who was prepared to see something supernatural. Squawitch believed as thoroughly in the existence of the Selkiewm as he did in his own, and seeing something in the water unlike anything that he had ever previously beheld, at once concluded that the monster had appeared. I have no doubt that he felt perfectly sure during the first hundred yards of our progress that we were all hastening into the jaws of death. He was probably ashamed to draw back when his two companions insisted on advancing, and indeed there was no way for him to reach the shore except by swimming.

As soon as we were near enough to the buck to make out what he was, and thus to soothe the fears of the Indian, the latter put more vigor into his strokes, and we rapidly neared the object of our pursuit, which had not yet observed us, but was swimming quietly along, evidently very tired with his long run. We ran up to within twenty yards of him before he noticed us. When he did so, he at once turned toward the shore and put on a burst of speed. He swam almost as fast as the canoe went, but before reaching the land slowed down somewhat. Just before his feet touched the bottom, Mr. H. warned me to be ready, and I rose to my feet, and, as the deer made his first bound to shore, shot him through the neck. The crimson fluid tinted the clear water, the animal turned back toward the deep water, and Mr. H., fearing lest it should die and sink there, gave it the *coup de grace*.

This was the first time that I had ever seen a deer killed before dogs, and I confess that, to my notion, this method of hunting suffers by comparison with still-hunting. The hunter, after he has the deer in the water, and has pulled up to it, is too sure of his quarry. He has too much time to think about it. The struggles which the animal makes to reach the shore excite his sympathies, and after he has killed his game he is likely to wish that he had allowed it to escape. There are, however, some localities in which, during the summer and early autumn, this is the only way in which game can be obtained, and this is true of most of the sea coast of British Columbia. The forests are utterly unlike anything that I have seen elsewhere on this continent, and progress through them is slow, difficult and noisy. Under such conditions still-hunting is an impossibility, a mere waste of time and productive only of loss of temper. The forests are very thick and full of down timber, and the underbrush dense and tangled. One strives to force one's way through it quietly, but at every step makes as much noise as a six-mile team. Fallen trees, from two to seven feet in diameter, have to be climbed over, or crawled under. In the open spots, ferns as high as one's head obstruct the view, and rocks, concealed by the luxuriant vegetation, bark your shins. You slip upon the thick wet moss. The huckleberry and sallow vines twine lovingly about your legs and throw you to the ground. You grasp the stem of a sapling to ease your fall, and find that you have chosen the thorny umbrella plant, or "devil's walking stick," as a support. Then you sit down and, taking out your knife, pick the spines out of your hand and think pleasant thoughts, while the Douglas squirrel and the Stellers Jay chatter derisively in the branches above your head. One feels at such a time that all is indeed vanity. I do not by any means wish to imply that all the country through which I passed is like what I have described, but through a very large portion of it it is impossible to hunt.

Our deer having been secured, we left to Squawitch the task of transporting it to town, while we hastened thither ahead of him. At two o'clock, with a charming party of friends, we took the stage for Burrard Inlet, distant nine miles from New Westminster, which we reached about 4:30. We were met here by Mr. John Fannin, a gentleman who has long resided in this northern country, and whose graceful pen has contributed to the columns of *FOREST AND STREAM* more than one most graphic and realistic pen picture of life in the Far North. Both Mr. H. and Mr. Fannin are interested in zoology, and through their observations not a few interesting points in regard to the habits of

certain Northwest coast birds, mammals and fishes have been brought to light. Many a pleasant hour did I spend with these two gentlemen, examining their specimens, talking over the fauna of the region, discussing knotty points as to the relationships of closely allied forms, and listening to the relation of the experiences through which, in their wanderings, they had passed. Tales of Cariboo and Cassiar, of Alaska and Dece Lake, of Athabaska, Peace River and the Arctic slope, gave a reality to those districts, heretofore only vaguely heard of, which to me they had never had, and made me promise myself that, in the years to come, I too would visit these scenes.

By eight o'clock the next morning our party had embarked on the little steamer Senator, and were swiftly steaming up Burrard Inlet, which, opposite the town of Hastings, is a mile or more in width. The staunch and comfortable little craft bore us swiftly up the Inlet, past the Indian rancherie on the north bank, past wooded hills and low grassy points, past the rough granite mountain faces, where the few scattering trees can scarcely find earth enough to support them and with difficulty maintain their foothold upon the bare rock, until, six miles from Hastings, we turned sharply to the left, and up the North Arm of the Inlet. Here the hills on either side drew nearer together, and thus appeared higher and more rugged, their summits being capped with snow, which in many of the gorges and ravines extended far down toward the water's edge. The almost vertical rock faces were covered with a harsh brown moss, which, except when it wet, gives an excellent foothold. Where the soil is not utterly wanting, or the precipices are not too nearly vertical, the mountains are densely wooded with Douglas fir and cedar, some of the timber being of great size. The varying shades of green displayed by the different species of trees gave a variety to the aspect of the forests as a whole, which had almost the effect of cloud shadows, and added greatly to the beauty of the scene. Down almost every slope in sight, and constantly changing as our position and point of view changed, poured most lovely cascades, some of which even deserved the title of waterfalls. Though at present carrying but little water, their wide beds of naked rock showed that in spring, after the rains, and in the early summer, when the snows were melting, they were mighty torrents which would sweep everything before them by their resistless power. Even now they were extremely beautiful, stretching as they did like delicate white threads far up the mountain side, often scarcely separable in the distance from the lines of snow in the ravines. Only by the aid of a good glass could we discern the leaping, wavering motion of the torrent, which served to distinguish the white, hurrying flood from the unmoving snowdrift. The presence of animal life added still further charms to the scene. The pigeon guillemot, in its sombre livery of black, relieved only by its white shoulder knots and coral-red feet, was present on the water in great numbers—an active, busy little bird, constantly employed in its search for food. A species of crayfish seems to be a favorite article of diet with this bird, and many of those which we saw flying by the vessel were carrying this crustacean to their young. They are said by the Indians to breed on the islands in the Inlet, rearing their young in the holes in the rocks. On these islands, too, the harlequin duck is said to breed, though not in such numbers as on the river, which flows into the Inlet at the head of the Arm. Eagles, fishhawks, kingfishers and crows fairly swarmed along the shores, for these waters abound in fish, good, bad and indifferent, the hideous dogfish standing at the foot of the list and the salmon at the head. Each species contributes something toward the support of the birds, and, besides these, the shellfish afford excellent feeding for the crows and ravens.

Here I first saw that very common incident in the history of the two species, the robbing of the fishhawk by the white-headed eagle—a beautiful sight and one long to be remembered. The eagle passed us, flying low and swiftly, while the osprey had risen to a considerable height with his fish, and apparently was about to make off with it over the woods. As soon, however, as he caught sight of his pursuer he began to rise in a spiral higher and higher, but it was easy to perceive that the eagle was gaining rapidly. At last he had risen above the fishhawk and made one or two darts at the latter, which it seemed easily to avoid, but evidently despairing of getting away with its prey, it dropped it. Shining like a bar of silver, the fish fell and was carried off by the wind diagonally on one side, but the eagle, half closing his wings, stooped for it, secured it before it had fallen half way to the water, and bore it off to a tall tree on the mountain side.

On the islands in the North Arm, as well as on the mainland, deer are abundant, and it is a delightful place for a hunt, as in many places the timber is so sparse that both deer and hounds can be seen from the canoe for a good part of the run.

Burrard Inlet, B. C.

THE MONROE MARSHES.—The famous ducking grounds of the Monroe Marshes, Michigan, at the mouth of the Racine River, in Lake Erie, have been purchased by a club, and are now rigidly protected. The club property comprises between eight hundred and one thousand acres. Mr. George Dawson, of Albany, N. Y., is the President of the club, and Mr. J. Bevans Giles, St. Catharines, Ont., the Secretary. The full organization of the club will be effected next month.

FISH COMMISSIONERS OF NORTH AMERICA.

WE herewith present to the Fish Commissioners of North America a list, revised and corrected to September 21. This list has been obtained by correspondence and is correct. It will be found to contain some new names as well as new commissions. We take this labor upon ourselves annually, that the Commissioners may be able to change reports and other information with certainty. It is a gratifying fact that the fish culturists of America recognize the *FOREST AND STREAM* as their organ of communication with each other, and choose it to publish such news as may wish to make public, instead of scattering it in obscure papers where it is not seen by those interested.

We take this occasion to return thanks to the Fish Commissioners of the different Provinces, States and Territories for their uniform courtesy in crediting to us such aid from our columns as they have seen fit to make use of in their reports, as well as for crediting us with the labor of compiling the official list of Commissioners. A prominent commissioner writes us: "My colleague, Mr. —, thinks it too poor to subscribe for your paper. Send it to him my expense. No intelligent fish culturist can afford to do without *FOREST AND STREAM* if the price were increased fold. He would soon find himself behind in the race, and is not to the strong, but to the best posted."

OFFICIAL LIST OF FISH COMMISSIONERS.

The expirations of the terms of office are indicated by the dates in parentheses. Where no date is given the term is indefinite.

The Sportsman Tourist.

THE STURGEON.

WHERE the broad Hudson graceful sweeps
Along its fair, romantic shores;
Where past its western, wooded bluffs
And frowning Palisades it pours;
And upward where the narrowing stream
Is guided by the embracing bank;
Far upward where the tufted woods
Umbrageous gather, rank on rank,
And downward where its outlet yields
Its generous tribute to the deep,
The white-scaled sturgeons glide or leap;
A hard-fought prize to net or spear,
Wherever they urge their free career.

Up the wide Sound, and far as trend
The rocks that hem New England's coast;
Up the Maine rivers, broad and deep,
Where boiling tides are ever lost,
The silver spangled sturgeon roam
In the fresh tides or salty foam.

And often gazing o'er the main
Where the Atlantic billows break;
O'er that illimitable plain
I see them their mad gambols make;
Now swiftly shooting o'er the surge,
Now leaping upward, each its length,
In course eccentric on their urge
With matchless speed, surpassing strength.

The billows brighten where they leap,
The spray rises upward, white and high,
Then sudden to abysses deep
They settle, lost to human eye.

Far, far along the dangerous edge,
O, Maine, with reefs and rocks beset,
Lined with the seaweed and the sedge,
Where ceaseless the salt surges fret,
I've seen the gleaming sturgeons play,
Along old Ocean's endless way,
And where they slivers pour their tide,
Penobscot, Androscoggin wide,
I've seen far up the drooping woods
The sturgeon flashing in the floods.

Ah, me! how pleasant to recall
Those college days, so distant wide,
When you and I, dear Longfellow,
Wandered in converse, side by side;
Wandered 'neath birch-trees' play woods,
Or by the Androscoggin's floods;
Now pausing by the way to note
The pikeon flocks above us float,
Or catch the sudden flash and leap
Of the great sturgeons o'er the deep.
Though time has long inscribed thy name
High on the scroll of poet's fame,
Yet well I know thy memory strays
Far back to scenes of valiant days,
To Brunswick woods and waters blue,
When we were young and life was new,
Though time has sprinkled on our brows
His white, inevitable snows,
Still in our hearts the life-days pour
As warm, as loving as of yore.

Shelter Island, Sept. 16.

ISAAC McLELLAN.

A FEARLESS DOE.

YOU see, Hank had promised me a farewell hunt on one of the finest sheets of water that a deer ever plunged in. Where that is, my friends, and how we got there never remain a mystery, for I have promised Hank never to reveal his secret lake. It is sufficient for you to know that about five hours after we left camp yesterday we were passing through a grand piece of woods, a regular old "forest primal." We were following a trail marked by blazes on the trees. It led us up the side of a steep ridge, and on its top we stopped to rest. All was still. There is a silence which never comes to the city even in the hush of midnight, nor to the fields of the country though the peace of the Sabbath rest upon them. It is that peculiar silence which is felt only in the deep forest.

I remember days in the woods when the whole air resounded with the notes of animal life; the quick chatter of squirrels, the sharp notes of the chickadee, the dull drumming of the woodpecker and the hum of insects. I remember days, too, when no sound broke the almost painful stillness, when even the falling of a leaf would have been a relief to the ear.

It was on such a still day that Hank and I rested there, the only human beings in that vast unbroken wilderness. The scene around was grand. Huge pines and hemlocks towered above us, some to the height of a hundred and fifty feet, some even more.

On both sides of us the ridge sloped abruptly away, and we could look down into the valleys below. They were covered by many fallen trunks slowly crumbling away. Moss everywhere covered the ground with its soft carpet; it hung in masses on the mouldering tree trunks and had already taken up its abode on those newly fallen. Though it was a bright day, it was dark and gloomy in the forest. Here and there a few rays fell from an opening in the foliage above, glancing and glittering on the leaves and gilding the green ferns and mosses.

We followed the ridge along. Hank carrying the canoe on his yoke, I loaded with "duff." It was a long carry, but the beauty of the country interested me and kept me from tiring.

At last we caught a glimpse of water through the tree trunks. Then it grew lighter, and we stepped from a clump of pines upon the shore of the lake at last. O! what a lake was there, my would-be deer slayers! Hank says that ours is the first color that its waters flout, and you would believe it if you could see the water. Only a moment we admired it, for Hank suddenly touched me and pointed to the opposite shore. The canoe was quickly in the water, and I, crouched in the bow, was intently watching the red form that was browsing along just under the alders. Long before we reached him the deer walked out. We turned back.

"Well paddle round and inspect a little," said Hank, "get a daylight shot if we can, and if it be otherwise, go in and camp before dark."

The lake was the wildest and loveliest I had ever seen. The shores were densely wooded and high ridges rose from all sides. I found it hard to believe that human beings had ever looked on this wild water, for wherever man goes he leaves the mark of his destroying hand.

But there was no dead timber here, no peeled spruces, no fire slashes where careless campers had let their fires run, no mark or trace of man. Even the wild creatures seemed scarcely to heed our approach. Upon the left, where the shore was held up by a bank, two gulls were sitting themselves on a rock. Near by a woodcock was hurrying along with her brood behind her, while just across at the head of a marsh which stretched out from a tamarack swamp, where the inlet seemed to be, a crane stood, silently watching for his favorite frog. I was admiring the patience of the bird, wondering how he could stand there for hours with one leg curled up under his breast, when a quiver ran along the boat. I grasped the rifle and looked along the shore, but could see nothing.

"Right over there in that cove among the lily pads," whispered Hank.

Sure enough, it was another deer.

"It's a little doe," said Hank. "Don't fire, it might spoil our chances for better game by and by."

"Let's see how near we can get to her."

At four rods she raised her head. The canoe was motionless, and the figures in it sat as if carved out of rock. She began to feed again. Three rods. I held my breath. Two rods. The canoe scarcely moved now. One rod.

"Look here, sissy," you'll deplorably ignorant of this world's cussedness. The yearling raised her head and looked into our faces as if to ask the meaning of that sentence. One quick, strong stroke and the canoe flew toward her. She jumped now. We were right upon her. I grabbed an oar and, reaching out, attempted to administer a parting chastisement for her temerity.

She was a little too far.

We started back toward the outlet and made for the point where we had left our "duff."

It was sunset now. Sunset on one of the most beautiful lakes of the Adirondack Mountains. What words can paint the scene! Could we see it upon the canvass, glowing beneath the skillful artist's brush, we should call it unnatural and overdrawn. Would you try to imagine it? Read all the descriptions of glorious sunsets that have ever been written, among the Alps, the Scottish Highlands, our own White Hills; combine the beauties of all in one fine picture. That is an Adirondack sunset.

The breeze almost always dies away at evening. It was all gone now, not a breath left. The lake surface was a perfect mirror. As we looked over the boat side we grew dizzy and seemed to long to leap over and fall down, down away off there among those fleecy clouds, away into that vast abyss of space, and drift off amid the gold and crimson hues of that other sunset. Yes, there was another sunset, even more beautiful than the one above; another forest too. What was of more interest I perceived for the first time how very dirty my face was. But no; it couldn't be. That fat, dirty, tar-colored fellow who grinned and nodded at me from the boat below was not myself, or at least it was an illusion. I am thin, and fair too, so my wife says; but how two months in the woods do metamorphose one!

[Continued from page 146.]

FROM VERA CRUZ TO MANZANILLA.

MARAVATO, MICHOACAN,
Mexican Republic, July 25, 1891.]

After only two days in the City of Mexico we were transferred by a short line railroad to the Mexican stage, which extends as far as the town of Maravato, 250 miles north-west of Mexico, and midway between that city and the Port of Manzanilla, on the Pacific Ocean, the proposed terminus of our contemplated railroad survey.

I am now almost worn out after a terribly fatiguing journey of three days in the Mexican stage coach. Within the few days that I have been here I have seen a great many species of our most common northern birds in great abundance here. Insects are equally plentiful, and as the birds are out of plumage, being in the molting season, I shall devote my spare time to the collecting of beetles, which I will forward from time to time. Transportation by mail is here, the postage to the City of Mexico is twenty-five cents, while the transport of twenty-five pounds of merchandise of any kind to Vera Cruz costs three dollars. There are a number of old ruins about here, but the transportation of these great tablets or images would cost more than their value amounts to. To-day I saw near my house some crow blackbirds, mocking birds, meadow larks, quail, red-winged starlings, crows, hawks, and very small finches, sparrows and warblers, some of which latter are new to me. There is also a plenty of water fowl on the near-by lake, and they appear to be in good plumage.

This town of Maravato, where I am now stationed, is a rather pleasant-looking place of about four thousand inhabitants. The River Lerma traverses it; in summer this water-course is an almost dry gorge, while it assumes respectable depths and width in only rainy season. A few small fishes seem just now to be only fish inhabitants. Near by and in fact full light is the volcano of Nevado de Toluca, which rises to an altitude of 17,800 feet, and is, of course, snow-covered at its summit. We came here by far the larger part of our journey by stage. This is a truly horrible affair to travel in, and is driven by mules which are frequently changed. We carried in our own conveyance seventeen passengers, and the conductor or postilion, whose chief and sole duty consists in driving his mules, which feat he accomplishes by the most dexterous use of a whip of about twenty feet in length. This instrument he whisks like a lasso around his head, and can, whenever needed, apply it specially to any particular one of his long team of nine mules, whether it be the foremost or in the rear. Whenever he exercises thus his dexterous skill he never fails to draw blood. The scenery about Maravato, after we arrived there, recompensed me for many privations we suffered on the way. High rocky mountainous walls arise almost perpendicularly everywhere, and through vast gorges the little river Lerma winds its way. Every mile or so a hacienda, strongly enough walled for any siege, embellishes the picture. The stations on the way to Maravato are equally substantial-looking structures, all surrounded by high and massive walls. I shall never forget the night our party spent at one of them near Harboston, a little town on the way from Yxamalaca to Maravato. We arrived there tired and hungry. After supper, which was served on a table so high that we could barely reach up to its edge with our hands from our low seats, we were accommodated with a few rough mat-

CATALOGUES RECEIVED.

We have received catalogues and price-lists from the following

dealers and manufacturers:
Abbey & Imbrie, New York.
E. A. Allen, Monmouth, Ill.
American Arms Company, Boston, Mass.
American Patent Portable House Manuf. Co., Corvoss, N. Y.
Bradford & Anthony, Boston, Mass.
T. Yardley Brown, Reading, Pa.
Camp Lonnge Company, Pittsfield, Mass.
Clark & Snedder, Baltimore, Md.
Conroy, Blisset & Mallinson, New York.
Will H. Crutenden, Cazenovia, N. Y.
L. A. Davenport, Davenport, N. Y.
Dennett Brothers, New York.
Goodyear Rubber Mfg Co., New York.
Jos. C. Grubb & Co., Philadelphia, Pa.
Hartley & Graham, New York.
Hodgman & Co., New York.

Upthegrove & McLellan, Valparaiso, Ind.
Whitney Arms Company, New Haven, Conn.
Winchester Repeating Arms Company, New York.

WEAKFISH ABOUT NEW YORK.—For the past two weeks weakfish have been plenty in the vicinity of New York City. Many have been taken with the hook off Staten Island. For the past few days the catch has been light, but they may come in the bay in considerable numbers yet. This fish is the "squatigue" of Massachusetts and the "salt water trout" of the Southern coast. It has been a fair season for it, as far as we have heard, and does not seem to be decreasing as fast as some other fish.

empty and, as in the case of the first nest, took a part of the branch and nest. And now I would like to ask the FOREST AND STREAM if it thinks both nests were made by the same birds. J. L. D.

[It is difficult to give a positive answer to such questions as are asked by our correspondent, and we can only give an opinion. We think it possible that a yellow and black-billed cuckoo might breed together, but very improbable. We should think it much more likely that there may have been some mistake in the identification of either the male or the female bird. We think it very likely that the second humming-bird's nest was built by the original pair of birds.]

LONGEVITY OF TURTLES.

WARRENTON, Va., Sept. 17, 1891.

Editor Forest and Stream.

Send you by this evening's express a "dry land terrapin" picked up by a friend between this point and the Fauquier White Sulphur Springs, where the "Yankees" camped on the land of Mr. Kemper, in 1892.

Examine the under side of this creeper, and you will find the inscription—

1802.

YANKER.

Which fixes the age at nineteen at least. How old the "terrapin" was when the aforesaid "Yankee" put his bottom mark upon him is a matter of doubt. Evidently he was full grown. After inspection, you will transmit the terrapin to the Smithsonian Institution at Washington, where he can be cared for and fill the full term of a respected old age.

[The question as to the age to which the animals of this group attain is an interesting one, and deserves more attention than has yet been given to it. That turtles are unusually well protected from the attacks of enemies is certain. We have been told, however, that raccoons eat the freshwater turtles, and have ourselves found the shells under circumstances which seemed to confirm this statement. A note on this subject which has recently appeared in the *American Naturalist* from the pen of Dr. A. S. Packard, Jr., bears directly on this subject. He says:

"So far as we are aware, no attempt has been made to explain the unusual longevity of turtles, whose lives, as is well known, span over a century. There appears to be no longer lived animals than these beings of slow gait and slow manner of life. The following facts may throw light on the cause of their great age. In the first place, they are protected by the solid shell from the attacks of snakes, fishes and birds; young turtles, we are informed by Professor J. W. P. Jenks, are sometimes carried off by herons, but in adult life they are probably rarely eaten by other animals. Has any one ever found any empty turtle shells? As some turtles lay but two or three eggs a year, nature seems to have counted upon an immunity from the ordinary evils of childhood in these animals. It is probable that the larger portion of—indeed most—young turtles who hatched survive, and when two or three years old, are fitted to resist successfully against any fish and avian enemies. They are not exposed to vicissitudes of weather; the fact that the period of egg-laying (in New England from June 10-20) is so constant, and varies so little at different seasons, shows that they are hardy and tough. Finally, the persistence of the type of gigantic tortoises on the Galapagos Islands indicate the wonderful vitality of this type of life in resisting prolonged climatic and geological changes."

The shells of the common box tortoise are not uncommonly found in dry woods, and we have twice found in the wet meadows near the salt marshes of the Atlantic coast shells of *Trionyx guttata*, which had apparently died a natural death.

We do not remember that any extended observations have been made on this subject, although the general belief that turtles live to a great age seems to be justified by what we do know.

The specimen referred to by our correspondent has been received and thought of as lively and apparently in good condition. Besides the inscription above noticed, there appeared faintly on the back part of the shell the initials R. N. or R. M.

Can any one claim the specimen as an old acquaintance?)

SPECIAL INSTANCES OF ANT INTELLIGENCE.

It is always difficult to draw the line between instinct and reason, between adjective action due to hereditary or purposeless habit and adjective action due to individual and purposive adaptation. But we may be least diffident in accepting, as evidence of the latter, cases where animals exhibit a power of adapting their actions to meet the requirements of novel circumstances—or circumstances which cannot be supposed to have been of sufficiently frequent occurrence in the life-history of the species to have developed instincts of mechanical response in the individual. It is in view of this consideration that the following instances are selected:

Ebrard records in his "Etudes de Mœurs" an observation of his own on *F. fusca*. The ants were engaged in building walls and when the work was nearly completed there still remained an interspace of twelve or fifteen millimetres to be covered in. For a moment the ants were thrown out and seemed inclined to leave their work, but soon turned instead to a grass plant growing near, the long, narrow leaves of which ran close together. They chose the nearest and weighted its distal end with damp earth until its apex just bent down to the space to be covered. Unfortunately, the bend was too close to the extremity and it threatened to break. To prevent this misfortune the ants gnawed at the base of the leaf until it bent along its whole length and covered the space required. But, as this did not seem to be quite enough, they heaped damp earth between the base of the plant and wall, and at last the latter was sufficiently bent. After they had attained their object they heaped on the buttressing leaf the materials required for building the arched roof.

This observation naturally leads to two others by two different observers. Thus, Moggridge says: "I was able to watch the operation of removing roots which had pierced through their galleries, belonging to seedling plants growing on the surface, and which was performed by two ants, one pulling at the free end of the root, and the other gnawing at its fibres where the strain was greatest, until at length it gave way." Again, as previously quoted in another connection, he says that two ants sometimes combine their efforts, one stationing itself near the base of a footstalk and gnawing at the point of greatest tension, while the other hauls upon and twists it.

The other observer to whom I have referred is McCook, who says of the harvesting ants of America that he has seen "the workers, in several cases, leave the point at which they had begun a cutting, ascend the blade, and pass as far toward the point as possible. The blade was thus borne downward, and, as the ant swayed up and down, it really seemed that she was taking advantage of the leverage thus gained, and was bringing the augmented force to bear upon the fracture. In two or three cases there appeared to be a division of labor; that is to say, while the center of the roots kept in his work, another ant climbed the grass-blade and applied the power at the opposite end of the lever. This position may have been quite accidental, but it certainly had the appearance of voluntary co-operation."—G. J. ROMANES, in *Popular Science Monthly* for October.

NOTE ON SNAKES.—Media, Delaware Co., Sept. 10.—I have read in your paper of September 1st, the interesting communication of H. J. Lombard, of Cassie's Valley, N. C., in reference to snakes. In it he states that "all harmless snakes have been tails and lay eggs." I can now recall to mind at least two exceptions to this rule. I have seen, among the mountains of North Carolina, not far from Cassie's Valley, a snake of the body and head of a hog, the hog-nosed snake, sometimes called the spreading adder (*Heterodon platyrhynchos*). This snake is harmless, though the sight of it is quite suggestive of venom.

I do not think that the common water snakes of Pennsylvania lay eggs, as I have frequently killed them with young snakes in their bodies. They are ovo-viviparous.

In reply to a former question in your paper, "Do black and garter snakes eat fish?" I have seen garter snakes eat fish, both fresh and in a putrid condition. In the former case, the head is swallowed first. In the latter case, the tail was swallowed first; the flesh being then soft, the dorsal spines were easily reversed, and offered no impediment to the process of deglutition. I had never seen any record of snakes eating putrid fish.

When a garter snake swallows a frog, the hind feet and legs go down the throat first. The frog is not previously killed, as I have heard one cry pitifully after it was swallowed. A hungry snake will sometimes make an absurd attempt to swallow a large fish. I once observed, for a long time, the efforts of a garter snake to swallow a fish so large that it could get but little more than the nose into its mouth.

In illustration of the Southern distribution of the beaver, I will state that I have seen the stumps of small trees freshly cut by beavers in Cherokee County, North Carolina, near the Georgia State line.

J. WILLCOX.

[It is curious to note how almost universal is the belief that the hog-nosed snake, sometimes in New England called puff-adder, is venomous. Probably the only dangerous snake in that portion of the country east of the Hudson River is the rattlesnake, which is almost everywhere extremely rare.]

ARRIVAL OF A YOUNG GORILLA IN ENGLAND.—The last issue of *Land and Water* contains the following account of the recent arrival in England of a young gorilla: "We are informed that Mr. Cross, the animal dealer, of Liverpool, has received a fine young gorilla. It arrived in the steamer *Scorilla*. During the voyage from Africa to the Mersey, the gorilla appears from an account which is published in the *Liverpool Daily Express*, to have given some trouble on board. After the vessel had been a number of days at sea, the animal, availing itself of the liberty which had been incautiously given to it, made an attack upon several of the crew. It ran amuck, in fact, at the captain, biting him savagely in the leg and two men who came forward to his assistance were also attacked, and to some extent injured. By dint of some ill-applied chastisement, however, the gorilla was induced to confine his ebullitions of temper to mere displays of his teeth, and later it was found possible to treat him without severity—a change of tactics which he repaid by becoming quite tame, and allowing himself to be handled with tolerable impunity. The gorilla was taken on board the *Senegal* at Setecoma, a small port on the southwest coast of Africa, and on its arrival in Liverpool it came into the possession of Mr. Cross. This animal is not as large as the adult, but is as blackberry briar. The orifice at the point is in the form of a slit, in the upper side, as though a diagonal slice had been shaved off with a penknife. I ran a fine straw entirely through the fang. The upper jaw is immovable, as in the case of most vertebrates. The lower jaw works on a hinge, and is susceptible of being opened wide enough to lie back against the throat, giving unobstructed play to the fangs."

FANGS OF THE RATTLESNAKE.—Vicksburg, Miss., September 7, 1891.—The fangs of the rattlesnake are perforated from base to point, through the centre, the hollow being about the size of a canonic needle. The specimen which I examined was three and a-half feet long. I boiled the head and found on each side of the upper jaw three fangs; one matured, one about half grown, and the third in embryo. The matured fangs were three quarters of an inch long, hollow from base to point, the base being much enlarged and containing a cavity as large as the point. The fangs are curved like a blackberry briar. The orifice at the point is in the form of a slit, in the upper side, as though a diagonal slice had been shaved off with a penknife. I ran a fine straw entirely through the fang. The upper jaw is immovable, as in the case of most vertebrates. The lower jaw works on a hinge, and is susceptible of being opened wide enough to lie back against the throat, giving unobstructed play to the fangs.

"MARONER."

A GENESEE OFFER.—Port Madison, Iowa, September 10, 1891.—I to-day caught a two-third grown cock pheasant. He tried to cross the river here and when he landed he was nearly played out that I walked up and picked him up. I will try to keep him or will send him to any one that has a hen, and would like to domesticate them.—W. H. ARRE.

[We hope that some of our readers are in a position to accept our correspondent's generous offer.]

A HINT TO "HOWARD"—Warrenton, Va., Sept. 21.—I see that "Howard" asks you for some place in Virginia to hunt in for a few days in September. There is absolutely no game at that time if I except a few squirrels. The same sort of birds have left, the partridge season does not open until Oct. 15, the wild turkeys are in the mountains, the ducking grounds are bare and woodcock in the depths of the swamp. If "Howard" don't intend to stay he may as well leave his breech-loader at home as to bring it here this season of the year.—CHASSER.

Game Bag and Gun.

FOREST AND STREAM GAME TABLE.

OPEN SEASONS.

The seasons, in which it is lawful to shoot game in the several States and Territories, open as designated in the following table:

States.	Deer.	Woodcock.	Quail.	Ruffed Grouse.	Pin-tailed Grouse (Jack-Chick).	Wild-foal.	Wild Turkey.
Ala.	Oct. 20.	Sept. 15.	Sept. 15.	Oct. 1.	Oct. 1.	Oct. 20.	Sept. 15.
Ark.	Sept. 1.	Sept. 15.	Sept. 15.	Oct. 1.	Oct. 1.	Sept. 15.	Sept. 15.

SOME OLD GUNS THAT I HAVE SHOT.

SPRUNG from a race of sportsmen. Well do I remember the picture of an ancestor engaged in a hand-to-hand encounter with a large stag. Cruelly wounded and disfigured by the sharp horns of the infuriated deer, whom he had "creased," his tatters dyed in blood, he stood in the picture, giving blow for blow with his stout hunting knife, which, as the story goes, he at last plunged into the heart of his maddened enemy. How I cheered the large deer hound strutting in its glory, and trampling to the ground the picture with bared breast that the stag too was covered with wounds, and how I read the story of the picture and resolved that I too would some day kill my stag and, if need be, would kill him with my knife. I did, but that is foreign to this paper.

I never had the child's love of gunpowder simply because it made a noise. The first attempt that I remember—I think I was about seven, and my faithful friend and my *Fidus Aetna*, Dick, coal-black about nine years old, was converted into "ole mas" John's fishing chair into an extemporized gun. This came, which had grown in Mississippi, was about the size of my arm and about twenty feet long. To cut off two joints at the bottom would not hurt the cane and would make us a good gun with which to shoot "dat ole rooster," a very pugnacious bird and Sandy's and my special enemy. When we had cut off the joints we bored a touch-hole at the bottom of the first joint, and thus we had a gun about three feet long, calibre No. 8. I did the aiming, while Sandy would apply a live coal to the touch-hole, and tramping to the priming. With light rifle charges and shot carefully counted, fifteen in number, we brought to grief, in the orchard, divers sapsuckers and other saucy and ill-conditioned birds.

Growing bolder, we resolved to test the efficacy of our improvised fowling-piece upon the nefarious rooster who had so often put us both to shame and ignominy by driving us out of his domain with sharp spur and peck, delivered *en traite*. Putting in our blunderbuss two rifle charges and five rifle bullets, we slipped up to the fence and saw our enemy strutting in its glory, not more than ten feet distant. To aim, to apply the coal was but the work of a moment, and the next we were asking each other what had happened. The gun—our fondly cherished gun—was gone, and with the exception of a few splinters, none could tell where it had gone. Sandy was minus all the wool on one side of his head from too eagerly watching the effect of the shot and sighting as he applied the coal. I, too, was minus eyebrows, eyelashes and most of my hair. Fortunately for the peace of mind of those who had me in charge, I was saved by bounding into a short time afterward and Sandy was made "gum minder." He detailed to me in a feeling manner how "ole Mas" had licked him for eating "dat rooster." He had taken that tough fowl to his mother's cabin and some wretch had told on him. I was affected, but told him to keep quiet, gave him a silver half-dollar to insure it, and parted from the staunchest friend that I ever had. Brave Sandy! How

many would have kept their counsel and never told on me? He had his reward in after years, and he now lives in a comfortable manner "way down South" in Alabama. Good luck attend him, and may his round, black face never grow discontented!

It was on the boarding-school that I first fired my first "sure enough" gun. I had been sent to a cobbler of that vicinity to get my shoes half-soled—needed badly from too much sliding on the ice—and there I remember that the disciple of St. Crispin left me having in my own hands an old musket that had seen service in all the wars in all America. Proudly did the owner point to a dent in the barrel made by an Indian tomahawk. How I fawned upon that cobbler! How abjectly I waited breathless upon his slightest word! And yet he ate raw onions and drank bad whisky—two things than which there could be nothing more disgraceful to my infant mind. (The judgment of my ripper years has but confirmed that youthful opinion.) On the next Saturday but one I was to meet the crafty cobbler (who had gobbled my whole supply of pocket money) in the woods, near his cabin. At length the happy day dawned, and I ate little or no breakfast on that morning. I found him seated on a stump, with two bottles containing powder and shot, and a third—something to which he had frequent recourse throughout the whole day, necessitating, finally, his assumption of a recumbent position, where I left him alone in his glory. The gun was handed to me to carry, and proudly did I assume that heavy weight. We had not gone far when a large blackbird, who had been fishing in the creek, flew upon the top of the chimney and commenced his usual servile dance upon seeing me—at least, that was the rule with his tribe, and I had sworn vengeance whenever and wherever I could get a chance at one of his fun-making companions. Laying my gun up by the side of a small tree, with my heart beating triple time, I took deliberate aim and pulled trigger. No one but those who have shot a flint-lock gun can have any idea of the intolerably long time intervening between the pulling of the trigger, the fizz! fizz! fizz! of the priming, and finally the loud report, followed, as in your case, by your falling—in no light manner, either—flat upon your back. I arose, and, feeling for my bruises, I went to look for my old enemy, the blackbird. I found him doubled up among some briars, looking a very forlorn bird indeed. Where be all your fun-making now of innocent, large-eyed boys? We gather him and go forward on the hunt. The tales at the end of that day sum up: Two blackbirds, two larks, one yellow hammer, one jay, and one glorious rabbit, shot from a rest across an old log.

I had a schoolmate, Peter Holmes, who loved to shoot as well as I. Many was the time that we took the cobbler's gun and killed of birds a great number, finally aspiring to the dignity of killing squirrels, for which his gun was not well fitted. And right here let me say that I have found many old smooth-bore muskets that shoot remarkably well. On what principle they do so I am unable to say; but in the hands of our Southern negroes they have killed all the squirrels. They are certainly not choke-bored; they are not made of fine materials, and yet, for No. 8, No. 4, or buckshot, they will kill like a streak. I have found many of them for one of them for any consideration, but in the hands of pot-hunters they are formidable weapons. I wish there was not one in Georgia—I should be happy.

I went home with Peter Holmes, my affinity, to spend the vacation, my uncle remarking in his letter giving me that permission, "that it did not much matter where I was, because gunpowder was plentiful, and I would be sure to bring my inventive genius to bear upon the construction of some to burn it."

Throughout the South at that time all old rifles that had become smooth from long use were bored by gunsmiths and converted into shot guns. As the bore was originally very small, the gunsmith merely cut all the "rifles" out, and left the gun about .25 calibre. Indeed, I have seen some as small as .50 calibre. Bored on no scientific principle, admitting but a very light charge, they were utterly worthless at any but a very short range. My friend was the fortunate possessor of one of these unique shot-guns, and, above all, it was fired with percussion caps; and, furthermore, if you fired right, it would kill like a streak. In the corner of the tall shell-bark hickory that could be found on our place.

As to doves, why, that gun could kill one ever so much further than brother Jim's rifle, which tore 'em to pieces; and my gun would do it too, but you shoot shot out of it, instead of a single bullet. As to yellow-hammers, why, I never shot at one in my life, far or near, that he did not fall stone dead. Our first exploit, two or three days after our arrival at Peter's home, was to expend our whole stock of powder and shot at three diabolical gray squirrels which were found up in the shell-bark at the corner of the wheat field, not more than a hundred yards from the house. The nuts of the shell-bark hickory afford a rich and favorite food for squirrels in the early autumn. At each discharge of our gun there was at first a great scampering and chattering among the squirrels; but as they soon found out that we could not harm them, they would either a nut, run out on a limb, curl their tails over their backs, wink at us in the most condescending manner and proceed leisurely to dispose of the spoil. How we shook our heads, wondering how I disparaged the noise which was to kill all things, at any range?

No, O shame! Brother Jim, hearing the continual firing and suspecting something of the truth, came down with his rifle and, at three shots, killed every one of those squirrels! And shot their heads off, too! So, in doubt and darkness, in a supreme contempt for all smooth bores, ended our first experience of old guns in squirrel shooting.

Some two years after this episode in my sporting life I went to visit a cousin who lived in a fine game country.

He had a single barreled rifle of about 12 calibre, about 52 inches long, of which style of guns there were thousands sold every year in the country stores of the South.

They shot well, too; some of them extraordinarily well. As well as I recollect they must have been English guns, for most of them had on their barrels, "London fine twist," a legend, as I now have reason to believe, like many other legends, having no solid basis of truth. However, they were good enough for boys, and we could kill with them.

Among the negroes owned by my uncle was a pragmatical old fellow named Joe. A privileged and favorite servant he was allowed often to take the rifle and kill the squirrels and turkeys with which the woods abounded. But few South-easterners allowed their slaves to handle guns, but Joe had been reared with my uncle, and had learned to shoot under his tuition. If there was anything on earth for which Joe had a supreme contempt it was a shotgun. It was his honest conviction that no shotgun had a range exceeding thirty yards. Any distance above that a shotgun, in his opinion, was utterly worthless. As we would return from hunting

he would meet us and, with sner and gibe, taunt us with the inability "ob dat ole shotgun." So far did he carry it that he offered to let us shoot at him, or rather his back, at seventy-five yards. Exasperated at his jeers at our favorite gun we dared him to a trial. Behold us, then, with seventy-five long yards stepped off by Joe himself! It was fully ninety, but we did not care, for we intended taking the conceit out of Joe forever. Turning his back to us, our living target, with a derisive gesture, told us to "fire away!" At the crack of the gun Joe leaped about three feet perpendicularly into the air and immediately fell flat upon his back, while visions of murder seized upon us boys. "Fire! Water! Murder! Fire!" mingled with horrible oaths came from the prostrate negro in rapid succession. We found on examination that four shot had buried themselves low down in his back, while one had gone through his nose and another through his ear. This had been caused by his looking at me, the marksman, between his legs. Joe never to his dying day could believe but that some supernatural or diabolical agency was concerned in carrying the shot so far into his corpse. We boys were soundly thrashed for being such fools as to shoot at old Joe, even when he was willing. We convinced him.

ST. CLAIR.

A GRAND HUNT.

READING the accounts of those royally-appointed hunting expeditions to the Far West, gotten up by Mr. Marble, his brought to me recollections of a grand hunt, in which I participated, down the Mississippi River. The party consisted of three gentlemen besides myself. We had built in New York a small propeller, which was shipped to New Orleans by steamer and thence to Cairo by boat, at which point she was launched and there we joined her. Our crew consisted of one engineer, a negro who acted in the dual capacity of stoker and deck hand, and two servants, one as cook, the other as steerage. Our vessel measured 45 feet over all, 8½ feet beam, and drew when loaded about 3 feet 6 inches. The boiler and engine were placed as far aft as possible, leaving the midships for the accommodation of ourselves, and the forecabin for the men. A standing awning with roll-up curtains on either side served as a protection against the weather. The side lockers were made wide enough for their tops to serve as berths; in the center was a fold-up table, and above it a rack for glassware and crockery.

On board this diminutive ship we embarked late one afternoon in October in order to reach on the island some twenty miles down the river, where we understood geese and ducks to be very abundant. What with the current and the aid of steam, we have in sight of our first stopping place in about two hours. Charley Fore, the most practical hunter of our party, suggested stopping the engine for a few minutes so he could listen for any sign of game that might have congregated on the island for the night. He leaned over the vessel's side, putting his ear close to the water, and in a few minutes reported birds in quantities. This determined us to tie up for the night, to be ready for business in the morning. To support the guns were taken from their cases, cartridges dealt around to each, a signal light hung upon the smoke-stack, one of the men stationed as lookout, and the remainder of us turned in for a dose of "nature's sweet restorer." As the lookout struck "six bells" we arose, but to find ourselves enveloped in a dense fog, accompanied by a misty rain.

"Just the weather we want," said Charley.
"Excellent for rheumatism," muttered George D—.
These were the first words spoken, and certainly I agreed with the majority, as a more dismal, dreary outlook it would be difficult to imagine.

Mr. Kurflman, the engineer, asked if he should get up steam, or "jess hold it 'twixt and 'tween till further orders?"

"Hold it," replied "George," rather sharply, "or else you'll blow us up to make matters even worse."

Soon, however, the fog began to blow away, and such a quacking of ducks and spunking of geese I never heard.

"Now," said Charley, "Mr. Kurflman, if you have your breakfast waiting, we will work out into the stream, but go ashore as slowly as you can to keep steerage-way on the craft, and the sooner we get under way the better."

With the first signs of Aurora, we were off. The fog had nearly disappeared, and in a few minutes the fusillade began; shooting at the game first in the water, and then as they rose to fly. It was as exciting as a genuine skirmish for the first two or three rounds; a number of birds fell to our guns and lay on the island and in the water.

"Let two of us go ashore up to the shore," said Charley, "and then crack down to the boat, and make for the lower end of the island, and come back for us through the chute. In this way we will have some good shooting this morning."

We pointed the boat's head to the land, going slowly, as the water around these islands is very shallow, and as soon as we touched bottom Charley and Jack jumped overboard and waded ashore. Down the main stream we then went, at full speed, rounding as directed at the foot of the island. Our engine made so little noise that we ran up unobserved on a large flock of geese, out of which George and I bagged six at the first shot and three at the second. Steaming up the chute we scared the birds back toward our friends, whom we could hear firing in rapid succession. We then checked our speed, and had a couple more shots before the birds left us for good. Picking up the game was tedious work, and no doubt we lost some; but, as it was, we counted twenty-five ducks and nineteen geese.

We now started down the river, intending to stop at New Madrid, and take a day's shooting in the lakes back of that place, and to purchase a skiff if possible. It was nearly midnight when we reached the boat at this earthquake-destroyed town. Our arrival created, even at that late hour, a stir, as the natives had never seen a craft like ours before; they all wanted to come on board, even to the women folks. Of course we gratified them, and it was through one of these visits that a name was given to our unnamed yacht. The morning after our arrival we were seated at breakfast, when an old lady and a young girl came alongside and asked, "where we were, and the name of the vessel." The little steam-boat "Liza Jane" after her "gal." As I was the owner I agreed, and the christening ceremony was performed there and then by the girl herself, who came on board, pronounced in a clear voice "Liza Jane," and broke a bottle of Charles Heidsieck over her bow. We then, in a glass each of the sparkling wine, drank long life to the young girl and her namesake.

The shooting back of New Madrid surpassed any I ever had; ducks and geese being the only game, but in such numbers as to soon satisfy any other than a pot-hunter's thirst for blood. The morning we slipped our moorings the whole

town turned out to see us off. "Liza Jane" was there decked in her gayest, although the poor child's face wore an air of sadness as she saw her namesake steam away.

Every day was a succession of good shooting, as we made it a rule to tie up every night near some island, to have the morning's sport. At the towns we would, of course, stop, give our game away, or else Joe would sell it, and buy instead, as he called it, "town grub."

On reaching Helena we decided to make a short run up the Arkansas River, as we found an old, reliable pilot there, who offered to steer us safely, taking his pay out of fun. We saw but very few birds, but George, who was sitting in the bow with his gun in hand, suddenly, as we turned a sharp point of the river, discharged both barrels, at what proved to be a magnificent buck with superb antlers. This circumstance aroused a great desire for a land hunt, but, as we had no dogs, the plan was not practicable, and we returned to the mouth of the river, there to resume our journey downward. Here I bought the skiff we so much needed, and which proved invaluable to us in our future nefarious shoots. The grandest day we had was at Island Ninety-five. This isolated piece of land is nearly two miles long, and heavily timbered, forming an excellent cover for game. Before daylight, Charley, Jack, Joe and the cook, took to the skiff, and pulled off to the inside chute of the island, while the "Liza Jane," with George Kurflman and myself, steamed down to the lower end. Each of us had a gun, leaving the management of the vessel to the stoker. We began firing as soon as the point was turned, and as we steamed slowly up stream, the skiff and its crew were floating down, so that the birds were kept constantly on the wing, going first one way, then the other, until at last we shot out all of our shells, and were rather glad of it. We picked up over two hundred ducks and geese.

We tied up at the plantation of Colonel Dick Christmas, a few miles below this point, to rest awhile; and gave the "Liza Jane" a thorough cleaning before making Vicksburg, at which point we had decided to leave the boat, and to go by rail to New Orleans. After a day's rest at Vicksburg, with the amiable Colonel, we again started on our voyage, reaching the "City of Lilis" after six hours' run. The "Liza Jane" was ordered to Deer Creek, and thus ended the most charming hunt of my life.

J. D. H.

Nashville, Tenn.

"LEFT-EYED SHOOTING."

ROCKINGHAM, N. C., September 12.

Editor Forest and Stream:—I am reading your opinion in reply to "Liza Jane" on "Left-eyed Shooting." I will not express the same opinion in regard to yourself that you did of the Philosopher; yet I will say, and I think prove it, too, that the Philosopher was right and that you are wrong.

I will premise by saying that a majority of persons are right-eyed; some few, however, are left-eyed; while others are either-eyed or both-eyed.

Now for the demonstration or proof. Point with your finger, or with a stick, at any object in life distance, keeping both eyes open; with the finger, both perfectly steady, then close your left eye, and if the finger is still in line with the object, you are certainly right-eyed. Try again, both eyes open; now close your right eye, and if your finger is in line with the left eye, you are certainly left-eyed. Again, both eyes open; now close alternately one eye and then the other. A little practice in this will determine which eye you are. Sometimes in closing the eye the finger seems to point to the left, and in closing the other eye with first open, of course, points to the right at the same distance from the object. In this case you are both-eyed, or either-eyed.

In answer to Invidius, I will say that the only thing necessary to enable him to shoot accurately is that he should close that obstreperous left eye of his when the gun is brought to the right shoulder. If he can accustom himself to bring the gun to the left shoulder, he can shoot equally well with both eyes open; yet there is no necessity for it, if he will close his left eye when he shoots.

To sum up then, to shoot well, a right-eyed man, with both eyes open, must shoot from the right shoulder, and a left-eyed man from the left shoulder, while each can shoot equally well from either shoulder by closing the opposite eye. If a right-eyed man shoots from the left shoulder, and a left-eyed man from the right, both eyes being open, neither would hit a barn door at forty yards. All this I learned years ago in shooting deer from horseback, and ducks from boats. Now, sir, just pick up your gun, I guess, of course, you always keep one handy, I take it, and, that you may, always bring gun quickly to the left shoulder—both eyes open, to remember—take aim, (or try to, at least,) at an object hurriedly. What is the matter? Why don't you shoot? Can't get your aim satisfactory, ah! No you can't! Why? Because, sir, you are right-eyed, and your left eye won't serve you in sighting the object along the rib of the barrels, but that right eye of yours tries mighty hard to get over on the left, and if you will not let it, the very best you can do will be to close it, then you are freed from the dilemma, and couldn't get any quicker. I have never yet met one who knew of this "eyed" business, and have never failed to convince them. So, if you have a great deal of company, I won't call you "a fool."

TROKELL.

RUST SPOTS IN GUN BARRELS.

CAMDEN, N. J., Sept. 26.

Editor Forest and Stream:—In your last issue a Boston correspondent, F. S., asks for information on the cause of gun barrels rusting in spots.

If the interior surface of a pair of barrels is examined with a microscope it will be seen that they are covered with an immense number of small holes, which serve excellently to hold the moisture. Now, when the oxygen, which exists more or less in the air, comes in contact with the steel, it collects in and around these minute holes, forming ferric oxide, or common rust. This makes the surface still rougher, and if not cared for properly, goes on taking up oxygen and consuming the steel, until the holes become large enough to be seen by the naked eye.

When in this condition of extreme rust, made from three parts cosmoiline, or oil, and one part emery, should be used on a carefully prepared swab, which will smooth the barrels out to a certain extent; then apply the wire scratch brush and wash out clean. If this is not attended to frequently, at the sea-shore or in damp situations, nothing but re-boring will bring out spots or holes. So long as the barrels are kept smooth but little trouble need be expended, but when specks appear

unmitigated care will keep them from getting worse. Gunpowder has often been blamed as the cause of rust; but, of good quality, it contains nothing that will oxidize. However, the chamber grade, especially when of fine grain, absorbs a good deal of moisture in consequence of the grains not being so hard as the more expensive kinds. The various ingredients of cheap powder—as sulphur, carbon and saltpetre—are often of inferior quality, and the residue they leave in gun barrels should be removed as soon as possible. What really does more damage to the barrels than the worst kind of powder, is the fulminate of mercury which is left after the discharge of the copper cap in the shell. It, together with the other compounds, mixed with acids to make the combination produce the most possible form of oxidation or six or eight inches from the breech, and it will often be noticed that most rusting occurs there. Perhaps the best way to avoid this, when the gun is not in use, is to push tight-fitting wooden rods covered with balize (or flannel) into the barrels, first having smeared them well with ordinary lino ointment. COLIN.

Editor Forest and Stream: Some one wants to know what takes the sports come on inside of gun barrels; and says that they are always cleaned out. I have a gun which has been used for five years, and is to-day as bright and smooth on the inside as when it came from the maker, but I have kept it by "eternal vigilance" and elbow grease, using the emery polish with. Have had a good many guns brought to me, which the owners claimed were clean, but upon examining them have found them otherwise. Gun barrels are sprung to make them shoot centrally (so they will not cross), and looking through them, unless you make a close inspection, they may be quite a number of places overlooked; and I try to get them off (especially if the day is not out) by emery, unless they work hard and use something besides emery, but out own that, to keep the barrels clean and bright, is full hard a thing to do as any thing that I have ever tried. They may be worse jobs, but I have yet to see them. It is best to leave too much oil on them after cleaning them. HAMMERLESS.

SPORT IN FRANCE.

(SHOOTING began on Sunday in most of the departments of France, as it begins with you to-morrow. This, as usual, there has been a wall over the growing ardency of game, and suggestions have been made that shooting should be prohibited for one year out of four in every department of a department, turn about. It is not impossible that some legislation will be attempted in this direction, for shooting has here become a national amusement, in which all orders of men join. From M. Grévy, who has a well-preserved estate at Mont-Sous-Vandrey in the Ardennes, everybody who can afford to pay twenty-eight francs a permit to carry arms must needs have a few days' sport the course of the year. People still talk about the *over-kill* in France as if the country teemed with game. The sportsmen busy away from the seaside for this important duty; châteaux overflow with guests; and gunmakers, who are a more numerous body in France than in any other country, do a capital business. Any stranger who happened to be at one of the Paris railway stations on Sunday morning might have thought that this was *par excellence* a land of crickets. Men in shooting dress were to be seen, not by tens but by hundreds; and most of them were accompanied by dogs, who yelped, tugged at their leashes, and dragged their hind legs and shiver. A card with the word "Chien" was hung upon each, and some of the railway carriages, as an intimation that in those compartments dogs and crickets could travel together; and in some carriages you might see eight dogs, eight double-barrels and eight *chasseurs* kindly accoutred. A great deal of the pleasure which a Frenchman derives from sport must consist in the habillements which he dons for the occasion. He wears gaiters, a coat with a leather shoulder patch, a game bag of netting slung to a broad strap, a belt with a cartridge-pouch, a flask, a knife, and a long and sometimes a hunting-knife two long to dispose of wild beasts if any should turn up. Late Alexandre Dumas, when asked why a certain dirden went out to shoot rabbits, answered: "*C'est pour les écorcher; il faut que tout le monde s'amuse.*" It is to be noted, however, that most of these sportsmen who are rigged apparently more for show than for work, do manage to get in the evenings with their game-bags full. So there will be a fair amount of game after all; and if it be scarcer than it is, they will deserve the more credit for getting down so much of it. Nobody will dispute that there are some first-rate shots among Frenchmen; and the ardor which sportsmen and citizens brag of their adventures in covers at this season of the year shows that the love of killing is no mere affectation. This being so, it is probable that the Legislature will soon deal with the game question in a frank manner. It is not desirable that all the game in France should be exterminated; and it would be regrettable if the sportsmen should be deprived of a sport which is to some extent a national amusement, and a great source of profit. It is not only the *arquebustiers*, shoemakers and other tradesmen, who earn much by selling the implements and clothing of sport; villagers also make a good deal out of selling parties. Boys are hired as beaters; the village innkeeper prepares dinners for the sportsmen, and has the pleasure to see them drink a great deal of his wine and "old brandy," while the vagabonds and old women pick up many dollars by begging of the sportsmen when they have finished shooting. In fact, so generally recognized as a thing for country folks that the potcher is no longer regarded with a friendly eye in villages. His depre-dations are not blamed when he thinned off the over-stocked presses of rich seigneurs; but he is now looked upon as a fellow who appropriates to himself game which might really have brought money to a good many poor people's communc.—*St. James' Gazette*, Sept. 3.

HOT WEATHER CAMP—Van Buren, Ark., Sept. 1.—I send a short article from one of our town papers. "Old" the writer, is known to you, and is a venerable old man and true. The remainder of the party mentioned young, and lacked much of his experience, but were as enthusiastic and hoped by persistent practice to be ultimately perfect. Although we killed one deer, this was not the way we were in pursuit of, but we were successful in killing turkeys and squirrels, and those only in sufficient quantities to supply our table. This is not, of course, a season with us to hunt, but there were some of us

whose only chance it was until the noble gobbler raises his "racket" in the spring—except for an occasional evening with the ducks, at which we expect to have rare sport when the proper time and ducks arrive.—DICK. The extracts are as follows: "It is useless to call every excursion to the woods, especially in dog days, a camp hunt; yet we camped at a nice spring and hunted just in the hills. On or about the 16th of August, I had passed some enthusiastic sportsmen, having grown weary of hot weather and dusty streets, left Van Buren and bled to the woods near Jackson Kings in the Cherokee Nation, some twenty miles from the starting point. Arrived at three o'clock, found all things lovely, plenty of game, and without half trying bagged in half an hour nine squirrels, one turkey and two quail. The next morning at early dawn the guns were soon at hand and shooting became rapid and repeated for half an hour, and the parties returned to camp with eight squirrels and three turkeys. After scolding them for the lavish slaughter of game, all consented to shoot another gun that day. On the 18th we killed ten squirrels in the morning and rested in the shade all day. "On the 19th, the sun rose as usual in a red, hazy sky, threatening another torrid day. The boys were not early to bag a sufficient amount of game for the day, which was done in a half hour. After breakfasting on broiled squirrels and fried turkey I left for home, via Fort Smith, taking with me two of the company, leaving but three and the cook to remain until the wagon returned for them and the camp. The game killed on the 19th after we left camp seems by the memoranda was three turkeys. On the 20th John Fritz left for home, leaving only Bourland and O'Kane. Amount of game that day was one turkey, by O'Kane. On the 21st four squirrels and one turkey. Morning's hunt (22) resulted in the killing of a fine fat deer by O'Kane, only a few hundred yards from camp. It was apparent that such large game could only be saved by the Indian process of "jerking," as called, which consists in cutting up in small pieces and placing on a scaffold over a brisk fire, making a kind of semibarbecue. This having been completed and the wagon having returned, all came home. I said in the beginning that the hunt was not all a hunt, but rather an excursion to the woods. The weather was so intensely hot that no game could be kept over six hours, and to kill more than could be consumed was not only cruel but lavish waste.—(OLD NIX)"

GAME IN SULLIVAN COUNTY.

New York, Sept. 19. IN perusing the interesting articles contained in your issue of 16th instant, I notice an advertisement of J. M. Bradley in reference to a good old shooting to be found in the vicinity of Eldred, Sullivan county, N. Y. If among your numerous readers there are any who would like such sport, I should advise them to pay Mr. B. a visit. I think I can guarantee them enough sport to satisfy a sportsman, having just arrived home from a two weeks' vacation spent there, principally fishing for pickerel and perch. These fish afford much sport, but are caught in large quantities and of good size, within a short distance of the house. The day before I left Eldred, Sept. 9th, Mr. B. and I drove about six miles (stopping on the way in the hotel of an old pond, where Mr. B. bagged three fine woodcock, over two splendid quail, lately broken by him for Boston parties) to a large pond bordered by marsh land, called Giles's Lake, where we succeeded in shooting nine ducks, five only of which were retrieved by the dogs. They were one black and four wood ducks. The rest falling at long distances in the dense wood and long marsh grass, were lost. Had I been any kind of a shot, and in possession of a breech-loading instead of muzzle-loading gun, I think I could myself very easily have killed five or six birds. When we left the lake, at dusk, the forel were just beginning to fly in from the neighboring lakes in streams, but our ammunition having given out we were obliged to depart. Beside ducks, there is very good deer, partridge and woodcock shooting, and a few quail are to be had. There is also good trout fishing during the early summer months in several streams in the vicinity. On the thirtieth day of August, Mr. B. and I fished the Beaver Brook, about a mile from the house, but only caught twenty-six fish. The reason of our poor success was the low water and the bright, hot day; the thermometer that day showing 100 deg. in the shade. We, however, did not feel the heat, wading in the cold spring water under the shade of the laurel bushes and the spreading branches of the tall pine trees. Mr. B. caught one trout last spring that weighed two and a quarter pounds. Mr. J. M. Bradley's address is Eldred, Sullivan county, N. Y. By writing in advance he will meet you with his wagon at Shohola, Pa., Erie Road. C. E. T.

ENGLISH SPORTSMEN IN WYOMING.—The Big Horn range of mountains in Wyoming will become as well known in England in the course of a few years as the jungles of India. Every summer increases the number of the English gentlemen visiting this famous hunting-ground. We felt it necessary for the last one of these noble sportsmen who were splendidly equipped for the Powder River country—Lord Manners. He is quite a young man and very ingenious, and being unfamiliar with the country he was easily taken advantage of by every cow-boy he met. Some one—I don't know who—induced him to buy a broncho at Rock Creek, and instead of driving comfortably in a stage to Fort Fetterman, persuaded him that it was the correct thing to ride the pony, which he did, making forty-three miles in one day and forty miles the next on "bucking." The Englishman and short stirrups. The young lord seemed quite used up when he reached Fetterman; but notwithstanding, he started off the next day, all alone, for a fifty-mile ride toward the Big Horn, and the last seen of him was about ten miles north of Fetterman, his roll of blankets suspended from the crupper of his saddle and nearly reaching the ground on one side, while his overcoat was thrown across the pommel and dragging in the road on the other side; and my lord, utterly oblivious to his surroundings, was braying up and down on his bucking nag, with his neck outstretched, peering across the sand-hills eagerly looking for the next stopping place. Lord Manners is an officer of the Grenadier Guards, now stationed at Windsor Castle, and his leave of absence expires on the 25th of October; hence his hurry. Captain Gaskell, formerly of the English army (9th Hussars), and his wife, are at present hunting in northwest Wyoming. The Captain has made quite a number of friends among the army officers, he having, several years ago, made a tour through Montana and the western part of our country, visiting the National Park of the Yellowstone, and the various military posts on the way. The Captain is a genial, clever, and well informed

gentleman, and Mrs. Gaskell is a charming, petite, demure, and vivacious and lively as one of our own American women. The following are the names of some of the distinguished English people now hunting in northwest Wyoming: Sir Samuel and Lady Baker, Lord Granville Gordon and Mr. H. H. Flowers, Captain and Mrs. Gaskell, Lord Mayo, Lord Manners, the Hon. Mr. Leigh, and Mr. Richard John Power.—*Correspondence Army and Navy Journal*.

RAIL SHOOTING IN MARYLAND.—The rail-shooting season has just begun on the Choptank, but owing to the tides not making high enough, which prevents the boats from getting on many of the marshes, comparatively few have been bagged as yet. There are thought to be more rails this year than usual, but not knowing anything of their previous life before they appeared on our marshes two months ago, we are unable to account for the unusual number. One of our sportsmen, though not having the advantage of an average high tide, succeeded in getting nine or seven birds in about two hours and a half this morning. The mud broken with the stalks were also an inconvenience, and until the reeds are mashed down, it is difficult to push over the marsh. A fine season is anticipated, and a number of gentlemen from neighboring towns and cities have arrived, and more are expected, to participate in the sport, and ere long our marshes will be the scene of almost incessant reports of breech-loaders. There will be an effort made at the assembling of the State Legislature to pass a law regulating the time to commence killing these delicate birds, which has been so badly needed, but which has never been used on our marshes of large size being plentiful and rails not so much sought for.—N. M. Denton, *Caroline Co., Md.*, Sept. 15, 1881.

[There should of course be a law in all the States protecting the rail, and in New Jersey, Pennsylvania, Delaware and some counties (Cecil and Harford) there is such a law. In Cecil county the season for these birds opens Sept. 15, and in Harford Sept. 10.]

CAYUGA COUNTY SPECIAL LAW.—A special "Act for the preservation of quail and partridge within the County of Cayuga," N. Y., passed Dec. 21, 1881, provides as follows:

Sec. 1. From and after the passage of this ordinance or regulation it shall be unlawful for any person to catch, kill or have in his or her possession any quail or partridge taken within the County of Cayuga, for the period of three years. Sec. 2. Any person violating this act shall forfeit a penalty of twenty-five dollars, to be sued for by any person before any Justice of the Peace, or the City Court of the city of Auburn, where such Justice of the Peace or City Court has territorial jurisdiction. The recovery, if any be had, to be paid, one-half to the complainant, and the balance to the County Treasurer for the support of the poor of the county. The process, pleadings, proceedings, judgments and costs in such actions shall be the same as in and to the civil actions before such Justice of the Peace or City Court of the city of Auburn. And the process for the collection of any judgment rendered under this act shall be the same as is now allowed by law in actions of tort.

QUAIL NEAR NEW ORLEANS.—New Orleans, Sept. 23.—The morning of the 15th, at seven o'clock, found me in the saddle with my old friend, John G. Watson, at Arcola, La., in search of that game little bird, Bob White. Notwithstanding the threatening weather, we were out for an hour. About the middle of the day we were joined by Messrs. Arch and Pierce Watson, who, by the way, are two fine shots as Louisiana claims. The day was agreeably spent; birds were numerous, and my late purchase of Munson's quail, in spite of the fact that for two seasons past she had not inhaled the delightful aroma of quail, did excellent work and found fully her share of the coverts and single birds; and the two dog companions she competed with were good ones, and only a dog of extra nose could get in a point. In the three days' hunt over 150 quail were bagged, quite a fair percentage being shot at so close a range as to be unfit for the table—or bag. For the benefit of some of my Northern friends let me state that we found each day not less than twelve coverts, and one day eighteen. The very dry season has been of advantage to the young, and most of the birds were from two-thirds to full grown. While ours were the first guns that had been fired this season, we found the birds all in a "hurry" when flushed. With plenty of fresh milk, butter, the best corn bread and quail coverts, as in the case when we visit the Watsons, we had a most delightful trip, and after promises of a speedy return were we allowed to return to our city home. CRESCENT CITY.

TENNESSEE NOTES.—Montvale Springs, Tenn., Sept. 15.—This place is situated about nine miles from Maryville, the terminus of a small railroad which runs between that place and Knoxville. The hotel at the Springs (which is also the post-office) is a large, plain, frame building which will accommodate several hundred, and is well kept by a gentleman named Martindale. The springs on the grounds are said to be very beneficial to invalids. I have been hunting some and killed considerable small game. The country is very hilly and there are some considerable mountains near here; the air is very strong and clear. The larger mountains southeast of this place contain some large game, and as soon as the snakes go into winter quarters I am going with a party to have a good hunt.—W. R. B.

Nashville, Sept. 19.—Last Thursday commenced our open season, though under the most unfavorable circumstances. Rain fell in torrents the night previous and continued to do so all day. Birds are reported as very abundant, and from the quantities brought into town Saturday, I should say that the reports are true. Our gentleman sportsmen, as a rule, have excellent dogs, the best of guns, and being crack shots they soon kill out the game in the immediate vicinity of the city, though within a radius of twenty miles there are plenty birds for all. Since the rain has commenced, the moon has commenced in earnest. Toward morning the moon still shines brightly, and when there is a wind the delicious melody of the hounds can often be heard even in the city. Col. W. H. Johnson and David McGavock, living each within a few miles of Nashville, have noted packs of foxhounds, and when they give voice the whole country is aroused. Dan Adams, Esq., has gone on a shooting expedition; he uses a single barrel breech-loader, with which he says he can bag as many birds as any of the crack shots with a double-barrel.—J. D. H.

THE LOUP AND DESERT COYOTES.—Columbus, Neb., Sept. 14.—John B. Baker, of Boston, William W. Jr., of New Bedford, W. H. Hutchinsons of Lynn, and Thomas H. Sturtevant and F. H. Ellis, of Framingham, Mass., left here to

day on a hunting expedition up the Loup and Dismal, with four or five dogs, seven horses, about a ton of necessaries, and ten thousand rounds of ammunition, to be gone six weeks. Elk are very plentiful in those localities, and the party are, for the next three weeks, going to shoot chickens northwest of here. —T. R. D.

[We know the Loup and Dismal country well. Many a pleasant day have we spent on these rivers, and many a successful hunt have we made in the region which they drain. Our old friends, Pawnee La Shar and La Shar-a-Kittibut, introduced us to the section many years ago, when it was indeed a great game country, but also a great Indian country. We are glad that the game still exists and trust that the Indians are now no longer troublesome.]

TEXAS GAME NOTES.—Willis, Texas, Sept. 16.—The weather is turning cooler now, and we are turning our attention to deer and fish. The deer are excessively fat, and the "running season" begins now in this country. Some fine bucks have been killed by my friends. We hunt them at this season by sitting for them with rifles; for as the deer are more active at this time, the chances of shooting, especially the old bucks, by sitting for them is greater than by walking about. This country is blessed with this fall with a good mast. The bears will get very fat, and we expect fine duck shooting when the weather grows colder. Ducks are making their appearance already in small numbers. The bear hunters will have great times this winter. Great many bears here, and increasing all the time. I shall write you before long, and give your correspondents some instructions on calling turkeys. —C. L. J.

BLIND FOR DUCKS.—Pensacola, Fla.—Some time since your correspondent and a party of gentlemen took a trip across Pensacola Bay to San Carlos Sound to try to shoot some of the ducks that abound in that body of water. As there were no marshes within six or eight miles of the house at which we were boarding, we took a small skiff and covered it well over with dead brush, and the man in the stern sculled us along very noiselessly. But for some reason the ducks were very wild, so we could not get any shots at all. Now, could some of the readers of the *FOREST AND STREAM* tell me of any way in which I could devise a blind so that I could get within shooting distance? This season promises to be a fine one for ducks as there is plenty of wild rice; there is also any quantity of quail, doves and field larks around. —H. T.

NEW JERSEY GAME AND FISH PROTECTIVE SOCIETY.—The third annual meeting of this Society was held at Plainfield, N. J., Sept. 21. Considerable business of importance was transacted. The Secretary reported that the membership of the Society was rapidly increasing. The following named gentlemen were elected a Board of Directors to serve for one year: James S. Vosseller, Isaac Brokaw, M. W. Schenck, J. W. King, W. L. Force, Roderick Robertson, William B. Dunn, Israel Ten Eyck, E. P. Thorne; President—James S. Vosseller; Secretary—Wm. L. Force; Treasurer—Wm. E. Jones; Vice-Presidents—George P. Suydam, John I. Holley, Percy C. Old, Homer Taylor, and D. B. Sterling, of Plainfield; James English, of Elizabeth, N. J.; Wm. B. Rankin, of Jersey City; Counsel—Wm. B. Maxson, of Plainfield.

MASSACHUSETTS BAY BIRD SHOOTING.—Boston, Mass., Sept. 21, 1881.—Tuesday found me at the Old Colony depot, waiting for the first train to Scituate. A ride of one hour and three-quarters brought me to my destination, and, with my friend, I was in a short time on my way to the marshes which border the shore of Scituate and Duxbury. We found plenty of waterfowl and other shore birds fairly abundant, though they had not arrived in large flocks up to Friday afternoon, Sept. 2. I inquired of several persons what the prospects were of good shooting this fall, and they all said after an easterly storm one can get more birds than he can carry home. Board can be had very reasonable, the general price being \$1 a day. The fare from Boston to Scituate and return is \$1.10, and to Marshfield \$1.40. The latter place would be the most convenient to stop at, as the marshes are only a short distance from the station. —F. L.

A BAG OF TEAL.—Hartford, Conn., September 19.—*Editor Forest and Stream:*—The Post of this city chronicles a shot which I served recent in your columns: A party of gentlemen had a wonderful piece of luck while shooting rail the past week. One of the number saw seven teal ducks driving direct for the boat, and fired, killing five with the first barrel and the remaining two with the second. Considering the light charge of powder and the smallness of shot used, we can only say that this luck—if it was luck—was not equalled before, except in the case of the five pound bass caught by an Asylum street merchant while camping out at New Hartford, Conn., some ten days ago. —N. C.

THOSE HAMILTON DECOY DUCKS.—Hamilton, Sept. 17.—*Editor Forest and Stream:*—I am sorry to say that the decoy ducks I advertised in your paper have been disposed of, but not in the way I intended. I was absent from home for ten days after I put in the advertisement, and on my return found many answers to it; but when I reached the house I learned that all the ducks had been killed in one night by some kind of vermin, either a skunk or a weasel, the only wound being a small hole under the wing. I think it must have been the latter animal, as the yard is not more than ten yards square, and my two setters were loose, which I think would have prevented a skunk from getting in his work so successfully. —A.

KING AND BARTLETT LAKE.—September 17.—At Hutchins Camp, at King and Bartlett Lake, Maine, since September 1, the following score has been recorded: September 1, a large black bear was killed by Dr. C. B. Porter, of Boston. He was estimated to weigh 300 pounds. September 10, a large caribou, dressing about 450 pounds, was killed by another Boston man. Reference, Mr. John J. Russell, of Plymouth, and Mr. Allen Danforth Bursar, at Harvard University. September 15, two moose, one a yearling cow, and another a monster male, 6 ft. 8 in. from car to tip of antlers; 6 ft. 1 in. high at the foreleg, and 5 ft. 10 in. high at hind leg; girthing 5 ft. 9 in., and estimated to weigh 1,000 pounds. Same reference as above. Mr. O. A. Hutchins, Eustis, Franklin county, Maine, is the proprietor and host at the camps. —W. B. N.

GAME FOR CHICAGO SPORTSMEN.—Chicago, September 19.—I returned this morning from Wolf Lake, Ill., where I have been on a day's shoot. My bag was a poor one; it con-

tained eleven teal and four wood duck, five jack snipe and two red ducks. I shot from a boat and did not use decoys. I killed over thirty ducks but only got fifteen of them. The rest fell in the rice; and as I had no dog I was unable to get them. Rail are here in millions, but they are not molested, as we do not consider them game here. Snipe, plover and other migratory birds are putting in an appearance, and by the first of October we will be enjoying line shooting. Chickens are getting scarce. —TEN BARK.

MR. REED EXPLAINS.—Indianapolis, Sept. 14.—*Editor Forest and Stream:*—If your correspondent, "Buck," will read the game laws published in your paper he will find what right we have to kill deer on the Michigan Peninsula during the last of August. He is only a month and a half out of his reckoning. The true inwardness of the whole matter is that he is mad because he was not along. C-o-p a man up in the city and then let him read that his brethren are having sport in the woods and he is bound to rush into print.—Yours truly, MYRON W. REED.

E-Canada, Mich., Sept. 21.—*Editor Forest and Stream:*—I see in *Forest and Stream*, September 14, "Buck" wants to know what right Rev. Myron W. Reed and Ora Pearson had to kill deer in the Brule River region, Michigan, in the month of August. The law allows the killing of deer in the Upper Peninsula, August 15, if they are not in the red coat, (or rather out of it) I think it doubtful about finding other than red coats even now. A party of three from Chicago, last week above here, killed nine deer; used what they could, and left the rest to rot where they camped. Perhaps I should give names but will not for the present. —A. F. Y.

TEXAS DUCKS.—Indianola, Texas, September 19.—Had a heavy storm of wind and rain on the 19th inst., which flooded everything, a day or two previous to which and since blue-winged teal and pintails began to arrive. The ponds and sloughs are now full, and I think we will have fine duck shooting this season. Weather now clear and cool. —A.

LOUISIANA DUCK SHOOTING.—New Orleans, La., Sept. 19.—We are now having teal duck shooting and some other waterfowl sport at it. The weather has been too warm for shooting up to this time. We are now having cool weather and several parties start out to-day. Our law is off now and quail are very plentiful, also partridges.—S.

CAZENOVIA, N. Y., Sept. 22.—Dr. J. P. Phelps won the Wendell gold badge at the club shoot to-day. The Trap Maker's Union lost it, but console themselves by saying that they have had it the most number of times. The weather is very dry and birds are hard to find; five or six is a good day's work. —HAMMERLESS.

ROMA, Georgia, Sept. 25.—Fine sport is anticipated here this season, which opens soon, with an abundance of partidges and turkeys. Gun club has about closed for the season; some fishermen still linger on the banks yet. —S.

BELLAVILLE, Mich., Sept. 16.—Ducks gone from here; too much low water; marshes all dry; plenty of partidges when frost comes. —C. H.

NOTES FROM THE RAIL MEADOWS.—Richmond, Va., Sept. 19.—On Wednesday last there was a strong easterly wind. About two o'clock I found a friend; arranged to go for a shoot with him; I hurried home; packed up four hundred cartridges, and carried a few larger ones for stray ducks. Taking the train, we arrived at 5.30 p.m., at the White House, about twenty-five miles from Richmond, on the Fork River. The house was built by a Mr. Cooper, a native of Virginia, a half-breed, a mixture between Cooper's great original red man and whites, to paddle our (own) canoe over to the Richmond Shooting Club's Lodge, which is situated two miles from the station on the noble Pamunkey. This club was organized about ten years ago. The lodge is a two-story house, with all the accommodations necessary for a first-class hunter. I arose at daylight; woke John S.; drank some coffee, and in ten minutes we were in the marsh. I shot a hammerless, full-choked gun, wishing to try it on a small game close range, and 2 drs. of water, thin wad, and a little less than 3 oz. of shot No. 11, pink edge wad. It answers admirably well, not mangle the birds at all. After going to the house to replenish the inner man, we started ducking. I shot four blue wing teal; one was about thirty-five or forty yards off, and I killed him with a sorrel load. When we met at the house we had between us nearly seventy sorrel and five ducks. We sent them to friends in Richmond the next morning. The cartridges gave out, but we raked up some and reloaded others, and in ten minutes we again started ducking. I know how many days of my life we started home with a grand total of 1,235 sorrel, 18 ducks, and two king sorrel; and I also shot one yellow-legged snipe. Are they rare? The sorrel are more abundant this year than they have been for a long time, and notwithstanding the severe winter the partidges are very plentiful. —B. RANCHO.

APPLEHANSVILLE, Sept. 22.—I and a friend were down at Lazaret's rail and red bird shooting and we found plenty of birds. I had a very good pusher, Mr. P. Wood. I shot my luck and then the Delaware around that place, and has three sons that are very good pushers also. I bagged forty-three rail and thirty-one red birds the first day I was shooting. A booby is at the river side, whose host, "Bill" Miller, is a first-class man. —S. T.

Following are the scores at Lazaret, Pa., to Sept. 17: B. Frank Miller, 41; Dr. Register, 37; Mr. Crawford, 35; John Kleckner, 31; Wm. Miller, 20; H. Remington, 20; Mr. Speakman, 9; Chas. Smith, 10; Louis Good, 13; Jno. Fox, 26. Sept. 6.—Jas. Mallin, 25; C. S. Jolly, 15; F. Miller, 31; W. Cummings, 13; W. Crawford, 35; Wm. Kleckner, 31; Mr. Quigley, 3; Wm. Miller, 15; Jno. Kleckner, 31; F. T. Tibbets, 15.—42. Sept. 7.—Jim Kelly, 20; J. H. Hendey, 15; Jas. Mallin, 26; W. Copple, 14; Abe Cummings, 15; Harry Mingle, 31; Will Kleckner, 17; Geo. McDunnell, 25; Jas. Hopson, 20; Chas. Powell, 25; Jno. Fox, 31; Wm. Crawford, 35. Sept. 8.—D. Murray, 35; W. Crawford, 31; Chas. Maxwell, 32; Jas. Alburger, 44; Jas. Mallin, 45; Col. Vost, 40; Root, Stark, 16; Ed. Maher, 25; Mr. Ralston, 25; C. S. Jolly, 26; Will Kleckner, 24; Abe Cummings, 13; Will Copple, 19; P. Clew, 56; Chas. Powell, 16; Jno. Gardiner, 38.—508.

Sept. 9.—James Webb, 72; John Fox, 61; Jas. Mallin, 78; Frank Sartori, 57; Gill Griffin, 46; John F. Pyle, 31; John Hubbard, 46; Tim. Reilly, 46; Tom Waddington, 33; Chas. Haine, 72; Mr. Hoopes, 24; Wm. Miller, 20; J. H. Hendey, 15; Wm. Miller, 20; Harry Mingle, 31; Wm. McCall, 13; Jos. Shusser, 25; John Garden, 60; Chas. Miller, 102.—937.

Sept. 10.—E. Soule, 40; Tim. Reilly, 46; Chas. Henckert, 37; Chas. Haine, 75; W. H. Weatherly, 16; John Kleckner, 31; R. Shetzler, 22; Dr. Steelwaggon, 15; Jas. Mallin, 35; Mr. Burt, 21; Jos. Shusser, 25; B. F. Miller, 20; Wm. Miller, 15; John Sidiy, 31; Jas. Mune, 13; Tom Waddington, 31; H. Mingle, 15; L. B. Tatham, 31; J. L. Graham, 31; B. Morton, 13; Tim. Reilly, 35; Jas. Alburger, 165; Jas. Thorne, 61.—849.

Sept. 12.—A. Godson, 11; Gill Griffin, 15; Mr. Henly, 25; Tom Wad-

lington, 35; John Sides, 17; Mr. Grant, 55; Sen. Shultz, 47; F. W. Price, 32; G. Wilson, 42; F. Pres. Wilberhill, 35; Sam. Wethrill, 43; Jas. Mac, 23; C. K. Dolly, 43; Mr. Burt, 21; Tim. Reilly, 45; Jas. Alburger, 43; John Thorne, 61; Ben. Morton, 41; A. Wetherill, 17; Mr. Jones, 37; Mr. Hoopes, 24; J. Lodge, 30; Mr. Wm. Miller, 20; Chas. Powell, 16.—748.

Tuesday, Sept. 13.—B. F. Miller, 16; Gill Griffin, 16; Dr. Karsner, 45; Mr. Hoopes, 24; W. H. Sidiy, 13; Mr. Penikese, 17; J. Wesley House, 17; Bradley Johnson, 7; R. F. Spear, 18; W. Spear, 18; J. Jos. Hendry, 14; Mr. Snowden, 45; Chas. Powell, 25.—265.

Wednesday, Sept. 14.—Mr. Burt, 36; Col. Vost, 40; B. F. Miller, 15; H. C. Hays, 15; Geo. McQuinn, 15; Wm. Miller, 15; H. C. Hays, 15; W. Kelsey, 26; John Kleckner, 17; B. F. Miller, 15; John Gardiner, 10; Jim Webb, 25; Geo. Kelsey, 15; Ed. Maher, 4.—361.

Thursday, Sept. 15.—Mr. Burt, 37; Jas. Alburger, 43; Frank Sartori, 57; Victor Sartori, 57; H. B. Tatham, 31; Tom Waddington, 33; B. F. Miller, 15; John F. Pyle, 31; Sam. Adams, 55; Mr. Townsend, 5.—923.

Friday, Sept. 16.—Wm. Miller, 20; Thos. Waddington, 17; Wm. Wood, 35; B. F. Miller, 26; Geo. McDunnell, 14.—104.

Saturday, Sept. 17.—R. F. Miller, 15; Geo. McDunnell, 15; Richard Wood, 17; Jas. Alburger, 10; Abe Cummings, 9.—62.

Wm. MILLER.

Cleanse and moisten the dry sticky mouth of patients and remove them from the Importers. The best place in New York City to buy a W. & C. Scott's Iron Branch-Loader, from the highest to the lowest grade, 10, 12, 16 or 20 bars, is at Charles L. Fitzmaurice, 943 Broadway, N. Y., who imports them direct from these celebrated makers.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

FRESH WATER.	
Black Bass, <i>Micropterus salmoides</i> and <i>M. pallidus</i> .	Yellow Perch, <i>Perca flavescens</i> .
Masago, <i>Esox nubilus</i> .	Striped Bass, <i>Morone chrysops</i> .
Pickereel, <i>Esox reticulatus</i> .	White Bass, <i>Morone americana</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Bluefish or Taylor, <i>Pomatomus saltatrix</i> .
Elkperch, <i>Stizostedion luciae</i> (pike).	Scup or Forgie, <i>Stenotomus argenteus</i> .
Stizostedion americanum, <i>G. griseum</i> , etc.	Rock Bass, <i>Ambloplites</i> (13 species).
	Warmonth, <i>Chenobryus punctatus</i> .
	Crappie, <i>Pomoxys nigricaudatus</i> .
	Chub, <i>Pomoxys annularis</i> .
	Bachelor, <i>Sciaenidae corporalis</i> .

Sea Bass, *Centropomus atravivus*.
Striped Bass or Rockfish, *Morone saxatilis*.
White Perch, *Morone americana*.
Bluefish or Taylor, *Pomatomus saltatrix*.
Scup or Forgie, *Stenotomus argenteus*.
Rock Bass, *Ambloplites* (13 species).
Warmonth, *Chenobryus punctatus*.
Crappie, *Pomoxys nigricaudatus*.
Chub, *Pomoxys annularis*.
Bachelor, *Sciaenidae corporalis*.

Weakfish or Squeteague, *Cynoscion regalis*.
L. Fayette or Spot, *Leiostomus xanthurus*.
Channel Bass, Spot or Redfish, *Sciaenidae*.
Sheephead, *Archamia procerus*.
Cephalopod, *Archamia procerus*.
Kingfish or Barb, *Menticolus nebulosus*.

That's the sport, to throw the fly, and in a half a minute to fish quickly out. Though the whole earth is given to the children's man, none but we jolly fishers get the plums and raisins out of the rivers which run along the hills. —CHARLES KINGSTON.

FISHING AT ESCANABA.

BY J. D. GASTON.

THERE is but little of interest to be said of Escanaba. It is a quiet summer resort for those who would escape from the torrid temperature which has prevailed for months. Its greatest recommendation is its salubrious atmosphere and cool climate. There have been no hot days in and very frequently fires have been found quite comfortable. The iron interest is the great feature of this place and the iron docks of the Northwestern Railroad Company are admirable structures for the purpose designed. The ore brought from the mines by sixty trains each twenty-four hours. More than ten thousand tons of ore are received and loaded into vessels each day through the season. The train on the docks are more than forty feet above the water. By the cars the ore drops into receptacles by the touch of a button and thence it is conducted by iron chute into the vessels, a rate limited only by the ability of the trimmers. Except on Sundays, the work progresses night and day—by the electric lights at night.

Escanaba is situated at the very foot of Little Bay Dequette and is one of the finest harbors on the lakes. For thousands of feet from the sandy shores the water is shallow and over a sandy bed; then it drops off suddenly to a depth of several fathoms, the exposure of which is many miles in extent, with good holding ground. Each of the three docks is supported by 350 piles over thirty feet in length driven to the surface of the water, and extends from the shore to the deep water, between which the space is dredged out to a depth sufficient for the largest vessel. The dock is protected by a sand point projecting far out, separating the waters of the Little Bay from those of Green Bay, beyond this Lighthouse Point. The deep channel is a happy accident of the Green Bay shore, and of the same character as that described above. There is shallow water lying upon a bed of sand for nearly a third of a mile when it drops off once into very deep water. What is this vertical wall of sand, which undergoes no appreciable change from year to year, while sea break upon it, I cannot myself explain. The same phenomenon was served in the Chicago River, whose shores were clay. For commerce had changed its natural features, for several feet on each side the water was shallow and in the low water season the surface was so low that it dropped suddenly to eighteen feet of water, affording a deep channel for the width of the river, and such had been the action from the earliest known times. If the roots of aquatic grasses had served to hold up this vertical wall of clay for an indefinite period of time, there is no such up at Escanaba, for there the banks are sand and have no roots upon them.

Another unsolved mystery in the case of the Chicago is that with a bar of ice in the mouth with ice for water to melt and receiving all the wash and drainage of a large area of prairie country, which brought down annually a amount of sediment, why was not this deep channel, tending into the country for five miles, filled up? The world almost suggest the existence of some physical law which we do not understand, or the existence of some of which we do not comprehend.

I was almost too late for the bass fishing in the Escanaba River which empties into the Little Bay, two miles from the dock, and up to the time the bass were good the day of my arrival, the 15th of July, one party, seventy pounds of bass, going out after dinner and returning at seven o'clock in the evening. A few days later they were found to have left the river and gone, no doubt into the deep water of the bay, probably on account of high temperature of the river water. The bass here are so reluctant to take the fly and must be persuaded with minnow if a good string is to be made.

Trotting in the bay is fair for that class of sport, though a few bass are thus taken, and still fewer of the well-eyed pike, called *dave* here, yet the principal catch is pickerel, which have firm and well-flavored flesh in these cold waters. They are in weight from three to ten pounds, though some are taken of twenty pounds and over. My best day was twenty fish from ten o'clock in the morning till six in the evening, stopping two hours for lunch. To insure success your boatman must row you in the deep water within a few feet of the shoulder or bank beyond which is the shallow water, say eight or ten feet in depth. If two lines are out the one on the side near the bank will take more than twice as many as the other, no matter which is the longest. The lines should be from 100 to 150 feet long, at least so results have taught me.

There is no very inviting trout fishing in the vicinity of Escanaba. Probably the finest that has ever been found in this country was Trout Lake. It is situated in an uninhabited forest, mostly surrounded with high banks, three miles long and three-quarters of a mile wide. It is fed by springs mainly internal. From it issues Whitefish River which empties into the head of the Little Bay De Noquette from which the lake is thirty miles due north. Last year a party visited this lake and caught in a legitimate way, on the first afternoon, 250 pounds of trout, but a severe illness of one of the party compelled them to leave the next morning. They were all taken from a raft which they anchored near a large bed of white material which looked like marl and was literally covered with trout which, when alarmed, they insisted, would disappear beneath the white surface. If in this time were not a mistake it is no doubt, a large spring full of white sand held in suspension.

Like other fish, the speckled trout have their good days and bad days for biting, for which there is no apparent cause. Soon after the same locality was visited by a party which found the trout just as abundant as on the former occasion, and as same, but they could not be persuaded to take the hook. Not to be balked they attached three large hooks together with heavy sinkers, threw them beyond the trout bed and drew them in quickly. In this way they hooked several hundred pounds of fish, but became thoroughly alarmed and disappeared. How often this discreditable affair was repeated I do not know, nor to what extent other illegitimate means, such as netting, in this charming lake we may never know, but it is certain that trout have frequently appeared in the markets, and that legitimate fishing in Trout Lake has been entirely destroyed. I cannot learn that a pound has been legitimately taken from that lonely lake this year. A party lately visited the lake for legitimate fishing, but found the usual haunts of the trout entirely deserted, and only caught a few small ones in the outlet. It is indeed a pity that the depredators cannot be subjected to the penalties of the law which in its letter is ample; but the letter is dead in that secluded place.

I was more interested in a fact, which was new to me at least, and that is that the lake whitefish are sometimes taken with the hook. More than twenty years ago I examined the stomachs of a number of whitefish at Eagle River, on Lake Superior. The principal contents found undigested consisted of crustacea and bivalves about the size of the head of a pin. These are, no doubt, found at the bottom of the deep waters of the lake, as I could hear of none which had ever been seen in the more shallow waters subject to ordinary inspection. No doubt there is a rich harvest in reserve for those who shall dredge the deep waters of these lakes.

Since that time many others have examined the stomachs of the whitefish, but all go to show that they gather their food from the bottom of deep waters, rather by the process of suction than by an active pursuit of their prey and biting it. Nor do I think this was contradicted by the fact that they are sometimes taken with the hook where the conditions were proper or investigated.

William Hart, a young boatman and fisherman at Escanaba, when rowing me for trotting, told me that he had frequently taken hooked whitefish around the iron docks. While I was skeptical, I carefully questioned as to the mode in which it was done. He said he had only taken them with the hook late in the fall, and nowhere except about the docks. He baited a small hook with a translucent minnow, which does not appear in the waters before the last of October. He never took them with any other bait, though he had tried many kinds. The bait was sunk to the bottom where it was permitted to rest till picked up rather sluggishly by the white fish. When hooked it was very active, and quite as gamy as the black bass. He had thus taken the whitefish for several years in succession, but at no other time of the year and with no other bait. He says the whitefish do not now enter Little Bay De Noquette till late in the fall, and only then can the proper bait be procured to satisfy reasons why they do not only take the bait. They may frequent the docks for the food which is thrown overboard from the vessels. If this be so it would show that the whitefish do not depend exclusively upon live food, which is a question I do not remember to have seen discussed.

Upon inquiry I found a number of reputable citizens who had seen Hart catch whitefish at various times, as he claims. Mr. Winger saw him take five large ones near his docks in one afternoon.

Escanaba Sept. 1, 1881.

[That whitefish take the fly is new to us. We should like to know further of it.]

A LARGE BROOK TROUT.

New York, Sept. 21.

IN the Oswegatchie River Inlet to Cranberry Lake, St. Lawrence Co., N. Y., at the mouth of a spring brook, upon the 17th of July, a gentleman from this city caught a brook trout weighing four pounds and six ounces. It was twenty-one inches long, and every one in that vicinity united in calling it the biggest trout caught there within the memory of the "oldest inhabitant." There were plenty of witnesses to the weighing of it, so that this fish story must be considered as one which can be well substantiated in every particular.

Anglo-worms were used as bait, and the number one Sproat hook was attached to a double snood.

The rod was of medium weight, and its first two joints were badly sprung in the protracted struggle with the heavy fish. The moment it felt the touch of the landing net it flopped off the hook, and as the reel proved too small to hold it, it had to be killed and thrown into the bottom of the boat.
